It is unfortunate that, just at the moment when the difficulty between the Bulgarian Government and the Disconto Gesellschaft of Berlin has been adjusted and the ground is now cleared for further negotiations for a Bulgarian loan under the auspices of the League of Nations, a Ministerial crisis should break out in Bulgaria. The details of the trouble have not been divulged, but it is understood that, immediately after the Anglo-French suggestion regarding the possibility of effective measures against the Macedonian Revolutionary Organisation, M. Bouroff, Minister for Foreign Affairs, and other members of the Cabinet decided that the presence of General Volkoff, Minister of War, in the Government was an obstacle to the carrying out of adequate measures against the Macedonian leaders. The obvious desirability of preventing a united front in the negotiations for a loan caused M. Liaptcheff to work hard to heal the breach in his Ministry and for a time it seemed as if he had succeeded. The quarrel, however, has broken out afresh on the eve of the meeting of the Sobranie, and a Ministerial crisis now threatens.

The Roumanian Loan Question.

The urgency of a foreign loan for Roumania, both on economic and on political grounds, is reflected in the reports that negotiations for a settlement of the dispute over mutual financial adjustments with Germany are proceeding as well as could be expected, and—no less significant—that modifications in the Mining Laws are being considered. The German view of the negotiations is not quite so optimistic, although it is recognised that ultimately an arrangement satisfactory to both sides will be reached, if only for the reason that the conclusion of the Roumanian loan may be said to depend, in all probability, upon such an arrangement. It can safely be said that if, on the top of an agreement with Germany, the Roumanian Government decided to introduce certain changes into the Mining Laws which will meet, in whole or in substantial part, the more serious objections of the foreign companies, no further difficulties will be put in the way of a Roumanian loan by British financial interests. The country's financial position promises to be much improved as a result of this year's harvest, if the official estimates are not too optimistic. There is a grain shortage in the Ukraine and a partial famine in Turkey; the diffi-

culties of her neighbours will be Roumania's opportunity, by supplying her with a ready and easy outlet for her surplus harvest.

Oil and Railways in Iraq.

Ever since an attempt was made to put a spoke in the wheel of the negotiations between Great Britain and Turkey over the Turkish Petroleum Company's concession, it has been known that powerful financial interests were prepared to take an active part in the development of the Middle East. Behind the agitation against the granting of the Dead Sea Concession to Messrs. Novomeysky and Tulloch has been the grievance that the big sums that will ultimately be required for its full exploitation can be more surely found, and are indeed being eagerly offered, elsewhere. Now comes the report that the Iraq Government is being pressed to transfer all the oil grounds not already taken up by the Turkish Petroleum Company to the same financial interests, and possibly to reserve for the latter any fields for which a renewal of the former's lease may be necessary. As a special inducement offered to the Iraq Government to accept this suggestion an undertaking has been given to construct without any financial contribution from Iraq the Iraq section of a railway from Haifa to Baghdad. The offer must present great attractions to the Iraq Government, but it will naturally want to weigh any prospect of immediate gain against the advantages that it stands to reap in the future from the uniform development of all its oil resources. At all costs it wants to avoid having its oil resources made the sport of financial operations instead of being properly worked. Whatever the future has in store, the compliment to the potentialities of the Middle East that lies behind an offer to build a railway without Government aid must not be overlooked.

India's Match Industry.

After a prolonged inquiry and much discussion the Government of India has come to a conclusion on the match manufacturing industry. As we have previously pointed out in these columns, the amount of revenue derived from the Indian import duty on matches has been declining during the last two or three years. The duty is equivalent to 100 per cent. *ad valorem*, and it has been so far a revenue and not a protective duty. In view of its diminishing yield the Government of India instructed the Tariff Board last year to investigate the position of the Indian industry. And after taking evidence from the manufacturers and others connected with the match trade,

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch—11, CALEA VICTORIEI BUCAREST.

Directors :

E. W. H. BARRY, Esq.

C. De CERJAT, Esq.

SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

and consulting the Chambers of Commerce, the Board made certain recommendations. These were considered by the Government of India, whose decision with reference to them was announced last week. The Board said that the 100 per cent. duty had been protective in its effect; that, sheltered by it, match factories had been established, and that the industry thus brought into being had made progress. They accordingly recommended that the duty should be maintained and converted into a protective tax. This recommendation the Government of India has accepted, although it does not greatly like the retention for a long period of such a high rate of duty. Much was heard during the discussion before the Tariff Board of the operations of the Swedish Match Company; and the Indian manufacturers asked for protection against the manufacture of matches in India by this concern. The Tariff Board found, however, that no action against the Company need be taken on the ground of unfair competition. At the same time, the Board thought that conditions might arise which would make an excise duty desirable. With this view the Government of India agrees, and it considers that, if the Swedish Company should obtain a monopoly of the manufacture and sale of matches in India, the situation will require to be reconsidered. In the meantime, the Government proposes to legislate this session with the object of making the existing import duty a protective impost.

COMMENTATOR.

THE MACHINE TOOL EXHIBITION.

The Fourth Machine Tool and Engineering Exhibition is to be opened at Olympia, London, on September 5 (while these pages are in the Press) by the Rt. Hon. W. C. Bridgeman, P.C., M.P., First Lord of the Admiralty, and will remain open until September 22. It will be the most comprehensive exhibition of the kind ever held, no side of the machine tool having been neglected. Nearly two hundred exhibitors from all parts of the country will show their latest machines, with all the improvements effected during and since the War. So many of these machines will be in operation that it has been necessary to instal an extra electric cable at Olympia to supply the additional power which will be needed to drive them. The machinery installed will be capable of making anything from a pen to a battleship, and, by a triumph of organisation on the part of the Management and the Exhibitors, this enormous plant will have been erected in fifteen days. The machines vary in size from the tiniest drill, revolving thousands of times a minute, to an enormous drop-hammer with a punching force of many tons and a gigantic planing machine weighing fifty tons.

In between these come grinding wheels, giving a spectacular pyrotechnic display as they sharpen various tools of the toughest steel, lathes which perform half a dozen

various operations on a solid lump of metal in as many minutes and turn out a beautifully finished part of a motor car, ball bearing devices which seem almost to solve the problem of perpetual motion, boring, milling, planing and shaping machines, chucks which hold the pieces of metal undergoing various operations in an immovable grip, gear-cutting machines, sawing machines both for wood and metal, electric welding plants, air compressor plants, electric control panels, morticing, slot drilling, surface grinding machines, power presses, tapping machines, riveting hammers, electric furnaces, devices for testing the hardness of metals, lubricant and cutting oils, and a multitude of small tools.

In the present exhibition may be seen the realisation of all the lessons learnt during the mass production period, combined with that thoroughness of workmanship for which this country is so justly famous. At the beginning of mass production we inevitably sacrificed some thoroughness for speed. In the last few years we have regained the thoroughness and increased the speed. In the workmanship there is a greater degree of accuracy, in the selection and treatment of materials there is a greater care and knowledge, and in technical skill there is a higher standard than ever existed before. To meet the increased costs of labour and the shorter hours worked, it is necessary to employ machine tools of the most efficient type, and to extract the last ounce of output from them.

Quite recently one of the great motor car producing firms announced a still further reduction in the price of its cars. To understand how this reduction has been made possible we recommend a visit to the Fourth Machine Tool and Engineering Exhibition at Olympia, where the machines which are responsible will be seen in actual operation.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, September 8); s.s. Assyria for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, September 6); s.s. Holywell for Calcutta (Birkenhead, September 13).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 10).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, September 8); s.s. Golconda for Bombay and Karachi (London, September 8); s.s. Mashobra for Colombo, Madras, and Calcutta (London, September 22).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, September 29); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool September 15, and Swansea September 18).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 14); s.s. Bangalore for Calcutta (London, September 15).

Prince Line.—S.s. African Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 15); s.s. Tripoli, Alexandretta, Mersina, and Cyprus (London, September 22). Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout.

Ellerman and Papayanni Lines.—S.s. Algerian for Gibraltar, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 8); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool September 8, Glasgow September 7); s.s. Voltorno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 16); s.s. Lesbian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 22); s.s. Flaminian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool September 29, Swansea October 4). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CIRCASSIA ...	Sept. 20	CALIFORNIA ...	Oct. 24
*ASSYRIA ...	Sept. 28	*ELYSIA ...	Nov. 9
*BRITANNIA ...	Oct. 9	*CASTALIA ...	Nov. 27

*First class passengers only. †First and Third Class Passengers. Specially low fares. ‡Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, Tuesday Morning.

The volume of business passing on the Stock Exchange remains restricted, but on the whole prices are well maintained. Gilt-edged securities were firm, sentiment being assisted by the publication of an extremely favourable Bank return. Home railways were inclined to recover some of their recent losses, but closed below the highest. In the main, the speculative markets were dull. There was, however, a distinct broadening of interest in the industrial share market. Artificial silk shares were firm (a matter to which we make reference in a subsequent paragraph), while there was also a considerable inquiry for iron and steel shares. One of the most conspicuous features was a substantial rise in Imperial Chemicals.

Greyhound Racing Profits.

The recent weakness in the shares of greyhound racing companies has been one of the outstanding features of the Stock Markets. The directors of the Greyhound Racing Association Trust have, therefore, been well-advised in issuing a statement to their shareholders, this company's shares having been particularly affected. It is doubtful, however, whether it will be completely successful in removing uneasiness. The statement refers to the "severe competition" caused by the formation of a very large number of greyhound racing tracks, especially in the Provinces; it also refers to the competition of dirt-track racing, which is proving a counter-attraction in certain centres. The company has been participating in dirt-track racing. Revenue figures are given, but these are of little value since, apart from prize money, they are not accompanied by details of outgoings. It seems fairly clear, however, that the prospectus estimate of a profit of £350,000 for the current year will not be realised. It should have been understood from the first that this was a highly speculative business; and, even if it could be proved that it were prospering to-day, it would not follow that a successful rival form of entertainment would not be introduced to-morrow. In a word, the investor of modest purse should leave such ventures to those whose means allow them to shoulder great risks.

The Artificial Silk Outlook.

During the past week artificial silk shares, after a period of comparative neglect, have been distinctly firm. For instance, Courtaulds have advanced to 4 19-32, as compared with 4 3 a month ago; the lowest price of the year is 4 1-16. The movement in share prices follows an improvement in the position of the industry. Trade in the late spring and summer was rather disappointing, prices in some cases having to be lowered to tempt buyers. The past month, however, has witnessed a slight recovery. The summer reaction this year, though seasonal, has been more serious than usual and the conclusion is reached that in Britain, America and on the Continent production has—for the time being at least—outstripped consumption. The falling off in demand appears to have hit the Continent more heavily than this country. There can be no doubt that the production of the newer companies is beginning to make itself felt. An occasional excess of production is the normal experience of most industries, but perhaps this danger is present in an exceptional degree in the artificial silk industry, since a large proportion of its output is dependent upon the caprices of fashion. Of course, new uses and adaptations for the future are constantly being discovered. The cautious investor, however, will carefully review the situation before making a purchase of shares.

Mortgage Bank Bonds.

During recent months a considerable number of foreign mortgage banks have issued bonds in London. These bonds, however, have attracted rather less attention than might have been expected—possibly because the mortgage bank is an unfamiliar institution in this country. But they are by no means without attractions. They possess a considerable degree of security. It is the common practice of a mortgage bank only to issue bonds up to 50 per cent. of the value of the land and freehold property upon which they grant mortgages to their customers. Moreover, many of the institutions issuing these bonds carry on a general banking business in addition to making loans on mortgage. In these cases, their mortgage bonds carry the additional security provided by their charge upon the other assets of the bank. The question of political risk cannot, of course, be ignored. Nevertheless, the yields given by the bonds—being in the neighbourhood of £7 per cent.—would seem largely to discount this factor, especially in view of the security of individual bonds. The following securities deserve attention. The Municipal Mortgage Bank of Finland 6½ per cent. sterling bonds give a return of £6 11s. per cent. A yield of £6 4s per cent. is obtainable on the Bank of State of San Paulo 6 per cent. guaranteed sterling mortgage bonds.

NEWS FROM ALL SOURCES.

Sir John William Anderson Bell has been admitted a partner of Messrs. Gray, Davies and Co., merchants and bankers, of 122, Leadenhall Street, E.C.3, as from September 1.

The traffic receipts of the South Indian Railway Company for the week ended August 4 amounted to Rs.7,27,230, making the total from April 1 Rs.2,11,95,648.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E7,757, making the total from April 1 £E91,147.

Electric tramways have been installed in Smyrna and the new services will begin on September 9. Hitherto Constantinople has been the only town in Turkey with electric tramways.

The directors of the National Bank of India have declared an *ad interim* dividend for the half-year ended June 30 last at the rate of 20 per cent. per annum, payable on and after September 14, free of income tax.

The Bulgarian Government is endeavouring to establish a second silk-worm "crop" each year. To this end special silk-worm eggs have recently been imported from Brazil and are being distributed among some fifty different localities. It is hoped in this way to be able to collect cocoons in the autumn as well as in the spring.

Motors and Motoring.

By G. B. B.

New Cars.

Times change and prices of cars change with them. The new Morris prices have come rather as a surprise to the motoring world, as most people had expected the price of the Cowley would come down a trifle. Instead of doing that, however, it has gone up, but the new Morris Minor, with a 7 h.p. engine has taken its place, with a chassis price of £100 and as that means a touring car price of £125 and a saloon model at £135, I fancy it will become very popular, especially as it will do 50 miles to the gallon and has a speed of 55 miles per hour on the road. The makers say that the coming of the Morris Minor has rendered it unnecessary to bring down the price of the Cowley model as that is a far more powerful car, is more of a luxury production and has far greater value put into it. The increase in the price of the Cowley is not very great, however, as a new four-door saloon model is now only £190 instead of, as formerly, £185.

The Morris Minor.

By the courtesy of the makers I am able to give some details of the new Morris Minor. The engine is of the overhead valve, overhead camshaft type, with four cylinders and has a bore of 57 m.m. and a stroke of 83 m.m., giving a capacity of 847 cubic centimetres. The tax is £8 per annum and the car should be very light on tyres, with its full length frame incorporating semi-elliptic springs for both axles. The cylinder head is detachable, and the pistons are of aluminium. There is a three-speed gearbox, the hand brake operates on a drum on the transmission and the footbrake operates internal expanding shoes on all four wheels. Shock absorbers are fitted, and front and rear bumpers are a part of the standard design. The saloon model is fitted with a fabric body and has two doors, and a single pane adjustable windscreen. The open four-seater touring model has a coach built, two-door body with hood and rigid side screens and I omitted to mention that the saloon model can be obtained in either a blue or a brown coloured body. There have been certain improvements incorporated in the new Cowley, possibly as some concession for the enhanced price and these include certain new coach work designs and colour schemes, and dipping headlights and bumpers.

Motoring Speeds.

The question has been raised as to whether the Minister of Transport has power to permit heavy motor traffic, as chars-à-banc or motor coaches, to travel at 20 m.p.h. instead of 12 m.p.h., as that speed is laid down by Act of Parliament. It is felt in some circles that only another Act of Parliament could legalise the change. I have discussed this point with some legal friends and they assure me that the Minister has power, under the Act of 1919, to do what he has done, as by that Act he acquired the powers previously exercised by the Local Government Board to regulate that class of traffic.

I fancy there is a good deal underlying the new concession and that those who are rejoicing in it are rather premature. In the present stage of affairs it would have been an unwise move on the part of the police or the authorities generally to proceed against any public service vehicle for exceeding the antiquated archaic speed limit of 12 m.p.h. The raising of the speed limit has altered the condition of affairs and I fancy that after a few weeks we shall find some of our motor omnibus owners in the position of defendants. The official view will be, of course, that speeds of 30 or 40 m.p.h., such as are indulged in at present, will be monstrous or unheard of or something of the kind. I see the Chief Constables of one or two counties have already declared that they are going to see that the new speed limits are not exceeded in their counties.

My view is that the wrong people are being pilloried. I have used our roads constantly since long before a motor omnibus was thought about and I have not yet seen any dangerous or inconsiderate driving by the drivers of that class of vehicle. It may, of course, be said that my experience is not that of others. On the other hand, I assert without fear of contradiction that it is impossible to stand for half an hour by the side of a main road, especially at a week-end, without seeing many instances of bad, careless, inconsiderate and, at times, even dangerous driving on the part of private car owners or hirers. The old order has changed. A few years ago the private owner was one who had had to work hard to attain the position that justified him in owning a motor car; he had a high degree of intelligence, was keenly alive to the courtesies of existence, was more or less a man of the world and in all circumstances was more or less of a gentleman in that he thought something of the feelings of others, would not do anything that was not the "correct thing" to do. To-day that class still persist although in numbers they are almost swamped by a new class of owner-driver; men of little or no experience, of no knowledge or courtesy or road custom, a class that has obtained second-hand cars on absurdly low hire-purchase terms and who behave themselves as soon as they get on the road, much as Punch's "Harry and Harriet" used to enjoy themselves on Hampstead Heath on pre-War Bank Holidays. To put it plainly, the road is becoming infested with hooligan car drivers and it is against them and their dangerous, inconsiderate and inexperienced practices that the attention of the police should be directed rather than against the drivers of motor coaches.

Bridges.

One of the great difficulties to be overcome in organising the communications of the new State is that due to the insufficient number of bridges over the main waterways of the country. Belgrade, separated from the new territories, on the one side by the Danube and on the other by the Sava, possesses only one bridge, the railway bridge over the latter river. The nearest bridge across the Danube is at Novi Sad, some eighty kilometres upstream. The bridge to cross the Danube just below the capital, the material for which is being supplied by Germany on reparations account, which is to carry both rail and road traffic will, when completed, be of very great importance. The whole of the works connected with the bridge, including the dam or embankment and the railway line complete to Panchevo, is to be completed by the end of March, 1931. The connexion thus established will give, in addition to interior communications of very great utility, a railway route from Roumania across Yugoslavia to the Adriatic coast. The works involved by this undertaking are of some magnitude; the bridge itself will be one of the longest in Europe; and the building of the line along the left bank of the Danube (opposite to Belgrade) from the bridge to Panchevo involves the construction of an embankment built on land which is frequently inundated at certain times of the year. It is planned to combine the construction of this line with the reclamation of a large area of potentially valuable agricultural land now subject to flood, but owing to the great area involved and the length of the dams or dykes which would be necessary it is a very costly project. Another reclamation project is that concerning the drainage and protection from flood water of a large tract of land adjacent to the river Sava near Sremska Mitrovitza; and the draining of a great deal of land at Lake Skadar (Scutari) is also an attractive enterprise to be undertaken at some future date. This, it seems, could easily be effected by dredging the channel of the river Boyana, which is the outlet of the Lake of Scutari to the sea; the river having silted up, the level of the lake and its area have gradually increased until it covers a large area of fertile land which, if reclaimed, would probably do much to relieve the poverty of the Montenegrin and Albanian peasants. As the draining of the lake concerns both countries, preliminary agreement between Yugoslavia and Albania will be necessary.

Shipping.

The principal Yugoslav seaports on the Adriatic are, from north to south, Shushak, Sibenik (Sebenico), Split (Spalato), Metkovitch, Dubrovnik-Gruzh (Ragusa) and Kotor (Cattaro). In addition, Yugoslavia has a part of the Greek port of Salonika, and an arrangement exists by which she has the right to use the Thacon di Reval basin in the Port of Fiume; but little use is at present being made of these facilities. The Adriatic coast abounds in

natural harbours, many of which are well-protected and can accommodate large vessels; but modern loading and discharging facilities are lacking at most of them, and the same mountainous formation which gives deep water close in shore renders development difficult, as there is rarely any great width of foreshore on which warehouses can be erected, or sidings, etc., constructed. The principal ports of the future, when the developments projected have been accomplished, will probably be Shushak, Split and Kotor. Shushak is the natural outlet for a great deal of Yugoslavia's export of timber; Split will become more and more the great general trading port for both exports and imports; while Kotor, with its magnificent natural harbour, will remain the principal naval base, and in addition, when the main Belgrade-Adriatic railway, which is to have its sea terminus there, has been built, should also develop commercially. Meanwhile, the port of Dubrovnik (Gruzh), served by the Bosnian narrow-gauge railway, carries a great deal of traffic; but transport to and from the principal trading centres, Belgrade and Zagreb, at present is under the disability of the necessary transfer of merchandise from the narrow to the normal gauge line and *vice versa*.

The coastal shipping lines engaged in handling tourist traffic along the Dalmatian coast had a good year; the large increase in tourists has been due not only to the propaganda of the "Putnik" tourist agency in Central European countries, but also largely to the appreciation of the lira and the resultant increased prices charged at the Italian resorts. Several of the Yugoslav steamship companies increased their tonnage during the year; and in addition to purchasing secondhand vessels, ordered new steamers in the United Kingdom; and the establishment of an emigrant service with South America with vessels flying the Yugoslav flag is projected.

The total tonnage of Yugoslav merchant shipping is about 300,000 at present, the increase for 1927 being some 17,000 tons, mostly purchased in Great Britain. Competition in shipping services is very severe, especially from Italian lines, and the Yugoslav shipowners have lately held a conference with the object of securing mutual co-operation among the coastal lines. Reductions in fares of up to 20 per cent. have been put into force on certain coastal routes, and other steps have been taken with the object of meeting foreign competition. Assistance is given by the State to the shipping companies both by direct subvention and by exemption from all taxation.

In addition to a long sector of the Danube, which is of course an international waterway, Yugoslavia possesses important navigable territorial waters, in the River Sava, which is navigable from Belgrade up to Sisak. There are further the Kralja Petra (formerly Franz Josef) Canal, a part of which is in Hungary, and the Begey Canal. Belgrade, being situated at the confluence of the two great rivers, the Danube and the Sava, occupies an exceptionally favourable position in regard to river transport. A great part of the river transport, both passenger and freight, is operated by the Government with its own fleet, through an autonomous body under the general

GLASGOW

control of the Ministry for Communications. A bi-weekly passenger service of large and well-equipped passenger boats is operated during the summer months by the Danube Steam Navigation Company Limited from Vienna via Budapest and Belgrade to the Roumanian port of Giurgiu on the Danube. The transport facilities offered by the Danube are greatly used for the carriage of coal, machinery and other heavy goods imported from Central European countries, for the carriage of petroleum products from Roumania, and for the export of agricultural produce, most of which goes to countries lying to the north. Grain traffic, however, owing to the failure of the Yugoslav harvest, fell off considerably in 1927.

Aviation.

A great deal of attention is being given to aviation, both military and civil, and serious efforts are being made to develop the manufacture of aircraft, including engines, in the country. The Compagnie Internationale de Navigation Aérienne, which succeeded the Franco-Roumanian Aviation Company, maintains its services from Paris to Constantinople via Belgrade. A local company, the Društvo za Vazduzni Saobraćaj (Aerial Navigation Company) has been formed and, commencing on February 15, 1926, has maintained a regular daily service between Belgrade and Zagreb, using Potez aeroplanes. The company receives a Government subsidy of 26 dinars per kilometre flown. The new Belgrade airport, situated on the far side of the river Sava, about eight kilometres to the north-west of the capital, was opened to international air traffic on February 15, and simultaneously the old airport at Panchievo was closed. When completed the Belgrade airport will, it is hoped, be one of the best-equipped in Europe, if not in the world.

An aircraft factory at Novi Sad manufactures aeroplanes of the "Brandenburger" type, and a pattern of hydroplane evolved by its own engineers, foreign engines being used in both types; a factory for the manufacture of metal aircraft of the "Potez" type has lately been established at Zemun; and yet another, to manufacture aeroplanes of the "Hanriot" pattern, has been opened in the same town. In addition there are two small works at Belgrade, at one of which wooden aircraft are made and at the other aircraft engines as well as fusilage, etc., can be repaired.

The most important development, however, is the construction and equipment, now being proceeded with, of a large works near the capital, at Rakoviza, where "Jupiter" aircraft engines are to be manufactured with French technical assistance. It is hoped to produce the first engines by the end of 1928: the engines will probably at first be composed largely of component parts brought from France, but later practically the whole of the machine will be manufactured locally.

THE DRIED FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, have issued the following report on the state of the local Dried Fruit Market for the week ending August 25:—

Sultanias.

Estimated arrivals on the Smyrna market since the opening of the season amount to 2,810 tons as compared with 3,750 tons for the corresponding period in 1927; the estimated sales amount to 2,000 tons as compared with 3,200 in 1927.

Closing prices at Smyrna per ckt. c.i.f. London were for Types 13 to 18 inclusive respectively as follow:—37s. 6d.; 40s. 6d.; 43s. 6d.; 47s. 6d.; 52s. 6d.; 57s. 6d.

The total shipments to date have been, with the amounts for the corresponding period in 1927 in brackets, as follow:—To the U.K., 175 tons (530); to the Continent, 370 tons (410); to the U.S.A., Canada and sundries, 49 tons (15).

Market Conditions.—Business has not shown expansion in relation to the increased extent of arrivals; prices began easing off at the middle of the week and an all-round decline of about 3s. per cwt. (ft. 3 per 100 kgs.) has been realised on last week's closing level. The undertone of the market, however, is strong at the decline, as the Interior is refusing to follow the lower level of values and fresh

supplies are not moving forward to market. It will need very little increase in buying to strengthen the market.

The diversity of quotations for the various main centres is due to the unsettled state of the Smyrna freight market. On the London berth competition exists between the regular liners (Ellerman group) and the Byron S.S. Company. The fruit rate to London has been for the present reduced to 10s. per ton. The Liverpool rate, which is feeling indirectly the competition on the London berth, has been progressively reduced from 45s. to 37s. 6d. and then to 30s. on boxes and 27s. 6d. on bags, where it stands at present.

The North Continent is maintaining its rates at 40s. on boxes and 35s. on bags. Trieste rate has been reduced to 27s. 6d. on boxes and 25s. on bags.

The freight position generally must be regarded as unstable and liable to sudden fluctuations.

Figs.

Estimated arrivals on the Smyrna market since the opening of the season amount to 1,535 tons, as compared with 1,650 tons for the corresponding period of 1927; estimated sales to date are 1,330 tons, as compared with 1,565 tons in 1927.

Market Conditions.—Market opened on the 19th inst., prices paid being between 30 per cent. to 40 per cent. above last year's level. This was due to the bull efforts of two or three shippers, whose interests lay in creating an artificially high opening for the purpose of influencing markets abroad. Prices have gradually declined throughout the week and stand to-day 20 per cent. below the opening.

The general quality of the early fruit was distinctly unsatisfactory. Later arrivals show a somewhat better condition, but there is still considerable scope for improvement.

The market will be closed in the 28th, 30th, and 31st inst. owing to local holidays.

Messrs. J. C. Houghton and Co., of Liverpool, report for the week ending August 31:—

Currants.

When allowance is made for the holiday season, and the fact that the declaration of official new crop prices was expected during the month, it is not surprising that at the commencement very little interest was taken, and that sellers found it extremely difficult to make headway with fruit on hand. As the month progressed holders became increasingly anxious to clean up the small remaining stock, and the market being in a state sensitive to any slight pressure, this had the effect of reducing values. Business in the lower grades shows a decline of 1s. 6d. to 2s. at 40s., but the fall in Vostizza is more pronounced. Fine Shade Dried qualities have been sold at 56s., thus registering a decline of fully 6s. from the highest point reached.

Closing quotations:—Pyrgos, 49s. to 49s. 6d.; Amalias and Patras, 50s. to 51s.; Zante, 51s. 6d. to 52s.; Gulf and Panariti, 53s. to 55s.; Vostizza, 53s. to 56s.

The authorities in Greece have fixed the retention rate for the 1928 crop at 50 per cent. in kind. The opening price at the equivalent of 42s. 6d. c.i.f. for Pyrgos was quickly advanced, and a strong Greek market is reported with 44s. 6d. c.i.f. for Pyrgos as the latest quotation. Loading will commence early next week, the first steamer being due here about the middle of September.

Sultanias.

Smyrna.—Business has been extremely difficult throughout the month, and sales were only effected by reducing prices. Ordinary to Medium, 37s. to 40s.; Good to Finest, 42s. to 65s. Reports are that the weather has been ideal for new crop harvesting operations, and latest estimates are about 37,000 tons for export.

Cretans.—Overland samples of very light fruit for August and early September shipment attracted some little attention at 72s. to 80s., landed terms.

Greeks.—Dragging sale 50s. to 51s.; bright and colour parcels, 64s.

Figs.

New crop Genuines offered at 21s. 3d. c.i.f. September shipment, but practically without result.

An agreement, it is reported from Greece, has been reached and will shortly be signed between the Greek Government and the New York banking house of Seligmans for a loan of 75,000,000 dollars (£15,000,000) for productive works.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 29:—

Egyptian Futures.—Sakel Contract.—Quiet and rather featureless markets have been the general rule during the past week; trading throughout has been of a light character and in the absence of any developments to influence a decided change of sentiment only minor price alterations have to be reported. Crop accounts recently to hand rather give the impression that last week's reports of deterioration were somewhat exaggerated, the loss only being normal for this period of the season; fears of further scares, however, still prevail and whilst the continued absence of trade support remains a "bearish" feature, we rather doubt whether any sustained pressure will be experienced until more definite views can be found regarding next season's supplies. Throughout the week the Alexandria market has shown a steady undertone, values moving with a moderate range; the stabilisation effect of the scheme for financing the coming crop is still in evidence, and it is to be noted that prices there have now reacted nearly 3 dollars from the low level obtaining a fortnight ago. A further slight hardening in our premium over the American contract has to be recorded; under present circumstances the ruling difference appears wide, but, at this point of the season, conditions change so rapidly that straddle operations between different crops cannot be entered upon with any degree of confidence. As we anticipated in our last report, early new crop positions have reverted to a discount with later deliveries; we look for Novembers to run back to 10 or 20 points under January later on.

Business in the fine count section remains at a low ebb and numerous reports of mills curtailing production are coming to hand. We are still some way off the crop movement, otherwise this state of affairs would operate more strongly as a market factor; at the moment, as mentioned earlier, it is rather outweighed by anticipations of scare reports between now and the date when the crop can be considered safe. We are still inclined to lean to the "bull" side for a short view, but in stating this we consider that the position is such that operations should be confined to minor quantities.

Upper Contract.—Only a moderate business has transpired in this option during the past week and little change in the level has to be recorded. Trade reports reveal rather more business, and this has been backed up by fairly consistent trade purchases of both spot and forward cotton. Crop reports continue in the main satisfactory and picking is now general. Early lots are beginning to arrive down in Alexandria, and receipts from now on should begin to show larger figures. For the immediate future prices will probably be governed by the action of the American market; we should not care, however, to follow any decided upward movement unless due to a material increase in trade purchases or to reports of crop deterioration from the American staple districts.

Egyptian Spot.—Business during the past week has been of a somewhat patchy description, and at one time, indeed, the inquiry practically faded away altogether; nevertheless, sales have been well up to those reported last week and values have remained remarkably steady with a tendency towards higher levels. Spinners have shown little enthusiasm as buyers, and there is no doubt that our "fine" trade is experiencing difficult times. Manchester reports, however, have lately sounded a more optimistic note, and it may well be that a general improvement is nearer than we anticipate.

Crop reports from Egypt are still very favourable, and in a short time now we should be receiving some early shipment of Upper cotton. The local inquiry has not been remarkable for any new feature. Sakel has been rather more to the front, and the difficulty found in supplying suitable staple cotton has been reflected in the advancing quotations. The demand for Upper has fallen off somewhat, but there is still a fair general inquiry about, for practically all grades, but chiefly as before, for the pass to 50 on cotton. Pilon has been in fair request at from 14½d. to 15d., but the more or less popular growths, such as White, etc., have been neglected. Sudan Sakel has moved off quietly, but no weight of business has transpired. There has been some slight improvement in the offtake for Tokar Sakel. A line of some 2,000 bales of American Seed Sudan changed hands on one occasion.

C.i.f. business has been very stagnant, but spinners have taken slightly more interest in new crop offers. Forwardings to the trade for the week ending the 24th inst. were returned as 6,683 bales Egyptian and 1,155 bales Sudan. Estimated sales, 2,700 bales Egyptian and 2,610 bales Sudan. Quotations of Sakel show a net advance of 40 points, those of Upper and Pilon 10 points. F.G.F. Sakel to-day, 19.05d. F.G.F. Upper to-day, 12.60d. F.G.F. Pilon to-day, 14.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 23, state:—

The market during the past week has been fairly active; the tone has been rather better. The week's summary of price movements is as follows:—Sakellaridis: November, 36.63 dollars, 1.24 dollars up; January, 36.74 dollars, 1.44 dollars up. Ashmouni: October, 23.35 dollars, 0.34 dollars up; December, 23.68 dollars; 0.38 dollars

up; February, 24.03 dollars, 0.38 dollars up.

Sakellaridis.—A considerably better feeling has been manifest this week, but it is hard to find any local reason for it. The demand has not shown any improvement, and there has been very little commercial buying. With no new material factors one might reasonably expect that the fluctuations would reflect the current rumours, but in the present instance such has not been the case; the rumour in the market this week has been to the effect that the acreage now being prepared for Sakellaridis in the Sudan will show a large increase, but this rumour has not had any depressing effect. The Sakellaridis Ashmouni straddle has widened out to 1,328 points, against 1,238 points a week ago.

Uppers.—Prices have fluctuated within narrow limits, and this variety has not shared in the rise shown by Sakellaridis. The demand does not show any improvement, spinners still maintaining their holding-off policy; the amount of new crop business concluded, so far, is very small and in this respect this season must be one of the poorest on record. We confirm our opinion that Uppers at present prices do not seem unreasonable, and we do not look for much decline in values, unless American prices break badly.

The Government have notified the institution of a scheme for financing the crops of small growers, similar to the scheme which was in operation a couple of years back. They agree to advance £E5 per kantar Sakellaridis and £E3½ per kantar Ashmouni F.G.F. upwards, at 4 per cent. per annum interest; the advances will be limited to 500 kantars for any one individual and the period four months with a conditional extension of another four months. The publication of the scheme had no effect on the market, but the firm tone may perhaps be attributed to a belief that the scheme is the forerunner of further Government intervention if occasion demands.

Spot: Total sales amount this week to about 4,000 bales, of which we estimate 2,000 bales Sakellaridis, 1,900 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: There has been rather less activity during the week under review. The demand for Fully Good Fair/Good and Good mentioned in our last report is still maintained, but buyers are not anxious to force up the premiums, and the business transacted has not been large. Any lots of medium grade appearing on the market find a ready sale. There is still some demand for low grade cotton, but this also is somewhat scarce. On the whole spot differences remain about unchanged.

Ashmouni and Zagora: The demand in these varieties showed a considerable falling off during the early part of the week but has revived again to-day. Spot differences remain about unchanged. One or two lots of new crop cotton from the south have made their appearance on the market, and have changed hands at about market premiums. It is much too early to give any opinion as to the quality of the crop.

Other Varieties: There has been a small business in White at about last week's differences.

P. AND O. AND TILBURY DOCK.

Improved Arrangements.

It is expected that the change-over by the P. and O. Company in the coming autumn season to new territory in the southern branch of Tilbury Dock will be found to present considerable advantages. Berths for the ships are provided at a quay, 2,200 feet in length, immediately adjacent to and in direct line with the new lock. Along the whole length of this quay will run a platform for the arrival and dispatch of the special trains by which passengers are conveyed from or to London.

In a central position, adjacent to the steamer berths, are the new dock offices of the company, which include a large and well-appointed waiting-room for passengers. In addition there are motor parking places, approached by a broad, well-surfaced road which has been laid down by the Port of London Authority between the main gates and the P. and O. Quay. This road will give easy access to the ships for motor lorries, whose loading and discharge will be accelerated by the greater convenience of the new site, and for cars conveying passengers from town or which may be sent to the dock for shipment abroad. The new quays are of great width and are equipped with sufficient numbers of the most modern types of electric cranes.

The directors of the company take the view that their share of the considerable expenditure on these arrangements will be justified by the great consequent gain in convenience to both passengers and shippers.

Seventy-five of London's mammoth double-deck, eight-ton omnibuses are being fitted with Dunlop pneumatic tyres as a result of the British Government's decision to encourage the use of pneumatic tyres on commercial vehicles in order to save the roads and lessen the noise of traffic. If the experiment proves successful, London's whole fleet of 5,000 omnibuses is expected to be fitted with pneumatic tyres.

Notes of the Week.

Albania and Her Neighbours.

The change in the status of Albania from a republic to a monarchy has been effected without any untoward incident in the country, and has evoked correct and adequate interest abroad. King Zogu has been the recipient of formal congratulations from the majority of the heads of neighbouring States including, notably, a message from the Greek President. The Government at Belgrade alone seems to have gone out of its way to show pique, and thus remains consistent in its mishandling of the relations between the two countries. Turkey, to judge from Press references, is inclined to be peevish; but this attitude may possibly be a reaction to the previous interest shown in the constitutional change in Albania, as a result of a suggestion originating from foreign sources that Mustapha Kemal Pasha might follow Ahmed Beg Zogu's example. The likelihood of any such step on the President's part is roundly denied, and there is no reason to doubt the genuineness of the denial. A greater contrast could hardly be afforded in personal character than that between King Zogu and the Ghazi. The loneliness of the former was complete and will hardly be emphasized by such regal aloofness as his new status imposes; to Mustapha Kemal Pasha companionship would seem to be the wine of life, and his popularity is due in no small measure to a happy faculty for identifying with himself, in the first place, his immediate associates and, secondly, the nation as a whole in all that emanates from his own commanding personality for the development of Turkey. The conditions in the two countries are different, and it may be that King Zogu, who is equally concerned for the advancement of Albania, is sincere in his conviction that the work can be more easily done from the vantage position of a throne than, as it were, down among his people with his coat off.

Great Britain and Albania.

It would be a tactful adjunct to Great Britain's recognition of the new status of Albania if the opportunity were taken of removing the British Legation to Tirana. There

are nine Legations at the capital including those of France, Germany and Italy; but the British Minister still has to reside at Durazzo, where steps have yet to be taken to drain the marshes behind the town, which are responsible for its malarial conditions.

Peace Pacts in the Balkans.

A formal pact of non-aggression and friendship between Italy and Greece, the negotiations for which are reported to have been completed, would have redounded more to the honour and glory of Italy, if the strictly disciplined Italian Press had indulged in less cynical remarks about the Kellogg Pact for the outlawing of war. The value of the latter lies in the fact that it marks the formal renunciation of a policy of sabre-rattling of which Italy has been the chief exponent since the War. The signatories of the Kellogg Pact have pledged themselves, in effect, not to indulge in Italy's "Corfu" tactics, when differences with other countries arise, but to seek a settlement through diplomatic means. For the general peaceful conduct of the world's affairs, it is far more important that Italy should subscribe wholeheartedly and with conviction to this international convention than that she sign a pact with a single country. In spite, however, of the Italian gibes at the attempt to make war "bad form" among civilised nations the Pact with Greece will certainly give a stimulus to similar agreements among the Balkan States. Already the Yugoslav Government has informed Greece that it is prepared to re-open negotiations with a view to the settlement of the questions pending between the two countries, and Greece in turn has been able to use her recent change of Government as an occasion to inform Turkey of her wish to settle outstanding points at issue and thus to facilitate a closer *rapprochement* between Angora and Athens. In this way we may hope before long to find all the States of South-Eastern Europe pledged to be at peace with and to behave properly towards one another, and they may then have occasion to turn their attention to the establishment of peace at home. It is a curious inversion of what might be expected as the natural sequence of events that a nation should show any anxiety

to be at peace with others when it is a complete stranger to peace within itself. The relations of Serbs and Croats, Roumanians and Transylvanians, Venizelists and anti-Venizelists will seemingly await a permanently satisfactory adjustment after the relations of Yugoslavia, Roumania and Greece among themselves and with their Balkan neighbours leave little to be desired. The order of procedure, however, is of less importance than that peace within and without should be established. By a curious irony of events Italy would now seem to be furthering this good cause.

The Bulgarian Crisis.

The Ministerial crisis in Bulgaria is not proving an easy problem to solve. Opinion in the Democratic Entente forming the Government's majority is divided on the merits or demerits of General Volkoff, as was shown by the action of three-sevenths of the deputies in declaring, immediately after the Government resigned, that they would not support any Cabinet that did not contain General Volkoff at the Ministry of War. In these circumstances it is not surprising that M. Liaptcheff has not succeeded in his first attempt to reconstruct his Cabinet. His solution appears to have been to omit both M. Bouroff and General Volkoff; but the former also has his friends and followers, and these, as the Populist Party, refused their support, if M. Bouroff were not given a portfolio. In the meantime General Volkoff does not seem inclined to lie down under the charges brought against him and the Army of allowing their personal feelings to interfere with the performance of their duty. That there is the possibility of serious trouble in the country over this charge is to be inferred from the speech delivered by King Boris at the Shipka Pass celebrations towards the end of August. When his Majesty spoke, the crisis had not come to a head, but the King was constrained to make a serious appeal to his troops for unity and self-denial in the interests of the country as a whole. The Anglo-French *démarche* would appear to have troubled the political waters of Bulgaria in a way that was not foreseen by the authors and can hardly be according to their wishes.

The Sultan of Muscat.

The history of Muscat, whose Sultan, Taimur bin Faisal, begins his stay in Great Britain as the official guest of the nation on September 15, is but vaguely known to the majority of the British people, although this country has for nearly three centuries been intimately connected

with the fate of the torrid country to which our distinguished visitor belongs. For a time Muscat was in the hands of the Portuguese, who laid the foundations of so considerable an Empire in the East. Owing, however, to their mismanagement, to the counter-efforts of the British, and to the possession of a remarkable series of native rulers, Muscat finally succeeded in obtaining its independence. And the independence, it may be remarked, is now a far more complete thing than the independence of the places in the Persian Gulf, such as Bahrain or Kowait. The Sultan of Muscat and Oman, whose territories face both east and south, is in name and in fact a sovereign independent ruler. With the later history of Muscat, particularly with its relation to the suppression of slave-trading and arms-traffic in the Gulf, most people are tolerably familiar. To a certain extent, its importance in the scheme of things in the Gulf has disappeared, for international competition therein, which at the close of the last century and in the early years of the present, attained a degree of sharpness that it may possibly never again reach, has now largely vanished. The centre of rivalries has in fact shifted northwards from the Gulf to Teheran and Baghdad. This State of Muscat and Oman still holds, nevertheless, very considerable importance to the British Empire, and it is to be hoped that the Sultan, during his stay here, will fittingly be made aware of the very real friendship between this country and his own State that a community of interests inevitably promotes.

Oman as Air Post.

For Oman is of very potent importance in connexion with the Imperial Air Route to the East. It is true that the route through Southern Persia, which Imperial Airways have now succeeded in establishing, is the most convenient for normal purposes; but circumstances are conceivable in which that route would not be possible. For that emergency Oman could fulfil a dual function. For Muscat, on the one hand, could be used as an intermediary station for aeroplanes between Basrah, Bahrain, and Baluchistan; and Dhufar, the resort on the Indian Ocean, where the Sultan stays during the summer months, would be of primary importance to the airship route between Aden and Karachi. In the long view, therefore, the State of Muscat and Oman may be held potentially to be destined to play a considerable part in the development of Imperial communications with the East. Nor, in recording the fact that this State of Muscat and Oman is now so well prepared, in the sentimental sense, to fall in with possible Imperial necessities, should one forget the wisdom of its present ruler, and the aptitude with which he has availed himself of the advice of certain British officials, notably Mr. Bertram Thomas.

Persia and the League.

The election of Persia as a member of the Council of the League of Nations is an important tribute to the new order in that country and an event of some significance, we may hope, in the affairs of the Middle East. It places the seal of European, or world, recognition on the political progress which Persia has made under the enlightened influence and driving power of Shah Pahlavi, and it should stimulate interest in the League among those Eastern nations which still remain outside its ranks. The Persian example must indeed give the Turkish Republic furiously to think, for it has been inclined hitherto to affect indifference to the League of Nations as a European "close corporation," or to consider that Turkey's adhesion is only to be secured at the price of a permanent seat on the Council. Persia has chosen the better part, and has reaped her reward. With her presence on the Council she has enhanced her own position in the Asiatic Triple Entente which is slowly crystallising between Turkey, Persia and Afghanistan; and another result should be a desire to regulate all outstanding questions between herself and Iraq.

Air Days and Airways.

The return flight from India in four and a half days of Captain C. D. Barnard and Flying Officer E. C. Alliott in their Fokker-Jupiter monoplane, and the flight from Croydon to Bucharest in twelve hours and twenty minutes of Flight-Lieutenant Scholefield in a Vickers Vivid machine are two events in the air history of last week that cannot fail to stir the imagination. They formed a picturesque setting to the annual meeting of Imperial Airways Limited, at which the Chairman, Sir Eric Geddes, gave an interesting review of the future of civil aviation, as envisaged by that Company. The new agreement with the British Government provides for a weekly service between England and India, with most modern aircraft, having a carrying capacity of from one and a half to two tons, and, as traffic develops, it is intended to make the service a bi-weekly one. The London-Karachi service, however, is regarded only as a first instalment towards the ultimate establishment of services on a commercial basis between London and Australia, as well as between London and Cape Town. It is in the development of these Empire routes that the mission of Imperial Airways Limited clearly lies. To this end it is essential that the Company should maintain services over the Mediterranean, a section of the main Empire route which hitherto has been left—as many think at too great a risk—in abeyance. Sir Eric Geddes referred to a new type of seaplane, which, it was hoped would promote a vast extension of flying to many outlying parts of the Empire. The marine side of civil aviation has lagged behind the land side, but this year the Air Ministry has made notable strides in the former direction and Imperial Airways contemplate “in the near future” the tackling of the problem of the long oversea flight from Singapore to Australia.

Aviation on a Commercial Basis.

There was one passage in Sir Eric Geddes' speech of special interest in regard to the air routes of Europe and Hither Asia. In the development of civil flying, he said, there would seem to be two more or less incoherent schools of thought—one which regards high figures of aeroplane miles flown, machines in existence and pilots trained yearly, and looks at a map with aeroplane routes spider-webbed across it and says, ‘That’s fine,’ and the other the mind which looks to the commercial development of flying and its ultimate independence of subsidy. The British Government is undoubtedly adopting the second mental outlook—and, he added, “by far the wiser, if we are looking at civil aviation commercially and not as a means of development of an auxiliary military arm, nor as a means of peaceful penetration into other countries.” The allusion is obvious. In many directions it seems a matter for regret at first sight that British commercial aviation should have been anticipated by the companies of other countries; but closer investigation will show that these routes are being carried on at a substantial loss. The end may justify the means; but it is at least possible that the tortoise will again outdistance the hare. In the long run the company, or country, which resolutely sets its face against anything short of the highest efficiency and insists on the constant scrapping of old types for improved makes will reap the advantage.

INDIAN NOTES.

The Beginning of the End.

The decision of the Madras Legislative Council to co-operate with the Simon Commission would seem to mark the beginning of the end of the foolish boycott movement. The Punjab, Burma, Assam, Bengal, Bihar and Orissa, Bombay and Madras have now all appointed Committees to co-operate with the Commission. Only the United Provinces and the Central Provinces are still standing out; and it is to be hoped that, following the good example of Madras, these two Councils will soon reverse their pre-

vious unwise decisions. The Swarajists in the Madras Council followed their customary silly practice of walking out of the Council Chamber when they find themselves in a minority. They have also threatened the Council with the High Court. But nothing very serious is likely to come of this move. It may be expected to end as ineffectively as did a somewhat similar attempt which was made in Bengal a few years ago. In the meantime the leaders of the boycott are evidently beginning to recognise that they are steadily losing ground in the country. For it is reported that their latest proposal is to petition the Viceroy to dissolve the Assembly, so that they may invite their constituencies to choose between their policy of boycott, and the decision of the provincial legislatures to co-operate. This would appear to be merely an attempt to hide the collapse of the boycott in the confusion of a general election. For there is no valid reason why there should be a dissolution just now, and there are several good reasons against it. The fact is, of course, that the promoters of the boycott have never really represented anybody but themselves. By organising a whirlwind agitation they obtained for the time being a certain measure of support for their proposal. But nothing could for long disguise the futility of throwing away the opportunity which was offered by the Commission. And now that there has been time for reflexion it is being realised throughout the country that it is only by co-operation that progress can be made towards representative institutions.

The Simla Session.

Earlier expectations that the usual short autumn session of the Central Legislature, which opened at Simla last week, would prove comparatively uneventful have speedily been belied. The return of the political leaders fresh from their Pyrrhic victory at Lucknow has already infused abundant animation into the proceedings of the Legislative Assembly. And the eleventh-hour decision of the Government of India to introduce several important official measures, which, however justifiable on grounds of expediency, are bound to excite considerable controversy, has served further to confound the prophets. A year ago, it will be recalled, the Viceroy opened the session with an eloquent appeal to the members of both Houses for Hindu-Muslim concord. This year there was no ceremony but the significance of the fact that one of the earliest replies to questions showed that the casualties from communal riots continue steadily to grow was doubtless not lost upon the responsible leaders of the parties. The pending legislation includes the Bill for the investigation and settlement of trade disputes; a Bill to penalise the authors of statements made with the intention of interfering, or likely to interfere, with peaceful relations with foreign countries, and a Bill for the protection of the Indian watch industry. Leave has been given for the introduction of all these measures, the passage of which seems assured although, except in the case of the last, it is likely to be a stormy one. The first breezes occurred when the Home Member moved for leave to introduce the Public Safety Bill. Although, as Mr. Creras said, if ever there was a case for co-operation of all well-wishers of India, English and Indian, it was provided by this attempt to combat the Communist menace, the obstructionist tactics of Pandit Motilal Nehru and his friends with the aid of a “responsive” President of the Assembly at the time of writing have succeeded in holding up the measure. At the same time the need for action is so widely recognised in moderate circles that it is difficult to believe that the good sense of the Assembly will not ultimately prevail. As was anticipated last week the sponsors of the Nehru-Sapru report have decided to withdraw their resolution in favour of acceptance of the Draft Constitution. Following the emphatic repudiation by all the leading Muslim leaders of the principle of joint electorates the Congress party's action shows that it is not prepared to withstand the opposition which the resolution would undoubtedly have encountered in the Legislature from the many parties unrepresented at Lucknow.

THURSDAY, SEPTEMBER 13, 1928.

THE BULGARIAN CRISIS.

There would seem to be too many ingredients in the Ministerial crisis that has broken out in Bulgaria for it to be a sign of ordinary healthy development. M. Liaptcheff has been in power for two and a half years, and this period is, perhaps, above the average for the life of a Bulgarian Cabinet. The peculiar circumstances of the country, however, in particular the fact that it is in the middle of negotiations for a loan under the auspices of the League of Nations, rendered it desirable that the Government should be free from domestic complications for the moment, in order to be able to impress Geneva with the measure of stability that two or more years' of office can be held to connote. The divisions that have for some time challenged the unity of M. Liaptcheff's Ministry have, therefore, chosen an inopportune moment for coming to a head. The crisis has followed too close upon the Anglo-French *démarche* of August 12 to allow it to be regarded as wholly unconnected with that unusual step on the part of two friendly foreign Governments. It would be, however, a mistake to exaggerate the part played by this step in the subsequent course of events in Bulgaria. The accepted version of what has actually happened is that, on the strength of the Anglo-French suggestion that the time was ripe for vigorous measures to be adopted against the Macedonian Revolutionary Organisation, whose activities are a menace to the security of neighbouring States and to the peace of the Balkan Peninsula, the section of the Cabinet that favoured drastic methods of suppression found its policy thwarted by General Volkoff, Minister for War. It appealed, therefore, to the Prime Minister to have General Volkoff removed. The Minister for War, however, resented the insinuation that either he or the Army had allowed personal feelings to interfere with the discharge of their duty, and refused to lend colour to the accuracy of the charge by resigning. On the particular point raised by him, General Volkoff appears to command no small measure of sympathy in the country. Confronted, however, by the resignation of three of his Ministers, M. Liaptcheff had no alternative to placing the resignation of the whole Cabinet in the hands of the King. The latter in agreeing to the reconstruction of the Ministry without General Volkoff would not necessarily endorse all the charges brought against his late Minister of War. The interests of the country are above all personal considerations, and at the present time those interests call urgently for some measure of continuity in the handling of the loan negotiations.

An unfortunate feature of the crisis is that it should have reproduced the features of a previous attempt a few months ago to force M. Liaptcheff out of office. The

challenge came then from M. Tsankoff, the previous Prime Minister and now President of the Sobranie, who has been at no pains to disguise his view that the time has come for his return to power, and the resignation of one of his followers in the Cabinet was intended to force the issue. This time M. Tsankoff's "hand" would seem to have been played by M. Bouroff, the able Foreign Minister, whose careful and correct steering of Bulgaria's foreign relations under M. Liaptcheff's captaincy has been of considerable service to the country. In the demand for the removal of General Volkoff, M. Bouroff and M. Tsankoff have acted in close co-operation, and it is noticeable that the resignations which finally forced M. Liaptcheff to lay down his office were those of two of his most expert helpers, the Minister of Commerce and the Minister of Agriculture. In these circumstances it must be supposed that there are wheels within wheels in the crisis. It would certainly be unfortunate if the action taken by the British and French Governments—no doubt, with the best intentions—can be shown to have reacted on party politics in Bulgaria to the extent of weighting the scales against one political group or another, and so creating bitterness against the Powers that will be held guilty of interference in the domestic affairs of the country. In the background remains the sinister shadow of the Macedonian Revolutionary Organisation. The view of the British and French Governments appears to have been that that body was momentarily paralysed by the quarrels between rival leaders and factions. If the Bulgarian Cabinet became divided as the result of a controversy over the accuracy of the Anglo-French diagnosis, there will be considerable support for those Ministers who held that the diagnosis was entirely wrong. As far as can be judged from outside, the Organisation has achieved greater unanimity and driving force than it has possessed for some time, as a result of the victory of Mihailoff over his rivals and his known propensity for an active terrorist policy. Those whom he has dispossessed of power may be biding their time, but their only opportunity lies in a continuance of the bloodshed which constitutes such a scandal in Europe of to-day. Any action by the Bulgarian Government against these disturbers of international peace must now inevitably be more conspicuous as a result of the Anglo-French *démarche* and may, therefore, be expected to find Mihailoff on his guard and more than ever resolved to seek defence in embroiling Bulgaria with her neighbours.

In the circumstances it is, perhaps, unfortunate that the British Parliament is not in session to afford the Government an opportunity of explaining the situation that gave rise to the Anglo-French *démarche*, with its critical developments for Bulgaria. It would argue an ignorance of Balkan affairs that cannot be charged to either Government to suppose that the Macedonian Question can be solved by drastic action against a few leaders. In the first place, all the indications, before the representations were made at Sofia, pointed to the consolidation of power in the hands of the extremist Mihailoff. Secondly, even if the so-called Moderates could be supposed to be gaining ground, they differed from their rivals only in the degree to which personal assassination should be employed as a means to achieve the common aim. They had shown no signs of modifying that aim, the emancipation of Macedonia from alien, primarily Serbian, rule. If, therefore, the object in view was to eliminate the Macedonian Question from European politics, it was essential that some steps should be taken simultaneously to ensure for the rank and file of Macedonians in South Serbia relief from the grievances which keep the Macedonian Question alive. With the Croat evidence before it of what Serbian domination entails, Europe cannot pretend that the solution of the Macedonian problem is to be found in representations in Sofia alone. If, therefore, an occasion was supposed to be provided for grappling with the problem, it is to be regretted that a more comprehensive effort was not made.

Sofia, September 4.

The Peace Pact.

No country is more alive to the blessings of peace than Bulgaria after her six years of disastrous war. When, therefore, the invitation was given her, in common with other States, great and small, to adhere to the Kellogg Pact against war, public opinion was unanimous in endorsing immediate signature by the Bulgarian Government. In referring to the subject, M. Liaptcheff, Prime Minister, said: "We rejoice sincerely in every step taken by America that brings her nearer to Europe. We appreciate above all the conclusion of the Kellogg Pact as a fresh manifestation of this drawing together, and Bulgaria adheres to it joyfully."

Mr. Bouroff, Minister for Foreign Affairs, spoke at greater length. "Although the Anti-War Pact," he said, "is more in the nature of a moral manifestation in favour of peace, it constitutes nevertheless an important step in this direction. Enterprises of this significance have always to be preceded by considerable moral preparation, without which their practical realization would be difficult, if not impossible. Considered in this light, the Kellogg Pact possesses all the importance of a very weighty international act."

The Bulgarian Press was equally favourable in its reception of the Pact, and pointed out that the countries that had been weakened and disarmed as a result of the Great War must necessarily repose greater hopes in it than other countries and look to it as a further guarantee of their security and of a brighter future.

The Bulgarian Army.

The three days, August 26, 27 and 28, were devoted to military celebrations on the southern slopes of the Balkan Range, not far from Kazanlik in the historic Shipka Pass, the scene for three days and three nights of the heroic defence of 1877 by the Legion of Bulgarian Volunteers, until the arrival of the Russian army, against the Turkish forces under Suleiman Pasha. The celebrations constituted an imposing ceremony in commemoration of the War of Liberation on the occasion of its fiftieth anniversary.

In order to enhance the significance of the ceremony King Boris made use of it to announce the promotion to the grade of sub-lieutenant of the pupils of the highest class of the Military School. His Majesty concluded the celebration by delivering an important address bearing on matters which have been the subject of rumours in regard to the Bulgarian Army. After a reference to the hard work undergone by the soldiers in barracks, King Boris continued: "The privations which mark the existence of our army, as well as the onerous conditions of existence of our State must not check our aspiration towards an ever greater perfection. Let a high moral, an iron discipline and careful preparation—three precious things which, thanks to the qualities of the Bulgarian, we can

certainly cultivate—replace things of less value which from a material point of view we now lack. . . . Now more than ever Bulgaria has need of an army, solid, unanimous and united around its leaders, who conscious of its high and important destiny, constitute a safe and devoted shield against every danger, a powerful support, under the protection of which the State and the Nation can quietly and by creative work realize their progress in every direction and prepare better days for future Bulgarian generations. I know well the valiant Bulgarian officers, with whom I am linked not only by ties of service, but also by the memory of joys and sorrows lived together. They have given proofs of their love and of their devotion without limit to the Fatherland, and I am sure that, far from all pernicious impulses which are incompatible with their career, they will know, in the future as in the past, how to keep pure and intact their spirit of discipline, of self denial and of disinterested service for their country, which we all cherish and for which we are all ready to submit to every sacrifice in order to see it prosperous, happy and great. Firmly convinced that the Bulgarian officers understand, as it behoves them, their military duty and that, working in silence, but with self-denial, for the uplift of the Army, they are following the good road of the most faithful and the most devoted service to the interests of the nation and of the State, I believe in the strength and the union of our National Army as well as in the brilliant future of our dear Country."

September 6.

The Ministerial Crisis.

Recent agitated activities in Ministerial circles came to a head yesterday when M. Liaptcheff, Prime Minister, who, it was obvious had not fully recovered from his indisposition, announced in the Sobranie his intention to hand in the resignation of the Cabinet to the King. His statement was to the effect that the necessity of filling the vacancy in the Ministry of Railways caused by the resignation of M. Gheorgieff some months ago afforded him an opportunity of giving full liberty to the Sovereign to enter into direct contact with the representatives of all political currents in the country. It has, however, long been an open secret that trouble in the Cabinet has arisen over the Macedonian question. General Volkoff is regarded by some of his colleagues as an obstacle to the taking of drastic measures by the Government against the Revolutionary Organisation. In a communication to the Liberal organ *Nezavisimost* the Minister of War repudiates the suggestion that, on the strength of the Anglo-French representations to the Bulgarian Government, he ought to withdraw from the Cabinet. He declares that the alleged pressure is a pure fabrication, and would, moreover, be highly damaging to the country. He adds that he and the Army have always done their duty and he challenges any Minister to quote a single instance when the Army has refused to render assistance asked of it. Any doubt on this points would destroy the moral of the Army. For this reason he had refused to resign, and he would con-

tinue to the bitter end, to protect the Bulgarian Army from the danger of party spirit.

The issue of the *Nezavisimost* was confiscated for publishing this statement, although it divulged little that was not common knowledge.

After leaving the Sobranye M. Liaptcheff repaired to the Palace, where he handed to King Boris the resignation of the Cabinet. His Majesty sent at once for M. Tzankoff as President of the Sobranye, and afterwards received M. Malinoff, leader of the Democrat Party. This morning audiences have been given to M. Kostourkoff, Secretary of the Radical Party, and M. Pastoukhoff, Socialist leader.

The difficulties of the situation may be inferred from the fact that 72 of the 172 members of the Democratic Entente have signed a declaration that they will remain in the Government majority only on condition that General Volkoff has a seat in the new Cabinet.

CYPRUS.

August 21.

The Proposed Loan.

There is much speculation as to what will be the gain to Cyprus should Sir Ronald Storrs succeed in carrying out his good intentions for a loan of £500,000, and other projects. Plenty of advice is offered by writers in the Press. While manifold needs are discussed, in their suggested order of importance, all agree in placing an increase of water supplies as unquestionably the foremost requirement, to which all others are subsidiary. Such, indeed, has rightly been the opinion of all authorities. Take, for instance, one of the many reports of experts who have visited, and dwelt on, island capabilities—those of Professor Wyndham Dunstan, who, a quarter of a century ago, came out to report on cotton-growing prospects. He found the industry decadent, and the methods primitive. "Given," he says, "an adequate supply of water, and improved cultivation this industry could be made the foundation of prosperity for the island." This relates to only one branch of agriculture. Other experts have similarly stated that by an increase of water supply not only could cereal productiveness be rapidly doubled, but also a vast field could be opened for the profitable sale of live-stock, fruits, vegetables; that, in fine, upon the solution of the irrigation problem depends the future prosperity of an island which lives by agriculture. If large sums are to be spent on roads and harbours, without such corresponding increase of wealth and productiveness, it will be throwing money into the sea, or building upon sand.

British Empire Forestry.

The Principal Forest Officer, Dr. A. H. Unwin, is having a year of strenuous activity. In addition to heavy office work, and a Blue Book report, he has had to deal with that of the Forest Committee of last year. To this has been added correspondence in connexion with the British Empire Forestry Conference, as a member of which Dr. Unwin is now on his way to Australia, by the Orient Liner Orama, as representative of Palestine and Cyprus. In May last he visited Palestine to inspect the forests and examine the important work that has been carried on there under the Mandate. While there he was able to ascend Mt. Hermon (Jebel esh Sheikh), 10,000 ft. He will be on duty leave from September 15 to November 28. During his absence, Mr. G. N. Sale, Assistant Conservator of Forests, will act for him.

Passport Irregularities.

It has been ascertained that frauds of various kinds have been occurring in connexion with the issue of passports and false certificates regarding British Nationality since November 1914, when Cyprus became a British Colony, and resident Cypriots became British subjects,

with certain exceptions. Cases of personation have occurred. In some cases Cypriots have personated relatives living in Egypt. The Police of Nicosia are busily engaged in hunting down offenders and are on the tracks of suspected persons. As there seem to be not a few, inquiries may be protracted. An official of the lower grade, who was employed in connexion with the issue of passports, has been dismissed.

Miscellaneous News.

The Legislative Council during its last sittings has considered various useful draft laws. Some of the more important have been reserved for next session. The Council has been prorogued *sine die*.

The gathering of olives has been proceeding and that of carobs (locust beans) has begun. The yield of the latter should be good, and prices are so far favourable.

Game is said to be plentiful. Under this head are included red-legged partridges, some francolins, hares, and, in a cold winter, woodcock, and some snipe.

TRANS-JORDAN.

Amman, August 25.

Parliament.

Preparations for the elections are in progress. Government departments have been asked to assist by lending as many of their officials as can be spared, and it is hoped that Parliament will be ready to begin its labours in November. There has been a good deal of talk of boycotting the elections, but it remains to be seen whether the attraction of an easily earned salary will not induce representatives to stand for the various constituencies. The total number of elected members will be 16, and the salary £180 a year.

Harvest.

Crops on the whole have been better than was at one time expected, but in certain districts, especially round Tafleeh and west of Madeba, they have been so bad that the Government revenue from this source has been practically nil. There is no doubt that a good deal of blame for this condition of affairs must fall on the farmers themselves. They know that the local grain is diseased and yet have not the initiative to co-operate in order to purchase fresh grain from abroad. The Government could certainly assist, and may experiment with a Moroccan grain that has apparently been sown with success in Palestine, where conditions are very similar.

The advent of another tobacco and cigarette factory, Karaman, Dik and Salty, of Haifa, which has opened a branch in Amman, will further strengthen the position of the cultivation of tobacco. The Sharabati company have certain areas under tobacco, and the newcomers will have to cultivate locally also, if they wish to compete for the cheap cut tobacco trade which represents at least two-thirds of Trans-Jordan's consumption. The Government are very wisely assisting the growing of tobacco by collecting no taxes for two years on the crops. A cheap local tobacco on the market is the best means of stopping the contraband trade from Syria, and it is said that 75 per cent. of this trade has been effectively killed since the opening last December of the first factory.

The grape harvest has been satisfactory. It does not seem to be realised that there is a good opening in this direction. The Trans-Jordan grape is superior to any other grown in Palestine or Syria, and yet growers are satisfied to sell their crops for neighbouring countries to make into wine. Wine, cognac and arac are made here, but for local consumption only. Here again the Government could assist by giving a rebate of the excise duty on exported wine, and there is little doubt that such an action would increase enormously the manufacture of wine and consequently extend the acreage under vines. In certain parts it is possible to go for miles through

vineyards, such as in the Ajlun district, but very little profit is made out of them. What is not bought by merchants from Palestine, or used for local wine, is made into raisins. These are of a golden colour and delicious flavour, but until the growers will combine, and also sort out their raisins, there is practically no chance of selling them in European markets. There is an opportunity in this direction for the outlay of a little capital for starting at Salt a factory for the sorting and packing of raisins, which should prove very profitable.

The Desert Mail.

The recovery of the mails captured by bandits near Rutbah Wells from a Nairn convoy was effected within 24 hours by the declaration of a blockade of the desert on the part of Syria, Iraq and Trans-Jordan. The mail intact and the car were returned to the spot where the attack had taken place, and it is said that the bandits have made themselves distinctly unpopular by their action.

Earthquake.

Two very distinct shocks were felt in Amman at 5.45 a.m. on Sunday, August 5. No damage was done to buildings, but some of the inhabitants were greatly alarmed. On the night of August 4 and 5 there was a violent eruption on an island north of Flores, East Indies, resulting in the destruction of several villages and great loss of life, and again on August 6 there were slight shocks in Armenia. It would be interesting to know whether there is any connection between these occurrences.

General News.

Lord Plumer's departure is very much regretted here. He understood thoroughly and appreciated Trans-Jordan's difficulties, and was always most sympathetic. His position was peculiar where the interests of Palestine and Trans-Jordan were not identical. He was High Commissioner for each separately, and at times a great deal of tact must have been necessary to conciliate the points of view of the two different Governments.

Prince Talal, eldest son of the Amir Abdullah, has been in Trans-Jordan at el Hammeh on leave before going to Sandhurst. Receptions in his honour were given by the Municipality, the Arab Legion and the Arab Club.

Khartoum, August 25.

Rains.

Though it is as yet too early to feel assured that the Sudan will have the average rains of a good year, they have given sufficient promise to send the Arabs to their work of cultivation. Unlike Egypt, the Sudan remains largely dependent on rainfall, although the usual visitor to the Sudan, whose experiences rarely reach beyond the railway journey from Port Sudan or Wadi Halfa, across the northern deserts to Khartoum, might well think of the Sudan as a rainless country.

Nuers.

The Sudan may have a rough geographical entity, but, like the term India, it embraces a multitude of races, and amongst the most backward of these are the Nuers (not to be confused with the Nubas) whose witch doctors still occasionally awake the old propensities to raid cattle and

to murder. A party of Nuers have recently raided villages of their old enemies the Dinkas, about 100 miles north of Bor and then attacked a small police outpost under a native non-commissioned officer, but here they were driven off with severe loss. Reinforcements, under a British officer have been dispatched to Nassu, but the raiders cannot be brought to book until after the rainy season. The present is a re-occurrence of the turbulence in which Major Fergusson lost his life earlier in the year.

A Sudan Pioneer.

Surprise is often expressed that British residents in the Sudan look so fit when home in England, but there are few who have had so long and arduous a connexion with the Sudan and yet have left it so fit as Mr. F. W. Beddison, Controller of Stores and Workshops, Public Works Department, Khartoum, who is now on leave in England pending his retirement from the Sudan Government Service. Mr. Beddison, then in the Seaforth, entered the Sudan with the expedition of 1898, and when he left at the end of July this year was the last Government Official still surviving in the Sudan who was present at the Battle of Omdurman. From 1902 to April 1907 Mr. Beddison was a War Office official at Khartoum, he then joined the newly formed Public Works Department. He might be said to have furthered the exploitation of mechanical transport in the Sudan, but that is only one direction to which his many-sided abilities have been turned to the advantage of the country which he has so long served.

Mr. Beddison has been a prominent Freemason and is at present District Grand Junior Warden. In the early days of Khartoum he was a member of the Cathedral Building Committee and was for many years the moving spirit of the old Khartoum Rifle Club. Many will miss the ever ready assistance, official and private, of his versatile genius, but somehow or other as one bade him goodbye one felt he will not pass into the mere twilight of pensionhood, but that we shall yet have something more of his energetic personality.

The "Mutiny" of 1924 Recalled.

The retirement of El Mirali Withers Bey on his return to the British Army after completing ten years' military service in the Sudan brings to mind the so-called mutiny at Khartoum of November 1924.

Almost immediately after the Armistice, Captain Bramwell H. Withers of the Loyal Regiment joined the Egyptian Army and after a fortnight with the XIIth Sudanese was transferred to the Camel Corps and given command of No. 5 Company at Wad Medani. Not content with official duties only, he started the Boy Scout movement there, which produced the first King's Scout of Africa (native) in Patrol Leader Sid Ahmed Abdulla, who won the King's Scout badge in 1920.

Captain Withers did a great deal of police work in connexion with the building of the Sennar Dam and in particular settled without bloodshed the trouble with the imported Yamani workmen, who were subsequently evacuated. It was his patrol which captured Mohamed Said the Fiki of Singa, one of those false prophets who rise up from time to time with dreams of leading the Sudan back to the bloodshed and anarchy which the Battle of Omdurman put an end to some thirty years ago.

After being on the Darfur Patrol during 1921-1922, Capt. Withers was promoted to Kaimakan and Command of the XI. Sudanese at Talodi in the Nuba Mountains, where certain isolated hills, originally defences against Egyptian and Arab oppression, have been nothing more than the refuge of raiders and turbulent elements during

the British occupation. According to many the XIth Sudanese was the finest battalion in the Egyptian Army, and they showed their mettle against the lawless hillmen of their own race, especially during the latter part of 1922. In January the battalion was moved to Omdurman, and such was its good name that it was especially brought in before the conclusion of battalion training at Kerreri for Lord Allenby's inspection. The Egyptian political propaganda of 1923-1924 had no effect on the rank and file of the battalion until it was split up for special duty and a renegade officer came to the battalion under a cloud for striking a man. It is now thought that besides this man and the other two or three native officers of the two platoons brought over from Omdurman to Khartoum there were probably no more than two N.C.O.s and three men who were disloyal or had any knowledge of treasonable intentions. Moreover, they were not Nubas like the rest of the battalion; but at a time of crisis, when the Egyptian troops at Khartoum North had refused orders to entrain immediately for Egypt, and the Sudan was rife with machinations of the disloyal partner to the Condominium, the British authorities were not to know that the men were merely the ignorant pawns of two or three discontented officers.

All the men of the battalion who were present at the demonstration, or whatever it might be called, were sent back to their hills in disgrace. With subsequent evacuation of the Egyptian troops from the Sudan the native units became the Sudan Defence Force and the proud XIth Battalion, ultimately reduced to company strength, became the No. 5 Company of the Camel Corps stationed at Dilling (No. 5 Company at Wad Medani having previously been disbanded). These men, however, again showed their pluck and loyalty in those fights occasioned by lawless raiders in the Nuba Mountains, and the only Military Medal of the Sudan Defence Force was won by Nafar Kotcha Burugi of this Company for gallantry in face of the enemy.

Withers Bey became second in command of the Camel Corps and O.C. Nuba troops. In 1926 he was transferred to the command of the Equatorial Battalion, and shortly afterwards was given his final command—that of the Western Arab Corps, with the rank of Miralai, in which he completes his ten years' service in the Sudan. He received the Order of the Nile (4th Class) in 1922 and the O.B.E. this year. In Captain Withers of the Loyal Regiment the Sudan loses a distinguished officer, but fortunately what the Sudan loses the British Army regains.

ABYSSINIA.

Addis Ababa, August 21.

The Italo-Albanian Treaty.

The negotiations between Italy and Abyssinia, which have been in progress for well over a year, reached a satisfactory issue in the signing on August 2 of a Treaty of Friendship between the two countries. This treaty,

which is made for a period of twenty years, provides for a state of peace and friendship between Italy and Abyssinia, and for the submission to arbitration of all disputes, incapable of solution in the ordinary way. There is, in addition, a clause whereby the provisions of Article 7 of the French Treaty of 1908 is expressly applied to Italians in Abyssinia. This Article of the French Treaty provides for the jurisdiction of the French Consul in disputes between his subjects, and for the hearing of cases between Abyssinia and French subjects by a Special Court, composed of an Abyssinian judge and the French Consul. This provision has in fact been followed as regards all foreigners protected by a Legation in Abyssinia, but the position of all except the French depended purely on custom. The present Treaty puts the position of Italian subjects on a legal basis and it is hoped that it will not be long before the position of British subjects (who constitute commercially the most important element in the foreign community), is regularised in a similar manner.

The Port of Assab.

Further negotiations between Italy and Abyssinia have also resulted in the signature of a contract, by which Italy leases to Abyssinia at a nominal rent for 130 years land at, or near, the present port of Assab, for the construction of an Abyssinian port. At the moment this contract has not been made public; but it is understood that a road will be constructed from Assab to Dessié (in Abyssinian territory) and possibly on to Addis Ababa. In the absence of certain information as to by whom this road will be constructed, it is difficult to predict the results of this agreement. It is stated that the road from Assab to the frontier will be built by Italy, and from the frontier onwards by Abyssinia. If this is so, it is not anticipated that there will be any practical results, for it is very unlikely that Abyssinia alone will build a serviceable road through waterless and desert country, at a considerable distance from the capital. If, however, the road is to be constructed all the way by Italy, or with Italian help the agreement may well have far reaching results, especially if the road is extended to Addis Ababa.

The exact site of the intended port is to be fixed on the spot by a commission. All goods destined for the Abyssinian Government will enter free of all dues not only at the port, but also on the road. It is, however, expressly stipulated that the whole contract is subject to the observance of all existing international agreements, and thus the contract will in no way affect the present position with regard to the importation of arms.

At the present time the only practicable entrance to Abyssinia is by railway to the capital via Jibouti, and any arrangement which opens an alternative route will be for the benefit of the community generally.

According to a Central News message from Rome King Zogu's coronation has been fixed to take place on November 28, the anniversary of the declaration of Albanian independence. The ceremony will be held at Kruja, the capital under the Skanderbeg régime.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 23.

The All-Parties Conference Report.

The comments on the All-Parties Conference Report have most of them come from your side. Speaking of it here, Sir Abdur Rahim, leader of the Muslim Party in the Bengal Legislative Council, said: "I wish to draw special attention to the international aspect of this question. The present status of India is that of a 'dependency' or a 'possession' of Britain, as if India was a huge farm or zemindary of 320,000,000 of people owned by 45,000,000 of men living thousands of miles across the sea. This is as discreditable to England as it is disgraceful to India. It is open to every nation of the world to benefit by India's resources, and all nations have their consulates here, while the doors of most countries are either barred to Indian nationals or open under the most humiliating conditions. India has no consulates of her own to promote her commercial interests anywhere."

That is a good point. A reflection that occurs to me is that, while Indian consulates throughout the world would mean an item of expenditure that now does not appear in the State Budget, the cost would no doubt be soon more than covered by the promotion of the well-being of India that would result. As much can be said for few of the items of expenditure with which the framers of constitutions would load the country. Sir Abdur Rahim passed to matters that would certainly mean greater State expenditure in more directions than one, but without a word as to how it would be covered. He said: "As regards the All-Parties Conference scheme for internal administration, its fundamental basis is adult franchise, so that no section of the people can raise any objection on the ground that it is not adequately represented. I have not had time to consider whether the scheme can be made practicable, but assuming that it can, I do not see how the representatives of any class or community can refuse to support it. If universal suffrage can be established and worked, I, for one, would say that there would be very little risk, if any risk at all, of communal majorities oppressing the minorities. For in that case real nationalism is bound to develop, and, speaking as a Muhammadan, nothing could be more congenial to the democratic ideal of Islam."

One's comment is, the word on the matter of finance having already been said, that what develop real nationalism are things nothing like as mechanical as universal suffrage. If one wants to consider how little good and what great evils might result in India from the establishment of universal suffrage, one has only to stand on the outskirts of some great crowd of mill workers, say, on the day of the Muharram, and look at it.

The Bengal Tenancy Act Amendment Bill.

The Bengal Legislative Council throughout this week, as during most of last week, has been engaged in considering the Bengal Tenancy Act Amendment Bill, clause by clause. That is to say, the Council has been making speeches, in almost every one of which occur words, the meanings of which are known in London only to such as retired Indian civilians and a few lawyers. Thus yesterday, because of the defeat of certain amendments dealing with *heba*, *waqf* and other dedications under Muhammadan law, all the Muhammadan members but two withdrew from the House. What are *heba* and *waqf* dedications? They at least are matters not suitable for this letter.

Bengal Irrigation.

One of the most interesting of recent debates in the Bengal Council had the irrigation policy of the Province for its subject. I have lying on my table the texts of the two lectures that Sir William Willcocks delivered during his recent stay in Calcutta. They are entitled, "Why is 'Cultivated Egypt Immune from Malarial Fever?' and "The Restoration of the Ancient Irrigation of Bengal."

They are documents of which more will be heard. They were, or their author was, referred to frequently in the course of the debate. Thus the Member in Charge of Irrigation is reported as having said: "Sir William Willcocks came to Bengal towards the end of January, and his lectures embodied suggestions which were the fruit of five weeks' study of some of the most complicated problems in river training in the world. Sir William's opinion on irrigation matters is entitled to respect, but it would betray a lack of proportion to consider his hastily formed impressions as anything more than mere suggestions. Sir William had not seen the Ganges in flood; he lightly proposed to put a dam across the Ganges at a cost of sixteen crores of rupees without having seen, much less studied, the river in flood." To say that Sir William Willcocks, after his years of labour in Egypt, has not seen every river in the world in flood in his mind's eye, where it is seen to much better purpose than in the physical eyes of a dull expert, is as childish a thing as could be said. I am no authority on irrigation, but I should be much inclined to back Sir William against the united voices of all the irrigation authorities in India. If, however, there is an excuse for their turning away their gaze from Sir William's proposals, in his having been in Bengal only a short time, let him be brought back; let him study the Ganges in flood. That would cost something, but if he and others to whom I have listened are right in saying that Bengal is poor largely because of malaria, and that Bengal could be cleansed of malaria as the Nile delta has been, and that the road to that cleansing is through a better and more nourishing diet for the peasantry, and that that depends on irrigation—if all that is so, then the cost of employing Sir William Willcocks for a term would soon be covered; it would be, and the sixteen crores for his Ganges dam besides.

Primary Education in Bengal.

Last mail day the Additional Inspector of Schools here gave a lecture on the primary education of the Province. A point he emphasised was that, unless the pupils are compelled to continue at school for a reasonable number of years, the additional crores that it is proposed to spend on the schools will all be wasted. According to Mr. Sen, 80 per cent. of the boys attending primary schools give up going to school after a year or two, forget the little they have learnt, and are soon illiterates again. "This," said Mr. Sen, "is the terrible waste in education." "The only remedy," the lecturer continued, "is to enforce compulsion to retain the boys for three or four years in primary schools." What good, one may ask, is schooling that lasts no longer? Things are desperately bad in matters educational in Bengal, which ought to be a sorrow to those who believe in educating the masses. I do not myself, but let that pass. I met a Bengali girl of seventeen yesterday, one of a group of families in Calcutta distinguished for capacity of all kinds. This girl spoke as good English as you would hear in any Oxford or Cambridge college, and better sense than most English men or women of twice or thrice her age. She is studying in a Calcutta college, intending later to go to Cambridge, and afterwards to be called to the Bar. She was telling me of her college life, and remarked: "How anyone is to teach most of the girls I do not know: they know no English and very little of anything else." She was right: I told her in my turn how I had once been examiner in English to the University, and what a set of duffers' papers I had had to deal with.

The Calcutta High Court on September 7 dismissed the appeal of Kazi Buzlar Rahman against his conviction on the charge of murdering Mr. G. H. W. Davies, District Magistrate at Chittagong, but a sentence of transportation for life was substituted for the death penalty in view of the mental history of the accused.

Mrs. Evangeline Lindbergh, mother of the aviator, has accepted an appointment as Visiting Professor of Chemistry at a women's college in Turkey. Mrs. Lindbergh sailed from New York on September 8 for Turkey, accompanied by Miss Alice Morrow, who will act as hostess at the college.

BOMBAY LETTER.*(From Our Own Correspondent.)**Bombay, August 25.***Bolshevik India.**

The papers recently have been constantly referring to the Communist leanings of some of our strike leaders. A certain section of the public—a very small and negligible section—has rejoiced at every new indication of the Communist "menace" and the Anglo-Indian has felt that the Government should have intervened long ago. As a prominent leader of that community has expressed it in a letter to the Press, the whole problem would be solved by arresting a few "Communists." In passing I might point out that it is exaggerating the importance of a handful of disgruntled young men to call them Communists. The arrest of a score of these "leaders" would only serve to make them more popular. Even if this could be justified, it is not the time for such repressive measures—it should have taken place a month after the strikes commenced or, better still, the same end could have been achieved by forbidding the agitators from going to affected areas. But now, when in a few days we shall see the workers throwing their leaders overboard, it would be sheer folly to resort to deportation and imprisonment. I have reason to believe that Government are contemplating a big coup and that most of the leaders will be compelled to bring their activities to a close, but I sincerely trust that Government will not repeat their mistake of 1921.

The Removal of Agitators.

Meanwhile a Bill to deal with Communist agents, called the Public Safety (Removal from India) Bill will be introduced by Government at the forthcoming session of the Assembly. The object of the Bill is to provide for power to remove those persons who are dispatched to the country for the purpose of forming organisations intended to promote and spread communistic doctrines and of creating disaffection among the masses. "It is not reasonable that these agents, the agents of Communism, if they happen to obtain an entrance into India, should be allowed to stay in India with the object of undermining the whole structure of the community. The Bill therefore is designed to provide for power to secure the removal of such persons, provided that they are not Indian British subjects or subjects of a State in India." The writer does not believe, all the same, that the Bill will go through the Assembly. A resolution passed by the R.I.M. Dock Workers' Union is important as an indication of the Indian attitude towards the persistent efforts of Communists to undermine the whole structure of the community. The resolution, which should go a long way to convince the Government that every worker is not a Communist in the making, runs as follows:—"This meeting of the R.I.M. Dock Workers' Union expresses its want of confidence and disgust at the conduct of Messrs. Jhabvala and Mirajkar, removes them from their office of Vice-president and General Secretary, as they have failed to do their duties to the Union and, moreover, have been publicly inciting the members of the Union to go on strike and become Bolsheviks."

A Boycott Meeting.

At a meeting in the Sir Cowasji Jehangir Hall on August 24, Dr. Besant, Mrs. Srinivas Iyengar and Mr. R. K. Shanmukham Chetty, who had returned from England that morning, addressed the assembly on the present situation in that country so far as India was concerned. The speakers were very pessimistic and held that there was no hope from that quarter. Sir Chimanlal Setalvad presided. Mrs. Besant who was the first speaker of the day, paid a tribute to the Bardoli peasants and said that, if Indians would only show the same spirit in asking for Swaraj, they could not be denied. Mr. Srinivas Iyengar, who received an ovation on rising to speak, said that the English were all Conservatives on one question and that

was India. He doubted the possibility of the Labour Party coming into power for some time to come and he said that, even if they did, there was no hope for India. He said that the various parties were at present not at all interested in India, but they were conducting their election campaigns. He emphasised that there was nothing in England which could be regarded as sympathetic towards Indian interests. He pointed out that there was no sincerity in English politicians. Mr. Shanmukham Chetty, once a prominent member of the Non-Brahmin Party in Madras and late Chief Whip for the Swaraj Party in the Madras Legislative Council, gave the sum and substance of his speech when he quoted the words of the poet, "Vain, vain my weary quest to find in other countries the solution which I can find in my own." The speaker declared that the chances of attaining Home Rule was as bright to-day as when Queen Victoria issued her Proclamation. Some of his impressions of England were not fit for public utterance. He said that he had sought high and low for that mythical person who, they were often told, had sympathies with the Indians—the average Englishman—but he was not able to find him. Like the other two speakers, he also stressed the fact that there was no hope in England. None of the three speakers seemed to look upon the Nehru Committee's Report with favour. There will most probably be a breach at the All-Parties Conference to be held at Lucknow on Tuesday.

The Chancellor's Farewell Address.

There was the usual large attendance at the annual convocation of the Bombay University last Tuesday when Sir Leslie Wilson delivered his farewell address as Chancellor. His speech was characterised from beginning to end by a cheerful optimism. It was a lay sermon on the dignity of labour. His Excellency suggested that a Chair of Modern History should be founded in the University and referred to the attempts at universal peace which are being made by World Powers. He pleaded for a wider outlook in life and said that it was the duty of the young students to "assist the progress of the country by disseminating among those less enlightened the most modern ideas about progress in sanitation and social reform and by helping to stamp out ignorance and superstition wherever you may meet them." Having got into his full stride, the Chancellor proceeded to his pet subject—division of labour, a subject on which he is never tired of dwelling. He advised his hearers, a good proportion of whom must have been married men and so unable to "enter life as upon a great adventure," not to look out for safe jobs with a pension at the end of them. The Chancellor proceeded to illustrate. "The Headmaster of one of the great Public Schools in England recently urged his boys to be prepared to start in any line of real work at the bottom of the ladder. A Public School-boy, he said, would make all the better railway director if he started his career by punching tickets. "And now it becomes my mournful task to wish you all goodbye and God-speed," concluded the retiring Chancellor. Sir Leslie Wilson has found himself most at home at prize distributions, annual gatherings and similar school and college functions. During the five years he has spent in this province the students have always felt that they had at the head of their University a man who was thoroughly imbued with the spirit of sympathy and understanding, who could never be guilty of the unpardonable sin of laughing at youthful aspirations. "Youth," says the Chancellor, "is nothing if not hot-headed and impatient," but he adds, "we would not have it otherwise."

In the Section of Anthropology of the British Association Conference held in Glasgow, Sir W. M. Flinders Petrie gave an account of excavation work carried out during the past two winters by the British School of Egypt on the site of Gerar, in Southern Palestine. Among the results achieved were the discovery of 11 granaries for the use of a Persian army of occupation, capable of holding enough to feed 35,000 men for two months, the latest of these dating about 457 B.C. Much gold was found dating about 1140 B.C., and the use of iron chariots, agricultural tools, and furniture by the year 1100 was confirmed. Remains of heavy iron ploughs and of furnaces in which iron was smelted and worked were unearthed. Work had been done also at Bethshelet.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE TROUBLES OF THE SUCCESSION STATES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I had no thought of playing the part of Ajax when I attempted last February courteously though warmly to cast some doubt as to the cogency of Mr. J. S. Barnes' reasoning on the accuracy of his facts on Hungary, Roumania, and Slovakia, nor of arousing others besides Mr. Barnes. Neither do I consider myself competent to hold the lists as protagonist of the *status quo* as opposed to the *status quo ante bellum*.

I think the readers of THE NEAR EAST AND INDIA will forgive my replying *in extenso* to Sir Graham Bower. But I did not "complain" of Hungarian propaganda nor did I "complain" that Czechoslovak officials would lose their posts. If Sir Graham Bower will re-read my letter (published February 16) he may yet appreciate the absurdity of a Slovak secession that would take the President of the Czechoslovak Republic and several members of his Cabinet besides many other Slovaks from their present duties. Fancy President Coolidge of the United States, accompanied by his Attorney-General, Mr. Sargent of Vermont, and thousands of other New Englanders seceding from the American Union. But Sir Graham Bower has so hopelessly garbled my statements that in despair I must trust the reader to do me justice.

I have enjoyed reading the temperate and courteous reply of the gentleman to whom I addressed my original remonstrance. While I may disagree with Mr. Barnes' views on democracy, I cited the political conditions in Hungary myself merely to show the lack of any attraction they might afford to Roumanians or Slovaks. I am also responsible for using the term "Dual Monarchy" to characterise the new State that Mr. Barnes apparently was creating. That State seemed to me to savour too much of the defunct Austro-Hungarian Monarchy of which Roumanians and Slovaks have had sad experience.

With Mr. Barnes' programme for a *rapprochement* between Roumania and Hungary, I am in substantial agreement, but with certain slight reservations unnecessary to specify here. I cannot, however, see that his conclusion is logically reached: "the two Powers would become practically one Power in the face of the world." But that is a matter of opinion, not necessarily controversial. Where I do differ with Mr. Barnes is in refusing to believe that this programme is possible of achievement until the great mass of the Hungarian people have the same freedom in choosing their rulers by such unrestricted suffrage as the people of the United States or of Great Britain have at the present time.

With Mr. Barnes' statements on Slovakia I must emphatically differ. The resentment of Slovaks at pre-War political conditions was voiced by Slovaks, and this resentment denounced by Magyars long before the War. The Slovak language was not respected (despite the Law of Nationalities) and the resentment was not confined to the aspects Mr. Barnes mentions. The religious bond between Slovaks and Magyars are vastly overrated. It is more ecclesiastical than simply religious. Not all Slovaks by any means are Roman Catholic, as many apparently think. There is a strong "liberal" element. Religious differences shrink as time goes on. They are to-day less important than in 1919.

A careful reading of my original letter to Mr. Barnes will not, I am persuaded, bear out all the interpretations made by Mr. Heathcote. My criticism of Lord Rothermere's mistakes as those of a journalist, not of a scholar who is a true student of history, applies directly to other problems than the Slovak. Again the present writer did not declare Mr. Barnes misinformed, but remonstrated at some of his statements (the greater part of which Mr.

Heathcote does not rise to defend) and asked certain questions on one particular topic, the Slovaks.

My understanding of Hungarian conditions since the War is surely not predicated on intimate first-hand knowledge such as Mr. Heathcote undoubtedly possesses. It rests partly upon Professor Oscar Jaszi, now well known in the United States, whose preface to "Revolution and Counter-Revolution in Hungary" might well be considered: "Only a thorough-going democratisation of Hungary, and loyal and intimate relations between this democratised Hungary and the new States, can create such an atmosphere in Central Europe as can cure the gravest evils of the present situation and clear the way for a democratic Confederation of all the small nations which are now tormented by the rigid dogma of national sovereignty." Professor Jaszi's books tells enough of conditions to prove the unpleasantness of the Hungarian atmosphere, for any save Magyars at any rate. But in view of the mass of information available from many other sources revealing the political and social atmosphere and conditions known to exist in Hungary to-day, it seemed to me quite proper to ask what attraction the Slovaks would find there? Certainly some German and Hungarian authorities would not paint a rosy picture.

Anyone who reads the protest of the Slovaks now living in the United States but originating from the territory of present Hungary (dated March 15, 1928, and published in the *Central European Observer* April 6, 1928, p. 205, and signed by the President and Secretary of the Society Matica) must wonder where Mr. Heathcote gets his information that the 300,000 (?) Slovaks still (1928) under Hungarian rule are so content as to encourage the Slovaks of Slovakia to rejoin them under that dominion. At Cleveland Mr. Louis Tarcay of the *Hungarian News* (a progressive Hungarian paper) repudiated the propaganda of the Kossuth delegation to America and the Rothermere programme, and declared the Hungarians in Czechoslovakia to be "well situated as regards political, economic and religious freedom." (See *C. E. O.* March 9, 1928, p. 144.) Again there could be no Czech coercion back of this demonstration.

Another protest against Magyar propaganda in the United States, a protest containing a bitter reference to Magyar oppression of Slovaks, Croats, Serbs, Roumanians, Russians, etc., is signed by the Slovak League of America, United Society Srbobran-Sloga, National Slovak Society, First Catholic Slovak Union, Croatian Fraternal Union, Local Roumanians, Slovak Gymnastic Union Sokol, Slavonic Progressive Beneficial Union, American Slovak Political League, Slovak Evangelical Union, Serb Federation Sloboda, Slovak Catholic Federation, and Slavonic Citizens League.

Perhaps I may be pardoned for saying that in the face of these demonstrations by Slovaks, Serbs, Croats, Roumanians, this constant reiteration of the assertion that the Slovaks and other subject nationalities of old Hungary were not oppressed, never thought themselves oppressed and are all ready to return to Magyar rule, lacks force. In view of these demonstrations, far beyond the control of Czechoslovak, Roumanian, or Serbian Governments, the negative arguments based on alleged but imperfectly proved abstentions of Slovaks from meetings of protest against Lord Rothermere and all his works seem rather weak. Any reader of THE NEAR EAST AND INDIA who has read the proceedings of the Popular Party of Slovakia meeting in convention with the Popular Party of Moravia and Bohemia, and together representing the Catholics of Czechoslovakia, will not accept purely negative abstentions.

The attack of Mr. Heathcote is centred upon my Slovak thesis. Here it should be noted that my remarks did not deny the existence of some friction between Czechs and Slovaks. My acquaintance with Slovakia may or may not be as great as that of Mr. Heathcote or of Mr. Barnes. It is slight indeed compared to that of others to whom I referred in my former communication, but no one would deny the existence of trouble there in the period

following the War and of some Czech responsibility for it.

Mr. Heathcote has cited as an example of a "true Slovak" Dr. F. Jehlicka. Very well. Let me first see what the Slovaks in America think of him. Here the amount of Czechoslovak governmental pressure could hardly be considered perceptible enough to vitiate the testimony of Slovaks. I have before me the *Resolution* of September 8, 1927, accepted by some two or three score Catholic priests, including editors of the principal Slovak papers, presidents of Slovak Leagues and Catholic Slovak Unions. Karol Strasmy of the *Obrana* (the paper cited by Mr. Heathcote) is here, among others. This resolution denounces Dr. F. Jehlicka and all his works, declaring him a traitor to Slovakia. This resolution was published in the *Obrana* October 4, 1927. I also have extracts from the *New Yorksky Dennik*, the same publication that published the diary of Dr. Jehlicka, a diary that the Slovaks in America consider sufficient to prove his dependence upon the Magyar propaganda office. They roundly denounce him and repudiate him as a Slovak representative. If Dr. Jehlicka is a fanatical lover of the Slovak nation, it is strange that the Slovaks in America, unrestrained as they are and yet in close touch with the Slovaks of Slovakia, are so overwhelmingly ungrateful. The true Slovaks, Hlinka included, have been duped by Dr. Jehlicka more than once, but I am assured by many of them that they never will be again.

I regret, therefore, that I cannot accept as representative the "Slovak" that Mr. Heathcote nominates. He is really a representative Slovak about as much as Louis Kossuth might be called such. At least, that is my understanding of Dr. Jehlicka, and I adhere to my previous statement:—"No Slovak that I know,"—I do not say nor did I say "no Slovak," though I hardly believe the latter phrase too sweeping—but what declines to accept Dr. Jehlicka as such. Many other documents that I have before me, printed protests from Slovak organizations in the United States, copies of American-Slovak newspapers, personal letters to me from various Slovaks, all support my stand. I venture too, to doubt if the economic situation in Slovakia is bad enough to make the Slovaks of Slovakia so differently minded from the Slovaks of America.

I notice that in *The Catholic Times* (April 13, 1928), Hlinka in his vigorous reply to Mr. Heathcote, in which reply he repudiates Lord Rothermere and all his works as well as any protection from a connexion with Hungary, uses similar language to that used by the undersigned last October, "No real Slovak—calls for reunion with Hungary." That picture of the Slovak nation turning back toward Hungary exists in the minds and inclinations of a few, but it is a mirage, not a fact, as the ready testimony of Slovaks on both sides of the ocean abundantly demonstrates.

It is, in fact, years too late to attempt any real defence of Magyar imperialism in Slovakia, Transylvania, Croatia, etc. Long ago we have had evidence enough out of the mouths of Magyar statesmen themselves. The facts thus established are among those that have crystallized sufficiently, so that attempts to "revise" them are both useless and wearisome. It can, therefore, be considered as definitely established that pre-War Hungary was not a country offering any appeal to Slovaks, Roumanian, Serb or Croat peasantry. Magyarized Slovaks, Roumanians, Serbs or Croats might flourish (a Kossuth like a Hunyadi) but not those who loved their own culture and national customs too much to be won over by the alien.

Now as to that wonderful decrease from Hlinka's party in favour of the Magyarophil Slovak party. The great mass of that vote actually appears to have swelled the total for the Agrarian party of Dr. Hodza, a party certainly not of the stripe of Jehlicka's group. Some twenty five thousand—not Slovaks exactly—did (in the towns which are not preponderantly Slovak) turn to the Christian Socialist Hungarians. Naturally, they would do so,

since Hlinka could not be counted upon to play the Magyar game, even unconsciously, any longer. The gain to Dr. Hodza's group was, of course, away from Hungary and not toward "reunion." Mr. Heathcote hardly proves that his statements of the Jehlicka strength are correct, and most significantly fails to show why the Agrarian vote rose so decidedly as the Hlinka vote fell.

As to the protests in Slovakia against the Rothermere programme, I am interested to note the inference from Mr. Heathcote's remarks under (3) that there were so many "Slovaks who had always belonged to Czech political parties." Needless to say that my information, all from Slovak (not Czech) sources, is rather opposed to that of Mr. Heathcote when it comes to the interest shown by the Slovaks against the Rothermeric ideas, but if he chooses to differ from my Slovak friends in his estimates, he has that privilege. But the rapprochement which Mr. Heathcote cautiously characterizes as being "projected" between the Hungarian Christian Socialists and the Slovak Populist Party is yet (according to the best Slovak information at my disposal) far too nebulous to be considered.

Slovakia is not so exploited by the Czechs as the pro-Magyars declare. Slovak ports, Slovak trade and Slovak industries in 1927, according to the figures now available, are steadily improving. Reports such as those quoted by my adversaries remind us of the calamity criers in the United States who periodically assure all and sundry that the farmers are going to the dogs. One may well hope that the farmers of Slovakia are discontented at this stage of its history; it is well, rather than the reverse, for the farmers of Czechoslovakia to be filled with ambitious discontent, but it will not take the turn the pro-Magyars desire it to take. Their legitimate desires should be satisfied, but it takes time. At the end of the first decade of American history, the United States seemed on even more uncertain ground than the new States of Europe to-day, partly owing to economic troubles and partly to differences of race and background among its people. In 1862, an English historian referred to the Disruption of the United States of America in the title of his book.

The futility of the geographical arguments for Austrian or Hungarian domination of the Danube Valley, is thus expressed recently, not by a Czechoslovak, but by an Englishman (H. W. V. Temperley, *How the Hungarian Frontiers were Drawn* in "Foreign Affairs," April, 1928).

One argument for revision which was foremost at an earlier stage seems less prominent now. It was urged in 1920 that the lopping of the various outlying parts of Old Hungary spelt economic ruin to the new State. This argument has not proved sound in fact. Lord Rothermere and his friends destroy their own case by arguing against the economic soundness of Hungary as it stands. The "economic viability" of the New Hungary seems to be proved by its superiority in credits, certainly as against Austria and perhaps as against the Successor States generally. This argument tells against frontier revision. If New Hungary, mutilated as she is, is sounder financially and economically than her mutilators, it is the latter who must be protected against further change. In point of fact the economic argument has been dropped by Hungarian propagandists for a very good reason. If economic arguments are to outweigh ethnic ones, the Arad-Szatmar strip should remain with Roumania. But it is the dearest object of Hungary to regain this area, and on ethnic grounds her claim is as good as it is bad economically. So the ethnic argument is at present the only one which Hungary can dare to use.

To this, add the following (from the *New Europe* for May 6, 1920, p. 89) by a student of Magyar economics, who unveils the "economic unity" of pre-War Hungary. The manufacturies were built at Budapest or in Magyar cities not where the raw materials were located. Industrial development would have meant political power. (See for example the growth of Czech power). To put factories in Ruthenia, Galicia, or Croatia was as foreign to the Magyar mind as it would be to a Frenchman advised to put his factories in the Ruhr or at Chemnitz. Now the Magyars have the factories and complain, because they can no longer work them by exploiting the resources of Slovakia, Transylvania, Croatia, etc. This then is the economic unity of the old Hungary.—I am, etc.,

ARTHUR I. ANDREWS.

The XVIIth Orientalist Congress—II.

The Government Luncheon.

On August 29 a Government luncheon was held in the Hall of Christ Church. The Chair was taken, in the unavoidable absence of Lord Birkenhead, by Sir William Sinclair Marris (Member of the Council of India). In submitting the toast of "Our Guests," the Chairman said:—

It was his privilege to bid them welcome on behalf of the Government of that country and to propose to them a toast which would express both the interest which his Majesty's Government took in the proceedings of that Congress, and their cordial appreciation of the contribution of other countries than their own to the vast fields of Oriental research. Lord Birkenhead (Secretary of State for India) desired him to convey to them his regret that he was unable to be present. Of all the great Departments of State, the India Office, by reason of its being responsible for a country which numbered its languages by dozens and its dialects by hundreds, was the one most closely associated with the matters which were the concern of the Congress, and it would have been a great pleasure for Lord Birkenhead if he had been able to welcome them personally. He (the Chairman) could not pretend to be an Oriental scholar, although that was doubtless an appalling confession to make after having spent many years in India. Such acquaintance as he had with any of the languages, art or philosophy of the East was just enough to warn him against drawing upon any such shallow resources in the presence of a gathering like that. One need not, however, be an Orientalist in order to appreciate the value of the Congress, the seventeenth assembly of its kind, which carried happily into effect in 1928 the decision taken at Athens in 1912—but hitherto frustrated by the War—that the next meeting should be held in Oxford. The field of Oriental learning was no man's peculiar prerogative; it was the common heritage of men of learning of whatever race. It was a branch of science which could not be exploited to enhance national dissensions. Workers in that field had a common purpose; they shared their gains; one man's success enriched and did not impoverish another; the work was international in the highest sense, and all the workers were co-workers in the great cause of national amity. How many agencies had combined in the task of recovering lost knowledge from Asiatic sources they knew far better than he did, and it would be idle for him to attempt anything like a comprehensive survey, but even a layman might venture to recall a few outstanding instances. To the ordinary man, Oriental research perhaps primarily suggested a deciphering of Cuneiform and of hieroglyphics and of Kharoshiti, that strange script used in the early years of the Christian Era from the Punjab to Turkestan. In all those works many nations had shared. In Assyriology a Dane paved the way, a German followed him, a Frenchman and a Norwegian went further, and an Englishman and an Irishman further still. In the field of Egyptology, Swedish, English, French and German names were pre-eminent, while English, Norwegian and Hungarian scholars shared the honours of Kharoshiti study. On those foundations scholars of both hemispheres had built up the knowledge which served to interpret the rich finds of recent years in Egypt, Mesopotamia, Persia and Turkestan, and had shown immense vistas in the antiquity of art and culture. Anyone like himself, whose life had been spent mainly in India, thought naturally of the achievements connected with that country, and he wished to refer to two of the most impressive of those. One was the monumental survey of Indian languages which had recently been brought to a successful completion by Sir George Grierson, and which had won him such well-deserved honour, and therewith it was right to recall the memory of a very distinguished young Italian scholar, who did most valuable research in Ranas-thani. The second event was the epoch-making explorations in Sind, and he felt it a pious duty to recall the name of a great administrator who did more than anyone else to stimulate interest in antiquarian research in India. To Lord Curzon was due the reorganisation and strengthening of the Archaeological Department and the systematic preservation of ancient monuments. Since his time the work had gone steadily forward, though exploration had always been hampered by lack of funds. The Government had sometimes been accused of parsimony, but as anyone knew who had been responsible for administering her resources, India was a poor country and had to think primarily of her day-to-day needs. But that interest in Oriental research had been genuinely aroused and was growing in India no one could doubt, and the crop of workers was spreading beyond the officials, and universities were showing interest. There was no doubt that the imagination of India had been deeply stirred by the discoveries at Mohenjo-Daro and Harappa, and by the concrete evidence of an ancient civilisation existing in India much further back than any previously known—all that was to the good. "Secular governments with many other responsibilities upon their hands," continued the speaker, "can do comparatively little to promote such researches directly. In the main, the work must always be done by the unofficial enthusiast, and this Congress affords abundant evidence of his vigour. May I quote as an example your own President, who, as a busy Treasury official, found the time to contribute valuable studies of Pali literature? None the less, I hope no one doubts that the Government of this country and the Government of India also are benevolently inclined towards the

labours of the non-official worker. Every administration that is worth the name must realise that the life of the people to-day is compacted of the past and that the more the past is examined and understood the better hope there is of coming to wise conclusions upon the problems of the present. But, perhaps, the value of the work goes deeper than this. The co-operation of workers, both from the West and East, in exploring that past which has given so much to the civilisations of both, surely makes for that better understanding of one another's minds and purpose, which is essential if the immense problems confronting the future of Asia are to be wisely and happily solved."

Professor C. Snouck Hurgronje, for the Government of the Netherlands, responding to the toast, said when he was informed that he was expected to reply to the toast of the Governments of the countries from which delegates had come to that Congress, his first feeling had been one of embarrassment, because he was a delegate of one of the smallest of those countries, whereas the countries who had sent delegates to that meeting represented the greater part of the civilised world. He had, however, taken encouragement from the thought that his country was not so small as one might suppose from the space it took up in the map of Europe. In the Far East there were more than 50 million people under the Dutch rule, but he could not imagine that that had been the reason for which he was chosen to represent so many diverse nations as were represented there. "No; the reason was a quality which I possess and which is generally considered as a defect," declared Professor Snouck Hurgronje, "namely, that I have passed the age of three-score years and ten, which the Psalmist gives as the normal space of human life." It was impossible for him to speak on behalf of every branch of learning represented in that hall, and therefore he trusted that they would permit him to take his point of view from the portion of study which was his own, namely, Islam. Muhammadan religious tradition was accustomed to divide human history into a number of parts, each of which stood under the auspices of a prophet. "All these prophets," continued the speaker, "are said to derive their force of revelation from a mysterious light—the light of prophecy, or, after the decease of the prophets, the light of Muhammad. If a prophet is dead, his light continues to shine, but in course of time his adherents are subject to a certain degree of languidness and confusion, which increases until a new prophet appears. Now, our international Orientalist Congress has had the same vicissitudes as human history according to Muhammadan tradition has had. We used to meet every third or fourth year, but after the sixteenth Congress in Athens the light by which we used to carry on our mutual discussions and co-operation in literary and other scientific undertakings grew dim and faded almost entirely away. Happily, this light has been rediscovered here in Oxford, where it must have been lying hidden for the last sixteen years, and the large attendance at this Congress defines more than anything the joy with which this discovery was hailed by Orientalists throughout the world." He was sure, therefore, that he voiced the sentiments of all on behalf of whom he was privileged to speak on that occasion when he expressed their sincere gratification at the welcome with which they had been received and their gratitude to the British Government for the hospitality it had extended to them.

Lord Chalmers also expressed the delegates' gratification at the pleasant hospitality which, he said, they had all enjoyed at the hands of the Government. To the members of the Organising Committee it had been a matter of peculiar satisfaction that the British Government should come forward to recognise by an act of official hospitality the high significance of the meeting of the Oriental Congress in Oxford. His Majesty's Government, always seeking to promote the growing sense of the community of nations by all means in its power, had been quick to testify by an official act to the unifying influences of a Congress of the world's Orientalists—a Congress animated by a single-hearted aspiration which knew no political boundaries to advance the frontiers of human knowledge for the common good of all mankind. Lord Chalmers then referred to Sir William Marris, who, he said, had had a distinguished career in the Indian Civil Service, in which he rose to be the Governor in succession of Assam and of the United Provinces; to-day he was a member of the Council of India. "Like all really busy men, from Cicero onwards," continued Lord Chalmers, "Sir William Marris has found time in the course of a strenuous career to seek solace in letters. A votary of the classics of Greece and Rome, Sir William has evinced his scholarly tastes, with a success which many here well know, by translating the *Odyssey* of Homer, the poems of Catullus and the *Odes* of Horace. May I venture to say that the *curiosa felicitas* of Horace has happily inspired the selection of Sir William Marris to preside here, in the Hall of his own College, at our luncheon to-day."

Assyriology and Kindred Subjects.

In his presidential address, on August 28, Professor S. H. Langdon said that recent discoveries in Sumer-Accad, Assyria, and Hittite lands had overwhelmed workers in cuneiform studies and completely revolutionised the study of ancient history, Semitic philology, and Biblical criticism. They had been extending the know-

ledge of the history of man not only back to its very origin, but right down to the Christian era. He claimed for Assyriology the title of "Queen of Modern Historical Research," and pointed to five special developments in its study:—

(1) The rapid rise of Hittite studies due to the German discoveries at Boghaz-keui;

(2) The rapid rise of Sumerology, its reduction to an exact grammatical science, and its great antiquity;

(3) The publication of historical and religious texts;

(4) The recovery of complete lists of dynasties from early and even pre-diluvian times down to the third century, which made Assyriology the safest guide in ancient chronology; and

(5) The astonishing discoveries in the Indus valley, which revealed a script having a connexion with Sumerian.

After the Chair had been vacated in favour of Professor Zimmern, of Leipzig, the Rev. Professor A. H. Sayce, *doyen* of Assyriologists, began the lectures with a most entertaining paper upon "The Heroic Age of Assyriology." He amusingly related how an article published by him in 1870 on "An Accadian Seal" in the *Journal of Philology* was mistaken for a misprint for a zoological paper upon Arcadia! At that time, of course, Accadian was supposed to be the name of what we now know as Sumerian. With Trübner, who published his "Assyrian Grammar for Comparative Purposes" in 1872, he enjoyed a friendship that lasted to the end of the German's life. Of George Smith, who worked at Mosul and died near Aleppo, Professor Sayce related the story of the complaint by Oppert that Smith never read anything except his own publications (which meant that he did not read what Oppert wrote). Smith's comment was: "There is only one way of becoming an Assyriologist, and that is to copy, copy, copy." Dr. Hincks the lecturer never saw, but received letters from him while still a school-boy.

With Edwin Norris, the lecturer carried on a long epistolary correspondence. Norris had a wonderful gift for languages, and his Memoir on the Third Language of the Achaemenian inscriptions which he termed "Scythic" was the foundation of all future works upon the subject. Norris's last letter was written to Professor Sayce.

Henry Rawlinson the lecturer knew well. He was of middle stature with a fine intelligent face and the manners of a man of the world. In later life he rather forsook cuneiform inscriptions for geography and politics, being convinced, like Dr. Birch of the British Museum, that Russia was a dangerous enemy to British rule in India.

With Layard Professor Sayce stayed at Therapia in 1879. He narrated the story of Layard's rise to fame. An uncle who was a coffee-planter in Ceylon asked the penurious young Layard to come to join him. Instead of proceeding to Ceylon by ship, however, the young Layard started to do so by land. By the time he had reached the other side of the Jordan, his funds were exhausted, and he was forced to travel on foot. He was captured by the *Badawin* and for six months was their slave. He escaped to Damascus, and there found a sympathetic British Consul. He then made his way on foot across Asia Minor to Constantinople, learning meanwhile the Turkish language. Soon afterwards, Sir Strafford de Redcliffe, then British Ambassador, recommended Layard as dragoman to Grace, who afterwards became his life-long friend. Again provided with funds for Ceylon, Layard started out once more; but this time got no further than Mosul. At Nineveh, Layard's gifts as a draughtsman resulted, through the advice of James Ferguson, the architect, in funds being collected which resulted eventually in the discovery of the palaces and monuments of the ancient Assyrian Kings. A propos of Layard's capacity as a draughtsman, Professor Sayce related the story of the qualification which Layard laid down for Military Consulships in Asia Minor. The one question which had to be answered in the affirmative by young applicants was: Can you draw?

Of Professor Haupt, who, just after he had taken his degree, and when he was giving lectures at Göttingen, was staying with Professor Sayce at Oxford, the lecturer asked how it was that he obtained leave of absence. "Nothing was easier," came the answer; "I advertised a series of lectures on Sumerian Grammar at 6 o'clock in the morning, and of course nobody came."

François Lenormant the lecturer spoke of with affection and admiration. This man, who, unlike Haupt, really belonged to the Heroic Age of Assyriology, died as a result of a wound received during the siege of Paris.

The lecturer first met Hommel, who, with Schrader and Delitsch, was the founder of Assyriology in Germany, at the Oriental Congress in Florence in 1878. Finally, he mentioned W. R. Cooper, who with the help of Dr. Birch established the Society of Biblical Archaeology in 1874. It was necessary, said Birch, to have the word "Biblical" to get as many subscriptions as possible. But in 1874-5 the Heroic Age of Assyriology was just passing away. Yet the more Professor Sayce looked back at the publications of men like Rawlinson, Hincks and Norris, the more he realised that there were "giants in those days."

Professor E. Chiera, of the American Oriental Society, then lectured upon "Excavations at Nuzi, near Kirkuk." He said that the joint expedition of the Iraq Museum and the American School of Oriental Research discovered a large house, which had apparently been built by a wealthy Babylonian, and had been burnt by Assyrian invaders. The fact that the walls had melted in the intense heat led to the conclusion that the rooms must have been heavily furnished: there must have been a large amount of wood to produce such a temperature. The clay roof was flat, and the water would flow down pipes inside the walls. There was no second story, and the thick walls had no windows. The door revolved over a door socket. A number of tablets found on the site had proved to be archives of the household. Every householder needed full documentation to ensure himself against future losses.

Next came papers by Dr. A. E. Speiser, of the University of Pennsylvania, on the important tablets recently discovered at Kirkuk, followed by two papers, in German, on philological subjects—"Der Geist der sumerischen Sprachen," by Professor V. Christian, and "Die Probleme der sumerischen Verbalpräfixe," by the Very Rev. A. Deimel.

On August 29, Professor S. H. Langdon, with Dr. Sayce in the Chair, gave an illustrated lecture upon "The Excavation of Jemdet Nasr, by the Oxford-Field Museum expedition; the pictographic inscriptions, pottery, seals,

Calcutta, Delhi, Simla, Lahore, Rawal
Pindi and Murree

and architecture." This lecture contained bold generalisations. Professor Langdon maintained that there was a continuous civilisation from the Indus, across Baluchistan and Persia to the rivers of Mesopotamia. One striking speculation which he threw out was that the people of about 4000 B.C. of whom he was talking first adopted monotheism, and that they afterwards declined into polytheism.

The following night a very large number of delegates and members crowded to hear Mr. C. L. Woolley's illustrated lecture upon "Excavations at Ur, 1927-28." The work of excavation at Ur of the Chaldees has been in progress now for six years. The lecturer described the discovery of evidence of elaborate rites of human sacrifice. Round the chamber of the King were bodies that had obviously been sacrificed at the King's burial. They included soldiers lying on guard in the tomb and women wearing elaborate headdresses. There were also oxen harnessed three abreast and little bulls as mascots. The Queen's draughtboard was found with seven black and seven white men, counters for paying forfeits, and dice which were thrown to determine the next move. The upper part of the Queen's body was decked with beads, and by her side was a golden pot of face paint. Mr. Woolley claimed that the date of the tomb was 3500 B.C.

Egypt and Africa.

On August 28, with Monsieur J. Capart in the Chair, Dr. A. E. Buck gave a preliminary account of the "Coffin Text Enterprise undertaken by the Oriental Institute of Chicago." He said that the undertaking started in 1923 at Cairo. The texts were photographed, connotated and tabulated. There were a great many in the British Museum, Turin Museum and the Louvre. Four hundred had been collected, and it was hoped that the work would be completed in two years. It was hoped to make translations of them which would prove of great value in many lines of research.

Professor J. J. Hess, of the University of Zürich, spoke on "Die Lage von Pwn-t (Pwane-t)" or "The Situation of Punt." He said that the Somaliland theory was no longer tenable. On Greek evidence the pronunciation of the word must be Pwn-t and not "Pawnet." This district on the west coast of Southern Arabia was identical with the Oppa of the Hebrews. The place might have been on both sides of the Red Sea, for he had seen identical tribes on both sides.

Professor G. Roeder lectured on "Die Wachsmodele zu ägyptischen Bronzefiguren," and showed numerous lantern slides illustrating the ancient use of wax models.

At night, Mr. C. M. Firth lectured upon "The Architecture of the Third Dynasty of Saqqara." He gave a short account of the work of the Department of Antiquities of the Egyptian Government at Saqqara during the last three years on the site surrounding the Step Pyramid and the Tomb of Zoser, third or fourth Pharaoh of the third Dynasty. He pointed out that Zoser and his more celebrated Vizier Imhotep might be called the inaugurators of a new era in Egypt as the first builders in stone. Mr. Firth gave a description of the progress of the work, and the discovery of the beautiful façades with four fluted columns of the tombs of two princesses, so reminiscent of Greek work that at first he took the building for a Saïte or Ptolemaic restoration till its genuine antiquity was confirmed by the translation by Mr. Battiscombe Gunn of the graffiti on its inner walls, the earliest of which go back to the New Kingdom and record the visit of scribes and officials to whom the building was as already old as the Colosseum at Rome is to ourselves.

The fluted columns were mere architectural embellishments, and if they do not imitate some plant form with a fluted stem, must copy the appearance of a bundle of reeds split down the middle and bound together by a fillet. Whether the Greeks borrowed the fluted shafts of these buildings is a matter of conjecture.

The statue of the King found *in situ* in the *serdab* is perhaps the earliest case of a royal statue being so found.

On the south-east corner of the Pyramid are the

remains of the temple erected for the *Hebsed*, the festival marking the complete 30 years of the King's reign, an extraordinary building consisting of a courtyard 300 feet long with a row of chapels on each long side. In the Vth and VIth Dynasty this and the pavilion behind it were used as an office of works, and the remains of rolls of papyri in beautiful hieratic script, the débris of the office, were discovered. With the exception of one curious papyrus recording the complaints of an Egyptian military officer, which was deliciously modern in style, these have all perished.

The paper was illustrated by a number of excellent slides, including some interesting ones from the air which showed the progress and position of the excavations and one in colour of a beautiful doorway of limestone bearing the names of Zoser, and decorated with blue tiles representing reed work bound with strings. The lintel of the relieving arch of the door is supported by "dedu" signs represented by bunches of reeds and rushes tied at the neck, and into the neck of each other sheaves have been pushed to form the solid capital.

Before the completion of the work, which is already in sight, Mr. Firth hopes to discover the tomb of Imhotep, the great Vizier himself, a man whom the Egyptians regarded throughout all their history as their greatest genius. His portrait will appear on the badge and stamp to be issued on the occasion of the Medical Congress to be held in Egypt next winter. It would be a happy coincidence if his tomb could be discovered, for he was an even greater man than the Pharaoh he served.

The following day, Professor H. J. V. Breasted gave a paper on "The Edwin Smith Surgical Papyrus and the Relations of Egyptian to Early Greek Medicine." He said that the papyrus was the oldest known surgical treatise, and was written between 3,000 and 2,500 B.C. It contained forty-eight surgical cases, of which the first and last were not complete. They began with the head and proceeded down as far as the thorax and the spinal column. Among the illustrations was one showing a Greek surgeon of the third century in the act of reducing a dislocated mandible, and the hands were, in exactly the same position as in the ancient Egyptian treatise. Historians of medicine seemed to have overlooked the fact that Darius sent one of his Egyptian officials from his Court in Asia to Egypt to restore the school of medicine at Sais in the Delta. This was the oldest State establishment for the teaching of medicine known to the history of science.

Central and Northern Asia.

Professor A. Foucher gave two eloquent lectures in the the Central Asia Section, on "Balkh," and "Les dernières recherches archéologiques en Afghanistan." Of Balkh and its wonderful legends, which had deceived the whole world, Professor Foucher said that there was now not a trace. All, absolutely all, had gone, owing to the work of Chingiz Khan and his hordes.

Other lectures in this section included one by Professor E. J. Rapson on "Kharosthi Inscriptions discovered by Sir Aurel Stein in Chinese Turkestan," and one by the President of the Section, Professor F. W. Thomas, on "Some Languages and Documents from Chinese Turkestan."

[Reference will be made to the Iran, Armenian and Caucasus group Papers, and reports of lectures to the Hebrew and Aramaic and Islamic Sections will be given in subsequent issues.]

TRADE DISPUTES IN INDIA.

(From a Correspondent.)

The Trade Disputes Bill, which is now before the Indian Legislative Assembly, is the outcome of a discussion which has been in progress for eight years. India's industrial unrest developed with quite alarming rapidity after the War; and in 1920 the Government of India, seeing that strikes were still on the increase, asked the local Governments for their views on the question of whether all-India legislation should not be attempted. They mentioned the English Industrial Courts Act of 1919, although they were themselves disposed to think that legislation on English lines was unlikely to be effective in India either in preventing strikes, or in securing their early settlement. With this expression of opinion most of the local Governments agreed after consideration; and the idea of promoting all-India legislation was accordingly dropped for the time being. But the Government of India set about collecting information concerning legislation in force in other countries; and they also instituted a statistical survey of the strikes occurring in India. These continued to break out, several of the more protracted of them occurring in public utility services. The public naturally asked that something should be done, and a demand arose for a reference of the points at issue to arbitration. Meanwhile the two leading industrial provinces—Bengal and Bombay—took action on their own account. In March 1921 the Bengal Government appointed a Committee which in its report emphasised the value of Works Committees, and favoured the appointment of Conciliation Courts to deal with disputes in public utility services. It also suggested the appointment of a panel from which the local Government might draw when constituting a Court to enquire into any dispute. The Government of Bombay, after considering the report of a Committee appointed by them in November 1921, recommended the statutory establishment of industrial courts of enquiry and conciliation.

The Government of India then went into the question again, and at the end of August 1924 they made a second reference to the local Governments. On this occasion they put their ideas into the form of a Bill, as they had come to the conclusion that the time was ripe for legislation of some kind. The proposals embodied in the Bill were provisional only, and criticism upon them was invited. In its main features the Bill largely followed Part II of the English Industrial Courts Act of 1919, its general principle being that the Government should be empowered, on the occurrence of a strike, or when one was apprehended, to refer the matter in dispute to a Board. But the proposals went rather beyond those of the English Act, in that they definitely imposed on the Board the duty not merely of investigating a dispute, but of trying to bring about a settlement of it. At the same time the Bill did not provide for compulsory arbitration. Its object was to place the Government in a position to offer to the parties involved in a dispute the services of an impartial tribunal to help them in coming to a just settlement of their respective claims. The Bill covered all workmen, but it distinguished between the general body of employees, and the employees of public utility services. In the case of public utility services it provided that it would be unlawful for any employer to declare or to enforce a lock-out, or for any workman to take part in a strike on account of any dispute unless due notice of the proposed lock-out, or strike, should have been previously sent to the prescribed officer. The intention was to ensure that, before the actual occurrence of the strike, the dispute might be referred to a Board appointed under the Act. If an order were made so to refer the dispute then the strike would not be permissible until the expiry of ninety days from the date of the notice. If no order were made for the reference of the dispute to a Board then the period would be thirty days. Any person contravening these provisions was to be liable to punishment by fine—

in the case of a workman Rs.25, and in the case of an employer Rs.2,000.

Objection was taken to the Bill on the ground that for it to be of any practical use it would be necessary for there to be in existence properly organised trade unions with leaders strong enough to induce the parties to accept the findings of the Board of Investigation and Conciliation. For the Board would be unable to do more than to endeavour to induce the parties to come to an amicable settlement. If no such settlement were reached, then the Board would merely report to the authority by which it was constituted and there the matter would end. The Government hoped that reliance might be placed upon public opinion to enforce the decisions of the Board. But public opinion in India is not a compelling force, a fact which was recognised by the critics of the Bill. It was apprehended also that the provisions regarding public utility services would prove to be ineffective in practice. For it was considered to be extremely doubtful if such compulsion as was contemplated would be of any use. If at the end of the period of ninety days—the time allowed to the Board—they should have failed to settle the dispute the position would be more unsatisfactory than ever. The Bill was not proceeded with by the Government of India, the Viceroy announcing at the annual meeting of the Associated Chambers of Commerce in December 1925, that the question had been thoroughly explored but that it would be premature to legislate until the Trade Unions Bill had become law.

The new Bill, which has been framed since the Trade Unions Act of 1926 was passed, and which is now under discussion, deals in a different fashion with strikes in public utility services. It provides that any person who is employed on monthly wages in such service, and who withdraws from his duties without permission, or without having given one month's previous notice in writing, shall be punishable with imprisonment which may extend to one month, or to a fine which may extend to Rs.50 or to both. Further, the Bill provides that any person who abets the commission of this offence may be punished with three months' imprisonment or with a fine of Rs.500 or both. These provisions are much more drastic than those which were included in the 1924 Bill, and which are outlined above. They suggest that recent happenings in public services in India have led the Government to modify the opinion expressed in that year. This was that it would be unwise and probably impracticable to attempt to prohibit stoppages of work in such services. It was pointed out at the time that such stoppages without due notice ought to be stringently dealt with, and that effectual penalties should be enforced at whatever cost.

For the settlement of ordinary industrial disputes the new Bill contemplates the establishment of two different types of tribunals for investigation and settlement named Courts of Enquiry and Boards of Conciliation. When a dispute exists or is apprehended the Government may refer any matters connected with it, or relevant to it, to a court of enquiry. Or they may refer the dispute to a Board of Conciliation. The Court of Enquiry will, publicly or privately, enquire into the matters referred to it, and will report to the appointing authority. The Board of Conciliation will endeavour to bring about a settlement of the dispute and it will accordingly investigate all matters affecting the merits of the case, and will try to induce the parties to come to a fair and amicable settlement. Each enquiry or investigation will be treated as a judicial proceeding. A Court of Enquiry will consist of a Chairman and such other persons as the appointing authority may think fit. A Board of Conciliation will consist of a Chairman, and two or four members, or it may, if the appointing authority thinks fit, consist of one independent person. When a Board consists of more than one person the Chairman is to be an independent person, and the other members shall be either independent persons or persons appointed in equal numbers to represent the parties to the dispute. All such persons are to be appointed on the recommendation of the parties concerned.

THE WEEK AT HOME

London, Tuesday Morning.

Cabinet Rumours.

Idle tongues have recently been wagging—there being little else to talk about in these days—upon the possibility of changes in the Cabinet. Officially, no changes are contemplated by the Conservative Party; but since there have in the past been similar unannounced changes in Cabinets, it may be well to record that the most persistent rumours surround the ultimate disappearance of Sir Austen Chamberlain and of Lord Birkenhead. It is being said that Sir Austen's ill-health inhibits his ever returning to the Foreign Office (and also that, in that event, Lord Cushendun, who is now acting for him, would be scarcely suitable), and that Lord Birkenhead has definitely decided to abandon politics for something more lucrative. It has, of course, been on everybody's lips for some months past that Lord Birkenhead intended to leave the India Office for the offices of the Berry brothers, the newspaper "magnates"; but this forecast is now being combined with one that concerns his entering the very lucrative world of insurance. Possibly the versatility of "F. E. Smith" might be equal to the calls of both journalism and of in-might be equal to the calls of both journalism and insurance.

One thing apparently is certain: that Mr. Baldwin will try his hardest to preserve his Cabinet intact until the General Election. After that he may have to refashion it; but there are those who think that he will be spared that trouble. For myself, I think that the job may cause him considerable difficulty, unless, as the "propaganda-mongers" now are saying, he fills his Cabinet with the younger men of the Conservative Party.

Peace in Industry.

It is perhaps unfortunate that the great debate at the Trade Union Congress on the "Mond" conference of employers and employed should have taken place during the holiday season, when few people are inclined to serious reading, for a step highly significant for the future of industry was then taken. The result in brief of this debate is that the Trade Union movement as a whole is in favour, *pace* Mr. Cook, of continuing discussions with the employers. In other words, the majority of Trade Unionists are in favour of now co-operating with the capitalists in order, presumably, that they may later socialise "Capitalism." This policy was anathema to Mr. Cook, who believes that co-operation signifies surrender. It is, one supposes, just the difference between those who believe that change should and must come gradually and those who believe that it should and must come suddenly.

At present in the industrial world, as in the international world, the air is full of talk of peace. The ravages of war have been so disastrous that present collaboration is the only conceivable policy, in the eyes of most people.

New Buses for London.

I do not know that the solid-tyred omnibus in London has ever greatly troubled the passenger, but the London General Omnibus Company is resolved to put an end to the solid tyres. A short time ago, it may be recalled, the Company experimented with six-wheeled, pneumatic-tyred, double-decked omnibuses, and one rather thought, when this experiment failed, that the last had been heard of the pneumatic tyre.

Now, however, a four-wheeled bus has been made, fitted with large pneumatic tyres (single on the front wheels and double on the rear) which is gradually to oust all the old solid-tyred buses. Before the end of this year 75 of these new buses will be put on the streets. The existing vehicles are to be mounted, a hundred at a time, on pneumatic tyres, but in time the whole of the Company's 5,000 buses will be of the new type, which, by the way, are to hold 24 people on the main deck, and 26 people on the upper deck.

A practical reason of this change is to be found in this

year's Budget. It is therein proposed to remit 20 per cent. of taxation on all public-service vehicles seating more than eight persons provided that these vehicles are fitted entirely with pneumatic tyres.

The Passing of Park Lane.

"They're turning Park Lane into flats," as Ella Shields, in those dear, dead days beyond recall, used to sing. Realisation of the sung prophecy is, however, even worse than was expected; for there are to be shops in Park Lane, which is to become a sort of superior Oxford Street. The financiers have decreed that Park Lane shall be linked up with Bond Street by shops running the entire length of Grosvenor Street: thus Grosvenor Square will be just such a centre of business as Hanover Square now is.

It is true, of course, that the tendency of big business is to move westwards; big shipping companies, insurance companies, banks, are all coming from the City to the West End, and Gamage's, of Holborn, are about to build a great store on the site of Hereford Gardens, in Oxford Street, near Marble Arch. But for the old Park Lane to be turned—even if only on the ground floor—into shops, does seem to the Londoner very like sacrilege. Of course it was aristocratic, and those who believe in the greatest possible happiness for the greatest possible number may rejoice that, owing to the flats that are to be let in Park Lane, many instead of the previous few will be able to enjoy the large views over the Park. But do people in flats very often care about views? And where in London may we find compensation for the loss of the little houses with the swelling fronts which have in the past made Park Lane to seem a place of jolly and intimate rather than forbidding appeal?

The Music-Hall.

One of the most heartening signs of our social life was manifest last week, when the Palladium, after following the primrose path of dalliance in the form of the cinema and of melodrama, returned to the variety form of entertainment, with many turns and comedians. If this were a sign that London had had too much of films and revues, one could really believe in a return to sanity and appreciation of individuality. But it is, unfortunately, far too soon to talk of the decline of the film and of the revue.

Still, a return to good sense is most heartily to be welcomed. When the world of entertainment is agog with the possibility of "talkies," as those films which combine entertainment for the eye with entertainment for the ear are typically entitled, it is splendid to find the old competitor popping up once more, with renewed vigour. For it is said that hundreds were turned away from the Palladium: and the sight of people "struggling to be free" is always heartening to the sentimental Englishman.

Barnet Fair.

Further proof of the deep roots which fix our national customs to the past was given last week at Barnet, where the Annual Fair—it is both a Horse and a Pleasure Fair—attracted men from all over the British Isles. Ponies were sent from Ireland, Wales, and the Shetlands—much as they have been sent ever since Ireland, Wales and Scotland realised that profit could be made out of England. Actually, the Charter for the Fair was granted by Henry II., but one can hardly think that the number of non-Englishmen present in those early days was as great as it is now. Possibly, however, the number of real gipsies was even greater.

On the whole the tendency at Fairs is, as in other business, for the small man to disappear. People join together for safety; often, indeed, "owners" of cocoa-nuts, darts, roundabouts, and so on, are only agents for some big firm. But there still exists infinite scope for individuality. That is the charm of these Fairs: you may meet types of men and women, modes of speech and dialects that could be collected hardly anywhere else in these islands. It is all a wonderful mixture, this smell of whelks and traction-engines and "rock" sweets and unwashed humanity!

ALTER EGO.

Book Review

NEPAL.

"**THE GURKHAS.**" By Major W. Brook Kerley and Capt. C. J. Norris (The Bodley Head. Illustrated, 18s. net.)

Few realize how utterly unknown the Himalayan State of Nepal is to the outside world, or how very difficult it is to collect any general information about it. Its means of communication are few and very arduous, so that an inhabitant of one part of the State has probably never seen most other parts nor has he any knowledge of them. The outsider who would make it his business to explore and enquire is rigidly kept out. Nepal is not, as many suppose, on all fours with what we call the "Native States" of India. It is an independent sovereignty, and the representative of the Government of India who is permitted to reside in a very circumscribed area at the Headquarters of the Nepal Government is, in reality, a sort of ambassador, like his Nepalese opposite number with the Government of India. Greatly favoured are the few great ones who are invited to join in the famous tiger shoots in the Nepal Tarai, close to the British frontier, and still fewer are the lucky ones (even Lord Curzon was not one of them) who are permitted to visit, escorted and along the main road and track only, the sacred valley of Nepal, where the capital city of Khatmandu is situated. When there it is not much that they are allowed to see. And it is only the very few who manage to secure permission to visit any other part of the country, nor can even they go alone or pass the prescribed limits which never extend more than a few miles beyond the Frontier.

This being so, it is not to be wondered at that we have hitherto known very little of Nepal, its inhabitants, their origins, customs and beliefs. What we do know so far is owing to Brian Hodgson, but even that is hardly satisfying, and he died long ago. Clearly the only way to set about remedying this state of affairs was to make careful enquiries from those most likely to know the facts. Such persons are readily available in the soldiers of our splendid Gurkha regiments, who are recruited from various parts of the State. Agents for making such enquiries are to hand in the shape of the British officers of these regiments whose relations with their beloved Gurkha brothers are extraordinarily close. No one, however, who had not the power of inspiring confidence, who had not drawn up a careful programme of his enquiries, and who had not the gift of endless patience both in questioning and in carefully checking his results could have written this book, no matter how much his attachment to his men and vicariously to their country inspired him. He could, of course, supplement and check his notes from the writings of others, specially of Brian Hodgson, and great would be his fortune, if he were able to add personal observation in different parts of the State, no matter how restricted his visits may have been.

These are precisely the qualities which the two authors of this book possess. The preparation of this book must

have entailed very hard and very exacting labour, but the result is a work of real usefulness and one which has long been badly wanted. Major Northey and Captain Morris are heartily to be congratulated on the completion of their labour of love, and we can now only hope that, as edition follows edition, each may be a still further improvement on the last. We have not space to enter into details, but hope that we may be able to give some slight indications of some of the directions in which this could be achieved.

The past history of the State is, of course, only outlined. If the outline is often blurred, the authors are not to blame. They have had to piece together as they could from a mass of legends, many of them contradictory. The main facts, however, do stand out. Modern history is given in much more detail, and here we miss any explanation or discussion of the curious custom which deprives the King of all temporal power and hands it over to the Prime Minister, in much the same way as we find in the neighbouring State of Sikkim. Perhaps the most effective historical narrative in the book is the chapter dealing with Nepal's share in the Great War. Simply, even badly, the facts are set down, but what they disclose is almost incredible. It would take the pen of Sir Thomas Mallory to treat it in any other way, for it is startling, if comforting, to learn that the old spirit of chivalry still survives, as indeed we were to learn that it still survived also in many of the Indian Native States. But here the material and human resources were comparatively small and the performance approached the impossible.

The physical nature of the country is described with what detail is practicable. But the most valuable part of the book is that which deals with the various tribes constituting its population. The varying admixture of Mongolian blood with that of various Indian tribes renders the task of sifting the legends of their origins very hard and in many cases, the matter has to be left in doubt. The authors have tried to give an account, in the case of each main tribe, of its chief social practices and religious ceremonies. This must have entailed much hard work and is particularly interesting. The admixture of Hindu and Lamaistic-Buddhist beliefs is very curious. Here and there, however, there is a lack of clarity, and now and then the workers seem to have grown weary and to have nodded. For instance this sort of thing stands out badly in the midst of records of permanent scientific interest:—"One more caste (*sic*) inhabiting Eastern Nepal remains to be mentioned. This is the Thami. Only about three to four thousand in number, they live chiefly on the banks of the Sunkosi and Tamburkosi rivers. Coarse in appearance, and the inferior of the other races in social and religious matters, they do not merit further description." We would suggest that, in preparation for a second edition, the authors should seek the advice of experts in ethnology and folk-lore with a view to weak points being strengthened. With expert guidance as to what is wanted, we have no doubt but that the authors will be able to supply it. The difficult question of tribal languages and dialects must, for full examination, await the opening up of the country to students.

We have only to add that the value of this excellent work is greatly enhanced by the unusually good and interesting illustrations which are included in it.

September 13, 1928 (New Style).

August 31, 1928 (Old Style).

Rabia I, 27, 1347 A.H., of the Muslim Calendar.

Ellul 28, 5688, of the Jewish Calendar.

The Hon. Donald and Mrs. Erskine left England on September 12 for India.

The Hon. Lady (Stanley) Jackson has arrived at the Hyde Park Hotel, from India.

Dr. Martin, of Addis Ababa, has arrived in England, where he will stay for the next few weeks.

Field-Marshal Viscount Allenby and Viscountess Allenby return to-day to 24, Wetherby Gardens from Scotland.

Princess Cecile of Greece left London on September 10 for Balmoral Castle on a visit to the King and Queen.

The Hon. Henry and Mrs. Mond returned to 45, Green Street on September 10 from a cruise round the Greek Archipelago.

The Bishop of Madras, who is returning to his diocese, left London on September 7 in the British India Company's liner *Mulbera*.

Sir Jagadis and Lady Bose were among the passengers leaving Marseilles on September 7 in the P. and O. liner *Kaisar-i-Hind* for India.

Lady (Clement) Hindley left London on September 6 by the P. and O. special train to join the s.s. *Kaisar-i-Hind* at Marseilles for Bombay.

The Amir Zaid, younger brother of King Faisal of Iraq, who has been on a visit to ex-King Hussain in Cyprus, has arrived in England, where he expects to stay for a few weeks.

The Earl of Birkenhead, Secretary of State for India, who has been appointed to act as Secretary of State for Foreign Affairs in the absence of Lord Cushendun at Geneva, took over his duties on September 7.

Miss Helen Schilizzi, daughter of Mr. Stephen Schilizzi, of Guilsborough Court, Northamptonshire, has been adopted prospective Liberal candidate for Northampton. Miss Schilizzi is a niece of Mme Venizelos.

Princess Eudoxia of Bulgaria, who is on a visit to Sir Kay and Lady Muir at Blair Drummond, Perthshire, arrived last week at Balmoral Castle on a visit to their Majesties the King and Queen, and left on September 8. Mdle Petrov-Tchomakoff is in attendance on Her Royal Highness.

THE ALBANIAN GOVERNMENT.

The first Cabinet appointed in Albania under the monarchical régime has been constituted as follows:—

M. Kosta Kotta	...	...	Prime Minister and Interior.
M. Ilias Vrioni	...	...	Foreign Affairs.
M. Jafer Ypi	...	...	Education.
M. Hqmet Delvima	...	...	Justice.
M. Milto Tutulani	...	...	Finance.
M. Talih Vuchiterni	...	...	Public Works.
M. Musa Juka	...	...	Agriculture and Forestry.

PERSIA ON THE LEAGUE COUNCIL.

At the election for filling the non-permanent seats on the Council of the League of Nations on September 10, Spain, Persia and Venezuela, with 46, 40 and 35 votes respectively, were nominated to take the places of Colombia, Holland and China. Norway came next with eleven votes; Greece, Portugal and Uruguay received two each.

NEWS IN BRIEF.

In consequence of differences between Ministers, M. Liaptcheff handed in the resignation of the Bulgarian Cabinet to King Boris on September 5. The Chamber of Deputies was adjourned and will not meet again until the formation of a new Government.

A thousand young Fascists, including Signor Mussolini's two sons, are visiting Constantinople. On September 6 they marched through the streets in uniform and laid flowers below the statue of Ghazi Mustapha Kemal, in the Taksim quarter.

When the United Grand Lodge of English Freemasons met at Birmingham on September 5, a maul (or mallet) found in the tomb of a Pharaoh of the Third Dynasty was presented to Lord Amptill, Pro-Grand Master, by Brigadier-General Wilson, Grand Master of Egypt and the Sudan.

Two hundred and forty-seven British pilgrims, among whom was Viscount Stopford of the Imperial War Graves Commission, who have been visiting the graves of their relatives and friends in Gallipoli, arrived in Constantinople on September 5 on board the *Stella d'Italia* for a two days' stay before their return to England.

Flight-Lieutenant J. Scholefield, who left Croydon at 5.30 a.m. on September 6 in an effort to fly to Roumania in one day on a Vickers Vimy military machine, reached Bucharest at 5.50 p.m. the same day, having flown about 1,600 miles with only two stops for refuelling. The machine is to be demonstrated to the Roumanian authorities in a competition for orders for new military equipment.

A Budapest message states that the coffin of M. Aichorn, late Director of the Hungarian Consular Mission at Cluj, which had been sealed by the Hungarian Legation in Bucharest, has been opened by Roumanian Customs officers at the Hungarian-Roumanian frontier station of Borsi, in order to ascertain whether it contained smuggled articles, especially gold.

Three Englishwomen who arrived recently at Athens on their way from Spain to Baghdad by motor car, have been experiencing difficulties in proceeding through Turkey owing to the Turkish law which forbids the driving of a foreign car across the Turkish military zone except by a Turk. They are proceeding to Adrianople, says *The Times*, where they will take the matter up with the local authorities.

BY MOTOR ACROSS EUROPE.

The interesting account that appeared in *THE NEAR EAST AND INDIA* during July of a motor tour from London to the Black Sea has inspired others to undertake the same journey. Miss Katherine Stoop, of Westhall, Byfleet, Surrey, and Miss Beryl Mappin, of London, have recently arrived at Varna, having made the journey from England alone in a Bentley 15 h.p. coupé *via* Holland, Germany, Austria, Hungary and Roumania. After a short stay at Les Trois Sources, the residence of Dr. and Madame Stancioff at Varna, Miss Stoop and Miss Mappin have been the guests of the British Minister and Mrs. Sperling in Sofia, and are expected to start shortly on the return journey by car. It is understood that their experiences on the way out were so entirely satisfactory and agreeable that they are encouraged to return to England by the same method of transport.

Tuesday Morning.

The German-Roumanian Negotiations.

The negotiations between Roumania and Germany for the settlement of the financial questions outstanding between them—to which reference is made elsewhere in this issue—are due to be resumed in Berlin this week, after an interruption to enable the Roumanian representatives to consult their Government. The Germans have prepared a scheme which stipulates for payment in gold of the interest on the pre-War Roumanian stocks held by German nationals, but provides that the percentages applicable to the payment of coupons shall range from 30 to 75 over a period of thirty years in the case of the Four and a Half Per Cent. Loan of 1913 and from 15 to 50 per cent. over the same period in the case of other loans. The first-named Loan, it will be remembered, was the subject of an agreement, dated July 4 last, between the Roumanian Government and Messrs. J. Henry Schröder and Co., with a view to the reinstatement of the quotation of the Bonds of this Loan on the London Stock Exchange. That agreement was noticeable for the sweeping clause which provided that payment as arranged was in future to be made "in time of war as well as in time of peace and whether the holders be citizens or subjects of a friendly, hostile or neutral State, without requiring any declaration or evidence as to the then present or former nationality, domicile or residence of such holders or any previous holders." It would be difficult to tie up a Government more tightly than that.

The Greek Free Zone at Salonika.

The success of the Greek Free Zone at Salonika is in striking contrast to the comparatively small amount of trade that passes through the Yugoslav Free Zone alongside. A proposal is now on foot to consider a further extension of the Greek Zone, both to the east and to the west. If it were not for the fact that its *amour propre* is so largely engaged in the matter, the Yugoslav Government might be expected to take advantage of the new order in Greece to withdraw from an arrangement which has not fulfilled the expectations formed of it. Theoretically it was at the time sound policy to require a Free Zone for Yugoslav trade through Salonika. Greek administration of the port was apt to be lax, the management of the railway line leading to and from it still more indifferent. The mere fact, however, of being compelled to admit her inefficiency in this direction would seem to have stirred Greece to greater efforts. She promptly established a Free Zone of her own and proceeded to show how it ought to be run. At the same time she improved the administration of the railway from Ghevgeli. Yugoslavia has nothing to regret in the matter; she has been instrumental in placing the port of Salonika on a satisfactory footing of efficiency and she stands to reap the benefit without the trouble of managing a free zone of her own.

Conditions in Syria.

During the three years which have elapsed since a "Report" was issued by the British Consul at Damascus, the trade of Syria has, as Mr. Satow points out in his statement, extracts of which are published elsewhere in this issue, suffered very severely from the effects of the Druse rising in 1925. In 1925 the British Consul's Report predicted a reasonably comfortable future for Syria; few, indeed, could foresee the months of bitter fighting in which the Mandatory authorities had to take part before tranquillity and security could be achieved. This political upheaval naturally reflected itself in the economic sphere. Imports largely exceeded exports, and although there are various reasons for regarding this fact with more equanimity than would be possible in other countries, one need but mention that in 1927 the value of imports into Syria was 1,291 millions of francs as against exports to the value of 540½ millions of francs to realise that it is in the economic domain that the hardest efforts will have to be made in Syria in order to achieve real stability and prosperity. To a certain extent, of course, the condition of Syria is dependent upon developments elsewhere in Western Arabia. If, for example, the terminus of the trans-desert pipe-line and railway be chosen in Palestine, instead of in Syria, as the French hoped, the effect on Syria's trade will be considerable. For one thing, the rail-line from Beyrout to Tripoli, which it was originally hoped to construct and extend to Haifa (thus making Calais linked by rail with Cairo, may be found ultimately to stop short at Tripoli.

Developments in Syria.

Conditions in Syria for the last few years have militated against any ambitious programme of public works. Steady progress, however, has been made in road construction, enabling the country to record a considerable increase in motor transport. In 1927 there were 4,500 motor cars and more than 400 lorries and trucks, the majority being registered in the Lebanon. The anxiety with which future developments at Haifa are being watched in Syria is explained by the lack of harbours in the French mandated territory. Beyrout is the only real port. Plans are now in hand, Mr. Satow states, for the enlargement of the harbour, work on the widening of the eastern arm having been in progress for some time. There is also a scheme for the construction at Lattakia of

a jetty 200 metres long and of dredging operations to secure a depth alongside of seven metres. One development on which the French are concentrating is the popularising of the Lebanon as a place of summer residence. Syria has always attracted visitors, but the French are aiming at making the Lebanon an important tourist resort. The 1927 season was regarded as a great success, and, encouraged by this fact, the authorities are making further efforts to let the attractions of the Lebanon be known. Although it must always make a strong appeal as a summer resort to dwellers in the plains of Iraq, it has a formidable rival in Cyprus when there is a question of a sea voyage first.

Co-operation for Cotton.

In view of the stimulus now being given the world over to the co-operative movement it is not a matter for surprise that an attempt should be made to introduce the system into Egypt's cotton industry. The prime mover is Amin Yussuff Bey, who has come over to England to make inquiries regarding the kind of reception that Lancashire might be expected to give to the movement. As he is careful to point out, he has no cut-and-dried scheme; the general advantages for the Egyptian grower are obvious, provided that the scheme does not affect prejudicially his market. At present cotton is said to pass through seven or eight hands between the grower in Egypt and its arrival in Lancashire. Whether some useful service is preformed at each stage remains to be proved; it is at least unlikely. On the other hand, the success of a co-operative movement would depend on the capacity of those concerned to render to the Lancashire buyer the services to which he is accustomed and which presumably he requires. Here the proof of the pudding will be in the eating. Lancashire is not going to turn down a proposal that offers her the same cotton at a lower price, and if the Egyptian grower is to obtain a higher price at his end, clearly the scheme is one well worth investigating carefully. Middlemen are easily denounced, but often on examination they are found to do some work for their living. If in the various stages of cotton's life history, there are drones battenning on the industry, their removal can be contemplated without compunction.

Athens Light and Power Problems.

According to an Athens journal the relations between the Greek State and the Power and Traction Finance Company, which holds a concession for a long period of years for the provision of light, power, and traction, are to be the subject of a letter to the company from the Minister of Communications, M. Christomanos, in which the question will be raised of the control of the company by the State as regards finance and technical matters. While no information is as yet available in London, it appears that conversations have been proceeding in Greece between M. Christomanos and directors of the company, among the points raised being the question of the voltage. The present current is 220 volts, which is the rate approved by the International Convention held at Chicago in 1926, but because there have unfortunately been one or two fatalities the view is taken in Greece that the rate is an extremely dangerous one, and a current of 110 volts is asked for which, of course, will entail the alteration of the existing installations. As a matter of fact, I understand that accidents have been known to occur with the lower current, and those who know the Greek mentality will probably agree that Greeks are at least as likely as any other people to attempt experiments in their houses once they have electric lighting, so that it as a very moot question whether the reduction of the current will prove quite the "safety first" device that is desired.

COMMENTATOR.

ROUMANIA: OIL AND FINANCE.

To carry through the wise decision to stabilise her currency legally, at the level at which practical stability had been secured for it for at least a year, Roumania found herself obliged to have recourse to foreign financial assistance. As soon as negotiations to this end were opened the Roumanian Government was given to understand that certain outstanding financial matters would first have to be settled. Among these was the settlement of the Roumanian War Debt to France, the regulation of the 1913 Four and a Half Per Cent. Loan and of Roumanian pre-War Stocks, held principally in France, Belgium and Switzerland, and the financial dispute with Germany. Settlements regarding the first three questions have been arranged, by substantial concessions on Roumania's part, but the points at issue with Germany are proving harder to solve. On the one hand Roumania claims compensation for the German occupation of Roumania, with special reference to the issue of bank notes to the amount of 2,173 million gold lei, which the Roumanian Government had to buy up; Germany, on the other hand, claims payment for Roumanian pre-War Government stocks held by German Nationals, while she maintains that under the Dawes Plan all special reparation claims by Roumania have been wiped off the slate. To complete the tangle, Roumania claims that she is absolved by the Treaty of Versailles from meeting her obligations in regard to the 600 million gold lei of pre-War Stocks held in Germany.

Although this inability to come to terms with Germany remains the only, so to speak, official obstacle in the way of co-operation of British, French and German Banks in the scheme for Roumania's currency reform and reconstruction programme, there is another matter which cannot well escape the attention of the Bucharest Government. On general lines the way for British participation in negotiations for an international loan for Roumania has been cleared, but there is still the possibility of a variety of subjects being raised in the course of those negotiations. It is certain that British financial interests that have invested capital in the Roumanian oil industry will be strongly opposed to the issue of a loan unless and until steps have been taken by the Roumanian Government to remove some of the disabilities under which foreign oil companies in Roumania suffer.

The Roumanian Mining Law.

By the Mining Law of July 3, 1924, Roumania nationalised her sub-soil and laid down the principle that exploitation of her oilfields could in future be carried out only by "nationalised" companies. The rights of existing companies were safeguarded in respect of concessions already granted; but to enjoy the advantages of Roumanian Mining Companies they were required within a term of ten years to conform to the regulations of the Law, which include that fifty-five per cent. (as compared with sixty per cent. for new companies) of the capital must be held by Roumanian citizens and that the majority (as compared with two-thirds) of the members of the Board, inclusive of the Chairman, must be Roumanian.

When it is recalled that for the initial exploitation of her oilfields Roumania was entirely dependent on foreign oil companies, to whom she had to turn not only for capital, but also for the necessary technical experience, it will be seen how unfairly these provisions of the Mining Law press upon those companies. In the first place they have taken the risk attendant on the development of an unproved field, and have then incurred heavy expenditure on installations in establishing the industry. An oil property, however, is at best a wasting asset; and the only means by which an oil company can make sure of the future is by a policy of expansion. The effect of the Rou-

manian Mining Law, it is urged, is virtually to deprive foreign companies of the prospect of expansion, by imposing conditions which it is difficult, if not impossible, for them to carry out. In view of the fact that they were invited by Roumania to come to her help at a time when, in the matter of oil, she could not help herself, and that they have been the means of making the industry what it is, the foreign companies claim that they have a right to more considerate treatment. Side by side with the actual disabilities imposed on them, it is complained that favouritism was at once shown to so-called "nationalised" companies to the prejudice of those who had borne the expense and burden of founding and establishing Roumania's oil industry. This was done, so it is alleged, even to the disregard of the country's interests, when an offer on the part of foreign companies to explore at their own expense all still unproved State lands, to take them over and to exploit them on the usual terms, and in addition to make a loan of £8,000,000 to the Roumanian Government, was rejected, and the Government proceeded to distribute the best of the proved State properties without any *quid pro quo* in regard to exploration work on the rest of the State lands.

Another sword of Damocles hanging over the heads of foreign companies is the regulation that 75 per cent. of their staff must be Roumanian. A period of seven years' grace is allowed from the promulgation of the Mining Law for the change-over to become effective, and it has been enacted that for the present the regulation need apply only to the technical staff in producing fields. Within three years, however, the companies are threatened with the necessity of changing their personnel on purely arbitrary grounds, without consideration for the interests of the industry.

When once Roumania had resolved to take over into her own hands as far as possible the development of her own country there was bound to be some conflict of opinion with established interests; but in view of the fact that the Government must for many a long year remain dependent financially on foreign capital, it behoved it to tread warily in dealing with those interests. Unfortunately, the decision that the country must work out its own salvation was reached by those who imagined that Roumania could at once dispense with all foreign help in every direction. Gradually these mistaken ideas are being thrown overboard, as the course of events that have followed the overtures for a loan have clearly shown. Pre-War debts, for instance, are to be paid on a gold basis; stabilisation of the currency will be carried out at the present level—both courses M. Bratianu refused to entertain a few years ago. As the present Prime Minister has had to meet the wishes of foreign financial interests, the foreign oil companies are no less anxious that he should now realise that they too have not been wholly arbitrary in asking for fairer treatment than was meted out to them when the Mining Law was passed. It may be in the interests of Roumania to introduce an oil monopoly; but, if any regard is to be had to her reputation abroad, it would have to be done with due consideration for vested interests on the basis that foreign companies whose co-operation was sought at one time are entitled to security of tenure or adequate compensation. Again, in the matter of assessing taxation there has been arbitrary discrimination between pre-War capital, which after being rated at four times its nominal value is now rated at six times, whereas the leu stands in the neighbourhood of 800 to the £, or thirty-two times the nominal value. In this respect, however, there is no discrimination between foreign and Roumanian pre-War companies.

In general, it is not to be expected that there should be any elaborate examination of detailed grievances between the oil companies and the Roumanian Government, before the Reconstruction Loan, which the country needs so badly, is arranged. It should, however, be possible for the Roumanian Government to satisfy all foreign interests that it has definitely abandoned the belief which at one time it seemed to hold, that it can afford to con-

sider its own interests alone and has no occasion to attempt to placate foreign interests. In regard to this question of Roumanian relations with foreign business interests there is no reason to suppose that the nation as a whole is under any illusion on the subject. It has suffered from the lack of sympathy which a mistaken policy has engendered abroad, and it is anxious to see better relations established. The exceptional conditions of the country, however, have left the people without much say in the matter, while being the chief sufferers.

Motors and Motoring

(From Our Own Correspondent.)

Mr. Norman Hardie, who is responsible for the business side of The Associated Equipment Co., Ltd., informs me that he is about to embark on an extensive tour in connection with the development of the overseas trade of that great manufacturing concern. I am glad to hear that he is visiting India, the Federated Malay States, Dutch East Indies and Egypt, amongst other places, so evidently he agrees with my contention, so frequently urged in these columns, that there is big business waiting in the Near, Middle and Far East for enterprising British firms, if they will only take the trouble to go and get it.

The Progress of the Ariel.

Ariel Works Ltd., one of the oldest manufacturers of motor cycles, is an outstanding example of modern production methods. With a total floor space of some 500,000 sq. ft.—replete with up to date machines driven by electric motors of nearly 2,000 h.p.—it is undoubtedly in the foremost position of the industry. In full production approximately 1,000 motor cycles and 2,500 cycles can be turned out per week—providing constant employment for nearly 3,000 hands.

In response to many suggestions from all parts of the world that a lightweight motor cycle should be produced. Ariel Works have now made arrangements to put on the market, at the rate of a thousand a week, a smaller machine of 250 c.c. capacity. It is, in every way, a really well designed motor cycle—in fact, a miniature of the 500 c.c., and the price is very competitive. This new venture will, in no way, effect the production of the larger machine, as very considerable extensions to the factory have been made to facilitate matters.

Some three years ago, the modern Ariel motor cycle was produced, after exhaustive tests, and took the eye of agents and public alike. Such was the great increase in orders, that it became essential for speedier methods of manufacture to be introduced. The problem was solved

FOREIGN EXCHANGES.

Warsaw	Zlotv to £	25.22½	43.28

by the employment of the "track system" for the assembly of motor cycles. This method proved entirely satisfactory. Not only was larger production made easy, but the standard of workmanship became even better than with the old way. One man, one job; repetition makes perfect. This system has, as far as possible, now been introduced in all branches of production. The enamelling plant, on endless chain lines, is an illustration of what engineering and modern science can accomplish—the parts being quite ready for assembly in less than an hour and a half from being dipped. There is no waste of time and no waiting. An order placed in the works, can be put in hand, the machines built and packed ready for despatch, within six or seven hours.

Apart from producing a very attractive machine at a reasonable price, it is realised that unless sales are backed by service success cannot be held. A separate factory of considerable size, and employing nearly a hundred expert hands, is entirely devoted to repair work and the supply of spare parts. Ariel Works Ltd. look forward confidently to even greater prosperity in the future.

Hooting.

The outcry against unnecessary "hooting" on the part of motorists is rapidly growing and it is probable that some steps will be taken in regard to the matter before long. Mr. Arthur Murray writes suggesting that the Home Secretary should insist that the police do all in their power to reduce this nuisance and adds: Some legislative powers are necessary to mitigate this intolerable hooting nuisance.

A close observer of road matters says that the hooting is worst where traffic is congested. Wherever there is a block or partial block, every motorist who joins the waiting or slow-moving throng begins to hoot for some mysterious reason. Some appear to think that if they only hoot sufficiently loudly for a sufficiently long time, the other traffic will get out of their way. Motor hooting has been called "the curse of modern existence." I do not think it is as bad as that. I think it is only a sign of the ignorant and inconsiderate driver.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Lock Gates, Etc.—The Resident Engineer, Delta Barrage Directorate, at Delta Bridge, invites tenders for (1) Construction of eight lock gates for Damietta and Rosetta locks both at Delta Bridge and their delivery at site and erection in position; (2) construction of twenty regulator gates and their delivery at sites. November 1.

Clothing, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, soft and

woollen, sheets, linen, napkins, blankets woollen, white and brown, material by metres, etc., required for the unexpired period of the year 1928-1929. October 11.

Door and Window Fittings.—The Ministry of Public Works invites tenders for the supply of door and window fittings. October 1. (D.O.T.)

Machine Tools.—The Public Works Ministry, Tanzim Department, invites tenders for the supply of machine tools, etc. (universal boring, drilling surfacing, tapping machines, plate bending rolls, drilling machine, lathe, blowing fan, hydraulic press, steel shafting, ball-bearing pedestal). October 3. (D.O.T.)

Water Meters.—The Public Works Ministry, Tanzim Department, invites tenders for the supply of water meters. October 6. (D.O.T.)

Chloride of lime.—The Egyptian Department of Public Health invites tenders for the supply of 20 tons of stabilised chloride of lime, October 2. (D.O.T.)

TURKEY.

Steamship.—A steamship company in Turkey is desirous of purchasing two large vessels. (D.O.T.)

Rotary Printing Machine.—A Turkish newspaper intends to purchase a rotary printing machine in the near future. (D.O.T.)

Newsprint and Printing Ink.—A Turkish newspaper desires quotations for the supply of newsprint and printing ink. (D.O.T.)

Copper Wire.—The Post and Telegraph Administration, Angora, invites tenders for the supply of copper wire. October 3. (D.O.T.)

Iron and Steel Girders.—The State Railways and Ports Administration invites tenders for the supply of iron and steel girders for roofs. September 20. (D.O.T.)

ROUMANIA.

Electric Portal Crane and Goods Lifts.—The Acting British Vice-Consul at Constantza reports that the port authorities are calling for tenders for the supply of one electric portal crane and two goods lifts. October 1. (D.O.T.)

YUGOSLAVIA.

Tin.—A firm in Sarajevo invites tenders for supply of tin in bars. (D.O.T.)

Sandwich Tins.—A firm in Sarajevo desires to receive quotations for the supply of half a ton of plain, round sandwich tins. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, September 20); s.s. Mahout for Calcutta (Birkenhead, September 27).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 19).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, September 22); s.s. Dumana for Bombay and Karachi (London, September 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, October 6).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, September 29); s.s. Bantia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool September 15, and Swansea September 18).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 14); s.s. Bangalore for Calcutta (London, September 15); s.s. Rajputana for Bombay (London, September 28); s.s. Novara for Calcutta (London, September 29).

Prince Line.—S.s. African Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 15); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 22).

Ellerman and Papayanni Lines.—S.s. Volturro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 15); s.s. Lesbian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 22); s.s. Flaminian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 29); s.s. Oporto for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool September 29, Swansea October 4); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 6).

*Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Moroccan ports via Gibraltar.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.
LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CIRCASSIA ...	Sept. 20	CALIFORNIA ...	Oct. 24
*ASSYRIA ...	Sept. 28	*ELYSIA ...	Nov. 9
*BRITANNIA ...	Oct. 9	*CASTALIA ...	Nov. 27

*First class passengers only. †First and Third Class Passengers. Specially low fares. ‡Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE.

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 11.

Business remains restricted on the Stock Exchange, the favourable weather having the effect of prolonging the holiday season. It is noteworthy, however, that the limited demand is mainly confined to securities of an investment character, the speculative markets mostly lacking support. Gilt-edged securities are fairly firm, but in the main home rails are neglected and uncertain. There was a considerable demand for bank and insurance shares, which provide an excellent outlet for the small investor's savings. Iron and steel shares again received steady support. Certain gramophone shares were active and showed considerable rises. The dividend and report of the Columbia Graphophone Company were announced. The total dividend for the fifteen months ended June last was 60 per cent., against 40 per cent. for each of the three preceding financial years ended on March 31, when, however, the capital was smaller. A capital bonus of 100 per cent. is also announced. Artificial silk shares were weak on the report of further price cuts, the disappointing balance-sheet published by Wardle and Davenport being a further depressing factor. The Chilean Government loan offered at the beginning of the week was heavily over-subscribed. The interesting statement was made that Gamages, the well-known Holborn stores, contemplate the flotation shortly of a subsidiary company, to be called Gamage (West End), Ltd., which will erect a modern store close to Marble Arch.

Mexican Debt Position.

The position of the Mexican Debt has attracted considerable attention during the past week. In certain quarters there has been a more hopeful feeling in the belief that the terms of a new agreement will shortly be made available. At any rate, the Secretary of the Mexican Treasury, in a public statement, has declared that Mexico would continue to pay not merely the interest on her debts, but would, "under a new agreement," proceed with the amortisation of those debts. This is the first information that the British bond-holders have received regarding the existing situation. The International Bankers' Committee, which has negotiated the new agree-

ment, has made no statement, but a report has gained currency to the effect that the London representatives have received advices from New York regarding the whole position. This statement, it has been pointed out, will be made known in the course of a few weeks. In the meantime, the Mexican bond market is in a state of considerable uncertainty. There is, however, a tendency to view the future hopefully. There is said to have been good buying of Mexican bonds, while the Mexican financial situation shows a recovery.

Brewery Shares.

During the past week Brewery shares, under the stimulus of public interest, have been somewhat active. The reasons for this activity are not altogether clear. There is no evidence which suggests a general improvement in the position of brewery companies, though of course this summer has been more favourable to the companies than the last. The general trade position, however, does not at the moment warrant great optimism. In a word, the investor should, as we indicated a few weeks ago, approach this section of the Stock Markets with the greatest caution. During recent years a considerable number of companies, and especially the smaller ones, have not found it easy to maintain revenue. Indeed, it seems probable that many small companies will find it advantageous to amalgamate with the larger undertakings. In these circumstances, the investor should confine his attention to the shares of the larger and more progressive companies, whose interests are widely spread. The shares of distillers have also received attention. In particular, there is a growing confidence in the future of Distillers Company. At present the shares return no more than £5 3s. per cent., but it is probable that sooner or later the shareholders will receive a windfall of some kind.

Gas Companies' Stocks.

With the approach of autumn the gas companies are entering upon the most profitable months of their financial year. It is, therefore, opportune to direct attention to these companies' stocks. In the main, gas companies have an excellent record so far as earnings and dividends are concerned. Consequently their stocks, both prior charge and junior, offer attractions for those who, while desiring a considerable element of security, seek a not unreasonable return. In particular the ordinary stock of the Gas Light and Coke Company deserves careful attention. The stock is offered at 19s. 1½d. per £1 of stock with six months' interest payable in March, and yields 5½ per cent. on the basis of the interim dividend of 5½ per cent. which the company has just paid. The market anticipates that the final dividend, which will be declared next February, will be something over 5½ per cent., and thinks that there is a good chance of the dividend on account of 1929 being put on a 5½ per cent. basis. The company can increase its dividend as the price of gas per therm is reduced, and with every probability of coal remaining cheap for a long time to come, there is a good prospect of gas being reduced to such a price as would permit the company paying a dividend of 6 per cent. The company is in a strong position and has considerable possibilities. As for prior charge securities, the 6 per cent. irredeemable preference stock of the South Metropolitan Gas Company gives a return of £5 10s. A yield of £5 11s. per cent. is obtainable on the Liverpool Gas Company's 4 per cent. perpetual debentures.

A message from Cairo states that the Egyptian Government has placed an order for 20 locomotives for the State railways with the Italian firm of Breda, of Milan.

Mr. G. H. Griffith, who has recently retired from the post of Deputy General Manager of the Egyptian State Railways, and Mrs. Griffith leave Egypt to-day for Europe.

The Provincial Assembly at Zagreb met on September 7 in ordinary session, and elected as President, in succession to the late M. Stepan Raditch, the Vice-President of the Croat Peasant Party, M. Predavetz.

Engineering Topics.

By G. B. B.

Concrete Roads.

A report has now been issued by the Chief Engineer, Local Government Department, Irish Free State, regarding an experimental length of concrete road laid down under what were then regarded as suitable conditions and in accordance with the most modern practice, in 1925. The road has been carrying heavy traffic for about three years, dealing with from 4,000 to 5,000 tons per day. The surface shows no deterioration, no disintegration is anywhere apparent and there are no surface cracks visible. Nothing whatever has been done to the road since it was laid, with the sole exception of filling the expansion joints with bitumen after the concrete had set firmly. The report says that the "running in a motor car" is not quite so smooth as over the adjoining asphalt surface, this being due to slight unevenness of the expansion joints, and the existence of a very slight waviness in the surface. This is more noticeable in one particular section. That further from the town is quite as smooth as the asphalt roads beyond. The engineer says: "I made several measurements on the surface with a straight edge, 5 ft. long, to ascertain the magnitude of the depressions. The deepest trough between two more elevated portions, 2, 3 or 4 feet apart was only three-eighths of an inch and this depth was only found twice out of several score of trials. The depth causing the unevenness of the running was not usually so much. This depression is not abrupt, but is in a length of an average of about 2ft. 6 in.

It is almost impossible for anyone to state whether the concrete is or is not better value than the asphaltic sections laid in other parts of this road. It appears, however, that the cost of a two-coat asphalt surface is one shilling per square yard less than that of the concrete road, a fact which will come as no surprise to engineers who have had experience with both kinds of surfacing."

The reports shows that the experimental asphalt surface portions are also in excellent condition, and as a matter of fact, provided the roads were well laid in the first place and the surfacing work was done as it should be, three years has not been a long enough time in which to determine the life of the respective surfaces. But from his personal observation, the engineer says that he is inclined, on the whole, to believe that the concrete is the better investment, chiefly in view of the fact that the sub-base or old road surface need not be so sound or so substantial as for asphalt.

In my view and that of most road engineers, it is essential, if a concrete road is to last, that its sub-base should be as sound and substantial as possible. The engineer goes on to say that an asphaltic surface cannot safely be laid unless on a really strong, well drained, existing road. Its length of life depends on the soundness of the foundation on which it is laid, and he concludes by saying that there are not many roads in the Irish Free State which are sufficiently strong and well drained to carry asphalt surfacing with safety.

If that be the case, it would seem evident that unless substantial reinforcement be used, which will add to the cost considerably, the roads are not strong enough to carry a concrete surface either.

British Firms and Indian Tenders.

I have been reading with some surprise that a year ago a British firm submitted a tender to the India Office for a quantity of rivets at as low a price as seemed possible, but that the order was placed eventually in Germany. An examination of the figures shows that the foreign price was £5 7s. 6d. per ton beneath that of the British firm, and in view of that difference, and looking superficially at the facts there seems every qualification for the order being given to the German firm. I note that *The Times* is hardly satisfied, however, and the point it raises is important. In the schedule attached to the tender it was clearly specified that the British firms should observe the recognised hours of labour obtaining in England in the trade and that it should pay the regulation trade union wages. The question thus is as to whether equivalent wages were paid and equivalent hours worked by the German firm. Another point that has been raised is that the British firm has to pay about four times as heavy taxation as the foreigners. Further tenders are being asked for and it is to be hoped that these matters will be borne in mind. The Government of India can make any stipulations it pleases in its tenders and can fix any conditions, but surely the facts that British firms pay high wages, contribute on a high scale to taxation, and run their works under modern conditions, and for hours judged to be fairest to their employees, should not be allowed to militate against their chances of securing Indian orders.

Town Planning.

The subject of town planning is one that is certain to secure more attention in the future than it is doing at present, and municipal authorities and others seem to be already recognising that consultation regarding proposed schemes with outside interests is essential. There seems to be far too little appreciation by the public of the way in which a district will be controlled by a town plan. If interested persons are frankly consulted and tactfully approached at the commencement it is not usually difficult to get them to agree to reasonable proposals, though as Mr. Johnson, of the City Engineer's office Nottingham, says, "these may not be altogether to their liking." It must be remembered further, that town planning schemes do not involve the local authority in immediate expenditure on works of any kind with a consequent increase in rates. Money will have to be spent on new roads as a district expands, and such work will not be more costly because it forms part of a well-conceived scheme. By judicious expenditure in this direction, greater rateable value will ultimately be secured.

The Turkish Government has notified the United States that it will adhere without reservations to the Kellogg Pact.

H.E. General Moheddine Pasha, Turkish Minister to Egypt, returned to Cairo at the end of last week from leave spent in Turkey.

The Dutch Minister at Teheran, who is in charge of Danish interests, has signed a provisional agreement between Persia and Denmark.

Ismail Sidky Pasha, Sherif Bey Sabry, and Ahmed Bey Abdel Wahab, Under-Secretary for Finance, returned to Egypt from Europe on August 26 by the s.s. *Ausonia*.

Fuad Sherin Bey, who was recently appointed Director of the Egyptian Educational Mission in Berlin, left Egypt on September 8 for Berlin to take up his new duties.

His Highness Sir Martanda Bhairava Tondiman Bahadur, Raja of Pudukota, G.C.I.E., of The Palace, Pudukota, India, and of Villa La Favorite, Cannes, France, Raja of Pudukota since 1886, who died on May 28, left (exclusive of property in India and France) estate in England of the gross value of £3,487, with net personality £2,069.

British Consular Reports

V.—SYRIA.

The following extracts are taken from the report on the trade, industry and finance of Syria of Mr. H. E. Satow, O.B.E., H.M. Consul-General, Beyrout:—

The Trade Situation.

The marked exchange fluctuations of 1925 and 1926 make any comparison on a sterling value basis with 1927, when the franc was fairly steady at about 124, almost impossible. Even on a currency value basis comparisons have but little value, seeing that many goods reach Syria from countries with a high exchange. On a volume basis 1927 was slightly better than 1926. The following figures as to imports are taken from official sources:—

		Metric Tons.		Francs.
1925	...	448,984	...	957,598,200
1926	...	417,970	...	1,267,140,680
1927	...	438,664	...	1,291,177,900

During the last few months of 1925 and practically the whole of 1926 the country was not in a normal state, and it was not, indeed, until the beginning of 1927 that the Damascus merchants seriously set about the replacement of their depleted stocks. The figures are therefore rather disappointing. As regards exports (including re-exports), during the same three years the official figures are as follows:—

		Metric Tons.		Francs.
1925	...	77,366	...	459,191,000
1926	...	76,696	...	544,813,400
1927	...	114,098	...	547,738,500

These figures are more satisfactory, inasmuch as they show a much greater volume of goods exported. The balance of visible trade is still unfavourable, but the phenomenon is a normal one in the economic life of the country.

Imports.

It is depressing to have to record the very considerable inroads made by Italian, Belgian, Czechoslovak and French competitors in the sphere of cotton manufactured goods, which is the main British import. The causes, as they are known here, have already been brought to the notice of those concerned. Cost is, of course, the predominating factor, but it must be remembered that tastes have changed. The women of Syria, even outside the towns, have in many instances reached the silk-stocking stage and require something attractive, even if less durable. According to the import manifests the total imports of textile goods of all kinds, i.e., cotton, woollen, silk, etc., at Beyrout were in 1927 39,402 packages. Of these, the main sources were as follows:—From Italy 14,347 packages, from United Kingdom 5,864 packages, from France 4,139 packages, from Belgium 3,083 packages. There were also imported in transit via Egypt 7,012 packages, as regards the origin of which nothing definite can be said.

Cabots and madapolams still come principally from Great Britain, but Japan is a serious competitor in cabots. Madapolams are said to be less in favour, and a preference shown instead for oxfords and jacquards. Italian specialities, prints, satinettes, zephyrs, oxfords, jacquards and flannelettes are much in demand. Belgium is said to have lost some of her previous advantage owing to stabilisation. France supplies better quality goods, mattress ticking comes from Italy and Belgium, and poplins from Great Britain and Italy.

Cotton yarns no longer come almost entirely from Great Britain. Indian, Italian and Japanese competition is severe. At Aleppo, India is considered to have acquired practically the whole of the yarn business. Damascus, on the other hand, reports that Great Britain

still maintains her position in the higher counts, usually gassed, while two-thirds of the glazed or polished thread comes from the United Kingdom, the remainder coming from Belgium and Switzerland. These yarns are used for making the better class cloths known locally as "dima" and "alaja." In this connection it may be noticed that an Indian Trade Delegation paid a short visit to Damascus and Beyrout early in the year. The yarns are used mainly by weavers at Aleppo, Damascus, Homs and Hama. The quantities imported in 1927 of all kinds of yarns, but mainly écrus, were about 430 metric tons, and stocks at the end of the year were normal. At Aleppo, British artificial silk yarn is now being given a trial, and at Damascus there is a large and increasing market for this article, hitherto solely supplied by Italy, which does not seem to interest the British producer.

Underwear and hosiery.—There was, during the whole of 1927, a steady and regular demand. Italy, as a supplier of cheap cotton or mixture goods, met with competition from Germany. This was favoured for a time by the rise of the lira, and a good many orders went to Chemnitz. The United States also send a fair quantity of goods, and one well-known make of hosiery which is well advertised seems to find a ready sale. Great Britain and France on the whole supply a better class of article. A local competitor has appeared in the shape of Palestine, where two factories near Jaffa supplied relatively considerable quantities of goods which found a ready sale.

In woollen manufactures Great Britain supplies a high grade article, but France is a formidable competitor. Czechoslovakia also competes seriously, and at Damascus is said to have swamped the market with quite presentable cloths in striking designs at prices much lower than the British prices. Italian cloths were, at any rate for a time, less in demand, prices not being suitable. To meet this situation concessions were made by the Italian manufacturers. In general, competition is very keen in this line. In silks and novelties France is predominant. About half of the silk goods imported are the result of purchases made in France from the manufacturers. Italian competition in this line fell off. Large quantities of Shanghai silk now make their appearance in Damascus.

British-made paper seems to be too expensive for the market. One firm sent to Damascus a complete range of samples, but only a few orders were secured for low grade papers. Quantities imported in 1927 were:—Writing 360 tons, packing 700 tons, printing 330 tons, cigarette 170 tons, and cardboard 535 tons. Germany and Czechoslovakia seem to be the main sources of supply.

The market for drugs, chemicals and groceries, though a small one, is worth cultivating. These have been the lines in which most British travellers have been seen. A British grocery store now exists in Beyrout. As regards soap, the Marseilles article has a very strong hold on the market and competes successfully even with the locally-made article. Though British soap has lost ground, there is still a certain demand for it, price being the determining factor. Palestine produces a soap resembling a well-known British article in its make-up, which is reported to be making great progress in Damascus. The demand for toilet soaps is limited and is supplied by France, the United States of America and Great Britain.

The building trade continues active and the import of building materials increased in 1927. As regards cement of which the total imports were some 22,000 metric tons, Palestine competed seriously and successfully, and especially at Damascus, with the Italian and Belgian article. France supplies a better and more expensive

article. Wood comes exclusively from Anatolia and Roumania. Girders, sheet-iron, iron bars and pipes come from Belgium, Luxemburg and France. Germany cannot compete in price and the competition from Luxemburg is severe. Damascus reports that there the galvanised iron market has been captured by the United States, an attractive (though not durable) polish making a great appeal to the native. In corrugated iron Great Britain is meeting and just holding severe competition from the same quarter.

It should be noted in this connection that the use of reinforced concrete is increasing, and also that there is a tendency to build houses in a more modern style and with modern fittings. This has already led to a demand, which as time goes on must increase, for sanitary appliances. At present Germany and Czechoslovakia are the main suppliers at relatively cheap prices.

Sole leather comes mainly from France, with small quantities from Belgium and Italy. Upper leathers come mainly from the United States.

It is only in the event of a bad harvest, such as this year's will be, that Beyrout, which draws normally upon Damascus and local supplies, imports foreign flour. When obliged to do so it obtains flour from the United States, Australia or Marseilles (Gruau D). The millers of Damascus have formed a syndicate in order to keep up prices.

Kerosene, petrol, and oils and greases are mainly supplied by four large companies having their own organisations. There is also a variable amount of competition from speculators. There was in 1927 an increase of 10 per cent. in the case of kerosene, and of 25 per cent. in the case of petrol, over the imports for 1926. Imports in bulk are likely to be rendered possible in the near future by the erection of tanks—one tank was built at Tripoli last year—which should reduce prices by eliminating packing costs, etc. Coal supplies from the

United Kingdom, which is the main source, were in 1926 interrupted by the coal stoppage, and a considerable quantity of German coal came in. Matters have now righted themselves, but the possibility of German competition must not be overlooked. Coal is imported mainly for the railways, for the French Navy and for bunkering purposes. An attempt to introduce a cargo of Turkish coal this year met with no success.

Motor-cars come mostly from the United States. Owing to the keen competition, sales were in many instances made on the instalment system with, in some cases, unhappy results. French and Italian cars take second and third place. A few British cars of a well-known make have made a belated appearance. Unless a car can be seen and handled on the spot it is useless to hope to introduce it. Taxi-cabs appeared on the streets of Beyrout and Damascus in 1927, but the business was overdone, and several failures resulted. Great Britain has a share in the trade in motor tyres, which should increase. In machinery, Germany is reputed to supply 40 per cent. of the motors imported, being followed by Belgium and Great Britain. Pumps, which are in demand, are partly supplied from the United Kingdom. Agricultural tractors, etc., are imported from Great Britain and from the United States. At present in Aleppo there is rather a slump in this line, which is otherwise a promising one for British trade. Electrical material was, and should continue to be in greater demand, as the installation of electric lighting in various towns and large villages continues. The United Kingdom does not seem to supply any of this material, which comes from Belgium, Holland, Germany, France and Czechoslovakia. The quality is, as a rule, poor, and prices low.

Exports.

The chief countries taking Syrian goods and produce in 1927 were in order of importance:—France, United States, Palestine, Egypt, Turkey and Trans-Jordan. The United Kingdom was eighth on the list. Aleppo has a total export trade of somewhere about two million pounds sterling per annum, between 60 and 75 per cent. of these exports leaving via Alexandretta. Wool is the chief item. Then come livestock, butter, hides, cotton, olive oil and pistachios. The balance up to 4-5ths of its total consists of re-exports, of which the greater part consist of foreign piece goods or goods made up in Aleppo from foreign raw material. Damascus exports wool, apricot kernels, dried apricots and paste. Hemp is doing well, and Damascus is looking for more markets. Beyrout exports silk, dried cocoons, wool, skins and miscellaneous provisions.

British Trade.

In 1927 the value of the imports from Great Britain was approximately 178,580,787 francs (gold piastres 181,484,540). France was the chief supplier (gold piastres 195,811,451), and Great Britain thus a good second. Italy (gold piastres 122,959,864) is steadily creeping up. It seems to be almost entirely, so far as most articles are concerned, a question of price. Competition is extremely keen, and the consumer is unable to pay the high prices asked for British goods, even though he gets something good in return. British goods are known to be reliable, and British business methods are respected, but credit is the order of the day here. Whether the granting of credit is really to the benefit either of the giver or the receiver may be doubtful, but foreign competitors of the United Kingdom seem to find it a paying proposition to give it generously. A discount for cash is really a preferable alternative. In Damascus credit is rather a new experience, and whatever is given more will be asked. British trade seems at the best to be almost stationary. We are, beyond any doubt, losing ground in cotton textiles, which is the staple British import of real importance. Other British imports are coal, woollen cloths, machinery, motors, metals (copper), biscuits and confectionery.

Near East Markets

CYPRUS TRADE.

The Returns of Imports, Exports, and Shipping for Cyprus for the second quarter of the current year show that although the value of the imports, amounting to £419,783, is somewhat lower than that for the first quarter, it is greater by nearly £15,000 than that for the corresponding period of 1927. Exports, valued at £375,225, are nearly £20,000 over those for the June quarter of last year, and £51,690 over the figure for the first quarter of this year. In imports the most notable increases were in machinery, motor cars, and wood manufacture. Cotton yarn and thread decreased by over £16,000 and there were also decreases in edible oils, sugar and unmanufactured tobacco. In exports seasonal decreases in carobs, barley, and oranges were more than balanced by the increase in asbestos; raw cotton, wool, raisins, silk and almonds also showed a substantial improvement.

In the foreign trade the total tonnage entered and cleared was 479,178 as against 410,953 for the corresponding period of 1927.

The report on Cyprus trade in July shows that the value of the imports during that month was £160,420—£32,520 more than in the corresponding month of 1927 and £48,291 more than the quinquennial average. The increase is more or less general, but is most noticeable in the following items: flour, manure, motor cars, motor car and other tyres, oils (non-edible), and timber. Large consignments of the last-named commodity continue to arrive from Roumania.

The total value of the exports for the month was £132,593, practically the same as for the corresponding month of last year. There is a slight decrease of £660, but as the total is £30,864 above the quinquennial average the position is satisfactory.

The principal increase in exports appear under the following heads: almonds, asbestos, raw cotton, pyrites, and raw silk.

The value of exports would have been higher had the normal exportation of barley commenced. This did not take place owing to an unusual local demand which raised the price to 3s. 2d. and 3s. 4d. per bushel.

Shipping maintained a good average.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 11—

Sultanas.

Estimated arrivals on the Smyrna market since the opening of the season amount to 4,770 tons as against 7,100 tons for the corresponding period of 1927; estimated sales to date amount to 3,800 tons as compared with 5,700 in 1927.

Closing prices at Smyrna per cwt., c.i.f. London, were for types 13 to 18 respectively as follows:—37s. 6d.; 41s.; 44s.; 48s.; 54s.; 62s.

Market Conditions.—Prices over the week have ruled very steady. Notwithstanding very little increase in new business reaching Smyrna, unsettled weather conditions, lower exchange rates, and a shrinkage in supplies reaching the market, are all factors that have contributed to the visibly firmer closing this week-end. On balance, prices are up by 6d. to 1s. (fl. $\frac{1}{2}$ to 1) over last Saturday's closing level. Some bear shippers, however, discounting a decline, have been cabling out quotations for September shipment at fls. 2 to fls. 3 below actual ruling prices. Indeed, in the lower grades, such as our type 3, tentative quotations have been made as low as fls. 4 to fls. 5 below to-days' level. Even at this decline, however, little business is being booked on inferiors, the demand running mainly on the better grades, say types 15 upwards. The closing is uncertain in feeling. The market appears a bit nervy owing to the unsettled state of the weather. Rain over the next week would materially affect the position, as probably half the crop is exposed on the drying sheds just now. On the other hand, given that the weather becomes normal, the demand from markets abroad does not appear to be developing on to a scale that would enable sellers to hold out at the present level of prices, except perhaps for the best sorts. A factor to be taken into consideration is that the reduced demand on the Smyrna market is, in the main, due to the very limited purchases for shipment on consignment. Buying is restricted to the execution of firm orders received. Shippers are impressed with the bearish advices in connexion with Californian prices, and, consequently, are unwilling to risk unsold consignments. A shortage in supplies may result on the main centres of distribution, from where many consumers are in the habit of drawing their requirements.

Figs.

Estimated arrivals on the Smyrna market since the opening of the season total 3,926 tons as against 5,015 tons for the same period of 1927; estimated sales to date amount to 3,805 tons as against 5,209 in 1927.

Market Conditions.—The market has ruled active throughout the week, all supplies on offer meeting with ready buyers.

Arrivals have remained on a comparatively small scale for the time

of the season. This may be explained as due partly to the late maturing of the crop and partly to the restrictions forcibly imposed by certain local authorities in the interior in limiting quantities allowed to be moved down to market.

Prices have remained steady with little variation over the week, but the closing tone is very firm for the better grades and, if anything, weaker for the ordinary qualities. The general standard of quality in recent arrivals does not show the improvement expected.

As will be seen above, the total supplies marketed to date this season amount to about 4,000 tons against close on 6,000 tons last year. The comparative figure in 1926 was 5,000 tons.

NEAR EAST MARKET REPORTS.

The September issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

The month under review has been dominated by the favourable weather and good crop prospects for cotton both here and in America a steady decline in prices having occurred. The Government acreage figures, published on August 2, show an unexpected increase on last year's figures for Sakel and indicate a crop of round about 7,000,000 kantars. The publication of the American Bureau Report was followed by a sharp rise in price, which was short-lived on account of the improvement in crop conditions said to have taken place since the compilation of the figures, and the fall has continued on further good weather reports. The spot market has remained fairly active, there being a steady demand for all grades of both Sakel and Uppers, and premiums have hardened considerably. The actual stock is small. Throughout the country, the prospects for the growing crop are excellent and picking has already commenced in Upper Egypt and Southern districts. The Sakel crop is a little late and will, therefore, be affected by the weather during the next few weeks, but, so far, the condition is good. The cotton seed market has experienced a very dull period, and the adjusted stock figures of Ardebs 517,820 are given with reserve, as they are still under examination.

The demand for cotton goods has been very poor and merchants in the consuming districts show little inclination to operate, owing to lack of business. Under the influence of New York and Java, the tendency of the sugar market has been weak and prices have declined, but lately the lower quotations have induced consumers and speculative interests to operate and, therefore, at the time of writing business shows signs of revival. In the flour market, the demand for local consumption and for export has been satisfactory, but the conflicting reports from America have caused irregularity for the greater part of the month. Prices have fallen considerably and at the present low level more interest is being shown by importers. The rice market continues to favour the Egyptian product, but prices are declining owing to the good advices regarding the new crop. The market in gunnies has been active and business in this article continues to improve. The cabot market is reported to be firmer, and as stocks are reduced, holders are not pressed to sell. Rising prices and an active demand for Santos Superior are in evidence in the coffee market.

The Sudan.

The general situation in the Sudan has remained satisfactory, but, as usual at this time of the year, business is slack and no improvement is anticipated during the next two months. The demand for gum, sesame, and dura has remained steady and increased planting of these products is taking place. As there has lately been considerable rain in the Sudan, the prospects for the coming crops are very good.

Palestine.

Commercial depression is evident throughout the country, but nevertheless development is still going forward in certain districts, although even in those areas it cannot be said to be general. The present depression may be expected to continue until alleviated by the forthcoming orange season. It is too early yet to make precise estimates regarding this crop, but reports show that the Spanish variety, which is the severest competitor to Jaffa, is good and abundant. As anticipated, the new cereal crops are poor in quality and quantity, and a reduction in the high prices prevailing is not expected. Local millers are ordering their required stocks of wheat from Egypt, owing to the shortage of the home produce. Large quantities of Australian flour continue to be imported, although it is of interest to note that Palestine now possesses up-to-date mills, capable of milling sufficient flour for at least two-thirds of its needs.

The past month has witnessed the arrival of several parties of tourists, and a beneficial effect has been felt in the retail markets, particularly in the case of Oriental goods.

General Hassan Tewfik Pasha, Commander-in-Chief of the Egyptian Army, and a cousin of King Fuad, died from heart failure in Paris on September 6 in his 53rd year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 5:—

Egyptian Futures.—Sakel Contract.—We have again experienced a rather quiet week in this market, and, as both local trade and speculative interests continue their watching policy, the somewhat erratic fluctuations that have taken place are almost entirely due to operations for Alexandria and Continental accounts. During the earlier days minor bouts of long liquidation gradually depressed values; but later cables reporting crop damage were backed up by buying orders from the other side, and prices quickly hardened about a farthing over last week's rates. To-day weak Alexandria reports have been followed by what appears to be the reselling of the cotton bought earlier on, and a sharp reaction has been witnessed, to-night's close showing values 7 to 13 points lower for near and 7 to 10 points for more distant positions.

Later information from conservative sources has failed to confirm the rather alarming crop reports circulated earlier in the week; but, as even in favourable circumstances the yield cannot be greatly in excess of requirements on last season's consumption basis, even rather vague detrimental rumours are likely to have effect, if only of a temporary character, on values.

Trade reports from fine spinning centres continue to reveal an unsatisfactory state of business, and the demand for long stapled cotton at the moment is negligible; this is confirmed by statements from Egypt to the effect that new crop contracts entered into to date have rarely been for such unimportant quantities.

At the moment there appears little in the situation to warrant the taking of a definite view either way, the crop position appears for the time being to be about neutralised by the existing state of trade; further, those taking up a decided standpoint will have to face the effects of the coming American Bureau report.

Upper Contract.—Rather more interest has been shown in this contract during the past week; but values, after fluctuating round previous levels, have latterly shown a slightly easier tendency. Spinners continue to make consistent, if moderate, purchases; but we rather doubt whether the present support accorded is sufficient to counter-balance the growing effects of the crop movement. Some detrimental crop reports have been in circulation; but we must have now reached the point where a satisfactory yield is practically assured, and these have had little or no effect on values. The American new crop basis appears decidedly stiff, and if maintained this may later react beneficially on the Upper position.

Egyptian Spot.—With another Bureau report rapidly approaching, business in this department has gradually quietened down, and, although a very fair inquiry has persisted, the total spot sales for the week show a heavy decline from those of the previous seven days.

Fluctuations have been of a minor character only, and the quotations of Sakel show no change on the week. Except for the untenderable qualities, say, cotton at from 14d. to 17d., it remains very difficult to dispose of Sakel cotton, so limited is the inquiry; and under such conditions it might well have been expected that values would decline. The explanation is to be found in the recent attempts which have been made in Egypt to force up the Sakel contract on rumours (they are nothing more as yet) that very serious deterioration has taken place in Lower Egypt.

In Uppers, on the other hand, the customary steady trading has been in evidence, but this, to some extent, has been offset by hedge selling in the futures market and the moral effect of increasing arrivals (in Alexandria) from Upper Egypt. Cotton at from pass to 50 on has once again provided most of the business. Pilon, at from 100 to 200 on, has been in fair request, and rather more business has been done. "White" growths have not been active, but an odd inquiry here and there has been met with. Sudan growths have moved off with rather more freedom, but the tendency to purchase the lower qualities in preference to the better ones has been marked. Actual c.i.f. business has been quiet, but the inquiry for forward cotton shows signs of expansion.

Forwardings for the week ended August 31 were returned as 4,680 bales Egyptian and 1,386 bales Sudan.

On the whole, in spite of the falling off in the week's sales, we are inclined to the view that the Egyptian side of the trade shows signs of becoming more active, and after this week, when the Bureau report will be out of the way and the majority of the mill holidays will be over, we look for a gradual improvement.

Estimated spot sales for the week: 1,400 bales Egyptian and 1,000 bales Sudan.

Quotations: Sakel unchanged, but 25 points lower for Upper and Pilon. F.G.F. Sakel to-day, 19.05d. F.G.F. Upper to-day, 12.65d. F.G.F. Pilon to-day, 14.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 20, state:—

The market since our last report has been quiet and steady; the tone is fairly firm. The week's summary of price movements is as follows:—Sakellaridis: November, 36.76 dollars, 0.13 dollars up; January, 36.88 dollars, 0.14 dollars up. Ashmouni: October, 23.17 dollars, 0.18 dollars down; December, 23.53 dollars, 0.15 dollars down; February, 23.85 dollars, 0.18 dollars down.

Sakellaridis.—The past week has been one of the quietest we have had for a long time; prices seem to have settled down, and the market has not the same attraction for the speculator. The demand from abroad is more or less the same; spinners are apparently of opinion that values are still too high and they are not at all anxious to put into stock at present prices. There are no indications of a revival in the fine goods market, and, with the new crop getting nearer every day, the position is certainly not one to inspire confidence; in spite of this, however, the tone generally is firm. The Sakellaridis/Ashmouni straddle stands at 1,359 points against 1,328 points a week ago.

Uppers.—The market has shared in the general steadiness. Fluctuations have been small and 23 dollars seems to be a point below which October will not go; good class buying has invariably come in whenever prices have fallen to round about this figure. Spinners, especially American, have shown a certain amount of interest during the past week; but prices have been the stumbling block to the conclusion of business. As we have repeatedly remarked, it seems that the demand is there, but for the time being, buyers' ideas of price are somewhat at variance with those of sellers. It is but natural for spinners to try to obtain their requirements at the lowest possible prices; but, on the other hand, present prices do not seem unreasonable compared to competing growths, and provided that American keeps steady, a further decline does not seem very likely. The Ashmouni/American straddle is now 427 points against 442 points a week ago and 760 points a year ago.

General.—There is nothing of a general nature to report this week. The scheme of the Government for financing the crops of the small growers is taking shape; operations start on the 1st proximo, and it remains to be seen whether the growers will avail themselves to a greater extent than they did two years ago.

The week's receipts amount to 9,954 kantars, against exports 69,930 kantars; the stock in Alexandria stands at 1,197,259 kantars.

Spot.—Total sales this week amount to about 4,100 bales, of which

THE LIVERPOOL COTTON EXCHANGE.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

we estimate 1,300 bales Sakellaridis, 2,700 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: There have been a few arrivals of new crop cotton, totalling about 50 bales. All grades from Fully Fair to Fully Good Fair/Good have been dealt in, but the demand has not been very active. Spot differences remain unchanged.

Ashmouni and Zagora: About 1,000 bales of new crop cotton have arrived so far; but we prefer to see more cotton before expressing an opinion of the crop. Contrary to the past few seasons, very little interest is shown in these arrivals, and, holders having rather high ideas as to premiums, little of this cotton has changed hands. The demand has been somewhat spasmodic, but has covered practically all grades. Spot differences have eased somewhat.

Other Varieties: There has been a little business in White at about last week's differences.

It is announced in an Italian newspaper that oil has been tapped on one of the Italian concessions in Albania at a depth of 400 metres. The petroleum yielded is said to be of excellent quality and its presence in considerable volume is indicated.

In connexion with the proposed drainage of the marshes of Karaboaze, near Nikopol, in Northern Bulgaria, the most favourable tender received has been from a German firm, whose offer is lower than the original estimate of the Bulgarian authorities.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for the month of August was 58,270 tons (compared with 52,180 tons for the corresponding period last year). This is the largest monthly production yet obtained by the company.

DIVIDENDS DECLARED.

CHARTERED BANK OF INDIA.

At a meeting of the Court of Directors of the Chartered Bank of India, Australia and China, held on September 5, it was decided to declare an interim dividend for the half-year ended June 30 last, at the rate of 14 per cent. per annum, free of income tax, payable on and after September 12. This rate is the same as that of last year.

EASTERN BANK.

The Eastern Bank announces an interim dividend of 4s. a share, less tax at 3s. 9d. in the £, after allowing for relief in respect of Indian taxation, payable on October 1. This rate is the same as that of last year.

Owing to the epidemic of dengue fever in Greece, the opening of the new Greek Parliament has been postponed until September 17.

Both Greece and Hungary have communicated to the Albanian Minister for Foreign Affairs their official recognition of the new Monarchical régime.

Lieutenant-Colonel Henry Hargrave Deane, V.D., late Chief Engineer of the Rajputana Malwa Railway, India, of Ailesbury Road, Dublin, who died on June 12, left personal estate in England valued at £2,659.

Gaafar Wali Pasha, Egyptian Minister of War, returned to Egypt on August 26 from the Western Desert, where he had been inspecting the preparations being made for H.M. King Fuad's visit to Siwa in October.

Notes of the Week.

The Yugoslav Crisis.

If reliance can be placed on reports from Yugoslavia, both parties to the deadlock are becoming aware that a state of affairs exists which is no credit to the country and is gravely prejudicial to its interests. This position is at least an advance on the situation that has lasted since the Skupshtina murders until quite recently, during which time Serbs and Croats have been occupied in denouncing one another, without much regard for what might happen, if the breach between them were allowed to widen indefinitely. A mutual desire for a reconciliation should imply that each party to the dispute has come to recognise the necessity for making some concession to the other. The difficulty now is to bring the opponents together for a round-table conference. Yugoslavia would seem to have few, if any, outstanding personalities who are recognised as being entirely above politics, and whose services might be utilised on the present occasion. In these circumstances it has to be inferred that the task of bringing the warring groups together will devolve on King Alexander. The rôle is not entirely suited to his Majesty, as it must inevitably involve much preliminary testing of the ground before the round-table can be set up. Yugoslavia's stumbling-block is her hard-and-fast highly-centralised Constitution, enforced not only before unification was accomplished, but also while some of the component parts were on different planes of political experience and culture. Fortunately the Constitution offers no serious obstacle to its own revision. Amendments may be proposed either by the King or by the Assembly, and are passed by the same process as parliamentary Bills, save that they require a three-fifths majority. For the amendment of the Constitution on lines agreeable to themselves the Croats can be expected to attend the Skupshtina.

The New Bulgarian Cabinet.

A solution of the Ministerial crisis that had arisen in Bulgaria has been found in the return to power of the Cabinet that had just resigned, with the vacant portfolio of Railways given to M. Rashko Majaroff, who had held the same post for the last year of M. Tsankoff's Government. General Volkoff, accordingly, remains at the

Ministry of War in spite of the efforts made to dislodge him. As M. Bouroff also retains office as Minister for Foreign Affairs, it is to be hoped that the differences of opinion in the Democratic Entente have been satisfactorily explained away, at least for the time being. That body gave M. Liaptcheff a unanimous vote of confidence on his resumption of office, and the Government majority in the Sobranye refused to agree to the Opposition's desire for a debate on the crisis, disguised under a motion for a statement of the new Ministry's programme. The ground is now clear for M. Molloff, Minister of Finance, to give effect to the approval of the League of Nations for a further Bulgarian loan, for which negotiations are shortly to be opened in London; but it is difficult to believe that the solution now reached represents more than a temporary settlement of the differences that gave rise to the crisis.

M. Venizelos's Foreign Tour.

M. Venizelos, having happily recovered from his attack of dengue fever, is able to take advantage of the disorganization of every-day affairs in Greece for which the epidemic has been responsible to visit a number of foreign capitals, where various questions of concern to Greece can be discussed. As these questions involve the domain both of foreign affairs and of finance, it will be noticed that the Greek Prime Minister still relies on his own personality and powers of persuasion to win for Greece settlements which subordinate members of his Government might not be able to secure. In regard to foreign affairs special interest attaches to the visits to Rome and Belgrade. The ground for the conclusion of an Italo-Greek agreement has already been prepared, and it may be supposed that the document merely awaits the signatures of the representatives of the two countries. With Yugoslavia an understanding is not so far advanced. M. Venizelos made it clear in his Salonika speech before the elections that returned him to power that he hoped to regulate as soon as possible the Salonika Free Zone question in a manner satisfactory to the two countries; Greece furnishing the widest facilities possible for Yugoslav traffic, and Yugoslavia on her part advancing no claim

calculated to encroach upon Greek sovereignty. This friendly overture, which was entirely in keeping with M. Venizelos's avowed policy to cultivate friendly relations with Greece's neighbours, has given rise to misgivings in the Greek business world that the new Government was contemplating large concessions to Yugoslavia. M. Venizelos consequently sets out on his foreign tour with a reminder that his own flair for international politics is not shared by the Greek people as a whole to the exclusion of their business instincts. On the subject of Greek finance it will be remembered that M. Venizelos's challenge of M. Kaphandaris's policy did not receive endorsement in foreign financial circles. There would still seem to be points at issue between the Greek Government and the new Bank of Greece, and M. Venizelos's intention presumably is to uphold with the Governments concerned his Minister of Finance in any differences of opinion with the Foreign Adviser attached to the Bank of Greece.

The Press in Egypt.

The suspension for four months of two newspapers in Egypt has not necessarily to be interpreted as the inevitable tightening of a dictatorship screw. In Western countries the freedom enjoyed by the Press is a fair index of constitutional liberty; but in the East, whether north or south of the Mediterranean, the sense of responsibility displayed by the majority of the newspapers falls a long way short of the standard to which the West is accustomed. In Egypt what may be termed the mechanical side of journalism has been developed far more rapidly than the intellectual; the Press is well served by the latest machinery and makes full use of telegraphic facilities; but for the most part the standard of editorial comment leaves the Western reader aghast, when he compares it with the intellectual standard of Egyptians with whom he is brought in contact. When the new Government came into office, it found it necessary to deal with the tendency for newspapers of an elementary and essentially scurrilous type to spring up like mushrooms and with equal rapidity to disappear when they were held to have served their purpose, or if difficulties arose. At the same time the regular Press was urged to avoid the embittering of feeling on one side or the other, and a system of warning newspapers that are inclined to overstep the boundary-line of fair criticism was introduced as a preliminary to more drastic measures. The two papers now suspended had previously been served with warnings, but the licence to which the Egyptian Press has been accustomed under the stimulus of political passion was not so easily to be checked. The incident is not creditable to the Wafd organisation, because, in view of the pains taken by the leaders to keep within the law, it looks as if they had taken advantage of the political inexperience of the Press organs to encourage these to carry on a campaign in which they dare not indulge themselves. Fortunately the Press diatribes find little or no echo in the country at large; for, if they did, it would have been impossible for the Prime Minister to visit Tanta, the former stronghold of the Wafd, and to be accorded a friendly reception. It is also a good sign that a newspaper that has been Wafdist hitherto makes an appeal to the Wafd to aim at the restoration of unity in Egypt, in other words to give the Government a fair chance to show what its administration means to the country.

Reforms in Afghanistan.

King Amanullah is not only accepting advisers from Turkey, but is also modelling his actions in other directions on those of Mutapha Kemal Pasha. Not content, like the latter, however, with reforming the headgear of his Afghan subjects, he could seem to have condemned their whole wearing apparel, at least for those who aspire in a parliamentary or other public capacity to come within reach of his Majesty. Hitherto the Afghan townsman has conformed more or less to European modes of dress, but the villagers and the hillsmen have retained those of their forefathers, subject to such modifications as the

frequency of their visits to a big town may have inspired. When for the purpose of one of the infrequent sessions of the Afghan Parliament representatives of all parts of the country reached the summer capital of Paghman, they found that by King Amanullah's order their country costumes had to be discarded for black frock coats and trousers, with boots in the place of sandals and felt hats for turbans. This modern application of the Biblical wedding-garment went even further, for facilities were provided for the removal of the beards of those among the delegates who were amenable to the process, in order that they might be more presentable for their rôle in the management of the nation's affairs. Yet these innovations in Afghanistan are not as drastic as the abolition of the fez in Turkey. Court circles and Kabul society have for two or three decades dressed in European fashion, at least for all appearances in public, for there was a tendency to revert to native costume in the privacy of the house. King Amanullah is now bent on extending the civilising influence of dress to all parts of his Kingdom, and the ready-made clothes trade has yet another market provided for it. A new era will be open to Afghanistan when the tribesman, instead of reaching for his rifle at sight of a stranger, hastens to don his best reach-me-downs.

The Disciplining of a Country.

Reforms in Afghanistan, however, are not to be confined to sartorial improvements. The country in the past has been a synonym for lawlessness, and clearly at the back of King Amanullah's active brain is a resolve to discipline his subjects, in no despotic sense, but merely for their own good and for that of Afghanistan. As a step compulsory military service is to be made a real measure by the abolition of all exemptions, and the term of service is to be extended from two to three years. The proposal to introduce a system of preaching certificates for mullahs has also presumably been taken over from Turkey, and with the same idea, because reforms are bound to be hampered, if the minds of the people can be poisoned against them by fanatical mullahs. A national levy to cover the purchase of armaments may be necessary after the Monarch's expensive tour abroad; but it would have been better for the nation, if the money so raised could have been devoted to education or equally needed productive works. King Amanullah is losing no time in applying the ideas that he gained on his tour in European countries. In his first trial of strength with reaction on the subject of the veiling of women and their position in the land he has seemingly won a complete victory, although, according to the story, when a large gathering of women in Kabul had acclaimed the Queen's two-hour speech against the veil, shouting "Long live Queen Souraya! Away with the veil!" and snatched their veils from their faces, they were careful to put them on again as they went out of the Palace into the street. King Amanullah, it is to be noted, is adhering strictly to constitutional procedure. His measures are formally passed by the Grand Assembly, and that body, which met only once in three years, has now delegated its powers to a Legislative Assembly of 150 members selected from its own number, who are to sit for eight months every year for a term of three years. All this spells progress indeed, and nowhere will the King's reforming zeal be followed with greater interest and sympathy than in Great Britain. It is not fair, however, to expect things to move too quickly in Afghanistan. The country is handicapped by poverty and absence of communications; there are only three or four towns which, such as they are, might be expected to serve as centres for radiating the reforms, and of these only the capital is in close touch with the King. Afghanistan's great asset, however, is the virility of its people who, though more backward in civilisation, form a striking contrast to the easy-going Persians and to the Turkish race honeycombed with disease, and there are some observers who believe that, if King Amanullah's reforms can secure a firm hold in the country, the time

will not be far distant when Afghanistan will play an important rôle in Western Asia.

Progress in Abyssinia.

With Afghanistan beginning to forge ahead under the reforming zeal of its King, comparison is almost inevitably challenged with the state of affairs in Abyssinia, already a member of the League of Nations. Among the Abyssinians too a tour abroad of the ruler heralded the inauguration of a new era; but the wheels of reform would seem to revolve more slowly in Addis Ababa. It is a mistake, however, to regard even the most backward country as incapable of progress. In Abyssinia the reformers recognise the necessity of proceeding cautiously; Ras Tafari has difficulties to contend with beside which King Amanullah's mullahs pale into insignificance. Each reform has, as it were, to feel its way. Electric light was to be installed in Addis Ababa; but instead of the whole town's coming immediately under its convenient rays, a start was made with this building and with that. Only much later—a few months ago—have electric lamps made their appearance along a few of the main roads radiating from the Town Hall, where the plant is installed. In no direction, however, has the Regent greater cause to be satisfied with the results that he has achieved than in regard to education. The lead that he has given is being followed now in the most conservative quarters, and a desire for education promises to assume the proportion of a wave passing over at least a portion of the land. If this desire can be adequately satisfied, and if the education imparted to the people is based on sound principles, a brighter era may well be in store for Abyssinia.

At Cross Purposes.

A small incident, but one which is by no means without its effect on international relations, is reported from Abyssinia. By agreement among the Great Powers the traffic in arms in backward countries is not encouraged; but it is recognised that restricted importation is justified when duly authorized. Recently, with the approval, it is understood, of the British Government, a consignment of seventy rifles purchased in Great Britain was dispatched to Addis Ababa to an Abyssinian official. The rifles, however, have been detained at Jibouti by the French officials, ostensibly on the ground that they ought not to be imported into Abyssinia, and so far, according to report, all efforts to obtain the removal of the French ban have failed. As an Abyssinian agent was actively engaged not very long ago in France in arranging a large purchase of arms, about the importation of which into Abyssinia no question was raised, the inference left on the Abyssinian mind is that the difficulties in the way of trade with Great Britain make it more practical to deal with France. It is not suggested that the obstacles are inspired from Paris, but experience points to a conception on the part of French colonial officials that the acid test of patriotism lies in efforts to thwart the interests of other nationalities. If the facts in regard to this Abyssinian incident are as stated, it would seem as if the efforts of the Paris authorities some time ago to inculcate other views among their overseas officials had not been successful in French Somaliland.

Persia and Iraq.

The recent election of Persia to a seat as a non-permanent member of the Council of the League of Nations should be a cause of unqualified gratification. It is to be doubted, however, whether her first public utterance as a member of the Council was either wise in itself or calculated to promote that community of interest and general peace which it is the object of the League of Nations to secure. For on September 14, at the League Committee, the Persian delegate, H.H. Mahomed Ali Khan Faroughi, indulged in a general complaint against the treatment of Persians in Iraq. In this complaint there is, of course, nothing new; it has been made

several times at Geneva and elsewhere. What is something of a novelty is the nature of the making of the complaint on this occasion, which apparently caused general surprise. Ali Khan Faroughi maintained that Persian subjects in Iraq (who before the War, in Turkish times, had enjoyed a special judicial régime in Mesopotamia) were not receiving fair and equal treatment; and he further complained that Iraqi taxes on foreign nationals hit very hard Persian pilgrims who wished to end their days in the Holy Cities of Najaf or Karbala. To this attack upon the good-will of Iraq the British spokesman, Mr. Godfrey Locker-Lampson, replied on the following day. He pointed out—that we have already emphasised in THE NEAR EAST AND INDIA—that special judicial privileges could not be granted to Persians in Iraq without completely disorganising the legal system of the Arab States. It is not reported that he added—that he might well have added—that the Courts in Iraq, which have been supervised by British officers, are at least as efficient as the new Courts in Persia. With regard to the Persian charge that Iraq has shown unfriendliness towards Persia by harbouring brigands or by affording refuge to unruly tribesmen, one might have thought that the Persians would have remembered with gratitude, for instance, the action of the Baghdad Government in connexion with the arrest of the rebel Salar ud Daulah, or would have recalled with some other emotion the fact that Shaikh Mahmoud, who for so long was a thorn in the side of the Iraqi authorities, had repeatedly taken refuge in Persian territory. But no; Persia prefers, apparently, to blazon her grievances to the world in forgetfulness of her own shortcomings. For Persia's own sake we regret the step that has just been taken by her at Geneva, because any League opinion on Perso-Iraqi relations is bound, on balance, to favour the claims of Iraq. Would it not be far better to continue the line of personal and private negotiation?

The Need for Reconciliation.

It is not going too far, indeed, to say that never was the need for restraint and care in expression of differences between Persia and Iraq so great as it is now. There is evidence, in fact, that, so far from improving, relations between the Teheran Government and the Baghdad Government have become increasingly delicate. Now it is trouble on the borders, now in the Holy Cities, now in the region of the Gulf. Almost in every respect there is urgent desirability of amelioration in Perso-Iraqi relations. Early this year the Teheran Government made the very welcome gesture of appointing Mirza Hassan

Ali Khan Hedayat as Acting Consul-General in Baghdad, and an inquiry was instituted into the alleged wretched condition of Persian nationals resident in Iraq. Since that time, however, there has been no record of better feeling between the two countries; on the contrary, one or two frictional "incidents" have been reported on the south-east border of Iraq. A certain amount of "propaganda" has been indulged in southern Iraq. Is not the moment ripe, therefore, for a comprehensive and heart-to-heart talk upon all the outstanding problems between the two States? We recognise, of course, that in the past Arabs and Persians have seldom made easy neighbours, but with the enlightened advice of which both countries are now able to avail themselves, a working solution should surely not be impossible. It is to the interest of neither land to stand on unworthy ceremony, particularly as one is now a member of the League Council and the other within measurable distance of gaining admittance into the Geneva Assembly.

Dead Sea Salts.

It is seldom that so learned a subject can contain suggestive matter for the present as does the recent lecture by Dr. S. A. Cook at the XVIIth Orientalist Congress at Oxford upon "Why was Jerusalem called the City of Righteousness?" a report of which we publish elsewhere in this issue. But if Dr. Cook's thesis is tenable concerning the part played by the salt of the Jordan and the salt trade in very ancient times, how striking a confirmation it may receive if the scheme for retrieving the minerals of the Dead Sea comes to fruition! As is known, optimists assert that the Dead Sea salts are capable, not only of "making" Palestine and Trans-Jordan, but also of revolutionising agriculture all over the world. To the academic it may be something more than a coincidence that Lord Melchett, whose interest in all that concerns Palestine is by no means negligible, bears a name which recalls the old word salt (Hebrew: *melah*, "Salt Sea"). Truly the past belongs, more patently than it sometimes seems, both to the present and to the future in the Holy Land.

INDIAN NOTES.

Europeans and the Commission.

The memorandum which the European Association has submitted to the Statutory Commission, and of which we give a summary in another column, is a document of very considerable importance. And it is further evidence, if such were needed, that the non-official Europeans in India are in no way opposed to the extension of representative institutions. On the contrary, the Association definitely claims that its attitude throughout has been that of constructive criticism when the reform proposals were under

discussion, and of loyal co-operation when the reformed Constitution came into being. Like the Associated Chambers of Commerce, the Association recommends the grant to the provinces of full responsible government. But it is opposed—as are the Chambers—to the introduction of the principle of responsibility in the Central Government, being of opinion that proof must be first forthcoming of the satisfactory working of the autonomous provincial Governments. And it goes even farther than this and recommends that the executive in the Central Government should be strengthened. To this end it would increase the number of nominated non-official seats in the Legislative Assembly. The Association also considers that the Assembly has been constituted on a wrong basis, and that it is, in consequence, entirely unrepresentative. The existing system of direct election should be, the Association holds, abolished, and be replaced by a system of indirect election by the provincial legislatures and approved public bodies representing landed, commercial, labour and minority interests. Agricultural interests must also, it considers, be given adequate representation, the specific proposals being that of the elected members 40 per cent. should be elected by provincial legislatures, and 20 per cent. by commercial and industrial bodies, landed and agricultural interests and other minority interests, respectively. Apart from the vexed question of communal representation, the most difficult problem which the Statutory Commission will be called upon to solve will be to determine the composition and status of the Central Government. With the Associated Chambers, the Council, inferentially at least, agrees that responsible Government can only be conceded in the Provinces subject to safeguards primarily designed to "secure the strengthening of the executive, upon the vital necessity of which the Association is unanimous." But while the Memorandum refers with approval to the emphasis laid by the Montagu-Chelmsford report on the disadvantages of giving powers of criticism without responsibility, the Association is unable to suggest any alternative to the present Constitution of the Legislative Assembly which commands a sufficient measure of support from its members to justify its inclusion in the present document. Detailed consideration of this, as of the many other hardly less important issues on which the Council of the Association has wisely been content to express a general opinion, must be reserved for a subsequent issue. In many important respects the recommendations are themselves conditional in character, the concurrence in the grant of full responsible government in the Provinces even being subject to the approval of the "Provincial Committees of the Association having a special knowledge of the conditions of their own Provinces." But the Memorandum, like the representations of the commercial bodies, is a well-reasoned and eminently fair statement of the position of those on whose behalf it is submitted and a real contribution to the problem as well as to the promotion of a better understanding between the communities.

The Bombay Council.

The course of the last session of the Bombay Legislative Council at Poona exhibited the parlous condition of weakness into which the Government of Bombay seems to have fallen. All the Government proposals which savoured of controversy had to be withdrawn. The Bardoli dispute is, indeed, settled for the moment. Such settlement, however, as has been arrived at, is claimed by the Nationalist papers as a victory: and not unnaturally, since Government has had to surrender the important principle that a re-settlement duly promulgated after the prescribed inquiry can be legally introduced and enforced. Such a surrender must, it may be feared, be a presage of agrarian strife in the future. It is, however, satisfactory that the Council decided by so large a majority to co-operate with the Simon Commission, and selected their most capable members to put their case

THE POSITION IN EGYPT.

The two months that have elapsed since the promulgation of the Royal Decree dissolving the Egyptian Parliament and postponing fresh elections for three years have afforded an opportunity to outside observers to take stock of the situation in Egypt and to appraise more accurately the policy to which the new Government stands committed. It would be idle to disguise the fact that the first impression conveyed by the Decree of July 19 was that one more country was seeking salvation in a dictatorship. The event, however, has proved that so far many of the familiar aspects of such a régime are missing. In the first place the Prime Minister, Mahomed Pasha Mahmoud, has shown himself to be no dictator in spirit, and it is evident that the motive power for administrative reform comes from the Government as a whole and is not dependent on the intellect and driving force of one man only. The interest of the experiment lies in no small measure in the ability of the Cabinet to continue to secure the advantages which the suspension of Parliament provides without falling into the more common errors and abuses of a dictatorship. The latter may well become inevitable when a people has shown itself bankrupt of all administrative capacity. Egypt, however, had not reached this stage. Her difficulty was that, between her and the application of the capacity that she had, intervened the surfeit of talk without action which was Parliament. The cautious attitude of the recent conference of the Inter-Parliamentary Union suggested that even that body recognizes that there are Parliaments and Parliaments, and that it is conceivable for elected representatives so to behave that they reflect no credit on themselves, bring parliamentarism into disrepute and inflict material harm on the country which they are supposed to represent. This was virtually the condition of the Egyptian Parliament under the domination of the Wafd Extremists. The requisite knowledge of Egypt's real needs was there, as well as the capacity to give effect to it; but nothing could be done, because the Wafd's policy ordained that, while it indulged in its purposeless baiting of Great Britain, the machinery of government should be at a standstill. This situation became less a matter for surprise when it was remembered how the principle of Parliamentarism had been applied in Egypt. A Constitution of a most advanced type had been hurriedly conferred on a people only recently arrived at political liberty. With an overwhelming percentage of illiterates among them, they had been given virtually "universal suffrage." The second Chamber, elected on lines that made it a mere echo of the Assembly, could not be expected to exercise the functions of revision that were its *raison d'être*, while the royal power of veto was reduced to a minimum. Under the masterful direction of Zaghloul Pasha the

Assembly could be kept more or less within bounds; but with him passed all sense of realities on the part of the majority of the deputies.

It was under such conditions that the Liberal minority, increasingly conscious of the material needs of the country in regard to public works, industrial development and social progress, found itself obliged either to acquiesce indefinitely in the degradation of parliamentarism and in the moral and political undoing of Egypt, or to risk the odium of unconstitutional methods for the ultimate strengthening of the parliamentary régime and the material advancement of the country. Political differences between the Liberal Party and the Wafd in so far as ultimate aims are involved are practically non-existent. Neither yields to the other in devotion to the cause of Egypt's independence. The point at issue concerns the methods to be adopted for reaching the common goal. The Wafd contention may be summed up without unfairness in the slogan that there is no possible view on any subject other than the view that it holds, which is, therefore, right and must prevail against the world, if necessary. The Liberals say in effect: We believe that Egypt is right, but cannot convince Great Britain of the fact at present; consequently, rather than hold up the development of the country through barren controversy, we will take steps to meet the British on their own ground—efficiency and security—and to convince them ultimately that they are wrong. To this end, it would seem, the policy of the new Government is being directed. A programme designed to bring Egypt real and rapid progress is being carried out, and not the least satisfactory part of the situation is that the action of the King and the Government appears to have struck a responsive note in the mind of the country as a whole, for the general acquiescence in the new régime is essentially born of a resolve to wait to see what the Cabinet makes of its self-imposed task.

What then of the Wafd, which also contains able and patriotic Egyptians, whom circumstances had condemned to sterility for all the practical good that they could do for their country? The present Government, we believe, is too shrewd to desire, even if it could detach from the leaders the bulk of their followers, to see Egypt permanently deprived of the co-operation of any of her people. With the opportunity for reflexion now given to them, these leaders must realize that the ground on which they felt so secure is rapidly slipping away from under them. (There are matters of more immediate importance to Egypt's hard-working millions than their precise share in the control of the Sudan or whether some British soldiers are in Cairo or Kantara.) Improvements in the irrigation system, more water for agricultural needs, the provision of hospitals, the stamping out of disease and the establishment of industries—those who only bade them shout "Long live Saad Pasha" made no mention of these things. Can the majority of the nation help feeling grateful to those who are now providing for their wants and calling for no distracting political services in return? Does the Wafd really want the fellaheen to take it at its word, and to believe that all the advantages that they now stand to enjoy come to them from the British, as the "masters" of a "traitor Government," rather than from their own countrymen? The Liberal Party has chosen the only means open to it of demonstrating that there are Egyptians able to run their own country, although there was no room for them in the Wafd, because the latter decreed that good Government must be subordinated to political slogans. If the Wafd is wise, it will beware now of allowing the fetish of constitutionalism to make it pose as the enemy of the economic and social development of which the country stands in urgent need. Instead of regarding the Liberal Government as its enemy and attempting to decry it as a danger to Egypt, let the Wafd realize that Liberal patriotism has taken the more practical form, and, by closing up the ranks of the Egyptian people, let it see to it that no one has any interest to try to convert the temporary suspension of part of the Constitution into a permanent dictatorship.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, September 12.

Italo-Turkish Amenities.

On the morning of September 6, the Italian liner *Cesare Battisti* cast anchor in the outer road of Constantinople, having on board just over 950 young "Fascisti," among whom were the two sons of the "Duce," Vittorio and Bruni Mussolini. The visitors were given a hearty welcome, by both the Turks and their Italian compatriots, a strong detachment of Turkish Boy Scouts, in regulation khaki kit, going on board the vessel to receive their black-shirted comrades.

Guided by the Turkish scouts, the "Fascisti" were shown over the town, where they visited everything of note, including the principal mosques, museums and archæological sites. They were then taken in hand by the Italian diplomats and Consular authorities and were given an insight into the numerous Italian institutions of which Constantinople can boast, such as schools, hospitals, the "Dante Alighieri" and the "Opera Italiana."

The Turkish newspapers, alluding to the recently concluded Italo-Turkish Pact, offered their Italian guests a hearty welcome and seized upon the occasion for dilating upon the historical parallel offered by the activities and the character of the Duce in Italy and the Ghazi in Turkey—"those two noble and strong friends whose hearty collaboration had laid the foundations for peace throughout the Near East."

The young Fascisti, notwithstanding their somewhat peculiar get-up of riding-breeches, pigskin or khaki putties, black shirts and black betassled forage caps, certainly looked a nice set of boys, and the Italian authorities are to be congratulated on their effort to bring the young people of the two countries together.

Before the *Cesare Battisti* sailed from Constantinople for Rhodes, an interchange of flags took place on board between Fascisti and Turkish Boy Scouts, when, a bugle having sounded, the Italians standing at the Roman salute, the two youngest members of each contingent solemnly gave each other the *accolade*.

It is regretted by many members of the foreign colonies in Constantinople that, by a Government ordinance, the Boy Scout movement in Turkey is now restricted entirely to Turks. This measure is open to criticism on the grounds that Turkish Boy Scouts are undoubtedly trained with an eye on the future military necessities of the

country—somewhat on the lines of the O.T.C. in England—whereas the foreigners in Constantinople used to support the movement from entirely different motives—as affording an open-air life and a healthy pastime for their youngsters.

Greco-Turkish Relations.

The Turkish papers to-day announce that M. Pappas, Greek Minister to Turkey, during his recent visit to Angora, handed to Tewfik Rushdi Bey, the Turkish Minister of Foreign Affairs, an autograph letter from M. Venizelos suggesting that the differences which still unhappily divide the two countries should form the subject of a direct interchange of views between them.

Could only the obstacle to a good understanding arising out of the Exchange of Populations be satisfactorily disposed of, there is little doubt that diplomatic relations between Turkey and Greece—provided always that a competition in naval armaments is not indulged in—might shortly show signs of great improvement.

The Kellogg Pact and Turkey.

The reply addressed to the American Ambassador in Constantinople by the Turkish Minister for Foreign Affairs concerning Mr. Kellogg's suggestion for the abolition of war stated that the Turkish Government had studied carefully the text of the multilateral Treaty, and announced the unconditional adhesion of Turkey to the Pact.

ROUMANIA.

Bucharest, September 13.

The Question of the Loan.

The fate of the loan negotiations started by the Roumanian Government last spring with an American financial group through France continues to be the main preoccupation in Roumania. As the necessary legislation authorising the National Bank to float the loan was passed at an extraordinary session of Parliament in July last, and the objections of British finance appear to have been removed by the concession by Roumania of the demands of Messrs. Schroeder and Co., in regard to the recognition of the gold value of certain "pre-War and post-War Roumanian stocks, it now only remains to obtain the support of the Reichsbank, with which negotiations are still on foot. If these negotiations are successful, it is expected that the loan will be floated in the autumn. The pessimistic articles which have recently appeared in an English Commercial paper and a London evening paper have roused a good deal of comment and indignation here, and there seems little doubt that they were inspired by the Opposition party in Roumania, whose only hope of getting into power is the failure of the present Government's loan negotiations. However just many of the Opposition's criticisms of the policy of M. Vintila Bratianu may be, there seems little doubt that by an anti-loan campaign at the present juncture they are rendering a great dis-service to their country, and the countenance lent to such political intrigues by the above organs of the British Press is calculated to redound unfavourably on British trade with Roumania. British traders have shown an inclination to distrust this market, and on every side their German competitors are gaining ground; for the latter fully appreciate the importance of Roumania as an actual and potential market and are making strenuous efforts to recapture it.

The total value of the proposed loan is 250 million

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

dollars, of which the first instalment is to be 80 million dollars. This is to be used (a) for the stabilisation of the currency, (b) to provide working capital for the Railway Administration and (c) to provide funds to start work on the Railway reconstruction programme. In this connexion, a recent investigation of the railway system seems to have led to the conclusion that the need for reconstruction work is very urgent indeed, for the capacity of the existing workshops and the funds at their disposal are far from adequate to retain the rolling stock at the required level, and the whole system is badly in need of overhauling.

Economic Situation.

All financial, industrial and commercial circles in the country may be said to be waiting breathlessly for the conclusion of the loan negotiations, for, unless these are successful, the immediate economic outlook will be very dark indeed. The lack of money and exorbitant interest rates charged for loans are strangling all enterprise, and many firms of good standing have recently been obliged to apply for a moratorium. The cost of living mounts incessantly and is likely to attain an undreamed-of figure this winter, owing to the long drought and the semi-failure of the maize crop, which provides the staple food of 80 per cent. of the population, namely of the peasants. Although it cannot be said that the failure of the maize crop spells famine, as there may be plenty of barley, rye and wheat, it must still be considered to mean serious want in the villages, for the main crop of the peasantry is always maize, and it is on that that they depend for their living. In many districts the stalks of maize, having developed no cobs, have had to be cut down for fodder, and the peasants who would normally be employed during September in gathering the cobs, are already gravitating to the towns in search of work, which they do not always find immediately.

For these peasants it is no doubt a fortunate circumstance that in Bucharest at least, there is at present a

great deal of building and relaying of streets going on, so that a good many unskilled labourers are being employed. Nevertheless, the situation was recently brought vividly home to the writer on being accosted in the street by a group of obviously self-respecting peasants, who had failed to find work and who were reduced by hunger to ask for bread.

Building in Bucharest.

During the last few years three whole new quarters have been added to the north end of Bucharest, and in the town itself new houses—generally apartment flats of four or five storeys—have been going up in every other street. In spite of this fact, however, the demand does not yet appear to have been satisfied, for rents continue to soar, and small flats consisting of three tiny rooms and a bathroom are offered at £150 per annum. The Bucharest Municipality have this year undertaken a number of much-needed improvements in the streets themselves, many of which have been relaid. New electric tramway lines have been started, connecting some of the outlying quarters with the centre of the town, and to relieve the congestion in the narrow streets of the city, which used to be caused by the tramways, the "one way" traffic rule has been introduced with the best possible results. Further, the old portion of the Boulevard Bratianu, one of the main arteries from the centre of Bucharest to the residential quarters in the north of the town, has been widened by pulling down the neglected old houses on its eastern side and a really splendid boulevard of about a mile and a half long is being formed, with a riding track between trees in the middle, which reaches from the Bratianu Statue in the Boulevard Carol to the Piazza Victoria, where the Foreign Office is situated. Everywhere houses, which until recently bore traces of the air bombardments during the War, are being repaired, and Bucharest is gradually taking on the aspect of an important capital.

Miscellaneous News.

The inquiry is proceeding into the recent fraudulent sale of certain of the State oil lands. An attempt has been made to inculcate foreign firms in this fraud, but so far the facts seem to show this to have been entirely unjust.

Queen Marie is at present staying in Sinaia, where she is receiving the visit of Prince and Princess Hohenzollern, nephew and niece of the late King Ferdinand.

THE VISIT OF THE SULTAN OF MUSCAT AND OMAN.

The official visit of His Highness the Sultan of Muscat and Oman (Sir Saiyid Taimur bin Faisal bin Turki, K.C.I.E., C.S.I.) began on September 15, when he was met at King's Cross Station, on arrival from Skegness, by Lieutenant-Colonel S. B. A. Paterson, Political A.D.C. to the Secretary for India, representing Lord Birkenhead, Mr. Bertram Thomas, O.B.E., His Highness's "Grand Wazir," and Mr. Ernest E. Beare, C.B.E., Secretary of the Government Hospitality Committee. As already recorded in THE NEAR EAST AND INDIA, His Highness had been received by the King at Buckingham Palace on July 25, and had come successfully through his operation at Skegness at the hands of Colonel Lessel Stevens, late Civil Surgeon at Karachi. During the period of recuperation he has stayed at the home of Sir Percy and Lady Cox at Clapham, Bedfordshire, and at the home of Lady Wilson at Much Hadham, Herts. (Sir Arnold Wilson is away in Central America until December.)

On September 15 His Highness's party, which includes his A.D.C., Saiyid Theeyab, proceeded to the Hyde Park Hotel, which is their headquarters in London. The Daimler car in which all His Highness's journeys by motor car are being made displays the Union Jack and the national flag (plain red) of Muscat and Oman. On this Saturday night, His Highness began the series of visits to theatres which are to occupy every evening when he is in town.

The following day, Sunday, His Highness spent partly in visits to Hyde Park, and to Kew Gardens and Richmond Park.

On the morning of September 17, His Highness, wearing native dress, laid on the Cenotaph a large wreath, consisting of white chrysanthemums, lilies and scarlet carnations, and bearing the inscription on a scarlet silk ribbon, "From the Sultan of Muscat and Oman." Then he visited Westminster Abbey and placed on the grave of the Unknown Warrior a large chaplet of palm leaves and scarlet carnations. He afterwards arrived at the Houses of Parliament, where he was received by Sir Thomas Butler, K.C.V.O., Secretary to the Lord Great Chamberlain. In the afternoon he journeyed by car to Windsor Castle, arriving by the Henry VIII Gateway and Visitors' Entrance, where he was received by the Inspector of the Castle.

On September 18 the Sultan's party were to have gone to the Oval to see the end of the Lancashire v The Rest of England match, but the Champion County succumbed to the representative team on Monday.

Yesterday, September 19, the party were due to arrive at the Royal Mint, to be received by Sir Robert Johnson, K.B.E., Deputy Controller; and in the afternoon at the British Museum, where the Director, Sir Frederic Kenyon, was to receive them.

To-day (Thursday) His Highness is to visit Croydon Aerodrome in the morning, and in the afternoon the Tower of London, where he will be received by Colonel Dan Burges, V.C., D.S.O., Resident Governor. The evening will be spent at the Crystal Palace in witnessing a fireworks display and in listening to a concert and organ recital.

For the remainder of His Highness's stay, the following programme has been arranged:—

September 21.—Leave Hyde Park Hotel in the morn-

ing for Portsmouth, where ships will be inspected. Lunch with Admiral Superintendent at Admiralty House. In the afternoon, leave Portsmouth by submarine for Southampton. Leave Southampton for Bournemouth.

September 22.—Leave Bournemouth for Savernake Forest, and thence by way of Spread Eagle Hotel, Thame, Oxon, to the Mitre Hotel, Oxford.

September 23.—Leave Oxford for the Bull Hotel, Cambridge. Thence to Stamford.

September 24.—Leave Stamford for Barnby Moor, and then York, where a civic welcome will be given at the Royal Station Hotel by the Lord Mayor.

September 25.—Leave York for Ripon and Durham.

September 26.—Leave Durham for Melrose and Edinburgh, where the party will be guests of the Corporation.

September 27.—Leave Edinburgh for the Trossachs and Glasgow.

September 28.—Leave Glasgow for Carlisle and Windermere.

September 29.—Leave Windermere for Chester (Grosvenor Hotel).

September 30.—Leave Chester for Llandudno and Holyhead.

October 1.—Holyhead to Kingstown, Dublin, and thence to Limerick (Royal George Hotel).

October 2.—Leave Limerick for Killarney (Great Southern Hotel).

October 3.—Leave Killarney for Cork and Tramore (Grand Hotel).

October 4.—Leave Tramore for Rathdrum, Dublin, and Holyhead.

October 5.—Leave Holyhead for Llangollen and Shrewsbury (Raven Hotel).

October 6.—Leave Shrewsbury for Hereford and Cheltenham (Queen's Hotel).

October 7.—Leave Cheltenham to lunch with Sir Percy Cox at Clapham, Beds, and to tea with Lady Wilson at Much Hadham, Herts, and thence back to the Hyde Park Hotel.

October 8.—His Highness will be received in the morning at the Guildhall by the Lord Mayor.

October 9.—The party will embark in the morning on S.Y. St. Katharine at Westminster Pier for a visit to the Port of London.

October 10.—His Highness will visit Cambridge.

October 11.—In the morning a Royal Air Force Display at Hendon will be witnessed.

October 12.—In the morning the party will be received by Sir Charles Holmes, Director, at the National Gallery; and in the afternoon the Law Courts, where the Lord Chief Justice will receive His Highness, will be visited.

October 13.—Kempton Park Race Course will be visited in the afternoon.

October 14.—His Highness and party leave England for the Continent.

It is thus to be seen that an admirably comprehensive tour of England, Scotland, Ireland, and Wales has been arranged for His Highness the Sultan, who will, it is to be hoped, not only make a complete recovery of health during this period, but will also be enabled to take back to the Persian Gulf a new conception of the strength and beauty of the countries which he is about to visit.

Major-General C. D. H. Moore, C.B., C.M.G., D.S.O., who died last week at his residence, Prospect Hill, Bamber Bridge, near Preston, at the age of 53, had seen much war service in the East as well as in France. When the Great War broke out he was still a captain, but in October, 1914, he was appointed temporary major and was confirmed in that rank in the following December. He went to Gallipoli as D.A.Q.M.G. in 1915, being awarded the D.S.O. and the Legion of Honour, and was subsequently A.A. and Q.M.G., and A.Q.M.G. from July, 1915, to February, 1916. Then he was D.A. and Q.M.G., 9th Army Corps, until October, 1916, when he was appointed to command the 157th Infantry Brigade (Lowland Scots), Egyptian Expeditionary Force, and took it to Gaza. For his services in Egypt and Palestine he received the Order of the Nile.

CALCUTTA LETTER.

(From Our Own Correspondent.)

All-Parties Conference.

Calcutta, August 30.

All eyes are turned to Lucknow, where the Report of the Committee of the All-Parties Conference, or the Nehru Report as it is known for short, is on the anvil. How much support the draft produced by the Nehru Committee commands, as the *Statesman* remarks this morning, it will not be possible to assess till we have the account of the final sessions at Lucknow. It may be argued that even then assessment will be impossible. It must not be forgotten that these constitution-makers are volunteers. They have not been empowered by Parliament to say what the Constitution should be, with the knowledge that it would be made whatever they might say it should be. Theirs is very largely an academic discussion. The delegates are in some measure, indeed a large measure, in the position of the House of Commons in the days when the powers of the House of Lords to prevent legislation were greater than they have been since the Parliament Act. Then it was not rare for a supporter of the Liberal Government of the day to vote for the measures introduced by his party, in the full knowledge that no vote of his could be fatal; for the House of Lords would assuredly reject the Bill. The delegates at Lucknow, or not a few of them, will vote for principles, knowing full well that the Simon Commission will turn a deaf ear, and that consequently how they vote does not much matter. An unperturbed looker-on will bear that in mind.

This particular unperturbed looker-on regards the financial side of things as the most important; for it is important, and it is the consideration that is apparently the last to enter the heads of any of these busy men. A statement over the signatures of Sir Ali Imam, the Maharaja of Mahmudabad, and other Muslims, was issued yesterday. It contains the following, among other things: "We suggest that the recommendation about the separation of Sind should be more clear and specific. It should be worded thus:—Sind should be separated as an administrative unit and, if financial deficiency is discovered, adequate measures should be adopted to make it up." The implication is that there is no lack of money somewhere, and that all that need be done is to direct the needy hand to the right purse. The truth is, of course, that there is a lack of money everywhere. That seems to concern no one else. I search the public prints in vain for some warning that the constitutional coat must be cut according to the financial cloth. One hopes that there is a member of the Statutory Commission strong on the side of finance. There may not be one: Parliament may have overlooked that as much as anyone here.

The Communists.

The Government of India having decided to deal with Communist agitators in India of foreign extraction, a Bill has been prepared with the object of conferring the power on the Government of ordering any such person (he must be of foreign extraction) to leave the country and not return without permission. As permission to return would never be given, the expulsion from India would be final. Those who will be liable to expulsion under the new Act, should it become part of the law of this land, will be those who:—

Seek to overthrow the Government in British India, or the abolition of all forms of law or organised government;

Seek to ferment or utilise industrial or agrarian disputes with the direct object of subverting the authority of the law or organised government in British India; or

Are members of, or are associated with, any society in British India or elsewhere which advocates these doctrines.

Grand Trunk Canal.

The Bengal Chamber of Commerce has associated itself with the river steamer companies in advocating that the Government of Bengal should proceed with the

project of the Grand Trunk Canal, the abandonment of the Sunderbans route being, it is stated, only a question of time. The object of the project is, of course, to provide a reliable waterway between the districts of Eastern Bengal and Calcutta. That object might be worth the price; but what the price is must be clearly stated. Attention may here be invited to the passage on page 18 of the lecture of Sir William Wilcocks, entitled "The Restoration of the Ancient Irrigation of Bengal," beginning with the words: "The country, supported by the Bengal National Chamber of Commerce, is strongly opposed to the construction of an alternative steamer canal continued athwart the whole of Central Bengal. I criticise it as an hydraulic expert." The passage is too long to quote in full; for it extends over a few pages. What, in Sir William's opinion, would be the effect of yet another bar thrown across the natural drainage of the country, would be to intensify yet further the havoc wrought, the havoc whereby Central Bengal has been converted from a fertile province into a pestilential swamp at one season of the year and an arid desert at the other.

It might pay to keep the water-communication between Eastern Bengal and Calcutta open, even to having a desert or a swamp between, but the thing must be gone about by men with open eyes. The human population of Central Bengal must not be left to be starved or poisoned to death. It would have to be transported, and settled elsewhere. That would be part of the price to pay. In many men's views it would be far too high a price: what is clear is that it is the price. It is clear, but it is not clear to everyone, and that is the gravamen of the situation. It is not to be expected that it should be clear to the agents of river steamer companies, outside whose beat lie all questions of the interactions of dietary for men and cattle and the expectations of life among men, of mosquitoes and the decline of a population. Those are beyond the ken of river steamer companies and the Chambers of Commerce that they influence. They also lie beyond the ken of canal engineers, or all but one in ten thousand of them. Thence the peril of the present situation.

The Brahma Samaja.

Very much less is heard nowadays of the Brahma Samaja (the name is usually, but inaccurately, spelt *Brahmo Samaj*) than used to be heard, and that Mr. Bipin Chandra Pal thinks ought not to be. One may agree with him. Mr. Pal has been addressing a meeting, part of the centenary celebrations of the *samaja*. It will be a surprise to many to learn that the movement is so old, but so it is. The decline of public interest in the *samaja* can be traced, through many ramifications, to Lord Curzon and his methods of government; for so interpenetrated a thing is this world.

BOMBAY LETTER.

(From Our Own Correspondent.)

The Lucknow Conference. Bombay, September 1.

The All-Parties Conference which met last Tuesday at Lucknow was more successful than the other two sessions held at Delhi and Bombay. This was due chiefly to the fact that the Conference had only met to discuss the Report of the Nehru Committee. Among the prominent leaders present at the Conference were many of the Liberal party who had not attended the previous Conferences. The absence of Mr. Jinnah, who has not been able to return to India on account of his wife's health, was much regretted, as he should have taken his place with the other leaders. There were present Mrs. Besant, Sir C. P. Ramaswami Iyer, Sir Tej Bahadur Sapru, Mr. C. Y. Chintamani, Pundit Kunzru and Dewan Bahadur Rangachariar from the Liberal Party. The moderate wing of the Congress was, as was expected, in greater strength than at other conferences held recently; the two chief representatives of this section being the veteran Congressmen, Pundit Malaviya and Mr. C. Vijayaraghavachariar.

The representatives of the Hindu Mahasabha, the Muslim League, the Khilafat Committee, the Sikhs and the Depressed Classes all spoke at the Conference in support of Lala Lajpatrai's resolution recording appreciation of the Nehru Committee's Report and conceding general support to it. There was only one dissident and that, as luck would have it, was a Muslim, Maulana Hasrat Mohani from the Congress. The Maulana declared that he stood for complete independence and so was not able to accept the Report. On the second day, when the Assembly reassembled, Pundit Madan Mohan Malaviya moved his resolution that the Government to be established in India should be responsible to a popular elected legislature possessing full and plenary powers and that India's status should not be lower than that of any self-governing Dominion. In moving the resolution, he said that he was not against complete independence; if he was for Dominion Status to-day it was because he thought it was in the best interests of the country to keep the British connection for the present. The resolution was strongly opposed by Mr. Jawaharlal Nehru who found supporters in the left wing of the Congress party. Mr. Hasrat Mohani then moved an amendment that the part relating to Dominion Status should be deleted, which was put to the vote but was declared lost for want of a supporter. The original motion was then carried without opposition.

The Hindu Sabha representatives are to be congratulated on the reasonable spirit in which they approached the question of the separation of Sind and other controversial subjects. On the Sind question, they have agreed to the separation provided it is advisable from the financial point of view and that the same concession is given to them in Sind as is given to the minorities in other provinces. In Punjab they have consented to give up their claims for separate electorates or reservation of seats for the next ten years. In Bengal they have accepted the recommendations unreservedly—at least so I infer from the telegrams received up to the time of writing. There has therefore been unanimity in almost every resolution passed at the Conference. The All-Parties Conference has progressed so far. I do not know how long this unanimity is going to last and whether it goes much deeper than the surface. One incident is far from reassuring: Pundit Jawaharlal Nehru, as one of the speakers put it at the Conference, was not satisfied with his father's ideal. He said that to attain unity at the Conference he would abstain from recording his vote against the resolution moved by Pundit Malaviya, but he said he considered himself free to carry on an intensive propaganda for his principle of complete independence. If all the minorities adopt this attitude there can be no meaning in the resolutions passed at the Conference because the decisions arrived at there have no bearing on the opinions of even those institutions who send representatives to the Conference. In other words, the Conference is held mainly with a view to impressing foreigners. The younger Pundit charged the Nehru Committee with forgetting the force of world opinion when he said that they have written a report as if there were only two countries in the world—India and England. But he himself is guilty of the still greater offence of forgetting the very existence of India, as he abstains from attempting to gain a victory for "complete independence" while at the same time conducting a campaign in favour of this very ideal outside the Conference. Would it not have been more considerate on his part—at any rate more honest—if he suspended his campaign till the result of the Nehru Report on the British Government was known? One can understand Mr. Hasrat Mohani and respect him, but the younger Nehru should be at least consistent.

Dr. Besant and the Nehru Committee have been appointed to frame a constitution on the lines laid down by the Report. Mrs. Besant is a valuable addition to the Committee as she has much experience of Indian politics. Further, as she has already drafted a constitution she can offer invaluable help to the Committee in its work. The Conference ended to-day amidst scenes of wild en-

thusiasm. In concluding Dr. Ansari said that all the members there assembled should make up their minds to stand or fall by the Report. The last resolution passed at the Conference ran as follows: "This Conference declares that the agreements and decisions contained in the foregoing resolutions are based upon the assumption that the general scheme sketched out in the Nehru Report adopted by this Conference shall be given effect to as a whole inasmuch as the various provisions thereof are interdependent and all parties assembled in this conference hereby agree that every one of them will stand by it as a whole and will refuse to accept any single part of it without giving full force and effect to all the other parts provided that any modification of this scheme may be accepted by the consent and agreement of all parties." All things considered the Conference has been a success, but it remains to be seen whether disappointed minorities will not work against it in the country. Already a league called the "Independence for India League" has been formed by Mr. Jawaharlal Nehru and Mr. Subhas C. Bose.

Signing the Kellogg Pact.

The signing of the Peace Pact at Paris has been welcomed in the country as a step towards world peace. But the fact that the High Commissioner was not asked to sign on behalf of India, nor even the Secretary of State for India, has caused much dissatisfaction in this country. The presence of Mr. Srinivasa Sastri at the Treaty of Versailles, the admission of India to the League and the subsequent part taken by her representatives in the various Imperial Conferences is looked upon by all persons in India as a precedent which should have been followed in this case. The extremists point to the exclusion of any person who could even by the wildest stretch of imagination be said to represent India as fresh evidence of the bitterness existing in England against Indians. Mr. Srinivas Iyengar said in his speech at the Sir Cowasji Jehangir Hall that he attached great importance to world opinion and particularly to the establishment of the League of Muslim Nations. Even the most ardent admirer of the British cannot fail to feel that there is perpetual bungling, and that is the most charitable construction put on the action of the Imperial Government in recent years. Sir Sivaswami Iyer in his recent book on "Indian Constitutional Problems" writes: "The growing estrangement between the Government and the people of British India is a source of sincere sorrow to persons like myself who have been firm believers in the value of the British connexion. I can only point out the dangers ahead and the remedies which seem necessary and practicable for the purpose of putting an end to the unrest in the country. But the chances are that the Government will be unable to distinguish friends from foes and will regard all criticisms as equally inspired by a spirit of hostility to the British connexion. The present policy of England is essentially based upon distrust of the loyalty of the people. History records no instance of a country as large as Europe, minus Russia, and containing a population of over three hundred millions being held in permanent subjection by another nation. For how long would it be possible to hold such a country by force or by the policy of *divide et impera*? If India is to be a lost dominion it will be lost by the adoption of a policy advocated by the Imperialist Jingo of sitting tight upon national aspirations, and not by a policy of graceful concession to national sentiment." Sir P. Sivaswami Iyer has been a member of the Executive of the Madras Government. He is considered to be the military expert in the Assembly. He represents all that is best in the Indian Liberal Party and is little experienced in the art of playing to the gallery. After such a book he could have figured as a popular leader but he was not present at the Conference.

The Strikes.

The strikes, it is generally believed, are nearing their

end. The credit for this can only be set down to the lapse of time. At Jamshedpur the Tatas have started recruiting new men; at Bombay the point of dispute is the standardisation of wages. - Mr. S. C. Bose, who should not have interfered in the Jamshedpur strike, now announces that there is a possibility of settlement. Such settlements, to say the least, are unreliable. One wishes that these "peace-makers" would refrain from entering the field of industries. But very often the trouble is that the management of a concern invite leaders to assist them and then find it would have been better to have let sleeping dogs lie. Mr. S. C. Bose, even if he acts with the best intentions, as the writer thinks he does, cannot expect to mediate successfully between two parties with neither of which can he identify himself. But intolerance is infectious and those very extremists who in the past accused the Government of suppressing criticism are now fast creating an atmosphere in which it is impossible to express an unpopular opinion or to criticise a popular hero whatever may be the credentials of the dissident.

THE EUROPEAN ASSOCIATION AND THE STATUTORY COMMISSION.

Summary of Proposals.

One of the most important documents which the Statutory Commission will be called upon to consider is the Memorandum submitted on behalf of the Council of the European Association, which has been made public to-day. The Memorandum, it is stated, has been fully discussed and approved by all the Branch Committees, who themselves will submit memoranda and give evidence, more particularly on provincial affairs, when the Commission reaches the various provinces. At the same time the responsibility for the wording of the document, it is expressly stated, rests with the Council of the Association, the governing body, which is elected annually by the members of the 31 branches, sub-branches and agencies throughout the country. Membership of the Association is open to all European British subjects as defined in the Rules under the Government of India Act, and of the 21,780 Europeans eligible according to the 1921 Census, 8,000 are members of the Association.

Following an introductory chapter, in which the position in general of the non-official European community in India, and in particular of the European Association, is explained, the Memorandum proper is divided into two parts. In the first part, which is entitled "General Considerations," the Association sets out its views on the present constitutional position and its recommendations as to the general lines on which changes should be made. "Representing a community with large interests in India, many of whose members have had practical experience of the workings of the Central and Provincial Governments under the Government of India Act, 1919, the Association hopes that the views expressed will be of use to the Commission."

In the second part the Memorandum deals with the special position of the European and Anglo-Indian non-official communities, and the manner in which their interests might be affected in the event of any extension of responsible government. Suggestions are made as to the desirability, especially in matters of taxation, trade and commerce, for safeguarding the present position under which Europeans and Indians have equal rights.

The Association deals first with local self-government, recommending (1) the encouragement and development of village panchayats and municipal and district boards to be elected on the widest possible franchise, with power to the executive to take over, in the event of mal-administration; (2) the formation of a local government executive service in each province; and (3) the adequate representation of European interests on local self-governing bodies.

In respect of provincial Governments, it is the opinion of the Association that the system of communal electorates must be continued, and the existing electorates

so reorganised as to give greater representation to agricultural, landed, and business interests, and the depressed classes. The Association would also empower the provinces to deal with the difficult question of social reform.

The moral and material progress of the people is largely dependent on the ability to existing ancient customs to suit the requirements of a modern India, and advance will be more rapid, it is contended, if the provinces are empowered to enact their own social legislation instead of waiting for the advance of public opinion throughout the whole of India.

It holds that there should be no extension, or at any rate no considerable extension, of the present franchise. But it would establish full responsible government in the provinces, subject to the following safeguards: (a) that Second Chambers should be established; (b) that all Bills passed by a provincial legislature should require the assent of the Governor-General in Council; (c) that there should be adequate constitutional safeguards against legislation discriminating against any particular section or community in matters of taxation, trade or commerce, and that it should be a charge on the Governor to use his power of veto on any legislation which may appear to be unfairly directed against any particular section or community; (d) that the recommendations of the Lee Commission as to the Services should be adhered to; (e) that the financial relations between the Central and the Provincial Governments should be re-examined and adjusted to overcome the inequalities of the Meston award; (f) that the Governor-General in Council should have power to take over and to administer a province in which the administration breaks down; and (g) that a Public Services Commission should be appointed in each province.

The Association is opposed to the introduction of the principle of responsibility in the Central Government. It would maintain the Council of State as at present constituted. But, as regards the Legislative Assembly, it would abolish the existing system of direct election, and would substitute therefor a system of indirect election by provincial legislatures and approved public bodies. With the object of strengthening the hands of the electorate, the Association would increase the proportion of nominated non-official seats in the Assembly.

It also proposes the appointment of a special Finance Committee to make recommendations on the financial relations between the Central Government, the Provinces and, if they agree, the Indian States. The Viceroy's Executive Council should, the Association thinks, remain as it is constituted at present, except that a British Minister for Defence should be substituted for the Commander-in-Chief as a member of the Council. The Association would also empower the Government of India to co-ordinate the work of the provincial Road Boards.

Other recommendations which the Association makes are: (a) that there should be built up a federation of the Indian States, working through the Chamber of Princes, with a view to the ultimate development of an all-India Government; (b) that there should be no further reduction of the British element in the Services at present; and (c) that, with a view to attracting the best men, any legitimate grievances of the Services should be examined and removed.

With regard to the European community, the Association recommends: (1) that the powers of responsible government should be subject to a statutory safeguard prohibiting discriminatory legislation against any particular communities in matters of taxation, professions, trade, industry and commerce, and that the existing instructions to Governors with regard to discrimination should be continued; (2) that adequate representation should be given to European interests on local self-governing bodies, especially in Assam; (3) that the present rights of voting and representation in the provincial and central legislatures should be preserved; (4) that European representation in the Legislative Assembly should be provided for the Punjab; (5) that the right to a jury containing a majority of Europeans should be preserved; and (6) that

the right to State grants for the Schools for Europeans should be protected.

The final recommendation which the Association makes is that the legal position of the Anglo-Indian community should be considered and defined; that the community should be re-organised as one of the communities of India; and that it should be given increased representation in the Central Legislature.

The Memorandum closes with the following statement :—

"The Council of the Association believes the Commission will recognise in the Memorandum which it has put forward, as well as in the work of the community's individual representatives in the various Legislatures, the good will of the British community towards India's political progress. The Council of the Association, in view of its responsibilities to its members, has only been able to make recommendation for a larger measure of responsible government in the Provinces on the understanding that adequate safeguards are provided, and it will be prepared to elaborate in oral evidence the nature of the safeguards which would meet these altered conditions."

THE STATUTORY COMMISSION'S PROGRAMME.

The following telegram, according to a Reuter telegram from Simla, has been received by the Viceroy from Sir John Simon :—

The Indian Statutory Commission is leaving London on September 25, and is due to arrive in Poona, where the first sitting will be held on October 12.

The Provincial Committee elected by the Bombay Legislative Council will sit with the Commission in Poona, and six out of the eight remaining Provincial Councils have also already decided to co-operate with us.

As regards the proposed Central Committee, your Excellency will remember that in our letter of February 6, which contemplated a Committee chosen by both Houses of the Indian Legislature, we laid stress upon the fact that we had no wish to dictate its precise composition but that we were concerned to secure that it should not be composed of an unwieldy number and should be as far as may be representative of British India as a whole.

Although the Council of State resolved to appoint members to such a Committee, a majority of the Legislative Assembly has taken a different view, and the Commission feels that the time has come when we ought to request your Excellency to invite the Council of State to elect its proportion of members. We should be grateful if your Excellency would complete the composition of the Committee in such a manner as you may think most appropriate. We trust that this Central Committee will be able to meet us on October 13 at Poona, and as soon as the names of the Committee are available we should propose to arrange as rapidly as possible for the supply to them of the material which will come under our joint consideration.

We should like to make it plain that we contemplate that the Committee as thus constituted should perform all these functions suggested for the Central Committee in our letter of February 6. In particular we should be glad if the Committee so desire to include its report as an annex to our own document, so that both may be presented to the King-Emperor and be made public at the same time.

The village of Karitchi in Northern Dalmatia was entirely destroyed by fire on September 11, the long drought making it impossible to stop the fire from spreading.

It is reported from Peshawar that for opposing reforms contemplated by King Amanullah, such as the abolition of Purdah and the compulsory education of women, the Muslim saint, Hazrat Sahib, who wields great influence in Afghanistan and was the favourite of the late Amir, has been arrested with some of his followers. Troops are said to have escorted the party to Kabul from Charbagh.

NEWS IN BRIEF.

The dengue fever epidemic in Greece continues to abate. Scarcely 25 fresh cases a day were last week being reported in the capital.

After a meeting of the Greek Cabinet on September 14 it was decided to postpone the meeting of Parliament for a month.

The new Albanian Cabinet met the Constituent Assembly at Tirana for the first time on September 10, when M. Kotta announced the Government programme.

The widow of Stepan Raditch has asked the League of Nations to send a representative to assist at the trial of the Deputies who are charged with the murder of her husband.

Dr. P. P. Pillai, of the Geneva International Labour Office, has been appointed to take charge of the permanent representation of the I.L.O., which it has been decided to set up in India.

The Nizam of Hyderabad has made a donation of £500 to the Extension Fund of the Central London Throat, Nose, and Ear Hospital, Gray's Inn Road, W.C.1, in recognition of its Empire work.

Two hundred and sixteen persons entered Palestine during June, of whom 145 were Jews. Two hundred and sixty-three persons left Palestine permanently, of whom 206 were Jews, including 163 who had settled since 1920.

Following upon the murder of Egide Peritch, who was involved in a case of alleged espionage in Yugoslavia, the police at Liubliana have arrested M. Verbitch, editor of a Nationalist newspaper, and an engineer named Kranjs, an employee of the same newspaper.

Mgr. Fan Noli for the "Albanian Committee for National Emancipation," last week sent a telegram to *The Times* protesting against the proclamation of Ahmed Beg Zogu as King of the Albanians as "an odious crime" against the Albanian people.

M. Venizelos is expected to leave Athens to-day on a 20-days' trip to Rome, Paris and Belgrade with a view to settling certain questions connected with Greece's foreign policy. The Minister for War, M. Sofoulis, will be Acting Premier during his absence.

The United States has recognised the Kingdom of Albania. The Tirana correspondent of the *Giornale d'Italia* states that King Zogu has received a telegram from the President of the United States congratulating him on his accession to the throne of Albania.

The Roumanian postal authorities have just issued the following air stamps :—1 leu brown, 2 lei blue, and 5 lei carmine, designs for which were secured in open competition. They are intended for use in the service connecting Bucharest with Temesvar, Galatz, Jassy, and Czernowitz.

The Latifiyah Agreement, by which the holders of the original Dila cotton plantations concession will acquire a new estate of 60,000 acres, was passed by the Iraq Chamber of Deputies in Baghdad on September 14 by 46 votes to 17, after a heated debate. Many of the Deputies were absent.

The Bulgarian political crisis ended on September 12 by the formation of a Cabinet by M. Liaptcheff, the outgoing Prime Minister. The only difference in the new from the preceding Cabinet is that M. Rashko Majaroff, leader of the Democratic Entente in Parliament, occupies the Ministry of Railways, which was vacant.

The Times Athens correspondent reports that fresh brigandage has been perpetrated outside the village of Anavrita, in Macedonia. A group of students were kidnapped by bandits, who kept three in captivity, releasing the others with a demand for a ransom of 500,000 drachmæ (about £1,300), to be paid in sterling or dollars. Troops were immediately dispatched to pursue the brigands.

"We ask you to give the love of the children of this little nation to the children of your great nation, and thus foster and lay the foundation for an understanding between the various peoples of the world," was the message given to a party of British women teachers who toured Yugoslavia in August by the Yugoslav Chief Inspector of Schools. The teachers visited all the principal towns, and receptions were arranged for them by the Yugoslav Government.

The Rev. A. F. Matthew is the first missionary to be appointed by the S.P.G. to Abyssinia. He will minister to the British community in Abyssinia, and during the last year, according to *The Times*, has been in Cairo preparing for his new work and studying the languages which will enable him to get into close contact with the people of the country. His stay in Cairo has also given him opportunities for intercourse with the Coptic Church. There is no intention of attempting to make Anglicans of Abyssinian Christians, but it is hoped that Mr. Matthew's appointment will provide a fresh means for friendly intercourse between the Church of England and the ancient Church of Abyssinia.

The XVIIth Orientalist Congress—III.

Iran, Armenia, and the Caucasus.

The paper read by Mr. A. Safrastian on "The Kurds" on August 28 we shall be privileged to publish somewhat fully in a subsequent issue.

Monsieur B. Nikitine lectured in French on August 30 upon "Urumiah Ashfars" and "Some Kurdish Animal Stories," with Dr. A. V. Williams Jackson in the Chair.

Lecturing on August 30, upon "Les caractères généraux de la langue arménienne," Professor A. Meillet, of Paris, described the general characteristics of the Armenian language. This was in its origin an Indo-European language which came to be profoundly influenced by another type. Dr. O. G. Wesendonk, talking upon "The Kalavada and the Zervanite System," instituted a comparison between the Indian and Iranian conceptions of Time as possessing religious significance. The Kalavada doctrine of India had much in common with the Zervanite system of Iran. Professor H. Lommel read a study of the Zoroastrian religion. The dualism of good and evil was, he said, by no means that of matter and spirit. The perfect state attained after the final judgment was not simply spiritual but corporeal, for the corporeal alone was active and the spiritual a passive reflection.

Perhaps the lecture which excited most interest in this section was the postponed lecture by Dr. E. Herzfeld on "The Oldest Civilisations of Hither Asia." Dr. Herzfeld, who was unavoidably late in arriving at the Congress, said that on the uplands of the Iranian plateau he had found painted pottery which he claimed to be older than that of Susa, Elam, and Sumeria. There seemed to have been a connexion between the highlands of Iran and those of the Hittite region, and Dr. Herzfeld was inclined to date the Hittite sculptures earlier than was generally done and traced the origin of stone sculpture to Hittite countries. A special feature of the very ancient pottery of the Iranian plateau lay in the geometrical designs, all different, which seemed to indicate some magical purpose.

Dr. A. V. Williams Jackson lectured on August 31 upon "Some Researches in Manichæism." He spoke of the discoveries in the Turfan oasis in Central Asia. Upon the famous word *Miyzdagtaci* he made the suggestion that the first half, *Miyzdag*, represented the solid or edible portion of the sacrifice offered by the Manichees, and the second, *taci*, represented the liquid or flowing portion. He then passed to the personality of Mani, who, born in Babylonia, founded the heretical sect in the 3rd century A.D.. He supported, in particular, the theory that Mani was not so much decrepit as lame in one leg.

Hebrew and Aramaic.

Professor A. S. A. Yahuda began the Old Testament section on August 28 with a paper on "The Language of the Pentateuch and its relation to the Egyptian language and thought." He said that the solution of Biblical studies was to be found in linguistic studies. In its wanderings Israel, though it preserved its tongue in the main, absorbed some alien elements into its own language. It was more than likely that the Pentateuch was strongly tinged with Egyptian influences. It was only after the conquest of Canaan that Hebrew developed into a literary language. Many Egyptian words appeared in Genesis and Exodus.

Dr. J. Morgenstern dealt with the legends attaching to the Eastern gates of the Temple, in a paper called "The Gates of Righteousness."

Then came a paper by Dr. S. A. Cook, entitled "Why was Jerusalem called the City of Righteousness?" It dealt with the supreme religious significance which was claimed for the city of Jerusalem, and with the idea of "righteousness" (*sedek*) which was associated with it, even before the entrance of the Israelites.

In early religion ideas of "righteousness" had a practical application: right behaviour, right consequences.

Religion was practical, and for the purpose of procuring peace, prosperity and plenty. Instead of gods as the causes of the processes whereby men live, often priestly kings or priests were supposed to be responsible for the crops and, in general, the material welfare of the people. The prophets of Israel marked the division between earlier ideas of a more mechanical, organic bond uniting gods and men, and the more ethical and spiritual ideas of this relationship. Righteousness, which in later days spelt "almsgiving," in earlier times was "right ritual," and to a late date, Jerusalem, its temple, and its priesthood were supposed to exercise influence over Nature's gifts.

The religious history of Jerusalem and the use of the Hebrew root of "righteousness" went back to the Amarna Age (XIVth Cent. B.C.) when nature-gods of Sun and Rain were prominent, and interrelated ideas of right, truth and order could be traced over the world of which Jerusalem and Palestine were an integral part.

Further, the regions of Judah and the Dead Sea, with its extremes of fertility and desolation, and the deposits of salt with its preservative and destructive properties, and its ancient religious and economic importance, would leave its stamp upon the old religion. Primitive religion tended to "economic," and in the Sinaitic Peninsula even the turquoise mines were the seat of a half-Egyptian, half-Semitic cult, many centuries before the Amarna Age. Moreover, the antiquity of religion in the region of the Dead Sea had been recently indicated by the discovery at ed-Dra on the east, of the remains of a very ancient, holy place, perhaps a place of pilgrimage and a necropolis.

Salt was a familiar symbol. The "covenant of salt" was an enduring one, and the "salt of the earth" were to save the world and preserve it from corruption. The idealism which made Jerusalem and Mount Zion the ethical "city of righteousness," the centre of universal religion, and Israel the priest-people to the world, went back to very ancient and primitive forms of thought, before the days of the great prophets, before the rise of Israel.

The mysterious district of Judaea and the mysterious powers of that valuable substance, salt, which enriched Judah and Jerusalem, and which lay in their hands, afforded abundant material for reflection upon life and death and the mysteries of existence. It was at their doors and in their hands. The life-giving and destructive properties of salt, and also the great nature gods (Sun and Rain or Storm), would encourage early speculation upon the paradoxical, though perfectly natural, character of the gods. This led on to the teaching of the prophets that Yahweh's "righteousness" naturally entailed the punishment of an erring Israel and that ethical "righteousness" would as inevitably bring prosperity. And this in turn culminated in the teaching in St. Matthew's Gospel v. 24-34.

In the evening of August 28 a lecture was delivered by Mr. P. L. O. Guy on "The Excavation of Megiddo," with Professor J. M. P. Smith in the Chair. Mr. Guy pointed out that the excavation of Tell el Mutesellim was being carried out by one of the numerous expeditions which are at work in the Near East under the general direction of Professor Breasted, Head of the Oriental Institute of the University of Chicago. It was rendered possible by the generosity of a group of gentlemen in New York, and operations were begun in 1925 with Dr. C. S.

School of Oriental Studies, London Institution

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Fisher as Field Director. In the spring of 1927 it became impossible for Dr. Fisher to continue excavation in the field, and the lecturer was invited to replace him there. Since last year, however, Dr. Fisher has been able to compile a volume, dealing with the early stages of the work, which is now in the press.

Tell el Mutessellim was the Megiddo or Armageddon of the Bible. It lay some 30 kilometres south-east of Haifa, overlooked the plain of Esdraelon from a low spur of the Carmel Ridge, and commanded important roads. There was no larger tell in Palestine. It measured some 300 by 200 metres across the actual summit, and the occupied area spread out far beyond these limits in all directions.

Six strata had so far been distinguished: they were numbered, from the surface downwards, I, II, Sub-II, III, IV, and V. I, II, and Sub-II were somewhat fragmentary, and did not occur everywhere on the site. III was fairly good, and owed this fact mainly to its being in large part a reconstruction of IV, from which it was separated only by a short period of time during which a destruction by fire took place. It was itself destroyed by fire later on. V had been reached only where it was visible in IV, or where IV had been destroyed in antiquity. It was IV which had given the most connected remains. Although the lecturer had not so far found *in situ* any inscriptional material which permitted him to give a precise date to stratum IV, its pottery pointed to about the tenth century B.C. as a very reasonable date.

Among the various excellent lantern slides shown by the lecturer was one of a town, containing stables, and perhaps also chariot-houses, built all to a uniform design.

In these great stables there were 12 pillars in each row, giving, with the two end walls, 13 spaces. The first of these, next the door, was probably used only for access, and there would thus be room for 24 horses in each stable unit. In the great building there were 5 stable units with room for 120 animals. The other buildings were slightly longer, and apparently had room for 28 horses apiece. In the area so far cleared, there was stable accommodation for over two hundred. The lecturer said that it had probably occurred to those of his audience interested in Palestinian archaeology that there was something familiar about the stables which he had described. This was because buildings which resembled them have been discovered before: he had merely unearthed better examples, and had given a correct explanation of their use.

The impression given very definitely by the stables, and indeed by everything about the chief buildings of stratum IV, was that they were the work of men skilled in construction beyond the average in Palestine. These buildings were not the result of a natural development of a local building tradition, and the buildings which succeeded them did not display in any way the breadth of conception and the mastery over materials which marked stratum IV so clearly. Mr. Guy had said that so far our evidence pointed to the tenth century as being a reasonable date for this stratum: he saw no possibility of its being earlier, but it would be wrong not to consider the early part of the ninth century as a possible date because of the masonry of Samaria; he was, however, much inclined to believe that the Samaritan construction represented not so much an original conception, or a sudden improvement of a local style, as a creditable effort on the part of Omri of Israel to make his capital as fine as that of Judah by copying the work of the Tyrian and Jebelite masons introduced into Palestine by the great builder Solomon, whom the Bible credited with a building-pro-

gramme of truly remarkable extent. That programme included Megiddo. It was given in I Kings 9, 15-19.

This was substantially repeated in II Chronicles 8, 1-6, where the additional information was given that it was only at the end of the twenty years during which Solomon had been building in Jerusalem that he began construction elsewhere.

Megiddo lay on the direct road between Jerusalem and Phœnicia, and it would be perfectly natural that Hiram's masons returning after the completion of the Temple and Palace should be employed there. The lecturer was much tempted to believe that stratum IV was their work. Another thing which led him to attribute this stratum to the time of Solomon was the amount of stable accommodation which it contained. And he mentioned passages in II Chronicles 9, 25; in II Chronicles 8, 9; and in II Chronicles 1, 14-17, which was practically the same as I Kings 10, 26-29.

There was obviously a large, organised trade in horses and chariots, and he suggested that the "Affinity" which we knew that Solomon made with Pharaoh was, at least in part, a commercial treaty to regulate this trade: it looked very much as if Solomon, with his characteristic wisdom, had picked upon a commodity which would enable him to strengthen and modernise his own army, and at the same time to dispose profitably of his surplus stock, which would naturally accumulate by breeding, to the people of the North.

Megiddo, placed on the main road from Egypt to Syria, with the pastures and grain-lands of Esdraelon at its feet, simply could not help being a centre for this trade, and Taanach, hardly an hour's ride away, would form a convenient overflow dépôt.

A more northerly station on the road to Syria would be Hazor, in the Huleh Basin.

It was worth remarking, in connexion with this Hazor, that somewhere on the southern section of the road from Egypt, and associated in I Chronicles 4, 31 with Beth Markavoth, or the House of Chariots, was a place called Hazar Susim, or the enclosure for horses. The proper name Hazor was connected with the word Hazer, and the appearance of the Huleh site certainly suggests an enclosure.

What he had shown of Megiddo clearly indicated that the ordered planning of stratum IV extended beyond the area so far cleared. There were visible, in Schumacher's trenches, walls of important buildings still unexcavated, and Mr. Guy was of the opinion that the site presented an unrivalled opportunity for laying bare—complete—the most important Solomonic town that could be dug. For Jerusalem could never be dug in our time. The clearing of such a town, of unique interest in itself, would, it might be hoped, throw light on what was still an obscure page in the closely-related histories of Palestine and Egypt. The lecturer had a suspicion that it was largely Solomon's trade in horses which increased the Asiatic armaments to such a point that Shishak found it necessary to go out with fire and sword to reduce them. It was at Megiddo, if anywhere, that information about this trade was to be found.

On the afternoon of August 29 Dr. T. H. Robinson, of Cardiff, spoke on the "Oracle Collections in the Prophetic Books of the Old Testament." He showed how the extant prophetic books were largely a collection of old oracles pieced together by the ancient editors to the best of their ability. Very frequently, oracles which had really no connexion were united by the makeshift device of inserting the connecting link—"and it shall come to pass in those days"—which was thus merely an editorial device for joining two oracles, and not necessarily the conventional opening of an interpolation, as many critics supposed. Dr. Robinson also observed that several of the oracles were preserved only in prose paraphrase. This would explain the sudden transition from verse to prose in the prophetic books and as well the parallelism in language between the verse version contained in one prophet and the prose in another. The date and locale

THE PERSIA SOCIETY.

F. H. Keeling
Hon. Sec.

of the original collections were uncertain, but the lecturer believed them to be largely post-exilic.

Literary criticism was again the main theme of a paper read by Dr. A. Kaminka, of Vienna, on "Widerlegung der Hypothese von einem Deutro-Jesaja," in which he endeavoured to restore the Book of Isaiah from the vandalism of critical vivisection. Dr. Kaminka showed at great length that the recognised two "attitudes" of Isaiah were merely the obverse and reverse of one coin, and that the central idea of the Book was the antithesis between the threat of doom in the first half, and the promise of hope in the second. This antithesis, the lecturer maintained, was even traceable in the language of the two parts, as when the smirching of the glory of Jacob was opposed to the clear-shining of the glory of Yahweh. He pointed out that the supposition of a post-exilic date for Isaiah XI-XVI, ignored the fact that Hebrew at this period, e.g., Sirach, was none too classical, and that the Jews who rendered the LXX at this date no longer understood the classical idiom of the book. Finally, Dr. Kaminka traced the influence of Deutero-Isaianic turns of expression upon the phraseology of later writers, thus destroying the critical dictum that Deutero-Isaiah was unknown to these authors.

A sympathetic discussion in which Dr. Gaster and Professor Strom participated, attested the audience's appreciation of this quixotic attempt to revive the conservative standpoint.

The concluding paper of August 29 was that of Prof. Coppens, who, speaking on "La réforme de Josias, l'objet de la réforme de Josias; la loi trouvée par Helcias," brought forward a number of arguments to show that the book of Deuteronomy was *anterior* to this Reform, since it was just on the known code of this book that the reform was based. The lecturer urged that the reform of Josiah was not a departure from existent cult, but rather a confirmation of it, and the aim of the book of Deuteronomy was not the centralisation of worship as has generally been supposed. Indeed, the attempt at fixing the date of Deuteronomy by the supposed parallelism between Josiah's centralisation and that of this code was fallacious, since centralisation was not mentioned in the Scriptures as a feature of the reform. Deuteronomy might well be Mosaic in origin.

The subject of the lecture by Professor Vaccari, of the Vatican, delivered on August 30, was "Le récit de l'Eden dans l'histoire des religions et dans la théologie." In speaking of the religious and theological aspects of the story of Eden in Genesis he suggested that to the author of this story the Divine chastisement of man consisted in his deposition from a supernatural state to a natural state, without any corresponding modification of his physical state or mental aspirations.

Professor R. H. Pfeiffer, of Harvard and Boston, insisted in a paper on "Non-Islamic Material in the Book of Genesis" on a re-division of the documents comprising the Book of Genesis. He urged that the commonly-accepted "Priestly Code" (P) was never an independent document, but rather a running commentary on the

accounts of J. E. and D. In addition, Dr. Pfeiffer recognised a new Edomite source (S), which had provided, for instance, the Edomite history of Genesis xxxvi.—a conclusion partly anticipated by Eissfeldt.

In the discussion, Professor A. H. Sayce vigorously contested the possibility of the precise analysis of documents in Genesis, although he had no doubt that the Book, as we now had it, was the result of a blending together of old materials—a process paralleled in recently discovered cuneiform texts. Professors Eissfeldt, Nielsen and Coppens also spoke.

The interest of recent excavations at Ur was manifested in a short paper by Prof. W. B. Stevenson, of Glasgow, on "Three Distant Contacts with Ancient Ur," in which he attempted to find parallels in other civilisations for three things found at Ur. The first was the *ziggurat*, the form of which he would connect with the original "step-pyramid" of Egypt. In the second place, there was found at Ur a stone plaque imaging a naked man sacrificing. This Prof. Stevenson would link up with the incident in I Samuel ch. 6, in which David is censured for dancing naked before the ark. The practice was also alluded to in Ex. xx. 26. Thirdly, Professor Stevenson had noticed that a toilet-set found at Ur was exactly of the same fashion in every detail as one found in a Saxon cemetery at Luton.

Mr. C. L. Woolley, in the discussion, condemned the association of *ziggurat* and step-pyramid as fantastic. The resemblances were very superficial, while the differences were cardinal. Prof. Allbright also spoke.

Dr. B. Jacob, of Dortmund, in a paper entitled "Die literarische Einheit der biblischen Sintfluterzählung," attempted to show that the account of the Flood in Genesis was a literary unity. The distinction between *Yahweh* and *Elohim*, of which much had been made by modern critics, was theological and not literary, and the seeming disparity in the mention in one place of *forty days* as the length of the flood and in another of *one hundred and sixty* was no disparity at all, since the forty days referred to the actual downpour and the one hundred and sixty to the time the waters covered the earth.

On August 31 Dr. S. Daiches read a paper upon "The Meaning of 'am tra'ares' in the Old Testament." This phrase, meaning "the people of the land," occurred frequently in the Old Testament. It was frequently taken, he said, to imply priority, "the ignorant peasant." But he had decided that it meant rather "the landed gentry." The post-Biblical meaning of the term would be due to the fact that later the lords of the land became a by-word for wrong-doing.

The Rev. K. E. Keith, of Liverpool University, in discussing "The Significance of the word 'Selah' (found in the Book of Psalms) stated his belief that it was not strictly a word at all, but the initial words of one of the Doxologies.

Mr. V. Srinivasa Sastri, Agent of the India Government in the Union of South Africa, hopes to leave for India in January. His successor will be chosen by the Department of Education and Lands and Health in consultation with the Viceroy.

Book Reviews

GREECE: THE LIVING PAGE.

"SILHOUETTES OF REPUBLICAN GREECE." By Betty Cunliffe-Owen. (London: Hutchinson and Co., Ltd. 18s. net.)
"THE STATION. ATHOS: TREASURES AND MEN." By Robert Byron. (London: Gerald Duckworth and Co., Ltd. 18s. net.)
"GLIMPSES OF GREECE." Edited by Brainerd P. Salmon. (Published jointly by the Hellenic Information Bureau, Washington, U.S.A., and the Anglo-Hellenic League, London. 3s. net.)

Those who read "Thro' the Gates of Memory" will know of the deftness with which Mrs. Cunliffe-Owen can wield an artist-pen and of her power to conjure up in a few words a realistic picture diffusing interest in and sympathy with her subject. Here in the compass of less than three hundred pages of large attractive type she takes her reader lightly through some arresting experiences that impressed themselves on her memory during a stay of a few years in Greece. Naturally, the reader will not find here the whole of the story of present-day Greece; he must be content with a succession of pictures, all in vivid colours. It would be a mistake, for instance, to go to Greece expecting to eat melons and grapes at Easter, although Mrs. Cunliffe-Owen, watching the country-folk near Argos "returning home with their Easter purchases," saw "water melons, bigs as moons, juicy oranges and golden grapes." Again, a reference to "the late famous General Pangalos" hardly does justice to the vitality of the ex-Director, who survived nearly two years of imprisonment to be able to leave his card on M. Venizelos and to be mixed up in a mild shooting affray at the last elections. The story of the arrest, by order of the Dictator, of M. Papanastassiou during a reception in his own house is, we may hope, literally correct, as it is told dramatically. Particularly happy is the section devoted to Corfu, into which is woven the story of Demitri's sister. Mrs. Cunliffe-Owen has the right temperament for obtaining the best that Greece has to offer; she has the knack of entering into the spirit of her surroundings and a sense of humour that never trespasses beyond the boundaries of kindness. Her book affords pleasant reading, and may be commended both to those who know their Greece already and to those to whom it may still be a treat in store.

The "Station" is Mount Athos, "station of a faith where all the years have stopped." Mr. Robert Byron describes a visit to the Holy Mountain undertaken for the purpose of photographing and describing the masterpieces of Byzantine art which the monasteries there contain. In another volume (in preparation) we are promised a more elaborate and technical presentation of the results of that visit; here the author gives a general description of the Mountain, its Monasteries and their treasures. The subject is one of sufficient interest, and Mr. Byron has enough to say upon it, with the requisite knowledge and enthusiasm, to devote the whole book to it; but he has decided that the reader will be better pleased if the more serious portions of the book are sandwiched in between narratives of the minutiae of the daily existence of himself and his companions in lighter vein. A few flashes here and there of what the Publisher's Note refers to as Mr. Byron's "witty and penetrating" style might have left the reader eager for more. When, however, this style is brought to bear on every incident of the twenty-four hours in a varied tour of many months it is apt to pall. For the author, doubtless on account of his likeness to Queen Victoria*, is not as other men are. Whereas most people are content to rise in the morning, or possibly, to get out of bed, not so Mr. Byron:—"On the last day of August we issued from the commonplace of sleep, to discover with surprise that the barrier between

ourselves and the accustomed had emerged from myth of yesterday into disconcerting reality."

It is a relief, therefore, when the author checks the youthful tendency to strain after effect and deals with the things that mostly count on Mount Athos. Here he is on safe ground, for he deals knowledgeably and enthusiastically with the architecture, painting and other works of art that come under his observation. Twentieth century architecture, Mr. Byron points out in an interesting passage, has as its underlying motive "movement in mass." In such diverse buildings as the later skyscrapers of New York, Liverpool Cathedral, the Town Hall at Stockholm and the large block known as Adelaide House at the north end of London Bridge he traces this movement in mass "in the uninterrupted stretches of flat perpendicular surface; in the avoidance of cornice, architrave, or any ornament that can disturb the sweep of the walls; and in the manipulation of perpendicular lines so that in fact or in appearance they are made to converge." For a prototype Mr. Byron turns to the two monastic dominions that the earth still possesses, the Byzantine community of Athos, and Lhasa. The similarity between the Monastery of Simopetra and the Potala at Lhasa is unmistakable, and our author is satisfied that it is due to more than coincidence. "Though one is Christian and the other Buddhist, it is plain that the contemplative life, untrammelled by the Western doctrine of justification by works, is productive, no matter what its religion, of grand conception and grand execution when its devotees are engaged on material creation." Apart from any possible historical consanguinity—as between Buddhist theocracy and Nestorian Christianity—Mr. Byron suggests the psychological relation between landscape and art. His claim that in these "God-governed states" the grandeur of the earth is unique leads him to a description of the setting of the "Station," which may be quoted at length. (In the face of this picturesque theory it is to be hoped that no one will arise to suggest a purely utilitarian origin having regard to self-defence.)

To anyone who has sojourned beneath the Holy Mountain; who has watched its peak, 6,000 feet sheer from the sea, white against the blue summer sky or magnet of fierce winter storms; has travelled the wooded ridges and sailed beneath the marble cliffs; who has gazed on the dim shapes of the horizon, Lemnos, Longos and Thasos, colouring and paling to the time of day; and has lived in sight of that inexorable sea, gleaming smooth all colours of a pearl, or silver blue roughed by some haphazard puff of air, green turquoise, spitting up white horses in the clear windy air, leaden grey, pouring over its own troughs, clanging the shore in ear-filling monotony—to anyone who has experienced this whole combination of man-made and God-made individuality, there cannot but have come an intensification of his impulse to indefinable, unanalysable emotion."

The history of the Mountain in brief will be found in a separate chapter under the heading "Government in the Fourth Dimension," but the narrative is amplified on a subsequent page by the story of the little-known attempt to establish Russian domination in the Peninsula. Visits to the more important monasteries are described, and a careful account given of their principal contents. Although the author is not blind to the faults and not too kind to the foibles of their inhabitants, we are left with the impression of a gathering of monks of a kindly, hospitable disposition, not far otherwise than their antecedents and surroundings would lead the visitor with knowledge of the East to expect.

Mt. Athos has not always been appreciated by its visitors. "The Station" is certainly to be recommended to anyone who contemplates a visit to it, as it will enable him to derive more advantage from his visit by indicating what to see and how he should try to see it. Mr. Byron's pages certainly "live," and when both books on Mt. Athos are published, he will have made a valuable contribution to our knowledge of this curious enclave on Greek territory. The illustrations in this volume are excellent.

* p. 186. "The bathe was enlivened by our imitation of Queen Victoria—had she ever swum—in propelling her rigid bust through the waves with that peculiar bustle motion which she would doubtless have employed. This pastime may seem unusual; but not unnatural, in view of the goodness of Providence, who has reincarnated the face of the monarch upon the person of the author."

"Glimpses of Greece" is a paper-covered book of 110 pages issued under the auspices of the Hellenic Information Bureau of Washington and the Anglo-Hellenic League of London. It contains a collection of sketches, bearing on different aspects of Greece, by well-known writers, together with a synopsis of practical information for travellers and plans for trips from Athens. The articles and the numerous photographs make the book a valuable and attractive *vade-mecum* for the visitor to Greece. It can be recommended as a readable supplement to any ordinary guide-book. Professor E. A. Gardner writes on Archæology and Mr. A. J. B. Wace on Crete; there are articles dealing with agriculture, certain industries, refugees and a variety of other subjects.

THE SAINTS OF ABYSSINIA.

"THE BOOK OF THE SAINTS OF THE ETHIOPIAN CHURCH." A translation of the *Ethiopic Synaxarium*, made from the manuscripts Oriental 660 and 661 in the British Museum. By Sir E. A. Wallis Budge. Four volumes. (Cambridge University Press. £3 3s. net.)

In 1805 the Abyssinian expert of the day described this work as one of the books in use among the Abyssinians in his day and in it "the miracles and lives, or lies, of their saints are recorded at large, in four monstrous volumes in folio, stuffed full of fables of the most incredible kind. They have a saint that wrestled with the Devil, in shape of a serpent nine miles long, threw him from a mountain and killed him. Another saint converted the Devil, who turned monk, and lived in great holiness for forty years after his conversion, doing penance for having tempted our Saviour upon the mountain. What became of him after they do not say. Again, another saint, who never ate nor drank, from his mother's womb, went to Jerusalem, and said mass every day at the Holy Sepulchre and came home at night in the form of a stork. The last I shall mention was a saint, who, being very sick, and his stomach in disorder, took a longing for partridges. He called upon a brace of them to come to him, and immediately two roasted partridges came flying, and rested upon his plate to be devoured. These stories are circumstantially told, and vouched by unexceptionable people, and were a greivous stumbling block to the Jesuits, who could not pretend their own miracles were better established, or more worthy of belief."

There speaks the stout Protestant! "Hagiology" is a department of literature which has a somewhat limited appeal, yet we have to rely upon it, duly sifted, for much of our knowledge of early eastern Christianity and of the history of the Near East in the extremely dark ages when Rome was rising and falling. And far be it from the people of this generation to call those of any other century superstitious.

Sir Wallis Budge's experience, industry and accomplishment in this field of careful annotation and translation are excelled by none; the Cambridge Press have issued the work in an edition limited to three hundred copies; it is beautifully printed and the limited number of those who possess it will value it highly—but whether as an impetus to piety or a source of diversion it is impossible to say.

INDIAN NOTES.

(Continued from page 316).

before the Commission. The memorandum submitted by the Bombay Chamber of Commerce to the Simon Commission for the revision of the Meston Settlement is an admirable document. It shows clearly that far more was taken from Bombay than from other Provinces, while the revenues left to it were not merely small but inelastic. Two reproaches are commonly brought against Bombay, that its expenditure is high and that it does not tax itself sufficiently. But the high scale of salaries in Bombay is due, first, to the necessity of giving a decent wage for honest work, and, secondly, to the industrial expansion,

which has raised the cost of living generally. The Government of India has taken away the taxes derived from the labour of the industrial classes, so that the burden of providing for the education and medical relief of these classes and for the maintenance of law and order in the industrial areas, falls largely on the poor cultivators. As regards provincial taxation, Bombay at least taxes itself more highly than any other province: more than three times as much as the richer Province of Bengal, and more than twice as much as Madras, the Province which received the largest amount of additional revenue under the Meston Settlement. The case for the revision of that Settlement is, therefore, from the Bombay point of view, overwhelming.

A Novel Safeguard.

Interest in the memorandum submitted by the Associated Chambers of Commerce of India and Ceylon to the Simon Commission will be enhanced by perusal of the text of an exceptionally instructive document now available by mail. One point in particular which merits closer attention than the necessarily curtailed telegraphic summary suggested concerns the proposed safeguards against legislation discriminating against British mercantile interests. As we remarked at the time, the Chambers are greatly concerned at the tendency shown by Indian politicians—and not only the most extreme among them—to seek to restrict the development, or even jeopardise the continued existence, of British commercial and industrial undertakings established in India by legislation or taxation indicating discrimination of a racial or communal character. The Chambers accordingly suggest the insertion of a clause in the statute creating the revised Constitution enabling any person aggrieved to move the Courts to treat as *ultra vires* any measure of an Indian legislature purporting to enact discriminatory legislation or taxation. The prohibition, it is suggested, should extend not only to Acts passed by the Central or Provincial legislatures, but also to by-laws or regulations issued by municipal and other local government bodies. While such a prohibition would admittedly be a novel constitutional provision, there is no lack of precedent for its basic principles. Nor is there any reason why the inclusion of safeguards of this nature should offend Indian susceptibilities, since, as we have previously pointed out in this column, such a provision is a familiar feature of commercial treaties concluded on a most-favoured-nation basis between Sovereign States of every degree. The Chambers confine themselves to asking for "national treatment" only for industries and commerce established in India; and "nothing in this demand is to be construed to prevent the imposition of tariffs for revenue or protective purposes."

THE PRINCE OF WALES AND THE DUKE OF GLOUCESTER IN AFRICA.

The Prince of Wales and the Duke of Gloucester, who had spent two nights in Alexandria, were seen off at Sidi Gaber on September 13 by Sair Zulfikar Pasha, Grand Chamberlain, on behalf of King Fuad, when they took the train for Cairo. They were accompanied by Mr. Hoare, Acting High Commissioner, and by Hassanein Bey, who has been specially delegated by the King of Egypt to attend during the remainder of their visit to his country.

They had an enthusiastic reception, according to *The Times*, from the British Colony on their arrival at Cairo Station. The Prince of Wales drove direct from the station to Helmiya to visit the 12th Lancers, of which he is Colonel-in-Chief, the Duke of Gloucester proceeding to the Kassed Kheir, King Fuad's river yacht, which was lent to the Princes during their stay in Cairo. Both the Princes took luncheon on board the yacht. Afterwards they visited the museum containing the Tutankhamen relics. The Prince of Wales then went to the Gezira Sporting Club, and the Duke of Gloucester visited Musky. In the evening they were the guests of the British Colony at a dinner at the Gezira Kitkat Club, where a cabaret show was given.

After an early visit to the Pyramids, they left the following day for Ismailia. The Princes were entertained to luncheon by the Suez Canal Company officials, and in the afternoon sailed on the British India steamer *Malda* for East Africa. They arrived at Port Sudan on the morning of September 17.

THE WEEK AT HOME

London, Tuesday Morning.

A Liberal-Labour Coalition.

Once again in the atmosphere one is beginning to detect, among the autumn-mists, the familiar scent of politics. Speculation is becoming keener on the result of the next General Election. Men among the Liberal and Labour camps are daily convincing themselves that no party will have a clear majority. And hence the old talk of "Coalitions."

Mr. Philip Snowden, whose mode of thinking is very attractive to a certain type of mind, has publicly discussed the probabilities. He thinks it very possible that the Liberals, although they may have no great "revival," will hold a balance of power. What, then, will they do? They might conceivably link up with the Conservatives, making some such stipulation as that there was to be no Protection. If they did, however, they would not only, according to Mr. Snowden, be cooking their own goose, but would also make the return of the Socialists to power in the following Election a certainty. If, on the other hand, they were to link up, on an agreed programme, with Labour, they could always take the praise for the good measures and disclaim responsibility for the bad.

The point is: would the Labour Party consent again to coalesce with the Liberals? Will they be willing, for instance, not to contest a seat for which a Liberal is standing? An electoral pact between Labour and Liberal is probably quite impracticable, but there might conceivably be a working agreement not to stand in each other's way. On the other hand, Mr. Hamilton Fyfe, formerly Editor of the *Daily Herald*, thinks that the only way to avoid another five years of Conservative rule is for the Liberal and Labour Parties to "unite" before the General Election, and advises a rallying round the old (and what I had thought discredited) banner of "Progressivism."

The Conservatives' Programme.

It is not yet clear, however, what precisely the "Progressives" will have to fight, for the Conservatives have not, apparently, yet decided which are to be their trump cards. Their opponents say that they must choose either the De-Rating proposals or the extension of Safeguarding with which to attract the votes of the hopeful populace. But we shall not know definitely until the Prime Minister makes his speech at Yarmouth next week. The

path of wisdom (which may not necessarily be followed) would probably be to go *forte* on De-Rating, and *piano* on Safeguarding.

Miners' Trade Unionism.

When the Trade Union Disputes Act was passed there was considerable speculation upon the percentage of men who would "contract in" for payment of the political levy. So far, no reliable statistics are available, but it is stated by the *Sunday Worker* (of which Mr. A. J. Cook is Chairman) that, out of the 800,000 miners who before 1926 comprised the Miners' Federation, "probably no more than 250,000 have contracted in."

This is decidedly interesting, but until the cause of the reluctance is known it is useless to draw conclusions. Some observers would have it, of course, that the mining Trade Unionists as a whole are so dejected as a result of their past leadership that they are prepared to turn their back on it and proceed more on what are called "constitutional" lines. It is more largely owing, I should have thought, to the economic depression among the miners. But it is quite possible that there may come about a split in the Federation, into the Communist and the anti-Communist camps.

Population Figures.

Figures have just been issued which will provide matter for wrangling among the sociologists for weeks to come. For it is stated, in the Registrar-General's review of 1927, that during that year there was the lowest birth-rate on record for England and Wales, that there were the fewest births for England and Wales since 1855, that there was an arrested decline of the marriage rate, and that there was an increase of 0.6 per cent. in population of England and Wales. The estimated population for England and Wales at the end of 1927 was 39,290,000.

It is noted that there was a great preference shown for autumn weddings, a preference constantly shown since the beginning of the present century; and that the number of decrees nisi made absolute during 1927 was 3,190 or 568 in excess of 1926. This total was the highest on record, except for 1921.

The number of illegitimate births was 29,023—568 below that in 1926.

The proportion of male births to one thousand female births was 1042. This proportion is now approximating that of the period immediately preceding the War.

But what the moral, social, and racial content of these figures is, I confess that I am not competent to indicate.

The Prayer Book.

Public interest in the Prayer Book died quickly down after its rejection by Parliament, but the situation created in the Church has, of course, still to be faced. The Bishops are to meet next week at Lambeth Palace to discuss the matter.

It is considered that an attempt will be made so to amend the Enabling Act that the Church of England may settle its own concerns through its Assembly and Convocations, just as the Established Presbyterian Church of Scotland does through its own Courts. By this means the Anglican Church could settle its creeds, forms of worship, and so on, without taking the opinion of Parliament. Upon the question of the spiritual autonomy of the Church there is, apparently, agreement among the Bishops, but in the practical aspect the problem still remains of what to do in cases of "indiscipline" in dioceses. Quite certainly the majority is not in favour of a complete severance of relations between Church and State.

Drapery Fusions.

Nothing, it seems, can stay the departure of the captains and kings. Amalgamation, fusion, absorption—these are the industrial watchwords of our time. The trend has been, particularly noticeable in the drapery business. It had been hoped, however, that certain "old-fashioned"

firms—such as were to be found in Oxford Street and Tottenham Court Road—would contrive to resist the tide.

But the wave is irresistible—the latest victim is the shop of Harries, which is to be “acquired” by Lewis’s. On the death of old John Lewis (a Welshman) last June, the business begat other ideals, and now, it is understood, it is to be formed into a company.

I am told (on authority which a man would be a fool to question) that Lewis’s always specialised in velvets and silks, and that Harries appealed to slender purses with its millinery department. Whether these peculiarities will continue now that, so to speak, Bass and Worthington are to be combined, who can tell?

The Test Team.

A few hours after I write these lines the “Rest of England” team which has beaten Lancashire at the Oval will be travelling to join the nucleus of the Test team which sailed for Australia last week. The wishes of every cricketer will go with them on every inch of their way.

The team is a good team, the best, I think, that could have been chosen, although the croakers will not have Mead at any price and are quite indignant at the possibility of Geary’s crocking and Larwood’s stamina being insufficient.

In any case, they are now off; and their doings, whatever they are, will lighten the gloom of winter.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

September 20, 1928 (New Style).

September 7, 1928 (Old Style).

Rabia II, 4, 1347 A.H., of the Muslim Calendar.

Tishri 6, 5689, of the Jewish Calendar.

Sir Ernest Budge had the honour of dining with the King and Queen at Balmoral Castle on September 12.

Sir Ronald Storrs has been ordered a complete rest and will not be able to deal with any official business for the present.

Captain and Mrs. H. C. Ross Skinner have returned from India to Stockwood, Luton, which is their permanent address.

Mr. Rudyard Kipling arrived at Balmoral Castle on September 11 as the guest of the King and Queen, and left on September 15.

Lady Heneker sailed from Southampton in the transport Neuralia, on September 14, to join her husband, Lieutenant-General Sir William Heneker, in India.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived on September 16 at 24, Wetherby Gardens from Perthshire, where they have been staying for the shooting.

Lady Marjorie Dalrymple left London on September 14, in the P. and O. liner Rawalpindi for Port Said. Lady Roberts and Miss Roberts were also passengers for Bombay.

Princess Cecile of Greece, who last week visited the King and Queen at Balmoral Castle, proceeded thence on a visit to the Dowager Lady Glentanar at Glen Muick, Aberdeenshire.

Lord Melchett, accompanied by Mr. and Mrs. Henry Mond, sailed yesterday for New York. Lord Melchett will proceed to Toronto and Coniston and will be joined at Montreal by Sir Henry McGowan.

The King has approved the appointment of Mr. Charles Henry Bayley Kendall as Puisne Judge of the High Court of Judicature at Allahabad, in succession to Mr. Justice Lindsay, who is retiring on October 26.

Dr. W. H. Dye, Colonial Medical Services, has been awarded the North Persian Forces Memorial Medal for the year 1927 for his paper “The Relative Importance of Man and Beast in Human Trypanosomiasis,” published in the transactions of the Royal Society of Tropical Medicine and Hygiene.

The marriage took place on Saturday, September 15, at St. James’s Church, Weybridge, of Mr. Arthur Lionel Pugh Norrington to Miss Edith Joyce Carver, daughter of Mr. and Mrs. William Moberly Carver, and granddaughter of the late Edmund D. Carver of Alexandria. The Right Rev. Bishop Temple, Archbishop-Designate of York, officiated.

The Secretary of State for India in Council has appointed the undermentioned on probation to permanent commissions in his Majesty’s Indian Medical Service: Captain F. R. W. K. Allen, I.A. (rtd.) and Messrs. J. S. McMillan, V. E. M. Lee, M. R. Sinclair, G. B. W. Fisher, R. A. Paton, A. V. O’Brien, G. F. Condon, S. T. Davies, E. S. S. Lucas, H. W. Farrell, D. Tennant, H. S. Smithwick, and F. W. H. Caughey.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Tobacco Growing in Cyprus.

Efforts are now being made in Cyprus to put the tobacco industry of the Island on a surer basis, and a conference was held recently at Nicosia to discuss measures to encourage the better cultivation and preparation of tobacco for export at which the Director of Agriculture reviewed the history of the industry and dealt with its economic importance to the Island. It appears that owing, it is understood, to some inferior leaf having been placed on the market some years ago there is some prejudice on the part of manufacturers against Cyprus Latakia, and the Director of Agriculture emphasised the point that everything possible must be done to raise the standard of the quality grown so that the confidence of the overseas markets may be repaired. With a view to the improvement of the methods of cultivation the Refugee Settlement Commission at Athens has been asked if they could assist in finding suitable families, skilled in the industry, who would be prepared to settle in the Island. In the event of this course being impracticable it is proposed to engage skilled workers from Macedonia for a fixed period for the practical training of the local growers. Another important matter to which the Director of Agriculture referred was the need for the fermentation of cigarette tobacco. This has so far not been undertaken by Cyprus growers for the reason that it entails packing and storing the leaf for a further nine or ten months with a corresponding delay in payment. Here the problem is purely a financial one, and can obviously only be solved by a system of advances to growers. It must be added that the question of fermentation is very important if Cypriot tobacco is to compete with success with that of other neighbouring centres.

Position of the Industry.

The recent history of the tobacco industry of Cyprus may be illustrated by a few statistics. In the last year of the War the area under tobacco was 3,612½ dounums (1 dounum equals 1,600 square yards) and the production amounted to 206,096 okes (1 oke equals 2 4-5 lb.); while in the following year the area rose to 3,955 dounums, though the production was smaller at 140,068 okes. These were the years when owing to War conditions Cyprus tobacco had no difficulty in finding a market, and it was then that manufacturers lost confidence in the quality of the tobacco. The result was seen in the rapid decline in the area under tobacco and in the production; until in 1926 the figures took a sharp upward turn again. In that year the area was 733 dounums, and the production 6,909 okes, while last year the area rose to 3,117 dounums while the production was 141,302 okes. The manufacture of cigarettes in the Island is an old-established industry, and one which has undergone considerable fluctuations. The export of cigarettes in 1900

amounted to 7 cwt. of the value of £131, and the peak figure was reached in 1907 when the exports totalled 233½ cwt. of the value of £5,165. The next best year was 1925 in which one may trace no doubt the effect of the British Empire Exhibition at Wembley. For that year the exports totalled 244 cwt. of the value of £9,728, but since that year there has been a steady decline, which, it may be hoped, will be ended by the efforts now being made to restore Cyprus tobacco and cigarettes to favour in overseas markets.

Ottoman Railway.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 shows a considerable falling off in revenue. The gross receipts were £168,666, a decrease of £32,259, and while working expenses were lower, the net revenue was only £45,887 as against £72,267. Traffic receipts were affected during the period by the drought which occurred in 1927, while the Turkish Government has continued to refuse to ratify the increase in tariffs specifically sanctioned in the recent Reparations Agreement. Further, the Greek Government, in spite of the most persistent representations, has not paid the balance due to the company for military traffic which has been outstanding since 1922. The immediate outlook as regards traffic is not promising in view of the failure of this year's crop.

Jerusalem Light and Water.

The news that the Mavromatis concession for the supply of electricity and water to Jerusalem has been taken over by the Power Securities Corporation and that a company has been formed in Palestine to work the concession has doubtless been received with enthusiasm by the inhabitants, who have suffered considerably from the lack of these facilities. Plans have been prepared by the Corporation, including the construction of a power station between Bethlehem road and the railway station, and these are now under the consideration of the Palestine Government. It will be recalled that to meet the water shortage a temporary scheme was carried out a few years ago, the contractors being the well-known firm of Sir John

Jackson, Ltd. While it is not yet clear whether the Corporation propose to carry out both parts of the concession themselves, it is probable that they will do so.

A Palestine Fruit Company.

I have time and again insisted that the soundest policy in Palestine at the moment is to concentrate on fruit growing, which has served the country so well in the past, and the formation which has just been announced of an important company which is to grow citrus fruit, following other developments in the same direction, suggests that there need be no fear that this side of Palestine's economic life will not receive its due attention. The new company is the Anglo-Palestine Citrus Company, Ltd., and it has a capital of £60,000, in £1 shares. The directors include Mr. M. Loshak, Mr. J. Garden, and Mr. Z. Stalbow. The land acquired by the company consists of about 800 doumums near Rehoboth, a region which I understand is specially favourable for fruit growing and in particular for orange cultivation, and it is proposed to grow oranges also grape fruit and bananas. The initial work was set in hand early this year. The number of shareholders in this enterprise is fifteen, and it is estimated on a conservative basis that the net return should be 25 per cent. It takes seven years for an orange plantation to come to the bearing stage, so there is, of course, that period to set against the prospective yield. Incidentally, as showing the increasing popularity of orange growing in Palestine, I might mention that the 32,500 orange trees acquired early this year on behalf of this company could have been disposed of since at a profit of a shilling per tree.

Improving Conditions in Palestine.

Mr. Loshak, who has just returned to England from a visit to Palestine, expressed himself as quite satisfied with the outlook for the country. He pointed out that the economic crisis which affected Palestine so severely in 1927 was confined to the towns and that the Jewish colonies went on flourishing despite the depression. The most hopeful feature for the country in his view is that the bulk of the Jewish immigrants who have remained in Palestine are of the right type for colonisation, such as the Haluzim, who are inspired by idealism and are prepared to sacrifice themselves for the sake of the cause they have at heart. Thus one finds among the Jews doing hard manual work, such as the clearance of marshes, a large percentage of University men. One particularly notable work for which these people have been responsible, he pointed out, was the clearance of the Emuk region, which ten years ago was a death-trap and to-day is a flourishing district. Mr. Loshak takes a hopeful view of the prospects for the development of small industries in the country. As a matter of fact, progress in this direction of late has been very marked, and as conditions generally in Palestine and the neighbouring countries—which are the main outlets for Palestinian produce—improve, it will no doubt be accentuated.

Sudan Cotton Production.

The final figures are now available for the cotton output of the Sudan for the 1927-28 season. The production was 471,769 kantars of Sakellarides, 374,972 kantars being from the Gezira, 41,492 kantars of irrigated

American, and 20,354 kantars of rain-grown cotton. In bales this represents 112,045 bales of Sakellarides and 14,070 bales of American, or a total of 126,115 bales, which is very considerably below the total for the previous year. Last year the Gezira crop amounted to 474,378 kantars as against 348,106 kantars for the previous year, the number of bales being 113,169. The area under cotton in the Gezira last season was 105,622 feddans, while for the 1928-29 season it will be 135,000 feddans, so that given reasonable weather it may be taken for granted that last season's total will easily be passed.

COMMENTATOR.

CORRESPONDENCE

GAS COMPANIES' STOCKS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I see that your financial correspondent calls attention to the attractive nature of gas companies' stocks and their past good record. It is nevertheless the case that if the gas industry is to maintain its present high position as the chief source of heat and power it must before long undergo a measure of rationalisation. There are too many small concerns which could be more economically operated in conjunction with their larger neighbours, and the whole industry is fettered by the out-of-date legislation which hinders such amalgamations. For every little thing it needs a gas company is now compelled to go to Parliament for a fresh Act or Special Order with all its attendant cost and delay.

What is needed is a short enabling Bill which would allow gas companies to raise fresh capital, effect joint working, and provide for inter-connecting mains on lines similar to the facilities recently afforded to the coal and electricity supply industries. This would open up a new era of prosperity for gas shareholders and incidentally do much to relieve the unemployment in the country. Perhaps even in the last session of this Parliament the Government could be persuaded to put through a short non-controversial Bill on these lines if shareholders and consumers throughout the country will urge them to do so.—I am, etc.,

FRANK ROBERTS.

The Royal Automobile Club. September 4.

The directors of the Bank of Athens announce an interim dividend of 5 drachmæ per share on the ordinary shares.

M. Argétoianu, the Roumanian Minister of Agriculture, has published the following figures relating to the harvest. Wheat is estimated to yield 355,000 wagons, or 90,000 wagons more than last year. As 270,000 wagons are required for domestic consumption and seeding, there will be 75/85,000 wagons disposable. Barley is expected to yield 164,000 wagons, or 40,000 wagons more than last year. Domestic needs require 96,000 wagons, so that there will be 68,000 wagons available. Rye and oats show surpluses of 7,000 wagons each over last year's yield. Finally, the harvest of cereals will furnish a surplus of 168,000 wagons. Maize was cultivated on an area of 4,445,000 hectares as against 4,219,000 hectares in 1927. According to reports received the yield will be good, and even very good in 57 out of a total of 72 departments. As far as can be judged, the maize harvest this year will be at least equal as to quantity to that of last year, which amounted to 353,000 wagons.

Motors and Motoring.

By G. B. B.

Motor Coaches.

Recently one or two of the more important newspapers have had much to say regarding the size and speed of motor coaches, and there seems some impression abroad, an impression which I shared at first, that before long we should see a good deal of police activity regarding the speed at which some of them travel. I understand, however, from a usually well-informed source that the public attitude, especially with regard to long distance services, will be sympathetic, and that there will be little or no interference with them provided that due care is taken. That is as it should be; it is evident to us all that the motor coach is filling a need, and that as such it must not be restricted unduly by any regulations that would retard speed without adding to road safety. My own view is that police supervision should deal rather with the provisions made to ensure safety for the passengers, particularly as regards overcrowding, and the fire risk. I understand also that the police are anxious that more motor coach parking places should be provided. At present many services are placed in some difficulty by reason of the lack of provision for terminus waits. Buses have to wait, in accordance with properly regulated time tables, in public squares or streets and that is a thing that should be minimised as far as possible. It is true that at present few coaches load in main thoroughfares, but wait to pick up passengers in side or back streets, but properly equipped termini would not only add to the comfort of waiting passengers but would also relieve traffic congestion and allow of more space for parking private cars.

An Eight-Wheeler.

There seems no limit to progress in the design of heavy motor vehicles and I have just been reading the specifications of an eight-wheel vehicle, representing a truly startling advance on the six-wheeler to which, at the moment, we have hardly become accustomed.

The eight-wheeler, as may be imagined, is for the heaviest loads and the wheel distribution is such as will be welcomed by road engineers, distributing as it does, the load well over the road surface. The vehicle is of the articulated type, and comprises a four-wheeled tractor on which is pivoted the load carrier, which has four wheels in line on its back axle. All eight wheels are detachable and run on roller bearings, and the arrangement is such that each tyre maintains perfect and full road contact and no tyre is overloaded. The weight of the tractor and load carrier is properly distributed, and as the axles are free to oscillate, the road shocks are halved. The engine, rated at 70 h.p., is of the usual powerful type associated with the makers of the vehicle, the pressed steel frame girders of the chassis are 14 inches deep, the body length is 27 feet and a four-speed gearbox is provided. I understand that the rated load is 15 tons and at that, the vehicle can travel 130 ton miles on a gallon of fuel..

Important Contracts.

The qualities of the Thornycroft productions seem to be well recognised, as I am informed that the L. N. and E. Railway have ordered 120 vehicles from the firm within the past two months. Messrs John I. Thornycroft and Co., Ltd., of Basingstoke, have long been known as makers of single and double-deck omnibuses as well as of lorries, and it is with no surprise therefore that I hear that a large proportion of the above order consists of single-deck road coaches. The firm have also been building lately a number of omnibuses for the Southern, London Midland and Scottish and the Metropolitan Railways.

Amongst other important orders recently placed is one by the India office who have given Guy Motors, Ltd., a repeat order for sixty-nine six-wheeled commercial chassis. A number of other vehicles have just been ordered from the firm by the Wolverhampton and the Reading Corporations, and I gather that all these represent a total value of £104,000.

There are now in cultivation in Cyprus 373,904 mulberry trees, an increase of 48,307 over the figures for the preceding year.

The value of Yugoslavia's exports for the first half of the current year amounted to 2,687,036,407 dinars, a decline of 318,777,940 dinars on the figures for the corresponding period of 1927.

The Cyprus Department of Agriculture has been sending weekly shipments of table grapes to London to the Empire Marketing Board to test the carrying capacity of Cyprus grapes for the United Kingdom market.

Of the tonnage using the port of Constantinople in 1927, Italy was first with 2,511,000 tons, England being second with 2,075,000 tons, and Greece third with 1,578,000 tons. The British share of the shipping was 21 per cent. as against 23.6 per cent. in 1926. Of the actual number of ship, 15 per cent. were British as against 18 per cent.

The Army Rifle Association's central meeting in India will take place on the Meerut ranges on February 18 to 22, including the Army Championship match and the King's Medal match for the best shot in all the forces. These two events are fixed for February 20 and 21. The entries will be limited to the four selected shots of a unit, with unlimited entry for British officers. Entries close on February 7. Strong efforts are being made at Simla to increase the training value of this meeting and to secure the attendance of marksmen stationed in distant places.

ARIEL

The Good Cycle

MAKES HILL CLIMBING EASY

The free and effortless motion of the "ARIEL" Cycle is a revelation. So smoothly and sweetly does every working part move that Cycling over rough and hilly roads becomes a simple matter. Invest in an "ARIEL" now, it will be a boon to you.

The British Company which produces this high-grade Cycle, also produces at competitive prices the wonder Ariel Motor Cycle.

THE LIUBLIANA AUTUMN FAIR.

(From Our Own Correspondent.)

Liubliana, September 5.

There is a tang of frost in the air, with a whiff of wood smoke. Early morning mists give place to skies preternaturally clear. The woods are preparing for russet splendours before stripping for their winter sleep. The cragsmen are making the best of the brief period of minimum snow on the rocks—in short, our glorious Alpine summer is over and autumn has come overnight. Into this pleasant interval between summer and the first cold snap falls the Liubliana Autumn Show, aptly named “Liubliana in Autumn” (September 1 to 8). It is mainly an agricultural show; this year decidedly so, as it celebrates the 160 years’ existence of the Slovene Agricultural Society. Much work has been done and great progress made since the first show of this kind in 1924. More and more attention is being bestowed on those rural industries which can flourish in Alpine regions—dairy-farming and cheese-making in the summer settlements on mountain pastures (*planine*), cattle rearing, and mixed farming in the valleys. Bohinje cheese was greatly in evidence and much improved in quality. It is practically the same as Gruyère, only the cheeses are not kept long enough here to develop the full flavour. Trappist cheese, too, is a good mild cheese of dependable quality. The Yugoslav makes of the finer sorts, which are packed in tinfoil (and usually put up in small cardboard boxes), have become reliable in quality and flavour. The Associated Dairies’ stand was all the time besieged by old and young anxious to try a pennyworth of whipped cream, or a glass of *youghourt* or *kefir*, or plain milk. *Kefir* is slightly fermented, containing about 2 per cent. of alcohol. Gone are the days when a stranger in Liubliana would ask why there was no decent butter to be had!

Apiculture is a very ancient industry in Slovenia. Carniolan bees and honey have been famous as long as the country has been known, and are to-day exported all over the world. This year has been a good one for honey, and all varieties were on show, from the palest blossom honey to green-bronze spruce honey, which is, I believe, rather a speciality of these parts. Heather honey, alas (oh, memories of Aberdeenshire!) is unknown.

Fruit, vegetable, and floral exhibits showed what might be done with systematic and scientific gardening. Great interest was aroused by the exhibit contributed by the Botanical Institute of Liubliana University and showing cereals vastly improved by ingenious cross-fertilisation. The necessary experiments are carried out by Dr. Fr. Jesenko, Professor of Botany, and his assistants.

Native industry was represented mainly by the furniture section, where there was good stuff on show as usual. The little one-man firms of these parts certainly turn out sound work with an individual note in the design. Then there were linen-weavers from Southern Carniola busy at their hand-loom, and other craftsmen.

Of special shows, the parade of national Slovene costumes was, as always, a delightful pageant. The accordion players’ competition made me want to write a song of the concertina. No Slovene gathering is complete without an “‘Armon’ka”; its strains are homely and fine to dance to!

But the great attraction of the Show was the collection of birds, fishes, and reptiles, which is to form the nucleus of the stock of a Zoological Garden, which aims at being in the first place a collection of the native fauna. It must be borne in mind that Yugoslavia, and Slovenia in particular, is rich in interesting animals. Conspicuous was a tank with fine specimens of the *proteus anguinus*, best known by its association with the Adelsberg (Postumia, Postojna) Grotto. Carniola is rich in caves, most of them as yet unexplored—a weird and often beautiful underworld of limestone formations and subterranean waters. The work of investigation is carried on by the Cave Research Society, University of Liubliana. Most of the

exhibits were caught and cared for by students under the auspices of the newly-formed “Zoo” Society and its indefatigable president, Professor A. Serko, Dean of the Medical Faculty, and incidentally an expert in catching snakes. “It is quite simple,” explained Mr. Serko, jun.; “you just have to pick ‘em up by the tail. . . .” A very popular animal in the present collection was a chamois which had obligingly come down from the Kamnik Alps, and got caught in a fence. It looked most unromantically comfortable and was not in the least shy.

Of course, there was the usual livestock show—horses, cattle, poultry, etc. Among the horses the officers’ mounts were conspicuous for English characteristics.

Slovenia is justly proud of two recent acquisitions which are indeed common property of the State though situated within her borders. The first is the big broadcasting station at Domzale, near Liubliana, which was opened on September 1. The second is a National Park. Thanks very largely to the efforts of Professor F. Jesenko, the region in the Triglav Range known as the Seven Lakes Valley and the Komna has at last been acquired by the State and set aside as a park where the interesting flora and fauna of the eastern Alps will have an assured asylum.

The Bank of England are prepared to receive the coupons due October 1 on bonds of the Greek Guaranteed £2 ros. per Cent. Gold Loan of 1898; the necessary lists can be procured on application at the Dividend Pay Office.

A Cairo message states that the condition of the cotton crop in Egypt as compared with previous year's is given as follows:—Lower Egypt, 100 per cent.; Middle Egypt and Upper Egypt, 99 per cent. The expected average yield is 3.96 kantars per acre. The crop is ten days late. An unknown disease has been observed in the pods, occasioning deterioration. Examination shows that the disease is neither entomological nor mycological. It is probably due to humid weather:

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves ‘more letter-writing’, or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

PORT FACILITIES AT CONSTANTINOPLE.

From the commercial point of view, the port of Constantinople may be divided into two parts—the outer port and the inner port (says the United States Commercial Attaché at Constantinople in a review of the port facilities at that centre). The outer port extends from the eastern entrance of the Golden Horn (a line from old Seraglio Point on the Stamboul side to the Top-Haneh arsenal on the Galata side) to the first bridge over the Golden Horn (connecting Stamboul and Galata and known as the Karakeui Bridge), a distance of about 1,800 yards. In this outer commercial port the water varies in depth from 22 fathoms on the Stamboul side to 19 fathoms on the Galata side. It is buoyed for merchant vessels, which load and discharge their cargoes into lighters.

The inner commercial port lies between the two bridges over the Golden Horn and is about 1,100 yards in length. It is used chiefly by small sailing craft arriving with local produce from the Black Sea, the Sea of Marmara, and from other Turkish littorals. The inner port is used also by lighters and barges awaiting their turn at the custom house at the outer port.

Connected with the port of Constantinople proper is the port of Haidar-Pasha, which is located on the Asiatic side at the southern entrance of the Bosphorus, and is the terminus of the Anatolian Railway.

Of the three quays within the port of Constantinople, one is on the Stamboul side near the bridge and has a length of 370 metres. One of the two quays on the Galata side, 758 metres in length, extends from the bridge up to the quay of the Seir-i-Sefain (Turkish Shipping Board); the quay of the latter company, which is practically an extension of the former, covers a length of 275 metres. The port of Haidar-Pasha is formed by quays built out from the land. These are 450 metres in length and are protected by a breakwater about 650 yards long, running parallel with the above. In addition, there is a wooden pier about 150 yards long, which is used for discharging wheat cargoes into lighters.

The quay on the Stamboul side and the first one of the above-mentioned two quays on the Galata side are operated and controlled by the Société Turque des Quais, Docks et Entrepôts de Constantinople. This company collects dues from cargoes and passenger vessels lying alongside the Stamboul and Galata quays, as well as storage and stevedoring charges for goods stored in its bonded warehouses. It owns the following loading and unloading machinery, which is in operation on the Stamboul and Galata quays: Steam cranes, 1 floating of 8 tons capacity and 3 travelling of 2, 3, and 5 tons capacity, respectively; electric-porch crane, 1 of 4 tons capacity; and 1 dredger with a working capacity of 120 cubic metres per hour.

On the quay of the Seir-i-Sefain (Turkish Shipping

Board) on the Galata side, there is the following loading and unloading equipment; 4 stable rotary electric cranes of tons capacity, 1 stable rotary electric crane of 4 tons capacity, and 1 electric crane of 100 tons capacity.

Warehouses in Constantinople may be divided into three principal categories—namely, bonded warehouses, warehouses for the storage of goods intended for clearing and importation, and warehouses for the storage of goods that have been cleared from customs, as well as for spot goods, etc. The bonded warehouses in Constantinople represent by far the most important category, especially with regard to size, storage capacity, and organisation. On the whole, however, and with the exception of a few warehouses only, the great majority of warehouses are buildings which originally were not constructed for this purpose and which therefore lack the necessary size, arrangement, and technical equipment proper for modern warehouses.

All bonded warehouses—that is, those owned and operated by the customs authorities, the Société des Quais and the Seir-i-Sefain (Turkish Shipping Board)—are placed under the control of the customs authorities. The greater number are located on the quays on the Stamboul and Galata side of the port; the others are located on the shores of the Golden Horn, at places along the shores of the Bosphorus, and at the port of Haidar-Pasha.

The Turkish customs authorities own and operate 12 warehouses in Constantinople. Neither official figures nor estimates as to the area covered or their general or individual storage capacity are available for any of these warehouses, with the exception of the Cabatash Bonded Warehouse; this covers an area of 2,376 square metres and has a total estimated storage capacity of 20,000 tons of goods packed in sacks, or 8,500 tons of merchandise packed in cases.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahout for Calcutta (Birkenhead, September 27).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 3).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, September 22); s.s. Dumana for Bombay and Karachi (London, September 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, October 6).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, September 29); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool October 13, and Swansea October 16).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13).

P. and O. Line.—S.s. Rajputana for Bombay (London, September 28); s.s. Novara for Calcutta (London, September 29); s.s. Delta for Bombay (London, October 4); s.s. Burdwan for Calcutta (London, October 13).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 25); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 9).

Ellerman and Papayanni Lines.—S.s. Oporto for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool September 22, Swansea* September 22); s.s. Flaminia for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 29); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool September 29, Swansea October 4); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 6); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 6). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 18.

There has not been a great deal of business passing in the Stock Exchange during the past week, except in one or two of the speculative sections, the Settlement, which proved to be a fairly heavy one, having occupied a good deal of attention. Gilt-edged securities, while quiet, have been fairly firm, but Home Rails eased still further on disappointing traffic returns. Argentine Rails, on the other hand, were a better market on the dividend announcements referred to below. In the industrial departments, profit-taking in Gramophones set in towards the end of the week, but among artsilks Courtaulds were a good feature. Iron and Steels were lower.

Argentine Rail Dividends.

Reference was made in this column a few weeks ago to the position of the leading Argentine railway companies. The view was expressed by the writer that, despite tariff reduction demands by the Government of the Republic and the incidence of labour trouble on some of the lines, the dividend announcements should at least be maintained. During the past week the dividend statements of three of the bigger undertakings have been issued, and they confirm the opinion expressed. The Buenos Ayres Great Southern is maintaining its payment at 8 per cent., and the Buenos Ayres Western and Central Argentine at 7 per cent. each. The companies obviously have an eye on the future. The B.A.G.S. is reducing its reserve allocation from £500,000 to £200,000, in order to increase the carry forward from £18,422 to £338,656, while the Western has carried forward a sum of £230,242, compared with £178,557, after having once more placed £100,000 to the credit of its reserve fund.

These results are, and were judged by the market to be, eminently satisfactory. It is true that, for the current year, the revised tariff charges may have an adverse effect. Against this, however, and ruling out the possibility of operating economies, it must be remembered that Argentina increases in prosperity year by year. The potentialities for future development are enormous, and

more and more railway traffic will almost certainly be carried. Moreover, it is a well-known fact that the leading lines, while paying good dividends, have always left themselves substantial profit margins, which have gone towards the strengthening of their finances. The average yield on the stocks of the principal companies is approximately 7½ per cent., which is generous enough to warrant the attention of the investor.

Rubber Company Directors.

Not long ago certain discontented rubber shareholders voiced the opinion that multiple-directorships were ruining rubber companies. The storm soon subsided, and nothing more has been heard of it. The writer noticed the past week, however, that in certain directions veiled hints are being made that the slow movement towards "rationalisation" in the industry is due to personal motives on the part of rubber company directors who draw fees from several concerns and who do not wish to have their incomes reduced by amalgamations. It is to be hoped that rubber shareholders generally will realise the injustice of such an accusation. Rubber company directors are no worse and no better than the directors of other industries. They have made bad mistakes in the past, but they cannot be accused of working for the satisfaction of their own personal desires. In fact, in not a few cases they have preferred, during recent lean years, to go without the fees to which they were legitimately entitled.

There is no doubt that amalgamations between estates, while highly desirable, are not occurring in great number. But nobody could reasonably expect a rapid rush among producers to merge their interests. There are many things to be considered. Some companies are waiting to see the effects of the abolition of restriction; others are confident of emerging successfully from the present period of trial, and to others the opportunity of amalgamation has not presented itself. There is no doubt that eventually the organisation of the rubber industry will be stronger than it is to-day, but the process of consolidation must necessarily be gradual. Undue hastening of the movement might, in fact, do more harm than good.

Investment Trust Shares.

While there have been no surprises contained in the several investment trust company dividend announcements recently made, it is apparent that fortune still smiles on this type of enterprise. The past week or two has witnessed several capital increase proposals, which indicate that there is no lack of investment opportunities. In fact, one of the undertakings, in a statement to the shareholders, observed that further funds were required because present conditions were favourable for investment.

Shareholders will be particularly gratified at this, in view of the utterances of many trust company chairmen who, at the last annual meetings of their concerns, warned their proprietors against expecting the continuance of the exceptionally prosperous conditions which have characterised recent years.

At the same time it must be confessed that while certain investment trust shares undoubtedly possess bonus possibilities, those shares are fully valued and prospects discounted. For instance, British Assets Trust Ordinary yield only £2 10s. per cent.; Great Northern Ordinary, £2 8s. per cent.; Independent Investment Ordinary, £3 7s. 6d. per cent.; Mercantile Investment and General Ordinary, £4 15s. 6d. per cent. Comparatively few investment trust ordinary shares yield more than 5½ per cent. On the other hand, a good selection of preference shares yielding over 5 per cent. is available, including Governments Stock 5 per cent. Preference, Great Northern 5 per cent. Preference, Continental and Industrial 5 per cent. Preference, and Army and Navy 5 per cent. Preference.

HOP GROWING IN YUGOSLAVIA.

BY JOE MANTUANI.

On August 15 there was a hopgrowers congress at Novi Sad, which is the hop growing centre in the Voivodina. (Voivodina is the Danubian province of Yugoslavia which used to form part of Hungary.) Besides 350 Yugoslav delegates, the Congress was attended by 11 delegates from Germany, Czechoslovakia, Austria, France, and Poland.

Hop growing has increased greatly in Yugoslavia of recent years, especially since 1925, when it began to be a gold mine for the districts affected. According to the statistics of the Ministry of Agriculture the hop growing area in Yugoslavia has been quadrupled during these few years. Yugoslavia has become one of the regular hop producing countries of Europe, and in fact ranks third among them, after Germany and Czechoslovakia. In 1926 Yugoslavia exported hops to the value of 206,5 million dinars, while for 1927 the value of the exports was 6400 million dinars.

Before the War, the hop growing area in Europe totalled 64,000 hectares (158,080 acres). To-day, after the long interval of the War, it has risen to 56,000 hectares (138,320 acres). According to the report from Munich, the hop harvest for 1927 totalled from 660,000 to 670,000 quintals (2,422,200 to 2,458,900 bushels). The production and price of hops naturally depend upon the output of beer in Europe and all over the world. In 1913 295 million hectolitres (6,490 million gallons) of beer were brewed throughout the world; in 1927 only 179,6 millions (3,951.2 million gallons). Despite the first-sight impression conveyed by these figures, the post-War production of beer is steadily on the increase. From 1926 to 1927 it increased by 5 per cent., and during the same period the ground devoted to hop growing increased by 19 per cent.

The delegates at this year's congress decided to limit the area under hops, in order to prevent over production and a serious drop in prices. This year's harvest is expected to yield about 550,000 quintals of fine hops, and some 100,000 cwt. less than last year will be placed on the market.

Though Yugoslavia is not the only country which produces hops it has the advantage of producing the best and most popular types of hops, viz., the "Sanntaler" (Savinya Valley) variety. In Zalca, Styria, there is a special Hop Exchange, very helpful to growers and dealers as a storehouse and clearinghouse for hops. Those interested would be well-advised to buy hops personally in Yugoslavia, or directly through their own agents, as the price is raised considerably by the goods passing through the hands of German or Austrian brokers.

The comparatively small harvest this year warrants the expectation of high prices. The world demand for hops is 600,000 quintals. According to the hop growers' estimate the year's output will total about 500,000 quintals. And this year the growers will not allow themselves to be bluffed, like last year, when prices were manipulated so as to fall desperately low. In the meantime, there is a good opportunity for foreign speculation. I therefore repeat my advice to prospective buyers to

come personally. Conditions in Yugoslavia are perfectly civilised, and the Hopgrowers' Association is sufficiently influential to offer buyers every facility.

SUDAN GUM ARABIC MARKET.

Messrs. Boxall and Co., of Khartoum, in a report on the Sudan gum arabic market dated August 20, state:—

Arrivals in Kordofan stations from July 1 to 31 amounted to 495 tons against 712 tons during the same month last year, whilst for the first twenty days of August arrivals amounted to 239 tons as against 151 tons for the corresponding period last year. The decrease in arrivals for the whole period was 14 per cent., but the point of greater importance is the absence of free stocks. Arrivals at this time last year were also very small, but it was the stocks in existence in the country which made all the difference in the quantity of free gum available.

A large proportion of the arrivals—from one-third to one-half of the total—was rain-damaged gum.

One might say there were practically daily fluctuations in the prices of El Obeid during July, but on the whole the upward move has been constant, and the market closed on the 31st at 4s. per cwt. higher than when it opened.

During August prices continued to rise and on the 20th they stood at 86 piastres per kantar, the highest price ever touched at the auction market of El Obeid this season, whilst still higher prices were paid outside the market to local dealers to secure some small parcels that were available. The total rise during August at the auction market of El Obeid amounted to 1s. 8d. per cwt.

Demand during July as shown by the Customs' export figures was smaller than that of last year, the quantities imported by the principal markets being somewhat less.

During August demand was very slack, mainly owing, we believe, to the holiday season in Europe.

The total quantity exported from January to July exceeds, however, that of last year by 2,307 tons.

The export figures for the period January to July are made up of the following quantities:—Hashab, 15,473 tons; bleached, 179 tons; talha, 1,566 tons; total, 17,218 tons.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, in their report for the week ended September 8, state:—

Sultanas.

The estimated arrivals on the Smyrna market since the opening of the season are put at 9,400 tons, against 11,200 tons for the corresponding period of 1927, and the sales to date are estimated at 7,300 tons, against 9,500 tons.

Closing prices Smyrna, for types 12 to 18 and 1, per cwt., c.i.f. London, are:—34s.; 36s.; 38s. 6d.; 41s. 6d.; 45s. 6d.; 53s.; 62s.; 64s.

Market Conditions.—The gathering clouds over last week-end dispersed without rain falling in any of the vine districts, some showers being reported in the highlands.

With weather conditions again settled to fine, the market opened easy and prices gradually receded, losing 2s. to 3s. (fl. 2 to fl. 4) for

Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza
Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London,
9, Mount Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

all inferior and medium fruit on last week's closing level. Prices for best grades are well maintained.

The point of interest this week has been a visible expansion in the demand. Business at the decline has been brisk, and a considerably larger volume of new business from markets abroad has been booked than in any one of the preceding weeks. A better feeling exists, but we do not apprehend any marked advance in prices unless the improvement in the demand continues developing on an increasing scale.

We wish to sound a note of warning as to supplies of Carabournu fruit, No. 1 Vourla and No. 18 Yerli. Carabs are about 40 per cent. short of last year; Vourla about 30 per cent. short, and the best Yerli, although in fair supply at the moment, are being freely absorbed.

Figs.

The estimated arrivals since the opening of the season are put at 7,000 tons, against 8,700 tons for the same period of 1927, and the sales are estimated at 6,374 tons, as compared with 8,476 tons.

Market Conditions.—The activity reported last week has been fully maintained this week for all qualities suitable for packing in layers and locoums. The market is slow on Naturals, the standard of which in general is of unsatisfactory quality.

The restrictions on arrivals have been raised and the movement of the crop has been more rapid, supplies coming freely to market. Prices for better grades are, if anything, higher than last week, whereas ordinary fruit is selling cheaper.

The traffic receipts of the South Indian Railway Company for the week ended August 18 amounted to Rs.11,04,511, making the total from April 1 Rs.2,33,84,577.

The Bombay Gas Company announces an interim dividend at the rate of 7 per cent. per annum, less tax, payable November 1.

THE WEEK'S FINANCE.

(Continued from page 339.)

German Potash Bonds.

According to reliable advices from Berlin, the German Potash Syndicate is experiencing favourable conditions. Sales of potash during August are announced by the Syndicate to have amounted to 108,700 tons. This brings the sales in the first four months of the current fertiliser year up to 375,030 tons. In the corresponding period of the previous year sales were reported as aggregating 299,400 tons. The figures now announced constitute a new high record.

To some extent, of course, sales afford little indication of the course of the trade, without details of selling prices. But it is, at any rate, satisfactory to observe that activity is being maintained and that the demand for potash is on the increase. The German industry is well organised and has practically a world monopoly.

When the Syndicate, a short time ago, offered some of its bonds to investors in this country, the response was entirely satisfactory. The amount of the loan now outstanding is approximately £11½ millions. Interest is at the rate of 7 per cent. per annum, and as the current market price is in the neighbourhood of 105, the yield works out at approximately £6 12s. 6d. per cent., on which basis the loan ranks as an attractive foreign investment.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Various Stores.—The Egyptian Ministry of Education invites tenders for the supply of various materials required for model workshops, trade schools, etc., during the year 1928-29. October 1. (D.O.T.)

Steel Boiler Stay Taps.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 128 best high speed steel boiler stay taps and 112 reamers, 47 sets best cast steel boiler patch taps and 3 sets best high speed steel taps and 5 best cast steel taps for bushes.

Coal Handling Transporters.—The General Management, Egyptian State Railways, Telegraphs and Telephones (Cairo Station), invites tenders for the construction, supply and erection of coal handling transporters. November 29.

Lock Gates, Etc.—The Resident Engineer, Delta Barrage Directorate, at Delta Barrage, invites tenders for (1) construction of eight lock gates for Damietta and Rosetta locks, both at Delta Barrage, and their delivery at site and erection in position; (2) construction of twenty regulator gates and their delivery at sites. November 1.

Marble Gauges.—The Inspector of Irrigation, Assiut Barrage Circle, Assiut, invites tenders for the supply of marble gauges. November 10.

Lubricating Axlebox Pads, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of 20,000 lubricating axlebox pads No. 10, 5 in. by 7½ in.; 316,700 mild steel split cotter pins, and 8,600 taper split pins; 450 kilos leather laces, 480 feet leather belting double and 2,700 feet balata belting, of different dimensions; 1,000 kilos mild steel tees, 3 in. by 2 in. by ½ in., and 27,000 kilos mild steel equal and unequal angles of different dimensions to specification.

Portland Cement, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones (Cairo Station), invites tenders for the supply of 6,000 metrical tons artificial Portland cement. October 30; and for the supply of materials and works connected with the replacement of the superstructures of 4 fixed bridges of the Sherbin-Kallin line and the adaptation of the abutments to the new superstructures. This project includes, among others, the supply and laying of the following materials: Reinforced concrete, about 3 c.m. and rolled, cast, etc., steel, about 38 tons. November 10.

Lighthouse Tower, Etc.—The Director-General, Ports and Light Administration, Arsenal, Alexandria, invites tenders for the construction of a lighthouse tower and annexes on Daedalus Reef in the Red Sea. November 12.

Door and Window Fittings.—The Ministry of Public Works invites tenders for the supply of door and window fittings. October 1. (D.O.T.)

Clothing, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, soft and woollen, sheets, linen, napkins, blankets woollen, white and brown, material by metres, etc., required for the unexpired period of the year 1928-1929. October 11.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 12 :—

Egyptian Futures.—Sakel Contract.—A sharp decline in values has occurred in this contract since we last wrote, heavy liquidation having to be faced due principally to the generally "bearish" influence of the American Bureau figures, and also, though perhaps in lesser degree, to the monthly official report of our own crop proving contradictory to the rather alarmist statements recently circulated. Most of the support latterly in evidence in our market has been in the form of speculative purchases for Alexandria and Continental operators, who evidently have been basing their views on a 2 to 2½ million crop and in anticipation of a quick change for the better in the demand for fine spinning cottons. The yield of course is still problematical; in fact, picking is only just about starting, but in conservative quarters a crop of 2½ million kantars is generally expected. With regard to the trade offtake, we doubt if in any previous season the demand has fallen to the low records of recent weeks. This lack of trade support became more pronounced as soon as values started to recede in sympathy with the prevailing tendency in other markets, and during the last two sessions active liquidation of old long accounts has been in process, the decline meeting with little resistance until the later trading yesterday, when some short covering and a little buying on the reaction theory halted the movement. To-day, values have made some slight recovery on rather better Alexandria advices, but the undertone remains unsettled and nervous. Values on the week have fallen 101 to 106 points for near and 100 to 101 points for distant months. The American-Egyptian straddle difference, taking the October and November positions in the respective markets; has closed into 800 points; this premium, under present trade conditions, appears somewhat excessive, but until more definite views of the size of the respective crops can be formulated, we do not advise commitments. At periods during the week our contract has shown a tendency to run closer to Alexandria and occasionally straddle reversing operations have been possible at close differences.

Whilst prices have now certainly worked down to a more attractive level, there is nothing as yet to indicate that the trade is going to accept ruling values as a basis to start purchasing. For the immediate future we are prepared to witness rather erratic fluctuations with "bearish" sentiment preponderating; certainly, we would not follow any upward movement unless distinct evidence of increasing spinners' activities make their appearance.

Upper Contract.—Whilst trading has been somewhat limited, values in this contract have been adversely affected by the weakness expressed in the American markets since the publication of the Bureau Report. At the ruling level more trade support has been in evidence, but with the crop movement growing in volume the basis has begun to show signs of easing and some cheap offers are coming to hand from Alexandria. Our premium over the American contract has again tended to close in, but as reports of the yield are not so satisfactory a resistance to further narrowing may be experienced in the near future.

Egyptian Spot.—Whilst awaiting publication of the latest Bureau report last week, the inquiry died down to a large extent, and although during the past few days some recovery has been made, spot sales show a considerable decline as compared with the previous week's figures. Apparently values are still regarded by the trade as being in too fluid a state, for, with the size of the American crop now more or less determined, no enthusiasm to buy cotton has yet been seen, although the inquiry has certainly commenced to broaden out again. The "wait and see" policy still holds good. There has been little improvement reported from the various trade centres of the world, and it is of course from such centres that the first signs of a revival must come.

Efforts are being made in Egypt at present to stir up interest in this year's Sakel crop by drawing increased attention to the damage caused by worms, but, owing to the very poor offtake for Sakel cotton which has been experienced during the past few months, these efforts have been largely wasted. Should spinners suddenly decide to purchase Sakel in quantity, it would of course be a very different story, but there seems little likelihood of this occurring at the moment. The local inquiry for Sakel has been confined almost entirely to "off" cotton within the wide range of 12½d. to 16d. and a small irregular inquiry for cotton at from 25 to 100 on. The better qualities have been entirely neglected. The bulk of the local spot business has once again been for Upper cotton at from pass to 50 on.

Low cotton (any growth) 4d. to 10d. has been in improved request. Good Fair Pilon at about 100 on contracts has met with some support, and White, Nahda, etc., have also appeared at times on the board.

A fair business has been done in Sudan growths. The first shipments of new crop cotton are due to arrive here this week and will be, as usual, eagerly received. C.I.F. business has been done on a moderate scale only, and forwardings to the trade for the week ending

the 7th inst. were returned as 4,727 bales Egyptians and 1,272 bales Sudan. Estimated spot sales for the week, 1,800 bales Egyptian and 1,000 bales Sudan. Quotations of Sakel show a decline of 95 points, and those of Upper and Pilon 75 points on the week. F.G.F. Sakel to-day, 18.10d. F.G.F. Upper to-day, 11.90d. F.G.F. Pilon to-day, 13.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 6, state :—

The market during the past week has been fairly active, but the tone is very undecided. The week's summary of price movements is as follows :—Sakellaridis: November, 36.88 dollars, 0.12 dollars up; January, 37 dollars, 0.12 dollars up. Ashmouni: October, 22.80 dollars, 0.37 dollars down; December, 23.10 dollars, 0.43 dollars down; February, 23.57 dollars, 0.28 dollars down.

Sakellaridis.—This variety is slightly up on the week. The improvement must be attributed to the rather less favourable crop reports which have been circulating recently; these reports have been very vague and the market has been left to decide as to how the crop has suffered and to what extent. There has been some deterioration recently, due to excessive humidity, and the damage is slightly more than normal, but it is not, in our opinion, to a degree sufficient to justify the recent rise of a couple of dollars. The market, however, is bullish of Sakellaridis and every bullish factor is made the most of.

The demand from spinners shows no improvement whatever. This apathy on the part of spinners is not confined to one or two of the consuming countries—it is general to all and shows very clearly that the trade is not prepared to buy Sakellaridis at present levels; this fact, however, is a point which the market chooses, for the moment, to ignore. The Sakellaridis/Ashmouni straddle has widened out to 1,408 points, against 1,359 points last week and 1,004 points a year ago.

Uppers.—This market has been without any support during the present week. The speculators have left Uppers alone and the commercial houses have shown very little interest. On the other hand, with the Uppers crop now seriously on the move, there has been a good deal of hedge selling, which, however, has been absorbed by speculators covering part of the short position which they have been running for the past three months; a good part of the October shorts have thus been covered, but a considerable position still remains.

The demand for Uppers has been poor this week, the revival which seemed possible when last we wrote having once again vanished into the background. The Ashmouni/American straddle has narrowed since Tuesday last to 384 points, against 427 points last week and 784 points last year. The general feeling is one of indecision; operators seem unwilling to operate pending more information on the American crop, and the Bureau report to be published on the 8th inst. is eagerly awaited.

The Government has at last decided to issue their acreage and crop estimates on fixed dates. The preliminary, intermediate, and final crop estimates will be published respectively on the first Mondays of October, December, and June, and the acreage estimate on the first Monday of August.

The week's receipts amount to 28,484 kantars, against exports

100,465 kantars; the stock in Alexandria stands at 1,125,465 kantars.

Spot.—Total sales amount to about 4,900 bales, of which we estimate 1,200 bales Sakellaridis, 3,600 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: The demand for this variety has been poor. Very little enthusiasm has been shown for the few lots of new crop which have so far appeared on the market. Spot differences do not show any appreciable change.

Ashmouni and Zagora: There has been a very good demand for all grades and keen competition amongst buyers to obtain any new crop cotton put up for sale; premiums have consequently stiffened somewhat for the higher grades, but otherwise remain unchanged.

Other Varieties: There has been a small turnover in Pilon and White at about last week's differences.

Crop, 1928.—There is very little of real importance to say on the crop. The excessive humidity during August has increased the damage from Nadua and the high temperature caused some premature opening and shedding of top bolls, so that the Zagora and Pilon crops of the South Delta are going to turn out slightly under normal. In the Sakel districts of the Central and North Delta the damage from the above causes is not so marked, and, given favourable conditions during the present month, the yield should be a good average one. Zagora and Pilon picking has started; Sakellaridis picking will seriously commence about the 20th inst. Pink boll worm attack has increased. It varies from district to district, but, on the whole, is less than last year. Nearly all the ginning factories in Upper Egypt are now working. In Lower Egypt a few have worked for one or two days, on early arrivals, but ginning will not really commence before the end of this month. Temperature is slightly above normal and humidity is still rather too high.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at July 31, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £2,925,000. Notes of the Week.

Egyptian Newspaper Suspension.

In a telegraphic communication which appears on another page Nahas Pasha, ex-Prime Minister of Egypt, challenges the statement made in a Press telegram that the recent suspension of two Egyptian newspapers was effected under a Law issued by the late Zaghloul Pasha when Minister of Justice. He points out that the Law which the present Government has applied was issued in 1881, and he cites the fact that according to the Constitution (of April 1923) the censorship of the Press has been abolished, and newspapers cannot be warned, suspended or suppressed by administrative means. It is not desirable that the foreign onlooker should pass judgment on the present dispute between Egyptian parties; but a direct appeal such as Nahas Pasha makes prompts a more detailed analysis than might otherwise be devoted to the situation. It will be noticed that, in spite of what might seem at first sight the far more drastic action of the Government in suspending the parliamentary régime, the ex-Prime Minister directs special attention to the suspension of a couple of newspapers. Possibly the great store set in Great Britain on the liberty of the press encourages him to hope that on this subject British opinion will rally to his way of thinking. It is true that the British people's love for liberty, as Nahas Pasha points out, is traditional; but so, we hope, is their practical common sense. It would never occur to the British people to allow their Press the preposterous amount of licence that the Egyptian Press takes, nor would it occur to the British Press to expect it. Liberty is to be loved for its own sake and must, therefore, be accorded to others by those who claim it for themselves. There is nothing in keeping with the British conception of liberty in the scurrilous abuse in which so often many Egyptian papers notoriously indulge. What the specific offences of the two papers recently suspended have been we do not know. Nahas Pasha, in suggesting that they had not made themselves punishable by law, may be restricting the Article of the Constitution that he

quotes to his own narrow interpretation. Social order, it would be supposed, was intended to have a wider reference than to the activities of Bolshevism, and one obvious way of undermining it is by means of unrestricted newspaper attacks.

Catchwords or Common Sense?

The problem in Egypt would seem to be one for the exercise of common sense rather than for any slavish adherence to catchwords. Nahas Pasha's own position as Prime Minister provided an illustration of the difficulty in which the country found itself. Elected to succeed Zaghloul Pasha as head of the Wafd, he entered upon office under, seemingly, the most favourably auspices, fully resolved, as his own statements witnessed, to seek an honourable settlement with Great Britain that would meet the latter's Imperial responsibilities, while satisfying Egyptian aspirations. In the event, the leader of the Wafd was quite unable to bring any of his own personal qualities to bear on the situation. The policy of Egypt was dictated to him by a handful of extremists, and his Government was not even allowed to devote its attention to the business of administration. Outwardly this state of affairs may have conformed to the dictionary definition of a parliamentary régime; in effect, it was the negation of all government. From the fact that Nahas Pasha now concentrates on what he considers a breach of a specific legal provision it may be inferred that his intellect and whole training caused him to rebel inwardly against the parliamentary farce in which he was involved, and make him now the less able to challenge the steps that put an end to an impossible position. On a point of law he feels himself on safer ground, and he carries out the duty of an Opposition by opposing one particular act on the part of the Government. His contention would seem to be that a Cabinet, which has made out a case for suspending the parliamentary régime, because Parliament had reduced it to a farce and the Government of the

country to impotence, ought not to suspend by administrative act two newspapers which were admittedly working against the unity of the country that the Government has set itself to promote. Nahas Pasha would, no doubt, be the first to realize that, if the Government had had recourse to the Courts, the case would, probably, not have been tried for several months, and that in the meantime the papers in question would have been free to repeat what are regarded as their offences *ad libitum*. Whether it is reasonable to expect that a Government which is essentially "out for business" and has no use for make-believe should adopt such a line of action we must leave to the ex-Prime Minister to decide.

Liberty v. Licence.

No one, it is to be feared, who couches a lance for the Egyptian Press is likely to arouse much sympathy abroad, if only for the reason that Egypt has always seemed so ill served by her newspapers in comparison with the intelligence and experience that she can command. As far back as 1881 it was found necessary to pass rather stringent Press Laws. By 1894 Egyptian newspapers were held to have acquired a sufficient sense of responsibility to call for no further application of the 1881 Law, which was allowed to become a dead letter. By 1909, however, fresh abuses were occurring, and the Government of the day found itself obliged to revive the provisions of the 1881 Law regarding the Press. In spite of this experience and of the known weaknesses of Egyptian newspapers, the 1923 Constitution awarded the Press complete liberty. Since then there has been abundant evidence to show the use made of this liberty. To the foreign onlooker it appears as if the great majority of Egypt's forty-three Arabic daily papers, of which a year ago twenty-four belonged to Cairo, with a population of less than nine hundred thousand, lack the capacity to be able to deal with matters of importance and exist merely to abuse one another and political opponents. It would have been supposed that the more serious-minded politicians of Egypt would have welcomed any means for bringing the bulk of the Press of Egypt to an adequate sense of its responsibility as a guide to the nation. If this is to be done only by such drastic methods as suspension or suppression, the fact is to be deplored, but it may prove the salvation of Egypt that some of her public men are found prepared to take the onus of acting *ultra vires*. The offences with which the suspended papers are charged were, no doubt, common before the new Government took office, and if Nahas Pasha did not set the law in motion in his time, it will have to be inferred that his Government lacked the power to deal with offences manifestly prejudicial to the interests of Egypt. Criticism of the Press entails no taking of sides in Egyptian politics. There have been instances when the boundary line of fair criticism and good taste has been passed in Press remarks regarding Nahas Pasha and his Wafd colleagues, and not long ago it was reported that the Government had issued a preliminary warning on this point to one of its own supporters. This at least is the right attitude in attempting to raise the standard of the Egyptian Press, and it would be a good day for the country, if, while disagreeing on other points, the ex-Prime Minister and the present one could co-operate in putting an end to a serious blemish on Egyptian public life.

Greece's Foreign Policy.

The three treaties that are expected to result from M. Venizelos's tour abroad should go far to exorcise the bogey of potential trouble in the Balkans. There has been no real danger of international complications for some years past, in view of the influence that it is always possible in the last resort for the League of Nations to exercise; but until the series of pacts binding the different States to conform to the League spirit has been rounded off by an agreement between Yugoslavia and Greece, the more nervously-minded politicians affect to discover a loophole for war, not necessarily between these two

countries but in the Balkans as a whole, in every difference of opinion that arises. The Pact between Italy and Greece which M. Venizelos has signed in Rome is of interest mainly because it is understood to make no reference to the Dodecanese. In other words Greece is prepared to face facts as she finds them, and does not intend to retard her own general development and that of the Balkan Peninsula as well while vainly kicking against the pricks. This policy may be said to be M. Venizelos' statesman-like message to the people of the Dodecanese and to the Cypriots; and the example thus given may be taken to heart in other countries of the Near and Middle East. By far the most important of the three treaties will be that between Yugoslavia and Greece, if the Greek Prime Minister is able to conclude one during his stay in Belgrade. Not only will it have the effect of settling the vexed question of the Yugoslav Free Zone in Salonika, but it will also, it is hoped, mark a turning point in Yugoslav policy. The Ishmaelite character of this policy has been too conspicuous in recent years, and an accord with Greece should imply that Yugoslavia is allowing some of her "corners" that have worried her neighbours to be rubbed off at last. From the meeting between M. Venizelos and Ismet Pasha much is hoped, for the ground has been carefully prepared by both Prime Ministers. In a long review of Turkey's foreign relations that he gave during a speech delivered at Malatia on September 13, Ismet Pasha declared that there was no insurmountable obstacle to an entente with Greece. The issue between the two countries was of a juridical nature, which would inevitably find a solution, given good will on both sides. The inference is that hitherto, so long as that issue was left to delegates of the two Governments to solve, the necessary good will was lacking, from the mistaken idea that intransigence on each side argued patriotism instead of the reverse. The existence of correct relations between Greece and Turkey is one of the most hopeful signs of the times in the Near East; any formal pact will merely endorse a situation brought about by the hard logic of events.

The "Optants" Question.

The dispute between Roumania and Hungary over the question of compensation for the Hungarian landowners in Transylvania, who "opted" for Hungarian nationality and had their properties dealt with under the Roumanian Agrarian Law, came up once again before the Council of the League of Nations on September 21. As all efforts of the two Governments to arrive at a settlement between themselves had failed, in spite of repeated urgings on the part of the Council, the Hungarian Government had requested that the question of the Council's obligation to nominate on the Mixed Arbitral Tribunal a substitute for the member withdrawn by Roumania should be submitted to the International Tribunal of The Hague. The Council again shirked the issue and recommended the two Governments, "while reserving their points of view in regard to the principles involved and the legal situation" to take steps "to enable their plenipotentiaries to meet as soon as possible and to be furnished with the necessary powers to come to a practical settlement of the question." Unless there is some subtle virtue in the reservation of the respective points of view in regard to the principles involved, it would not appear that the settlement of the dispute had been advanced by this resolution. In the circumstances the difference of opinion which prompts one London newspaper to state in a headline to its Geneva telegram "Promise of Solution;" while another newspaper announces "Optants' Question Shelved," may be forgiven.

Great Britain and Soviet Armenia.

For some reason, which it is charitable to assume can derive only from suspicion of the integrity of the motives of Soviet Russia towards the various States comprising the "U.S.S.R.," official opinion in this country has never supported the scheme, which has now become inseparably

connected with the name of Dr. Nansen, for settling Armenian refugees in the Republic of Erivan. It is perhaps superfluous here to reiterate the pledges made by the Allied Powers during the War and by the League Assembly after the War in favour of an Armenian National Home. The non-fulfilment of those pledges is admitted on every side. It was unfortunate, however, that at the League Assembly last week Great Britain and India should have provided the only delegates to pour cold water on the Erivan scheme, and to refuse to support it financially. In face of the British delegate's opposition, based on the necessity for "budgetary economy" and on the allegation that the League was not "a vast charitable organisation," a supplementary credit for Dr. Nansen's costs of administration was passed on September 10. Dr. Nansen remarked during the discussion that the German Government was ready, provided that the work in Erivan was done under the direction of the League, to contribute £50,000, that Armenians in Europe had subscribed £100,000, and that Roumania, Greece, Norway, Switzerland, and Holland had promised contributions to the total sum that was necessary, namely, £300,000. We repeat that Great Britain appeared in an unfortunate light at this meeting, for it must be well known in official circles in this country that Armenians as a whole infinitely prefer the Erivan scheme to any other scheme of refugee settlement for their people. This British resolve seems, however, to be inflexible: which is only the more reason why something should be done by Britons for the only other scheme of Armenian settlement which offers prospects of success on any large scale—the French plan of colonising them in Syria. There should now be no fear of reviving animosities—such as that pertaining to the Christian v. Muslim cry, which confused the issue in former years. On the purely realist basis, it is "good business" on the part of the West to help to settle these refugee Armenians, the very gifted people who might, were they thrown back upon the East, being rejected by a short-memoried West, conceivably become, in desperation, agents of a Power whose ultimate hope is the wrecking of Occidental civilisation.

A Transformation of Islam.

The revolution which Islam, in the religious sense of the word, is at the present time experiencing is now an accepted commonplace, although observers differ upon the probable results of this revolution, some asserting that what the present generation is witnessing is nothing less than the disintegration of Islam, others believing that the more comprehensive contact of Muslim lands with the West will produce a new interpretation of Islam. At the moment it is the fashion to place Nationalist Turkey in the vanguard of the movement in Islam towards what in the West is called "progress"; it is the fashion to oppose the new Turkish spirit, that is, to the old Arab thought, which for so long had been held to dominate Islam. The tendency nowadays is—and it is a tendency which can be indulged in by the careful student only with considerable reservations—to speak of the religious warfare between two ideals in Islam: that of the idealist, anarchist, international, casuist Arab, and that of the realist, positive, disciplined, warlike, and patriotic Turk. It is true that Turkey has cast off what she considers to be the slough of Arab custom; it is true that other Muslim countries—with perhaps less advertising of the fact—are making in the same direction. But in many parts of Arabia also dissatisfaction with mediaeval Arab custom is shown: it might, in fact, be said that it is largely Arabs themselves who have demonstrated what to them appears the inadequacy of former Arab practice. And yet there is still in Arabia, as well as elsewhere in Islam, a vast mass of devoted Muslims who adhere, and will continue to adhere, rigidly to the *Shariat*, and to all the time-honoured conceptions and practices of their ancestors; who are by no means convinced that Western codes and customs can fitly be applied to Eastern lands; or who fear that, in

admitting certain departures from orthodox customs, they may let in to the machinery of their life the end of a wedge which in time will eclipse that machinery altogether. There is, of course, something to be said for both ideals; but perhaps that which will most appeal to the European student of Islam is the one, which, while not spurning the West, and being prepared, in fact, to take from the West whatever seems good (one might exclude, for instance, jazz music, the cinema, certain alcoholic drinks), is not ready to let the West effect a moral conquest over it, but rather so to take inspiration from it as to impel a regeneration, to extract new creative values, in and from itself. One need think only of such countries as Persia and certain parts of Arabia to realise that the West with more advantage to the world in general could go to Islam as a moral sympathiser or lender than as a conqueror. The bad in Western civilisation is so easily copied: the good so hard to assimilate.

INDIAN NOTES.

Europeans and the Princes.

Although the formal presentation of the second part of their case will not take place until the Butler Committee reassembles in October, the Princes are not letting the grass grow under their feet. Following the Maharaja of Bikaner's notable pronouncement last week on the occasion of the farewell banquet in honour of Sir Manubhai Mehta, comes a timely letter, reproduced in another part of this issue, from Professor Rushbrook Williams, with whose activities on behalf of the Princes readers of THE NEAR EAST AND INDIA are already familiar. The earlier statement was important as being the first in which reference has been made by a Prince of the first rank to the manner in which the problem of the Indian States was dealt with recently at the All-Parties Conference at Lucknow and by the signatories to the Nehru report itself. The Maharaja's dignified protest against "the unmistakably hostile spirit" towards his own order which was displayed on that occasion and against the "scurrilous attacks," the "stabs in the back," and "the abuse hurled without qualification" was both timely and to the point. For while there were one or two members of the Conference who had the fairness and the strength of mind to challenge the majority opinion, the latter abundantly justified the Maharaja's description. That the Princes were still animated by the ideas of the fifteenth century was perhaps the mildest expression. In welcome contrast to a gather-

THE POLITICAL SITUATION IN INDIA.

The Chairman and the members of the Statutory Commission leave to-day for Bombay for the purpose of continuing and completing the investigation which they began in February and March last. All who have the welfare of India at heart will wish them success in their great undertaking. Their preliminary visit was unquestionably successful; for, although the Indian political situation is not even now all that might be desired, it has materially improved during the last six months. In fact, it may be fairly claimed at the present moment that the boycott is dying, if indeed it is not already dead. The legislatures of eight of the nine major provinces have declared in favour of co-operation with the Commission. And the indications are that the outstanding legislature, namely, that of the Central Provinces, will eventually take the same line. It is, of course, to be regretted that the Legislative Assembly has not rescinded the silly resolution, supporting the boycott, which it adopted by a small majority earlier in the year. For the action of the provincial legislatures shows conclusively that the resolution does not accurately reflect the opinion of the country. And, this being so, the Commission is justified in its decision to ignore the Assembly in the matter of the appointment of the Central Co-operating Committee.

It is, we think, clear that sane and moderate opinion has at length asserted itself. Indians are realising, as they were bound to do, that the unique opportunity which the Commission affords them for placing their case before the British Parliament and people must not be lost. And the result is that the various races, communities, parties and sects are now willing to co-operate with the Commission. The minority communities are naturally early in the field. For they can, of course, visualise a future administration which, because of its freedom from dependence on minorities, may be inclined to overlook their claims and interests. We referred last week to the opinions expressed by the European Association—the representative political organisation of a community which is, in point of numbers, one of the smallest in India. But although the Europeans in India are few in number, their material interests in the country are vast. For this reason—and also because they are the only people in India who have practical knowledge and experience of the working of democratic institutions—their views on constitutional questions are entitled to consideration. And the fact that both the European Association and the Associated Chambers of Commerce have favoured the immediate grant of full provincial autonomy will be certain to have a most important bearing on the situation. For it means that Indians and Europeans are now practically in line on this question. They are, however, still sharply divided in regard to the constitution of the Central Government; and it will be around this exceedingly difficult problem that the struggle before the Commission may be expected to develop. To quote its own words, "the European Association is opposed to the undue acceleration of responsible government in the Central Government prior to satisfactory proof of the experiment in the provinces." In other words, the Association does not support—for the

present, at any rate—the introduction, in the Central Government, of the principle of responsibility to the Indian legislature. On the contrary, it considers that the central executive has been unduly and unwisely weakened under the Reforms scheme, and that measures calculated to re-inforce it ought to be taken. "It appears to the Association that the position of the executive in the Central Government should be strengthened, particularly if the recommendations for a further transfer of power in the provinces are accepted." We certainly agree with the Association that a strong Central Government will be imperatively necessary under any system of provincial autonomy. For, as we have before pointed out, it is impossible to believe that British India can ever develop into a self-governing State unless the discordant elements in the country are held together by a strong central controlling authority. But assuming that the Commission also takes this view, the question which it will then have to face will be whether this central authority is to continue to be, as it is at present, responsible to Parliament, or whether it is to be made responsible to the Indian legislature.

Indian opinion is, we believe, strongly in favour of the introduction of the principle of responsibility in the Indian legislature. The Nehru report is emphatic on the subject; and even the moderates favour the introduction of the principle, although they recognise that the Government of India, in its relations to the Indian States, must remain responsible to Parliament. The European Association is, on the other hand, against the immediate introduction of the principle in the Central Government. In 1918 it suggested that the changes in the Government of India which were part of the Reforms scheme should be postponed. And it now maintains that experience of the working of these changes has shown them to be largely undesirable, inasmuch as they have weakened the Executive. Further, it holds, as we have said, that a strong Central Government will be more than ever necessary if provincial autonomy comes into being. In short, the position of the Association is, if we understand it correctly, that the Central Executive should not be less strong than it was under the Morley-Minto system. It will be recalled that about a year ago a correspondent set forth in this journal a somewhat similar proposal, the essence of his scheme being that the Indians should be given freedom in the management of their local and provincial affairs, but that the Central Government should consist of a small European Executive. There is unquestionably a great deal to be said in support of some such scheme as this, more especially if, as the Association contemplates, it is to be a stage on the road to self-government. It is to "the gradual development of self-governing institutions" that Great Britain is pledged; and this pledge will be more than fulfilled, for the time being, by the grant of provincial autonomy. And the Association is right in contending that the results of so bold an experiment ought to be awaited before far-reaching and, perhaps, risky changes are made in the Central Government. But, on the other hand, there arises the question whether any such scheme would not mean the creation of a system somewhat akin to dyarchy. It seems to us that herein lies the difficulty. For it is not easy to see how a Central Government, constituted as the Association proposes, could exercise, without excessive friction, any effective control over a number of autonomous provinces. The authors of the Report on Indian Constitutional Reforms realised this difficulty: "We cannot think," they said, "that states on the way to responsible government which have imbibed a large element of responsibility into their constitutions can be controlled by a purely autocratic power"; and, again—"change in the provinces implies change in the Government of India." But, as they recognised, the change in the Government of India need not be simultaneous with, or in equal proportion to, the change in the provinces. Their view would appear to be sound; but the problem is one which needs to be thoroughly explored, as, no doubt, it will be by the Statutory Commission.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, August 30.

Topics in Parliament.

The first debate on the general budget for 1928-29 was attended on August 17 by King Faisal in person. Perhaps the weather may be held partly responsible for the unusually acrimonious tone of the discussion, which extended over several sessions and resolved itself into a general attack on the Government.

The estimates were submitted to the Chamber of Deputies by the Minister of Finance in a very long speech; in the course of which he said that, though the estimated revenue showed an apparent decrease of 6½ lakhs as compared with 1927, there was actually an increase in revenue of seven lakhs, the difference being accounted for by the drop in the British grant-in-aid and the increase in income tax revenue. He expressed satisfaction with the state of Iraq's commerce in general. No decision had yet been reached upon the Financial Agreement subsidiary to the Anglo-Iraq Treaty, but hopes of a satisfactory result were entertained. In regard to the currency of Iraq, the Government had decided to establish a National Bank—which would be in part an agricultural bank—and to issue a new coinage.

Members of the Opposition were not slow to criticise the Budget, chiefly on the score of its failure to provide for new productive schemes. To this the Minister of Finance replied that such schemes could not be carried out in the space of eight months by an Administration, which, on taking office, had found itself in possession of an empty Treasury.

The ex-Minister of Commerce complained of the Government's failure to cope with the fast-increasing demand for more schools throughout Iraq. He referred also to the unsatisfactory and inadequate provision for public health in out-districts, and threw in a protest against the high salaries paid to foreign officials, notably to British Advisers.

Other deputies accused the Government of delay in presenting the Budget—a delay which had cost the nation four lakhs of rupees in salaries to deputies and senators detained for the prolonged session—and of failure to encourage agriculture or to solve the problem of the ownership of the railways.

The ex-Minister of Commerce, continuing his criticism of the Budget, said that one quarter of the whole vote was swallowed up the Ministry of Defence. Much had been heard about the Iraq Army, yet it had not for one day repulsed the *Akhwan* or protected the helpless Iraqi tribesmen against loot and massacre. Energetic steps must be taken to increase the Army's efficiency, or further expenditure upon it was merely thrown away; more decisive measures for assuming responsibility for Iraq's defence were imperatively needed.

This speech drew from Nouri Pasha a spirited defence of

the Army, which, he said, had been sent immediately after the first *Akhwan* raid to the frontier, where it had built and manned the Sulman Post, in which Iraqi forces were still stationed in defence of a vast territory. The Army had also been responsible for maintaining order on the northern frontier, except at one place (Rowanduz). Their small voluntary army could not do more. The Minister then reiterated his recent arguments in favour of conscription as the only means of enabling Iraq to undertake her own defence. Replying to a further question, he assured the House that no further contracts would be given to British officers until the question of national defence had been satisfactorily settled.

In the course of his reply to the critics of the Budget, the Prime Minister made a statement with regard to the subsidiary agreements to the new Anglo-Iraq Treaty. The Military Agreement stipulates that Iraq should undertake to pay the difference between the expense of maintaining British forces stationed in Iraq and the cost of such forces were they stationed in England. Sir Abdul Muhsin as Sa'dun said that his Government was unable to agree to this undertaking, partly because Great Britain had many political and economic interests in Iraq and should, therefore, bear this burden herself, partly because Iraq might through it find herself involved in very heavy financial obligations if at some future time Great Britain found it necessary to bring more troops to Iraq. In view of the great expenditure on productive works, irrigation and communications, which Iraq must necessarily incur in the near future, the Government had officially informed the British Government that it could not possibly meet this charge, and had asked that the matter be reconsidered. To this Great Britain had replied that the money need not be paid at present, but as soon as Iraq's financial resources enabled her to find the money; but Sir Abdul Muhsin gave the House an emphatic assurance that his Government would never agree to undertake this charge for the maintenance of the British forces in Iraq.

The Prime Minister went on to say that the Government had also informed Great Britain that the question of the ownership of the Iraq Railways, and that of the registration of the Port of Basrah, must be settled before they could open negotiations in respect of the Financial Agreement. In view of all that he had stated, Sir Abdul Muhsin thought that his administration could not justly be accused of neglecting the interests of the country.

At a later session of Parliament, the Budget provision for the Police service was subjected to severe criticism, on the grounds of the considerable increase of the vote for this as compared with former years. Several deputies objected to the work of the C.I.D., which they stigmatized as an alien espionage institution that directed its activities against citizens of Iraq. The Minister of Interior endeavoured to remove this impression, and explained the increase in the Police vote as due to the enrolment of additional policemen, the opening of a school for training inspectors, and the taking over by the Police force of patrol duties in the desert hitherto undertaken by the Ministry of Defence.

up the question of a new appointment, that of Master of Ceremonies to the Ministry, a post which several members of the Opposition considered unnecessary and unjustifiable in the present state of Iraq's finances. Another deputy complained that the Diplomatic Representative of Iraq in London was an equally useless official, since he was not allowed to express his own views. The general policy of the Ministry of Foreign Affairs was criticised by Saiyid Abdul Mahdi, ex-Minister of Education, who "could see no glimpse of light" in Iraq's position *vis-à-vis* either King Ibn Saoud, on the one hand, or the Persian Government, on the other. The Minister of Interior assured him that the difficulties with Persia had been greatly exaggerated, and that no serious dispute was in question.

General News.

The seventh anniversary of the coronation of King Faisal was celebrated on August 23, when His Majesty held a review of the Iraq Army on the aerodrome of Imperial Airways. The King, who was met at 7 a.m. by Nouri Pasha, Minister of Defence, and by the Commandant, Southern District, was greeted with a royal salute, and then with his staff passed down the ranks, inspecting each unit in turn. The troops were the 1st Iraq Lancers, one section 1st Field Battery, 1st Mountain Battery, 2nd Mountain Battery, the Band, the 4th Iraq Infantry, and the 7th Iraq Infantry. After the King's inspection the troops marched past the saluting base to the strains of a march. The great improvement in steadiness, precision, and general turn-out achieved during the past two or three years was very noticeable.

A Persian tribe, the Sinjali, are reported to have made a raid across the Iraq frontier in the Khaniqin district, attacking the Sayah tribe and driving off some 3,000 sheep. The Government has addressed an official protest to Persia through its Diplomatic Agency.

This year about twenty students are to be sent by the Ministry of Education to colleges or universities abroad. Five will go to England, four to study higher engineering and one to take an advanced course in law. Three are to specialize in agriculture in the United States, and two will study Arabic literature in Egypt. Of special interest is the decision to send four graduates from the Girls' Training College in Baghdad to continue their studies at the American University of Beyrout. About one hundred applications were received by the Ministry, and it is possible that the original twenty students may be reinforced by a selection from among those of the others who are able to pay half their college fees.

Imperial Airways, Ltd., are reducing the price of the Baghdad-Basra journey to £7, thus bringing the fare from Cairo to Basra down to £39 instead of £41.

could hardly be produced in Cyprus, and that "Cyprus cigarettes" like "Egyptian," must continue to be made from imported "Turkish" leaves. But time, and recent patient efforts, have brought about a change, and new hopes. Active steps are now being taken, under the Director of Agriculture, Mr. Dawe, to inaugurate a new effort. An important conference was held on August 30 in the Lecture Hall of the Agriculture Department to discuss ways and means, under Government consideration, for placing the industry on an improved basis. It may be remembered that members of the Legislative Council recently proposed either that families expert in the cultivation and preparation of tobacco should be settled in suitable centres in Cyprus, or—failing this—that skilled workers of both sexes should be brought from Macedonia to train Cypriot growers. These might be Greeks, Turks, Armenians, or Russians. It is now considered advisable that they should be only of the two first-named nationalities: that Greeks should be settled in Greek-speaking villages, and Turks in Turkish villages. In mixed villages the Turkish residents can generally speak Greek.

The Director of Agriculture has been in communication with the Refugee Settlement Commission in Athens. It is indispensable that Cypriots should be trained in the manner indicated. The meeting, which was well attended, was, of course, anxious to know what financial assistance the Government would give towards the cost of bringing over and settling the expert advisers; especially as the Director of Agriculture stated that Government aid would mean taxation in some form. But nothing can be said on this subject until further information on various questions is available. More details must be left for a future letter. It is interesting to note what a change has been brought about. In the early years of British administration tobacco growing had, for fiscal reasons, become practically extinct. Moreover, it was then believed that only small pockets of soil, at considerable altitudes, were suitable for its cultivation; whereas it would now seem that it can be grown in most parts of the island. The British Government continued the Turkish policy of discouraging any growth of the leaf, as likely to interfere with Customs revenue, and also because the assessment of diminutive crops in the hills was difficult and costly; for the leaf, like all other produce, was subject to tithe. Consequently the first Director of Agriculture, Mr. Gennadius, who was strongly in favour of reviving and developing the industry, was given to understand—as were British officials—that any proposal in this direction were undesirable.

No time should now be lost in pushing forward the movement for improvement, under the guidance of Mr. Dawe, who has no doubt satisfied himself that there is good ground for the proposed active development. Meanwhile the Trade Commissioner in London is doing all that is possible to co-operate. Even now there is a demand for "Cyprus cigarettes," and there are those in England who will smoke no other. It is to be hoped that island grown tobacco will before long be able to compete with other kinds on its own merits. According to figures given by Mr. Dawe it would appear that in the last ten years the average area devoted to tobacco has been only 1,114 dunams, or about 375 acres.

Cyprus Grapes for London.

The Agricultural Department is dispatching weekly shipments of table grapes to London, to the Empire Marketing Board, in order to test the results for the United Kingdom markets. It is a little doubtful whether they will be successful, having regard to previous trials, some years ago. But every such experiment is of value in the interests of Cyprus. Some of the grapes, especially large ones from some of the higher villages of the Limassol district, are excellent, and should they bear transport, they ought to find good markets.

Carobs.

The yield of carobs (locust beans) is not large. Opening prices are 22s. to 25s. the Aleppo kantar (of 180 okes) or 1½ cwt. The vintage is now beginning.

Sofia, September 18.

Solution of the Cabinet Crisis.

The solution of the recent ministerial crisis—the maintenance of the fallen Cabinet, with a new Minister for Railways—has displeased everybody, particularly Governmental circles, and all observers are agreed that the solution is only of a very provisional nature. The three factors leading to this solution were, first, the general situation of the country, secondly, the situation of the Sobranye, and thirdly, the situation in the Democratic Entente.

The general situation in the country, in the political and economic aspect, is pitiable. If the Bulgarian nation has surmounted the difficulties created by the *coup d'état* of 1923, it has not rid itself of the pernicious consequences of the bloody struggles which followed this step of liberation from Agrarian anarchy. On the contrary, these consequences have had a depressing economic effect—an effect which the earthquakes of last spring and the poor crops this year have considerably aggravated. The present political and economic condition renders necessary two conclusions: that Bulgaria, to free herself from it with even a small degree of success, has urgent need of help from external sources, which can take the form only of the stabilisation loan actually negotiated, and that Bulgaria cannot undertake a reliable General Election before the realisation of the loan, that is to say, before the dissipation of the troubled atmosphere created by the present difficulties.

Such being the general situation, the parliamentary situation takes on a decisive importance. Now the present Sobranye, the outcome of the often discussed elections of May, 1927, contains an overwhelming majority belonging to the group of the Democratic Entente, formed on the morrow of the *coup d'état* by the fusion of several old parties or sections of parties, for the defence and consolidation of the new régime. Out of 273 deputies the Democratic Entente claim 168, while the whole Opposition numbers only 95, of whom 13 are Democrats, 44 Agrarians of the Left, 4 Agrarians of the Right, 10 Socialists, 13 Liberals, 2 Radicals, 5 Labourites, and 4 camouflaged Communists, the remaining ten deputies comprising the neutral Macedonian group. It is very probable that this division of political forces in the Sobranye does not correspond exactly to the respective strength of the same forces in the country; but since

immediate recourse to the electors is undesirable, one has to reckon with it.

The different groups of the Opposition, consulted by the King, advised the Sovereign that a Cabinet of Concentration should be formed under the presidency of the leader of the Opposition in the Sobranye, M. Malinoff. This, they said, would re-establish constitutional liberties and appease the country. From such a Cabinet the majority would have excluded the Democratic Entente, while M. Malinoff himself advised a Cabinet of National Union in which this group could equally participate. The appeasement, already begun by M. Liaptcheff, being judged inadequate, they demanded a very definite step in advance, and sought above all to prevent the *dénouement* of the ministerial crisis from involving a return to the sad proceedings under the former Government by the projected entry of M. Tsankoff and his friends in the new Ententist Cabinet. But all that pre-supposing the immediate dissolution of the Sobranye, and the Democratic Entente being considered by the whole Opposition as too exhausted and compromised to remain at the head of the Government, M. Malinoff proposed the constitution, under the direction of a leader of the Opposition—who could only be himself, in the unanimous opinion of all the parties and of the country in general—of a Cabinet of Transition, which, representing a coalition of one or two parties of the Opposition with the Democratic Entente, could work with the existing Parliament, at any rate for a few months, that is to say, for a period sufficient for preparing the country for new legislative elections.

All depended, therefore, upon the attitude of the Democratic Entente. But the Entente rebelled at the idea of having to divide power, wishing to keep all the power for itself. An effort was made to form a new Ministry of a wholly Ententist character. Three attempts were made, and all failed, owing to the deep divisions existing within this group. The truth is that the Democratic Entente is a party only in appearance; at bottom, it is a group of parties, united to keep themselves in power. The most important elements in this group are the Democratic Ententists of M. Liaptcheff, who should not be confused with the Independent Democrats of M. Malinoff, and the Populists of MM. Bouroff and Majaroff. From the beginning of this crisis and even before its official outbreak, these two groups took up diametrically opposed attitudes. The Populists declared that General Volkoff could no longer remain in the Cabinet, where his presence was harmful to the foreign policy of the Government; the Democrats, who disapproved of the concessions which M. Liaptcheff had made to MM. Bouroff and Majaroff, proclaimed their inability to accept a change in the Ministry of War under the pressure of advice, real or fictitious, which came from abroad. Between these two points of view there was no reconciliation possible, and it was in vain that M. Liaptcheff, in accordance with the suggestion of his King, tried to induce the deputies of the Democratic Entente to support a new list of Ministers which could be only a list with Volkoff and Bouroff or without Volkoff and Bouroff—the sole means of appeasing the susceptibilities of the one and the other. All his endeavours were fruitless, and after all the possible lists in this thankless alternative had been examined, he proposed to the King the re-establishment—*faute de mieux*—of his old Cabinet. But this solution, dictated by the necessity of keeping things going until the Loan now being negotiated had actually been realised—and no one dare risk its being postponed by a dissolution of the Sobranye—constitutes a verdict without power of appeal both against the Democratic Entente and against Parliament in which it has a majority and which is impotent owing to the impotence of the parliamentary majority. The attitude of the King is easy to understand. The evening after the provisional settlement of the crisis, a quarter of an hour after the signatures of the ukases which M. Liaptcheff presented to him, for the maintenance in power of the old Ministers and for the nomination of a new

Minister for Railways, he paid a long visit to M. Malinoff, leader of the Opposition, thus publicly showing his disappointment with the Democratic Entente and his choice concerning the personality of the head of the next Government, the head of to-day being able to have, even in the opinion of his own supporters, only a brief spell determined by the necessity of the forthcoming loan for the stabilisation of Bulgarian money and finances, as well as by the persistence of the reasons which ten days ago brought about the explosion of the ministerial crisis.

Cairo, September 15.

The Princes' Visit.

The visit of the Prince of Wales and of the Duke of Gloucester, although strictly private, was from start to finish a conspicuous success. No very elaborate programme had been prepared, for one thing because the visit was to be of such short duration and also because the Princes did not want to be tied more than courtesy to the Sovereign and the authorities necessitated. Both in Cairo and in Alexandria admission to the receptions was reserved to the British community, but the foreign and Egyptian element was not to be outdone, and wherever the opportunity presented itself crowds collected and gave the Royal visitors an ovation.

By special arrangement the "Kaisar-i-Hind" put in at Alexandria before calling as usual at Port Said, to enable the Princes to pay their respects to King Fuad at the earliest moment. The steamer did not come inside but anchored in the outer harbour, being met by one of the launches of the Royal Yacht Mahrussa bearing Zulfikar Pasha, the Grand Chamberlain, sent by the King to welcome the Royal passengers, Mr. Hoare, the Acting High Commissioner, and Rear Admiral Tomlin, Director-General of the Ports and Lights Administration. As they left the steamer the Princes received a rousing cheer from the passengers, and again, as they steamed through to the Arsenal landing stage, from the ships in the harbour—which had all dressed for the occasion. But in a way the most remarkable scene was on the quay where the British community had mustered in full strength. There, after being greeted by the Governor, Hussein Sabry Pasha, Mr. Summerhayes, the Acting Consul General, Ingram Bey, the Commandant of Police, and Major Congreve, Acting Commandant, British troops, Alexandria, the Princes walked some couple of hundred yards down the red carpet, on either side of which were gathered members, of both sexes, of the community who gave them a real British cheer, many of them, including staid elderly members, running along as the Princes progressed in order to catch another glimpse of them before they entered the waiting cars. The Prince drove off in one of the Palace cars with Mr. Hoare, their suite following, to the Residency, where they stayed during their visit to Alexandria. All along the route crowds had gathered and gave them an exceedingly cordial reception.

After a quiet dinner with the Acting High Commissioner and Mrs. Hoare, a reception of the British community was held, the members being introduced to their Royal Highnesses by Mr. Hoare and Mr. Summerhayes. The gardens of the summer residence of the High Commis-

sioner had been most tastefully illuminated, and the scene was a revelation to many who had never realised that the grounds were so extensive, nor that they could lend themselves to such advantage. For the entertainment of the Princes and the guests a couple of "Gulla Gulla" men, the type of Egyptian conjurer so well known to visitors to this country, had been engaged. These kept everyone amused for the best part of an hour with their clever tricks and quaint chatter. After them a concert party of the Aircraft carrier Eagle, which had arrived in port the day previously, gave an excellent musical programme, and altogether a very delightful evening was spent.

Next morning the Duke of Gloucester motored over to Abukir, and bathed in the company of Group Captain Brooke from the Air Force beach, returning in time to accompany the Prince of Wales to Ras El Tin Palace for the luncheon which King Fuad had arranged in their honour. The guests included, in addition to the Princes' suite, Prince Omar Tussun, the Acting High Commissioner, the Prime Minister, the Minister for Foreign Affairs and the Royal Household. As soon as the Princes had returned to the Residency, King Fuad, accompanied by Said Zulfikar Pasha, drove over from Ras El Tin and paid them a visit. The Princes then went to the Sporting Club for a round of golf, and after another quiet dinner at the Residency they visited the Pavillon Bleu, the leading cabaret, and remained there until a late hour thoroughly enjoying the various turns. On Thursday morning they left by special train for Cairo in the company of Mr. Hoare and of Hassanein Bey, whom King Fuad had specially delegated to attend them during their stay in Cairo.

In the capital a great reception awaited them, both at the station, where was assembled an enthusiastic gathering of Britons, and in the city itself. During their stay in the capital the Princes lived on board the Kassed Kheir, the luxurious river yacht which King Fuad recently acquired and which he placed at their disposal. One of the first acts of the Prince of Wales on arrival was to drive over to Helmia in order to call on the 12th Lancers, of which he is the Colonel-in-Chief. He and his brother paid a visit to the Museum, and while the Prince went to Gezira for a round of golf, the Duke visited the Musky and spent some time in the Khan Khalili. In the evening the Princes were the guests of the British community at Gezira, where what is characterised as the largest company that has ever sat down to a meal in the Club grounds was assembled. The Hon. Cecil Campbell was in the Chair, but the proceedings were quite informal and there were no speeches. An excellent cabaret show followed the dinner, and on leaving the Club the two Princes went on with their suite and a number of the other guests to the Kit-Kat Club, where they remained until an early hour.

Yesterday the Princes paid a flying visit to the Pyramids. They ascended the Great Pyramid from the top of which the Prince of Wales hit a golf ball to see how far it could go. So far no one has been lucky enough to find it. Two of the guides then, at the Princes' suggestion, performed one of the feats of agility for which the Pyramid Bedwin are celebrated. They raced down the Great Pyramid and up the second one, doing the distance in the amazing time of eight minutes, much to the amused delight of the Prince who held the stopwatch. The party then proceeded to the Sphinx, had a bath and a hurried breakfast at Mena House, and then went by special train, accompanied by Mr. Hoare and Hassanein Bey, to Ismailia where they had an exceedingly warm reception and lunched at the Suez Canal Company's residency. Their departure by launch to catch the Malda was another occasion for a display of enthusiasm, not only by the British but also by the foreign residents of Ismailia, and a fitting termination to what has been a memorable visit was the display which the Royal Air Force gave as the Princes passed on their way to the ship which is to take them to East Africa.

The Premier at Tanta.

On Thursday last the Prime Minister went to Tanta in response to an invitation extended to him by the notables. This visit was noteworthy for two striking features. In the first place the greatest enthusiasm was shown for the Premier, Mohamed Mahmud Pasha, and those of his colleagues who accompanied him. There was not a single discordant note, and it was evident that Wafd activities, in this centre hitherto regarded as one of the Wafd strongholds, had failed entirely of their purpose. The second feature was the very comprehensive and outspoken speech made by Mohamed Mahmud Pasha and the information he gave with regard to the future parliamentary régime and the programme of reforms which the Government intends to carry out.

The Premier said that the Government had no wish to be overstrict, but that it intended to ensure the merciless application of law and the establishment of justice which are the only means of maintaining discipline and encouraging national progress. Parliament had been dissolved in order to re-establish a more efficient one later. The fundamental principles of the Constitution would be revived as vigorously as ever. Meanwhile the Cabinet was safeguarding all constitutional liberties. But in regard to the Press the Government, whose duty was to encourage the return to a sane and useful Parliamentary régime, had found itself obliged to intervene, and to prevent freedom of opinion from becoming a tool in the hands of writers who have their own axe to grind. Mahmud Pasha then went on to outline the future Parliamentary régime. He said they were working for a parliament in which the Upper and Lower Houses would be formed of those sincerely interested in the welfare of the country, people who really wished to benefit the country and were prepared to suffer for the country. It would be a parliamentary régime in which national representation would never be counted as a living for deputies and senators, neither would an opportunity be given for graft or jobbery. It would be a régime in which members of Parliament would always respect the principle of separating the Legislative from the Executive. It would be a régime which would set the Government working for the welfare of the people instead of being a means whereby those occupying State posts would alone benefit. He added that though the Government would be very severe with those who committed any breach of law, it would be much more severe with officials who acted contrary to discipline, justice, or sound morality. It was to the people that the Government looked for power and energy for the realisation of its projects of retrenchment and reform.

Detailing the practical side of the Government's programme the Premier said as public health was one of the things on which the wealth and prosperity of the country depended this was receiving urgent attention. Considerable progress had been made with the filling up of ponds and pools. People would be prevented from making new ponds and the question of filling up the 4,000 now existing was being studied. It had been found that a million villagers in the vicinity of the cities could be supplied with filtered water by extending the pipe system and a credit of £E500,000 was about to be asked for this work. An investigation was also being carried out with a view to providing the densely populated areas with filtered water, and it was hoped that within ten years the whole country would be thus supplied and the *fellahin* protected from the many diseases from which they now suffer. In regard to housing three of the more densely populated districts of Cairo, viz., Sayeda Zenab, Bulac and Gamalia, where the labouring classes are poorly housed, had been selected, and blocks of houses would be erected on the extensive areas that exist there so that the labourer would have a hygienic dwelling at low rental. Finally, in the matter of hospitals the Government had decided to erect in the provinces 150 hospitals equipped with ambulances and all the latest apparatuses. This should be of incalculable assistance in time of stress and bring relief to thousands of *fellahin*; adults as well as infants.

Turning to irrigation and drainage Mohamed Mahmud Pasha said that the Government aimed at regulating summer rotations in the most satisfactory manner, enabling the cultivation of 20,000 feddans of rice every year and at improving and preparing 1,500,000 feddans of waste land for cultivation. Both the heightening of the Aswan Dam and the construction of the Gebel Aulia Dam would be started soon. By winter the experts would have terminated their investigations of the proposal for the heightening of Aswan Dam. Side by side with this irrigation development there would be an extension of the drainage system and the Government was discussing the construction of stations for generating electricity to work fifteen pumping stations for drainage. Of these stations Gharbia would have eight. The drainage scheme would take two years to complete.

Lastly the Government recognising that small properties are an important economic and moral factor, had decided to distribute the public domains among agricultural labourers and small landowners. A start would be made with 2,000 feddans in the Fayum, among farmers owning fewer than ten feddans. The same system would be followed in all other provinces where public domains exist.

The premier then made a reference to the Kellogg Pact, to which the Egyptian Government has recently intimated its adherence. He stated that Egypt's foreign policy is to complete her independence and secure a place among the other nations in keeping with her glorious past. It had been with great pleasure that the Government had signed the Pact, but as adherence would have implied an acceptance of certain reserves made by certain Powers it was the duty of the Government clearly to point out that such an agreement should not be interpreted to imply an acceptance of any reserve. Finally, the Premier declared that the Government intended to remain in power until its task of reforms had been completed, relying in this on the support of the people and the continued confidence of the King.

Cases of dengue fever were last week reported from Fethie, in the south of Smyrna.

An Italian delegation is expected in Roumania this week for the purpose of offering a present to King Michael.

Marshal Pilsudski, Polish Prime Minister, is to be given an official reception in Bucharest this week.

According to the *Aerial ABC*, arrangements are being attempted by a group of Indian Mussulmans to start a regular aeroplane service to convey pilgrims from Jidda to Mecca.

It is stated that 120 Yugoslav military aeroplanes will take part in manoeuvres in connexion with the tenth anniversary of the breaking of the Salonika front by Yugoslav troops.

The claim of Ishaak Bey Helmy to have swum the Channel on August 31-September 1 has been officially recognised by the Channel Swimming Association, of which Lord Desborough is President.

Sir Robert Hodgson, British Minister at Durazzo, has notified the Albanian Prime Minister of the British Government's recognition of the new Albanian Kingdom. The Roumanian Minister at Durazzo has handed over a letter of congratulation on King Zogu's succession to the Throne.

The preliminary work of the expedition which Sir Charles Marston has organised for the exploration of Hazor and also other ancient sites in Palestine last week disclosed the ancient walls of Hai, the Royal City of the Canaanites, and the scene of their massacre by Joshua after his Jericho victory. Professor Garstang, who is supervising the expedition, began major operations on September 24.

The Greco-Turkish Mixed Commission for the exchange of populations, at a plenary session held in Constantinople on September 20, considered the question of property belonging to non-exchangeable Turks in Western Thrace. The Commission's proposal was, according to *The Times*, to appoint a special sub-commission to go to Thrace and settle the question. The Greek delegate accepted this proposal, but the Turkish delegate moved that the Mixed Commission should visit Thrace, and see for itself what was going on there. After a long discussion the Commission adjourned until September 24, when it was hoped to arrive at definite decisions.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 6.

The All-Parties Conference.

The session of the All-Parties Conference at Lucknow finished last week, the last act being to appoint a Committee to embody the Nehru Report in strict parliamentary form. Whatever value it has, it will have most in that form, and none can now doubt its worth, not even those who are against any immediate advance of so radical a nature. The Statutory Commission will presumably not be prepared to go so far, but the Nehru Report will remain as a documentary landmark, and as pointing to a goal for a later generation to reach.

A very interesting analysis of the underlying principles of the Nehru Report appeared in the *Statesman* of last Friday from the pen of Mr. Bepin Chandra Pal. His reading of the situation is that, whereas twenty years ago the strongest political tide in India was setting towards independence from Great Britain, now that the Colonies, Australia, South Africa, Canada, etc., are so much nearer to being Sovereign States, so that Dominion status is now seen to be by so much more valuable, the strongest movement in India is towards Dominion status. If India could achieve sovereignty within the British Commonwealth, there would be nothing left to cry for but a state of sovereignty that could never be as securely founded. An India founded on British rock is one thing: an India founded on her own shifting sands would be quite another.

Statutory Commission and Punjab Chamber.

The Punjab Chamber of Commerce has presented a memorandum to the Commission; one that differs in not a few of its recommendations from those put forward in the memorandum of the Associated Chambers of Commerce. Among the recommendations of the Punjab Chambers are these:—

That there be a moderate extension of the franchise.

That the urban classes be more largely represented.

That Delhi be extended into a province with a Governor.

That dyarchy be abolished; that is, the distinction between reserved and transferred subjects.

That the Provinces be given more power and more financial control.

That justice and police be central subjects, and that there be a Supreme Court for India.

Bengal Legislative Council.

The Bengal Legislative Council, after passing the Bengal Tenancy Act Amendment Bill through the Committee stage, and giving it a third reading, has adjourned. Much was heard of *salami*, but no mere brief note upon that would evoke much interest on your side. Much, too, was heard of the ryots' right to the trees on their holdings. That also is a thing of local interest, but there are not wanting leading men who think it favours the landlords too much. If it does, it will have to be amended in its turn. The trend of changes is all towards justice to the poorer classes. A day may come when the Bengal landlords will all of them be bought out, as in Ireland. It is better to be bought out than hurled out, as in Russia.

Madras Legislative Council.

On Tuesday the Madras Legislative Council carried without a division, the Swarajists having left the Chamber in a body, the motion of Sir Norman Marjoribanks that a Committee of the House be appointed to collaborate with the Statutory Commission. That makes another Province for collaboration. An amendment had previously been carried, Sir Norman Marjoribanks accepting it. This demanded equality of status with the Commission as regards the examination of witnesses and access to confidential documents. No harm in that whatever.

Khargpur Riots.

It looks as if industrial peace in parts of India was more at the mercy of the local *goondas* (hooligans) than of those Communists of foreign extraction, against whom the Central Government is arming itself. There is, therefore, some clear need for a change in the law affecting Indians and British in India involved in industrial disputes. Legislation is proposed or predicted. The serious Khargpur riots of the end of last week (authentic news from that quarter is still somewhat scanty) are believed to be traceable ultimately to industrial conditions or industrial history, however they may have been the work of *goondas*. The railway workshops have had to be closed.

Port of Calcutta.

The figures for 1927-1928 of vessels entering the port, and of goods handled at the jetties and docks, make a record for the port of Calcutta. The aggregate of tonnage was 4,638,000 tons against the 4,367,000 of 1912-1913, while 6,143,000 tons of goods were handled as against 6,049,000 in 1913-1914. The Commissioners hold out the hope that, when a sufficient reserve has been built up against possible years of poor trade, the port dues will be lowered.

Indian Medical Research.

It is reported from Simla that the Standing Finance Committee of the Assembly has sanctioned an important scheme for a Public Health Institute in Calcutta and a Central Medical Research Institute at Dehra Dun, at the initial cost of twenty-four lakhs, and five lakhs recurring. It is no new scheme; for it was sufficiently far advanced to be strangled by the Indian Retrenchment Committee, to whose activities some men's memories are too short to go back. The scheme has been revived, with the Rockefeller Foundation now behind it; indeed, its execution pivots on the Foundation. People will cut India into provinces (it will be seen that yet another, with another Governor's salary, etc.—that of Delhi—is proposed) without counting the cost. When it is a question of really doing something, as founding a Medical Research Institute, men look for the money where they can find it, and that is not in India.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 9.

The Assembly in Session.

The Assembly met on Tuesday for its autumn session. There was no formal opening ceremony. The session promises to be an interesting one, as it brings up many controversial subjects. Mr. Crerar took his seat for the first time as the Leader of the House. Two adjournment motions were moved after question time, but both were disallowed. The first referred to the criticism in the editorial columns of the *Times of India* that Mr. Patel was abusing his privileges as President of the Assembly by travelling all over the country at the expense of the taxpayer, that Sir Frederick Whyte, his predecessor, was in a privileged position, as he was a man of experience and was able to benefit the country by visiting the Provincial Legislatures, and that the Assembly should not allow such an incident to pass without opposition. The President disallowed the motion of adjournment on the ground that such motions were generally proposed to discuss the policy of the Government. If it was only a question of privilege, he said, he must disallow the motion, but he did not wish it to be understood that the House had no protection. It had an inherent right to censure the attack through a substantive motion. The next motion, that chalk was being substituted for quinine, was disallowed by the President, who said that he gathered from the mover's speech that the question was not urgent. The Assembly paid a tribute to the memory of Sir Alexander Muddiman and Captain Kabul Singh.

The Public Safety Bill.

Among the official Bills which were to come up before the House this session was the Public Safety Bill, which was to be moved by Mr. Crerar. Pundit Motilal Nehru objected that sufficient notice had not been given and that under Standing Orders no measure could be taken into consideration until the Bill had been made available to the members of the House three days before it was brought to the House. He anticipated the Government objection that copies of the *Gazette of India* in which the Bill had appeared had been supplied to members and that was as early as August 25. But he pointed out that publication in the *Gazette* was not enough. In reply to the President's inquiry Mr. Crerar informed the House that Government regarded the matter as one of grave urgency. The Law Member, asked for an opinion, stated that it was not necessary to make the Bill available in any other way than by publication in the *Gazette*, as the Standing Order only referred to notices and similar papers that could not be published in the *Gazette*. The President then gave his ruling. He said: "I think all difficulties would be solved, if I were to postpone a decision on the question. That would mean that the consideration stage would go to the next day and no difficulty would arise," as the copies of the Bill had been circulated to the members two days before—"But I do not propose to take that course. There is absolutely no doubt that this motion cannot be made unless copies of the Bill have been made available three days before to the Honourable members. I am clearly of opinion that publication of the Bill in the *Government Gazette* cannot dispense with the obligation which is laid down under Standing Orders on the office. I therefore rule that this motion cannot be made to-day, unless the Standing Orders are suspended. As no request has been made on this behalf, it is not necessary for the Chair to consider the point."

The Assembly Secretariat.

I offer no apology for the length at which I am writing on the Assembly proceedings. The President made an important statement in the Assembly on the question of setting up a separate department for the Assembly. He said in the course of his address that the Secretary was responsible neither to the House nor to the President, but to an outside authority. The advice of the Secretary, therefore, could not be regarded as impartial, unbiased and independent. He informed the House that the Viceroy had agreed to discontinue the practice of nominating as Secretary a member of the Assembly from the present session. His interviews with the Viceroy had produced no tangible result, as the scheme he proposed and the outlines of which he had placed before the Government were not acceptable to it. The Government stated that in order to function efficiently the Secretary's staff should be independent of the Assembly and its President. All the negotiations had fallen through, and in spite of Mr. Patel's request that no dispatch on the question should be sent to the Secretary of State, until the Government and the President of the Assembly had come to an agreement, he found that already a dispatch had been sent to England. He believed that, before the sending of the dispatch, the Assembly should have been consulted on the points in dispute. He had asked for a copy of the dispatch, but it had been refused him.

Another Memorandum.

A quaint memorandum has been published by Mr. G. Harischandra Row, who has submitted the statement to the Statutory Commission. He starts with the axiom that even a bad monarchy is better than a good democracy, and winds up with an attack on civil aviation. The principle of nomination should take the place of the new fad of election. The Governor-General and the Governors should nominate not only their own Cabinets, but even the entire Councils. These bodies must be strictly warned that they can act only in an advisory capacity and that they should not expect the head of the Government to

accept their views. No women should be permitted in these Councils, as "the juxtaposition of the sexes is often found producing undesirable results." Agreeing with the faddists who regard education as a curse—at any rate in the East—Mr. Row asks for the complete abolition of the Education Department. He would only permit Government loans, if they are raised for "purposes of war." Women are to be debarred from public services as the association of man and woman leads to friction. No one should be compelled to work; the legal profession should be put down with a strong hand, as no society in which the lawyer element predominates can hope to prosper; even if civil aviation is safe, it is certainly inconvenient to householders, who require privacy and security, though serviceable to romantic lovers who may swiftly elope with girls, or adventurous banditti who may expeditiously life property. Mr. Row may not get his recommendations accepted, but he can console himself with the idea that he has amused not only his own countrymen but the public in others which are not so fortunate as India in being able to retrace their steps in education.

The Age of Consent.

It is not easy to fortell what the proposals of the Committee will be on the Age of Consent, but, if one may judge from the Memoranda submitted it is difficult to see how the members can avoid recommending an increase in the age from the ridiculously low limit of twelve years. Mr. Harbilas Sarda, as reported by the Simla Correspondent of the *Leader*, referred to the support which the country had given to his Bill in words that may be applied to the Age of Consent question: "The reform affects women more than men, and throughout the country women have not only given it their unstinted support, but have even in many places demanded a greater measure of reform. A remarkable feature of the movement is that not a single meeting of women has opposed the reform. The opposition is confined to a few individuals and reactionary small sections." In the face of all this was it necessary to appoint a Committee? The main work of the Committee resolves itself into collecting public opinion on the question of the advisability of raising the marriage age, but this could easily have been done by framing a Bill and ordering its circulation. The Committee system involves an unnecessary burden on the taxpayer.

"SHIRAZ."

Whether it was the intention of the producers and the scenario writer or not, the central character of "Shiraz"—the romantic pageant film about whose wonders so many rumours were current during its making—is the Taj Mahal, that Indian jewel of the Imperial architectural crown. After one has reconsidered the gorgeous splendour of scenery, costume, and incident it is the vision of the final pictures of the Taj in all its dreamlike chastity and beauty that seals the film as something far removed from the general order of screen productions.

Though it must be confessed that the action is rather slow, Mr. Niranjan Pal is to be congratulated on the manner in which he has told his tale. And if he has chosen now and again to go against history in his account of the Taj's creation, he is fully justified by the result.

A B.I.F. production, the film had its trade showing on September 21 under the auspices of the Pro Patria Films, Ltd., at the London Hippodrome before a large and most enthusiastic audience, which included the Countess of Oxford and a party, as well as many well-known Anglo-Indian figures. Mr. Himansu Rai, who supervised the film in India, was in a box, deeply interested in watching himself, as the hero Shiraz, Miss Enakshi Rama Rau—a charming film actress of international calibre as Selima, afterwards the Empress, Mumtaz Mahal, Miss Seeta Devi as Dalia, the villainess of the plot, and Mr. Charu Roy as Shah Jehan. Among the long list of supernumerary characters mention must be made of the dumb actors—birds, snakes, lizards, camels, horses, and the elephants lent by the ruling princes of many of the Indian States. But after all, it is the Taj Mahal itself whose memory lingers.

A gang of Turkish bandits is reported to have raided three Iraqi villages on the northern frontier on September 18. They are said to have killed three people and decamped with a number of cattle.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

IRAQ AND NAJD.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your article on "The Control of the Desert" in your issue of August 16 impels me to a reply. In the first place there is no reason for either disappointment or surprise at the failure of the recent negotiations at Jidda, as it was known beforehand that the demolition of the forts was from King Ibn Saoud's point of view a *sine qua non* condition of an agreement. He was clearly not going to commit himself to yet another agreement with Great Britain unless and until he was convinced that she meant to observe the conditions of previous instruments, to which she had put her signature. She failed under the test, and King Ibn Saoud, with every intention of maintaining his long-standing friendship with Great Britain, may be excused for not courting further treaty-relations which may necessitate further interpretation when the years have created fresh developments of British imperial policy. You write: "No question exists that, on the purely legal or literal aspect of this Iraq-Najd quarrel, Iraq is absolutely in the right." You will perhaps bear with me if, in expressing complete disagreement with your opinion on this point, I state that it is precisely on the legal and literal aspect that the whole question arises. The two parties to the Protocol of Uqair read one of its articles in diametrically opposite senses and the door to the reconciliation of the two views is barred by Sir Gilbert Clayton's declaration to King Ibn Saoud that Great Britain will not accept arbitration on the point. Yet nothing but arbitration in some form can settle the issue on which the parties have agreed to differ. That was the whole extent of the agreement arrived at, and you are in error on a point of fact in stating that King Ibn Saoud has expressed "his willingness to preserve the *status quo*."

To turn for a moment to the meaning of Article 3 of the Protocol, it should be remembered that Ibn Saoud refused to accept the Treaty of Muhammarah (1921) owing to the extremely unfavourable frontier laid down therein. Sir Percy Cox went down to Uqair to discuss the situation with him, and the result was that Ibn Saoud abandoned his opposition to the Treaty on the condition that adequate safeguards should be provided for the unfettered exercise by his tribes of their time-honoured rights of grazing and watering on both sides of the frontier. Article 3 was accordingly drawn up to provide that no buildings or forts should be constructed on the wells and watering-places on both sides of the frontier, and the only possible interpretation of such a prohibition is that it applies to the whole desert on either side of the frontier up to the limits of its normal user by the tribes on either side. If specific distances had been intended they would have been stated in the Article, which in point of fact means nothing more nor less than it says. The British Government now, somewhat late in the day, suggest a non-building zone of 25 miles. But why 25? Would that not be a restriction of the right of Iraq "to govern her own deserts according to her own ideas?" Besides, at the time of the Uqair meeting the specific case of Lina, some 30 or so miles within the frontier on the Najd side according to the latest maps and a good deal further from the frontier according to the map on which the Protocol was actually based, was raised by Ibn Saoud, and it was after consideration mutually agreed that it fell within the prohibited zone. Precisely the same thing would have been said about Busaiya if the question had been raised, but in this case the British Government built and trusted to luck, with consequences now well-known and even then foreseeable by anyone with any knowledge of the desert. But doubtless treaty rights must go to the wall in deference to "the process which Great Britain has taken in hand . . . of

civilising the desert." Is Britain really spending her taxpayers' money on that? Ye gods!

One more matter before I close—let Britain rest assured that King Ibn Saoud has no intention of pitting his Badawin strength against the organised might of the Empire. And to suggest that he has little control of the tribes on his north-eastern frontier is merely to confess complete ignorance of the subject. One might just as well suggest that the recent mail-robbery on the Nairn route argues a loss of control in that area by the British Government. The result of the Jidda failure merely is to compel King Ibn Saoud to absent himself from the Hijaz where his presence is so urgently required to attend to the administrative needs of the country in the ultimate interests of the pilgrims from all parts of the world. If we have added to the difficulties of his task, we have nothing to be proud of, and the practical result of our attitude must inevitably be to build up against ourselves throughout the peninsula a solid barrier of unfriendly sentiment. Is the game worth the candle?

With apologies for trespassing so far on your space.—I am, etc.,

H. ST. J. B. PHILBY.

Jidda, September 4, 1928.

[We willingly publish this letter, but would express our conviction that questions of "Imperial development" have nothing to do with the Iraq-Najd dispute.—ED.]

INDIA POLITICAL REFORMS AND THE INDIAN STATES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The recommendations of the European Association, which you summarise in your issue of September 20, are particularly notable for their clear recognition of the fact that while, politically speaking, India is, and must continue to be, divided between British India and the Indian States, from the economic standpoint the ideal to aim at is unity throughout the whole sub-continent.

At present this economic unity is very imperfect; and the steps taken to promote it have involved sacrificing the constitutional rights of the Indian States to the needs of British India. This process tends to weaken the fundamental good will of the Indian Rulers and their readiness to co-operate with British India, upon which alone economic unity can be solidly erected. The European Association are demonstrably right when they point out:—"The majority of questions now dealt with by the Central Government of British India intimately affect the Indian States, who have at present no say in the settlement of these questions. Already the difficulties of this position are being acutely felt."

The solution suggested by the Association is the ultimate establishment of an All-India Government, consisting of a federation of Indian States co-operating harmoniously with British India. As a first step towards this goal, the Association recommend the building up of a federation of the Indian States, working through the Chamber of Princes and controlled by a Viceroy in States' Council (corresponding to some extent to the Viceroy's Executive Council in British India) to which the participating Indian States would delegate certain definite powers. For the settlement of questions affecting both the Indian States and British India—as, for example, customs tariffs, railway rates, excise policy, defence, and the like—the Indian States Council and the Executive Council of British India would meet as a Union Council under the Viceroy.

The recommendations of the European Association are based primarily upon their perception of the economic needs of India; but it is noteworthy that the Standing Committee of the Chamber of Princes, facing the same problem from the political standpoint, have arrived at a solution identical with that here put forward.

This is surely more than a coincidence, when we consider that British Commerce and the Indian Princes, though superficially so unlike, share one characteristic in-

common—an enormous stake in the ordered progress of India.

It is further significant to notice that the European Association gives forcible expression to a sentiment which has long animated the Chamber of Princes, namely that "it is unable to envisage any Reform in the political organisation of India that leaves unsettled the political status of the Indian States and their relationship with British India." In other words, many of the problems which Sir John Simon and his colleagues are investigating, cannot be solved without reference to another set of problems which are no whit less fundamental because they happen to fall outside the scope of the Statutory Commission's terms of reference. The Memorandum of the European Association is the first public document in which the point has been bluntly stated.—I am, etc.,

L. F. RUSHBROOK WILLIAMS.

Joint Director Special Organisation Chamber of Princes: Foreign Minister of Patiala.

THE SUPPRESSION OF EGYPTIAN NEWSPAPERS.

The following telegram from Mustapha el Nahas Pasha, President of the Wafd and former Prime Minister of Egypt, reached us last week too late for insertion in our issue of September 20 :—

Cairo, September 18.

The papers here announce that *The Times* has published a telegram from its Alexandria correspondent to the effect that the suspension of the newspapers *Al Balagh* and *Rosa el Yusef* was according to a law issued by the late Zaghloul Pasha when Minister of Justice. The fact is that the law which the present Cabinet applied was issued in 1881—that is, a quarter of a century before Zaghloul Pasha became Minister. Moreover, that law has been abolished as regards the censorship, warning, suspension, and suppression of newspapers by administrative means (See Article 15 of the Constitution). "Preventive censorship is forbidden; warnings, suspension, or suppression of newspapers by administrative means is also forbidden, except in cases when it may be necessary to have recourse to such means for the protection of social order"—that is, against Bolshevism. The Constitution emphasises the inviolability of the principles concerning the freedom of the Press (See Article 156). The present Ministry, which suspended the Constitution, made a further aggression against its vital articles by suspending *Al Balagh*, *Rosa el Yusef*, and by warning *Kawkab es Shark* on the pretext that they criticise the present régime.

It is noteworthy that the present régime can by no means be tolerated by the Egyptian people or its organs, for the simple reason that its existence is a flagrant usurpation of the people's rights already established by the Constitution. The British people, whose love for liberty is traditional, will undoubtedly condemn this wanton aggression, as its worthy representatives to the International Parliamentary Conference in Berlin have taken part in the historic decisions of condemnation passed on August 28.

Whatever the pretext of the present Ministry might be, it was necessary to resort to the courts, according to the articles dealing with the Press in the Criminal Law. But the Ministry abstained from this course because it knew well enough that these papers had committed nothing punishable by law. They only interpreted public opinion, and whatever criticism they made of certain primary legal measures was sanctioned later by decisions of the Courts of Appeal and Assizes. The truth is that Mohamed Pasha Mahmoud's Cabinet has suppressed these prominent Zaghloulite organs for the sole reason that they disclosed the scandalous measures adopted by the local authorities to make the Premier's visit to Tanta capable of deceiving the outside world.

[Reference to this telegram is made in the Notes of the Week.—ED.]

INDIAN NOTES.

(Continued from page 347).

ing whose only solution of the practical problem of the future relations between British India and the States was practically to deny its existence, is the attitude of the European Association. While, as Professor Rushbrook Williams points out, "politically speaking India is, and must continue to be, divided between British India and the Indian States, from the economic standpoint the ideal to aim at is unity throughout the whole sub-continent." Not only does the Association frankly recognise the situation, but also makes various constructive proposals designed to meet the present anomalous position, rightly remarking that "it is unable to envisage any reform in the political organisation of India that leaves unsettled the political status of the Indian States and their relationship with British India." In other words, as we pointed out a few months ago in these columns, it is difficult to see how the work of the Statutory Commission can be complete unless it embodies the conclusions of the Committee over which Sir Harcourt Butler presides.

THE SULTAN OF MUSCAT AND OMAN.

On September 20 His Highness the Sultan of Muscat and Oman visited Croydon Aerodrome, and, after inspecting the fleet of Handley Page, Napier, and Silver Wing air liners used on the Imperial Airway Cross-Channel services, made a flight over London in a big 20-seater Silver Wing air liner. He was accompanied by members of his suite and by Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, and Major Woods Humphrey, General Manager of Imperial Airways.

After his flight the Sultan remarked that London from the air was a magnificent sight. The flight had given him the greatest sensation he had had since arriving in Europe. Later the same air liner left for Paris, and the Sultan was an interested spectator of the embarkation of the passengers. He then watched an exhibition of mail dropping by parachute from an aeroplane. The Sultan showed great interest in a single-handed demonstration by Captain Neville Stack of the ease with which a small 30 h.p. Avro Cirrus Avian light aeroplane, which was housed in a hangar no larger than an ordinary car garage, could be taken out of its shed and flown off within one minute 40 seconds.

On the following day the Sultan's party motored from London to Portsmouth. When he arrived, about noon, he found all the ships flying the plain red flag of Muscat and Oman. (Incidentally, a rule of the port was thus broken for the first time—no flag of a foreign ruler having ever before been broken from the flagstaff over the Admiral-Superintendent's residence.) A salute of 21 guns was fired as the Sultan drove into the yard, and a naval guard of honour was mounted. Rear-Admiral L. A. B. Donaldson, Admiral-Superintendent, received the Sultan and conducted him first through H.M.S. Victory and then through H.M.S. Tiger. He entered one of the Tiger's turrets, the working of which was shown him, and before leaving he fired a blank charge from one of her big guns.

After luncheon with Rear-Admiral and Mrs. Donaldson (a number of officers who have recently served in the Persian Gulf also being present) the Sultan embarked in Submarine L 25 for a trip to Southampton. The L 25 flew the Sultan's flag, and a salute of 21 guns was fired as she left the harbour escorted by the destroyers *Umpire* and *Truant*. After reaching Spithead the submarine dived and carried out exercises with the object of showing the Sultan how a submarine is navigated under water. He was greatly interested in this and closely inspected all parts of the boat. As a culminating feature of this demonstration two torpedoes were loaded into her tubes, and the Sultan fired these. By looking through the periscope he was able to follow the track of the weapons as they ran towards their objective. After the torpedoes had been loosed L 25 came to the surface, and the Sultan climbed to her conning tower, from which he watched the evolutions of a number of flying-boats and seaplanes that formed an aerial escort to him through part of the Solent.

When landing at Southampton the Sultan shook hands with Lieutenant-Commander Bell and said, "I thank you and your officers and crew very much for their courtesy to me. I have greatly enjoyed my trip. It has been a wonderful experience. I have often heard praise of the great efficiency and skill of the British Navy, and after what I have seen to-day I know how well that praise is deserved. I have been greatly impressed by everything I have seen."

At Southampton the Sultan inspected the Cunard liner *Aquitania*, from which his red ensign was flown. Later he motored to Bournemouth, staying at the Branksome Towers Hotel.

M. E. H. Mulock, Commercial Secretary to the Residency at Cairo, is vacating that post on grounds of health on October 5, and will leave for England by the P. and O. s.s. *Comorin*. He will be succeeded by Mr. R. A. M. E. Turner, who is proceeding to Cairo from Athens.

The XVIIth Orientalist Congress—IV.

Islam; Turkey.

Professor Margoliouth opened the proceedings on August 28 and welcomed the members, and then vacated the Chair in favour of Professor Snouck Hurgronje. The first paper was read, in the unavoidable absence of the author, Dr. H. Farmer, by the Rev. Dr. Moffatt. The subject was "The Greek Musical Theorists in Arabic." The writers mainly concerned were Pythagoras, Aristotle, Euclid, Nicomachus, Ptolemy and Aristoxenus. Many Greek works, now lost, were translated into Arabic and in some cases the translations survived and were the sole source of information of the Greek originals. Pythagoras' treatise on music was cited by Ibn Al-Kifti; Pythagoras was venerated by the Arabs as the founder of the theory of music. Arab writers stressed the moral influence of music. The Platonic theories of music were popular as well as familiar, for they were contained in the *Timaeus*, which was twice translated into Arabic. In regard to Euclid, Arabic authors spoke of certain works unknown in Greek; some of these ascriptions were inaccurate, but others were genuine and proved the existence of treatises no longer extant; al-Farabi commented various lost works of Euclid. The spherical propagation of sound was known to the authors of the *Ikhwan As-Safa*: this theory was not known to the Greeks, but Vitruvius spoke of it. Ibn Sina (Avicenna) did not write an independent work on musical theory, as was alleged, but he abridged earlier works. The Arabs used the Nicomachean notation for recording music.

The second paper, on "De nouveaux manuscrits de la Dhakhira d'Ibn Bassam" was by Professor E. Levi-Provençal. The lecturer referred to his important finds of MSS. in the libraries of Fez and Morocco. His discoveries dealt with sources for the history of Spain and, in particular, with Ibn Bassam's "Dhakhira," of which previously three MSS. at Oxford, Paris and Gotha, were known to Dozy, the Historian of Moorish Spain. It was now possible to edit almost a complete text of Ibn Bassam on the basis of the four new MSS., which Professor Levi-Provençal had unearthed.

Mirza Muhammad Khan, who represented the Government of Persia, but who lives in Paris, next gave an account of the *Munis ul Ahrar*, an anthology of Persian poetry by Muhammad ibn Badri Jajarma, an important poet who lived in the days of Hulagu and Abaqa. The MS. of this rare work contained 260 quarto leaves in which a large number of unknown or little known poems were to be found: no fewer than 200 different poets were represented. The MS. would be edited by the reader of the paper and published in the *Bulletin* of the London School of Oriental Studies.

Afterwards, the Rev. M. Bouyges, of the University of St. Joseph, Beyrout, spoke of the proposed new series entitled "Bibliotheca Arabica Scholasticorum" which the University of St. Joseph at Beyrout proposed to undertake. The series would contain about 20 volumes and would serve general mediaeval scholars as well as Arabists. The needs of the former would be met by the provision of an accurate and annotated translation based on a critical text which would be appreciated by Arabists. The second of the projected volumes, the "Tahafud al-Falasifat," of Al-Ghazzali, appeared in 1927.

The members of the Islamic section passed a unanimous resolution welcoming and supporting the new series.

M. Bencheneb, a Delegate of the University of Algiers, who wore native costume at the Congress, read a paper on Ibn Hatima, a Arabic-Spanish poet of the VIII century, A.H. He gave specimens selected from the four parts of the *Diwan*, which he had prepared for publication.

Then followed an interesting and vigorous discussion, carried on in Arabic under the initiative of M.M. Kurd Ali, of Damascus, on the services of Europeans to Arabic civilisation and what the Arabs of to-day are doing to revive their ancient culture. Incidentally, it was suggested that Damascus should be the place of meeting for the next Congress. Thereupon Dr. Taha Hussein, of the State University, Cairo, demonstrated the claims of Cairo. Shaikh Dujaily advocated that some centre in the East, at any rate, should be selected.

In the evening session on August 28 Mr. H. I. Bell, of the Egypt Exploration Society, spoke on "The Organisation of Egypt under the Umayyad Khalifs." He showed how the Arabs, after the Conquest of Egypt, took over many features of Byzantine government, adapting them, when desirable, to the necessities of Islam. The characteristic of Roman rule had been decentralization, and this led to weakness and inability to resist invasion. The country was split up into small independent zones which were powerless to stem the Arab tide. The new régime went to the opposite extreme. The evidence furnished by the Greek papyri showed that the Roman policy of using Egypt as a milch cow was continued unchanged. Tracts of land were deserted owing to the flight of the peasant proprietors, due to ruthless taxation. The revolt of the Copts, described by Makrizi, was not known from the papyri not to have been the first outbreak. Under the Arabs, during the early period, *jizyah*, the tax paid by non-Muslims, and *Harraj*, the ground tax, were practically synonymous. Much information was to be gained from these newly acquired documents with regard to the internal organization of Egypt, its administration and the control exercised by Damascus over Forstat and by Forstat over the smallest villages.

Professor P. Kahle, of Bonn, delivered a lantern lecture on "Der Leuchtturm von Alexandria." This Pharos, once reckoned one of the wonders of the world, was, he said, immortalized by the Arabs in the popular shadowgraph, an amusement which still lingered in Egypt, although in a most degenerate form. Professor Kahle showed illustrations of a large variety of shadowgraphs which he had collected in Egypt. Some of these were at least six centuries old, as they displayed an armorial device of the Mamelukes which could be assigned to certain definite limits.

On August 29, Professor G. Ferrand, representing the French Government, presided. Owing to the unavoidable absence of Professors Kowalski, Babinger and Minorsky, three interesting items were lost to the morning's agenda. The proceedings were, therefore, opened by Professor C. A. Nallino, the title of whose paper was "Sur l'histoire du droit chez les Syriens." Professor Nallino's conclusions will be of interest not only to Orientalists but also to the wider circle of legal students and theologians. The lecturer had used several unedited Syrian and Arabic manuscripts, through which he was able to expose some fundamental results of his mostly still unpublished researches on "The History of Law among Christians of the Syrian Churches." Jurists were prone to speak of "Syro-Roman Law" or "National or Common Syrian Law," or "Common Law of Oriental Christianity." These terms were inexact. They were based on the cardinal error of assuming a national or religious Christian unity which never existed but which was supposed to have had important influence on the Christian-Roman codes of Europe. Professor Nallino showed conclusively that the

famous "Syro-Roman" book law enjoyed no reputation among the Syrian Churches prior to 800: even later its influence was slight. Scholars had erred in assuming that this code represented a living system: it was, in fact, nothing but a proposed model which was artificial and ideal. His second exposure was the fallacy that Syrian Law was composed in Syria. Professor Nallino showed that the composition was made by men who lived in countries other than Syria, chiefly in S.W. Persia, Mesopotamia and, towards the middle of the XIII century, by a Syrian in Asia Minor. His third point was the necessity of recognising the four elemental divisions of the Syrian Churches in discussing Syrian Law. To treat them as a unity was a fallacy. The Melkite and Maronite Churches possessed no juridical literature of their own. The Jacobite or Monophysite Church had none until the "Nomocanon" of Bar Hebraeus (d.1286). This famous book has been regarded as typical of indigenous Syrian Law, but already in 1923 Professor Nallino showed that the non-ecclesiastical part of this "Nomocanon" was a translation of the book on Muhammadan Law by al-Ghazali (d.1111). The so-called Syro-Roman Law, therefore, was nothing but the Hanafite system of Islam. The fourth Church, the Nestorian, alone produced true Syrian Law: the oldest handbook was in the Pahlavi language. The author was the Metropolitan Iesubokht, who lived in Persia about 800. But he himself declared that his book represented an innovation, i.e., his own ideas of what law should be, based on Jewish, Muslim and Zoroastrian parallels, set out to try to put an end to the juridical anarchy among the Christians. Iesubokht did not achieve juridical unity. Professor Nallino demonstrated that the Synod of 900 introduced a system of inheritance that was nothing but common Muslim procedure. Among his other discoveries was the Arabic abridgment of the "Nomocanon" of Gabriel, Metropolitan of Basra in the years 884 and 891. In 900 the original judicial activity of the Nestorians ceased. The "Nomocanon" of Ebodiesu (d.1318) was based on that of Gabriel. (It was officially sanctioned by the Nestorian Synod in 1318). Beside the great enterprising spirit of the Nestorian community in various fields in the eighth and ninth centuries, Muhammadan domination and the public law of Islam gave rise to the juridical activity of the Nestorians.

Professor Margoliouth afterwards characterised this paper by Professor Nallino as one of the most important of the whole Congress.

Professor Nallino's paper was followed by two papers, delivered in French, by Keuprulu Zade Fuad Bey, Delegate of the Government of Turkey, (1) on Muhammad Bin Kais and his Turkish-Kankli dictionary and (2) new light on Omar Khayyam. The author discussed a small Persian treatise by Mustapha Ali, an Ottoman author of the XV-XVI centuries, which contained fresh biographical information about Omar; the information, especially in regard to dates, Omar's alleged belief in metamorphosis, and his relations with Ghazali, was to be received with caution. The main point of interest centred on 53 "new" quatrains of Omar.

Then came two papers, by Dr. J. H. Kramers of Leyden (delivered in French), on "The Persian Tradition in Islamic Geography," and by Professor A. Schaade on the literary output of Mahmud Taimur, a contemporary Egyptian writer.

In the evening of August 29 Professor A. Fischer spoke on Christian Monastic Institutions in Muslim lands. He explained the cultural influence exercised by these houses, which was two-fold; good, in that it aroused a feeling for art, and bad, in that it stimulated debauchery and drunkenness. In the Convent or Monastery, the Arab visitor saw and admired paintings, sculptures and mosaics, e.g., of the Virgin, by which he learned what the artistic representation of the human figure could achieve. This form of art would otherwise have remained unknown to him, owing to the restrictions of Islam. But the Monks were likewise free from the Islamic prohibition of wine, and so the Cloister became a mere tavern or cabaret for licen-

tiously inclined Muslims.

In subsequent discussion, Professor A. A. Bevan asked whether part of the lecturer's thesis was not based on a misconception of a certain passage in Yakut, but Professor Fischer claimed to have further evidence in support of his charges.

General disappointment was expressed at the abandonment of Professor Rathjen's two lectures on "Holy Arabic," and on "Through Bellicose Arabia." This was due to the regulations of the Customs authorities, which forbade the free entry of the film without which the lecture was impossible. Thus was the Congress denied the first cinematographic record of life in the Yaman.

On August 30 the Chair was occupied by Professor Fischer, of the University of Leipzig. The critical survey by Professor Bricteux, representing the Government of Belgium, of the attitude of Islam towards other religions was the subject of considerable debate, the lecturer's tolerant attitude towards Islam and his examination of the *Jihad* being apparently misapprehended by such Muslim members of the audience as Mr. Yusuf Ali and Shaikh Dujaily. Dr. Taha Hussein also disagreed with the lecturer. Dr. Taha Hussein then made a noteworthy contribution to Quranic philology, his theme being the exceptional non-agreement of the pronoun. His second lecture dealt with the parallels between the philosophies of Leibnitz and the Mutazilites. For this third lecture, which bore the interesting title of "Influence des discussions théologiques aux deux premiers siècles de l'hégire de la rhétorique arabe," there was unfortunately no time.

Professor Z. Smorgorzewski informed the Section about a valuable collection of Ibadit MSS.

Moulvi Abdur Rahman, of St. Stephen's College, Delhi, University, who wore native costume, delivered an eloquent oration in Arabic on Pre-Islamic proverbs.

The following is the authorised summary of the Arabic lecture:—

"Proverbs exist, as is well known, in every language of the world, and shed light not only on the life of a people, but also on its language. The pre-Islamic Arabic literature was committed to writing mostly in the second century of the Hijra. What is not committed to writing for centuries runs the risk of losing its original character: but the pre-Islamic Arabic proverbs have not been affected in this way, not only because they were handed down from generation to generation, but also because their beauty lay in their original form. The very force and significance of a proverb is lost by a change, however slight it may be. Moreover, no one will deny that the shorter and more elegant a phrase is, the more easily it is remembered, and the more slowly forgotten. And the proverbs of al-Jahiliyya are very short. Hence it is clear that they did survive up to the time when they were committed to writing in the latter half of the first century, as Ibn Nadim says that Abid Sharya composed a book on Arabic proverbs.

"While studying the pre-Islamic Arabic proverbs, I have arrived at certain conclusions, some of which I desire to place before you for your consideration:—

"(1) We possess a large number of the genuine proverbs of Arabs and it is certain that the proverbs of a people are always in its spoken language, and we can trace some of the characteristics of the language of a people from the study of its proverbs. We find that Irab is maintained in all the proverbs of al-Jahiliyya, which fact leads us to infer that the pre-Islamic Arabic language was full of Irab like proverbs. Similarly the language of

Hon. Sec.

poetry is always the same as the spoken one, the only difference being in point of elegance, refinement and imagination and never in point of grammar. Hence there is no truth in the theory of some scholars that the spoken language of al-Jahiliyya was quite different from that of poetry and was devoid of *Irab*.

"(2) The language of most proverbs is middle way between ordinary and elegant composition. Some of them approach the highest form of speech, which is poetry. In that case we find metre in proverbs. Of the pre-Islamic Arabic proverbs many are metrical.

"(3) There are two alternative explanations of these metrical proverbs: either they are parts of verses or poetry or not, but somehow or other metre has crept into them. In the former case the existence of poetry in al-Jahiliyya is established. In the latter case, it is at least obvious that metre did exist in the period of the Ignorance, it does not matter whether this metre is found in some inscriptions or not, because from the absence of a metre in places where it might be expected, it does not follow that the metre did not exist at all.

"(4) Many of the metres noticed in the proverbs are the same as those found in the so-called pre-Islamic poetry. Hence poetical *wazn* was not invented by Khalil, as Professor Margoliouth is inclined to think. Similarly I do not agree with him when he says that *wazn* was introduced into Arabic poetry, especially that at the beginning of Islam ought to have followed the model set by the Quran, but we do not find a single example of this. I admit that the Quran may have stray examples of metres; but it never contains a single full couplet. Then how can we say that it is poetry throughout?

"(5) Undoubtedly in the Quran there is something that may resemble poetry, and so the prophet was called *Shair* by his critics; but at the same time the Quran contains that which is not poetry, and so God refuted them, whereupon the infidels said that he was a magician or lunatic; or they were divided in their opinions. This shows that the difference between poetry and the language of the Quran is much greater than the resemblance between them. Moreover, the very fact that the Prophet was called a poet proves the existence of poetry in al-Jahiliyya. What was that poetry like?

"Suppose that the so-called pre-Islamic poetry is entirely spurious, yet, since forgery is always an imitation of a genuine thing, it is clear that the genuine poetry of al-Jahiliyya must have been like the spurious poetry. If this reasoning is correct, then it is wrong to hold that the poetry referred to in the Quran was something like the *Saj* of the soothsayers, as claimed by Professor Margoliouth.

"(6) When it is proved that poetry (in the common sense of the word) existed in al-Jahiliyya, neither its survival up to the time when it was committed to writing nor its liability to forgery is improbable. I am of opinion that the pre-Islamic Arabic poetry is neither entirely forged nor entirely genuine."

After the lecture Shaikh Dujailly passionately denied the possibility of Europeans' ever understanding the real spirit of Arabic verse.

Dr. Klingenberg then crossed swords with Professors Cohen, Mittwoch and Littmann, who challenged his thesis that Amharic poetry was rhythmic and not syllabic. Finally, Mr. R. Levy of Cambridge, proved that the prose version of the Yussuf and Zulueikhs romance in the India Office MS. was not by Ansari of Herat.

Before the delivery of Dr. Abdur-Rahman's lecture, a resolution, proposed by Sir E. Denison Ross, and seconded by Professor Bevan, was enthusiastically passed to the effect that a telegram—"Islamic, Iranian and Biblical sections of the Seventeenth Orientalist Congress at Oxford send heartiest greetings to the great teacher whom we all revere"—be sent to Professor Theodore Nöldeke. On the following day a reply telegram was received:—"Many thanks."

On the night of August 30 Mr. B. Thomas, with Professor Fischer in the Chair, gave an account of his recent

journey of 600 miles through unexplored Arabia, where no European had previously set foot—an account which we shall supply more fully in a subsequent issue.

On August 31, Prof. C. A. Nallino occupied the Chair. The following lectures were delivered: Professor Margoliouth on an unidentified volume of Tanukhi's "Table Talk"; Dr. Abdul Haq on the "Diwan" of Abu Tamam; Dr. Schacht on the MSS. in Constantinople and Cairo libraries; M. Gad al-Mawla Bey on the Quran; Mrs. Hasluck (whose absence through illness was deplored) a lantern lecture on an unknown Turkish Shrine, and the lecture in which Prof. Marcel Cohen developed his new theory of Semitic deponent verbs. His point was that verbs of the so-called intransitive type, i.e., *Labisa-Yalbasa*, were in reality, internal. Mrs. Hasluck's lecture, which was read by Mr. G. Horsfield, related her journey in 1923 to a shrine in Greek Macedonia. This shrine had a cave, with springs of cold water and curative earths. Ruins attested to its former popularity. Its patrons belonged to the Bektashi. Women proceeded thither to learn whether they were to bear a son or a daughter, or whether they were doomed to sterility. Among other things, this shrine, which was freely used for omens, possessed four holy stones and two saints.

The following resolutions were unanimously passed:—

(1) Dr. Abdul Haq's resolution:—That in the opinion of this section of the Congress it is desirable that a complete and comprehensive historical Arabic dictionary should be prepared in the Arabic language, and that the Egyptian Government be requested to consider the suggestion, as Cairo will be the most suitable place for the co-operation of Oriental scholars and Orientalists.

(2) Moved from the Chair:—That this section of the Congress cordially approves the proposal of Professor Mittwoch for the formation of a *Corpus Medicorum Arabicorum* on the lines adumbrated.

(3) Moved from the Chair:—That this section of the Congress cordially approves the scheme adumbrated by Rev. M. Bouyges for the formation of a *Bibliotheca Arabica Scholasticorum*.

(4) Moved from the Chair:—That this section of the Congress has heard with great satisfaction of the progress made by the four scholars appointed by the Jerusalem University in the Concordance of Arabic poetry up to the end of the Umayyad period and wishes the work every success.

THE EGYPTIAN CHANNEL SWIMMER.

A reception in honour of Ishaak Bey Helmy, the Egyptian who recently swam the Channel, was given at the Egyptian Legation on Wednesday, September 19, by Sesostris Sidarouss Bey, *Chargé d'Affaires*. Special interest was taken by the numerous guests in the chart of the course taken by Hilmy Bey in his plucky swim of nearly twenty-four hours. From the explanation given by Mr. Burgess and others who accompanied the swimmer, it was possible to realise how largely the element of luck enters into these feats. Leaving Cape Gris Nez at 2 p.m. on August 31, Hilmy Bey had covered nearly a third of the distance in three hours, when a current carried him in a south-westerly direction for four hours. At this point, meeting a strong northerly current, he made good progress towards the English coast, until at the end of twelve hours he was less than two miles from the shore. Here the tide carried him in a westerly direction at first and away from the coast, before the swimmer struck a current that carried him for the next five or six hours parallel to the coast. Consequently about four hours were occupied in swimming in a complete circle, the swimmer all the time, of course, swimming strongly and facing north. At the end of the twenty-first hours there was every prospect of the tide changing and carrying the swimmer back again along the course he had just followed parallel to the coast; but he was fortunate enough to strike a current off Folkestone which enabled him to reach the shore after swimming for twenty-three hours and forty minutes.

The Yugoslav Government, desiring to make Belgrade a centre of Russian science abroad, opened in Belgrade on September 16 a "Russian Institute," which, it is hoped, according to *The Times* Belgrade correspondent, will to some extent take the place of the Petrograd Academy of Science among Russian *émigrés* generally. Its members will be selected from among exiled Russian professors in many countries. The fourth congress of Russian professors abroad also opened in Belgrade the same day. Over 150 delegates attended from various countries. The three former congresses were held in Prague.

The Dutch airmen *en route* from Amsterdam to Java landed at Bamrauli Aerodrome, near Allahabad, on September 18, having flown from Karachi. They travelled from Amsterdam in six days, and brought the first direct air mails ever received at Allahabad, delivering them at the Post Office. They flew to Calcutta the following day.

THE LATE ABDEL KHALEK PASHA SARWAT.

It is with great regret that we have to record the death of Sarwat Pasha, twice Prime Minister of Egypt, whose name will always occupy a prominent and honourable position in the history of Anglo-Egyptian relations. He had been spending the summer in Europe, and was at his house in Paris when he died suddenly on September 22. His health had been unsatisfactory for some time, but it was thought that with rest and freedom from the cares of office he might make a complete recovery, as he was only fifty-five years of age.

Sarwat Pasha has every right to be regarded as one of Egypt's great statesmen. In his own country he could not command the overwhelming popularity of Zaghloul Pasha; but he had the confidence of the thinking section of the people, and it was unfortunate for Egypt that the co-operation between the two men, after a period of antagonism, should have been so soon cut short by Zaghloul Pasha's death. When Sarwat Pasha became Prime Minister for the second time in April 1927 it was with the full support of the Wafd leader, and that he should have left for England three months later to engage in discussions with the Secretary of State for Foreign Affairs for the negotiation of a Treaty implied that he had gone far towards weaning Zaghloul Pasha from his old intransigence to a more practical attitude towards Anglo-Egyptian relations. Unfortunately before the negotiations were concluded Zaghloul Pasha had died, and the treaty that Sarwat Pasha drew up in collaboration with Sir Austen Chamberlain had to be submitted to a Wafd without Zaghloul, which summarily rejected it. When an Anglo-Egyptian treaty is finally concluded it will, no doubt, contain modifications on the draft that Sarwat Pasha was prepared to accept; but to him will belong the credit of realizing from the outset Egypt's need for a comprehensive understanding with Great Britain.

Sarwat Pasha was conspicuous among his countrymen for his moral courage and independence of thought. In office he was "the strong man," but he invariably commanded the respect and affection of those with whom he was brought in contact. Even the Wafd, there is reason to suppose, regarded him latterly with a favour extended to no other politician outside its own ranks, with the possible exception of Adly Pasha. By instinct a sound Constitutionalist, Sarwat Pasha would probably have made a further attempt to work the Constitution for which he was himself largely responsible; but before he left Egypt he had accorded his support to the policy adopted by Mahomed Pasha Mahmoud, as a practical alternative to the administrative stagnation for which the Wafd was responsible. His death is a loss to Egypt, and in particular to the present Government, which must have derived encouragement from his moral support.

An Appreciation.

By ABDUL RAHMAN BEY AZZAM.

In the course of practically one year Egypt has had the misfortune of losing four Prime Ministers, each of whom was gifted with special talents and conspicuous for distinct character and temperament, while each had done his best to serve the cause of Egypt by the methods fitted to his temperament. They are Saad Zaghloul, Hussein Rushdi, Mohammed Said, and Abdel Khalek Sarwat, who died suddenly in Paris on Saturday. Of the four Zaghloul was by far the oldest and the first to take part in politics and to step into fame, but the last to become Premier, although he had held Cabinet rank at a much earlier date. In their life time they had each his friends and his enemies, but curiously enough all of them seem to have chosen a time for death when they unite at their graveside those

who before were disunited by their love or hatred, for the dead man.

In this Sarwat was by no means an exception. I am sure Egypt as a whole will lament his death, and the Wafdists are the first to feel the loss of this Egyptian statesman. I for one who, since he had anything to do with politics, and indeed since I was a student in a secondary school, looked on Sarwat as an old, weak sort of politician, unworthy of our patriotism, have regarded him at times as a hopeless pessimist who ought to resign politics in a national renaissance. But from 1926 I began to see the other charming and great side of Sarwat. His non-participation in the anti-constitutional methods of 1925-26, although he was hurt, first attracted my attention. In spite of Zaghloul's refusal to treat with him in 1924, he stuck to democracy and favoured parliamentary rule and that was a marvellous picture of self-restraint and an illustration of the essential good that was in him. Confirmation of this came later this year. Cruelly crushed in connexion with his treaty with Sir Austen Chamberlain, and deserted by friend and foe alike, he did not make the slightest move to revenge, or expose the constitutional régime to danger, persistently refusing to make any quarrel about his own person. He had two principles that guided his path in critical moments. First he had faith in British justice, and second he was an ardent constitutionalist and would give both the fairest chance. He never swerved from one or the other to the last minute. He believed in a parliamentary régime and was out of high favour once for exalting his ideas of democracy.

I was struck six months ago by his regular attendance as a private member in the Senate, after he had ceased to be Prime Minister. For his membership of Parliament Sarwat Pasha had to rely on the exercise of the Royal prerogative, for he was nominated a member of the Senate after the second elections. It was in Parliament that Sarwat lost his treaty and was losing his reputation as a statesman. But he passed gracefully from the Front Bench to the back, sticking to his principles and keeping his faith in democracy. It was in this way that the real greatness of Sarwat was revealed to me. His ability lay in his power to see other people's points, without necessarily adopting them or sacrificing his own. He was patient, calm, supple of intellect, polite, gentle and exceedingly courteous.

There was one contradiction in his character. Although essentially democratic and simple, he would have nothing to do with the masses. He was too reserved, too cautious, and too far-sighted and calculating to make any direct appeal to inferior intellects. Perhaps his failures were due to his not being able to keep pace with the rushing new generation, and to his not seeing that Egypt was drifting quicker than he imagined. After all, he is not the only statesman of great intelligence who has fallen behind the times.

Sarwat as a democrat is really needed just at the time when he disappears, in the same way as Zaghloul, the man of energy and strong will, passed just when Egypt had made up her mind in favour of British friendship. Both are a great loss to the cause of democracy and national freedom; but Egypt will recover from her loss, and a new brilliant page of Egyptian history is sure to be reserved for her younger men.

SINHALESE SELF-TAUGHT

By Don M. de ZILVA WICKREMasinghe, M.A.

Epigraphist to the Ceylon Government.

In Sinhalese and Roman characters, with the English Phonetic Pronunciation. Containing the Sinhalese Alphabet, with transliteration and phonetic signs used; Table of Syllabic characters, Tonic Accent; Classified Vocabulary and Conversations; Outline of Grammar; Terms and Phrases for Travel, Commerce, Planting, Public Works, Fishing and Shooting, &c.; Numerals, Money, Weights and Measures, &c.

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25, London: E. MARLBOROUGH & CO., Ltd., 51 & 52, OLD BAILEY, E.C.4

THE WEEK AT HOME

London, Tuesday Morning.

Survey of the Electorate.

All the political parties are now well down to the task of preparing to beat each other at the General Election early next summer. Victory is, of course, to a considerable extent a matter of organisation, and a survey of the electorate is, therefore, an indispensable preliminary.

Conservative, Liberal, and Labour organisers are aiming at a detailed survey of each constituency. This has largely to be performed by voluntary workers, who, by the way, are themselves often too young to vote. By far the most ambitious scheme has been launched by the Liberals, who intend to compile nothing less than a census of the population. This Liberal plan is for each worker to have a hundred houses to visit in the months of November, December, and January. In May a special register will be issued, containing the name of every Liberal qualified to vote.

It is hoped by a house-to-house visitation to discover the politics of every family in the land. The undertaking is a gigantic one; and I should not be surprised if there are too few voluntary workers to go round. But the decision has been made; and the survey will be started as soon as the Municipal Elections next month are over.

The Sale of the Bible.

Some months ago, it may be recalled, there was an outcry at the supposed fact that the Bible is nowadays far less read than formerly. This allegation is, however, falsified—if the sales of Bibles be any criterion. For in the 124th Annual Report of the British and Foreign Bible Society, which has just been published, it is stated that in 1927-1928 the increase over 1926-1927 in Bibles, Testaments, and "portions" sold in the home language was 531,477 copies. The total number sold, 2,213,467, was, in fact, the greatest ever disposed of by the Society, with the exception of 1915—a curious fact, this last one, of which I was previously unaware.

Of this number the overseas portion of the British Empire purchased most, for the number of volumes circulated in the Motherland was 905,828. Other parts of the world in which the number of Bibles circulated showed "enormous increases" were Continental Europe, Africa, South America, India, and Japan.

Modernism.

Few things are so exciting as a heresy hunt, a feature in our religious life which occurs all too seldom in this over tolerant age. But there appears to be a chance of one now, for Lord Halifax and seven hundred and twenty-four clergymen have sent an open letter to the Bishop of Gloucester, who is to preside over the Church Congress to be held next week at Cheltenham, protesting against the appearance of Dr. H. D. A. Major, Principal of Ripon Hall, and Editor of the *Modern Churchman*.

These orthodox clergy object strongly to the presence of a man, down to speak, with others, on "The Anglican Interpretation of the Christian Faith," who has publicly asserted that a Modernist denies, among other things, the resurrection of the flesh, the penal character of Christ's sufferings, the Lord's omniscience and omnipotence, the Virgin birth and physical ascension, any specific authority for the monarchical episcopate, the evidential value of miracles, and Biblical and ecclesiastical infallibility. The teachings of Dr. Major are, in the opinion of these protesting clergy, not a version but a perversion of the Gospel of Jesus Christ.

Now in 1922 a similar charge was brought against Dr. Major; but it came to nought. This individualistic Principal believes that his "heresy" will soon be recognised as the newest form of orthodoxy. And he refers, as all his kind refer, to the needs of the rising generation as involving the scrapping of the "legends, myths, superstitions and doubtful speculations" hitherto unfortunately manifest in the Christian religion.

Those who have lost or deliberately destroyed their moorings will, presumably, rally round Dr. Major, who quite certainly will not lack considerable support. But there is still a healthy mass of opinion which would heartily include him in the verse:—

Heretics all, whoever you be,
In Tarbes or Nîmes, or over the sea,
You never shall have good words from me.
Caritas non conturbat me.

Drinking Habits.

We are going dry. Of that there can be no doubt. Not compulsorily dry, of course, but deliberately, wickedly, and fatally dry. Look at the statistics. In 1900 the consumption of spirits in England was 32,239,522 gallons; in 1913 it was 22,004,432 gallons; to-day it is 10,412,921 gallons.

Nor in Scotland itself can a different tale be unfolded. For there, whereas in 1900 the consumption of spirits was 8,623,092 gallons, and in 1913 was 6,709,343 gallons, to-day (last year) the consumption is but 2,456,283 gallons.

Of malt the same decline is told. In England the consumption, in bulk barrels, was 31,810,877 in 1902; 30,758,800 in 1913; and 23,418,640 in 1927. Scotland also fell from grace. She consumed 2,260,759 barrels in 1902; 2,119,666 in 1913; and 1,673,576 in 1927.

And the cause of all this? Not propaganda, surely. Partly, perhaps, repressive legislation, partly inferior liquor, but mostly, in all probability, the fact that new inventions have developed new habits. The cinema and the wireless, the motor-car—all these things militate against the crowding of the tavern. The modern craze for speed, and the care needed in controlling that speed, seem, in fact, to inhibit a man's potations. And we are all the better, you say, because of this? Maybe, maybe.

Superstitions.

We rather pride ourselves on the fact that we have rid ourselves of superstition and belief in magic, and we only laugh at the sort of nonsense concerning witchcraft which, as we leaped afresh from the meeting last week of the Folk-Lore Society, which has just been celebrating its jubilee, for long held sway with so considerable a section of mankind. But with all our superior education, our science, our discoveries, we are still (thank Goodness!) more than a little credulous.

Can you not see, any day, lion-hearted, devil-may-care,

City men deliberately avoid walking under an unoccupied ladder; or the stop-at-nothing young "Miss," when she spills the salt, throw a pinch over her left shoulder; or the male and female together refuse to sit down thirteen at a table? And it is good that these unreasonable things survive. There is more in life than logic, "rationalise" ourselves howsoever we will. Superstitions, indeed, are often the salt of human character, although the new superstitions are never so picturesque as the old.

Autumnal Glory.

This summer that is incomparably the finest that I can remember is coming to a most beautiful end. Early morn, day, and sundown are one long delight. All is mellow and fruitful, coloured and lingering. The gardens have lived on in perfect content under the bountiful sunshine; the sweet-peas, for instance, are almost as lively and as various as they were two months ago.

And with this conservation of glories that really belong to summer we have the colours and scents of autumn. There are reds and browns and greens in the woods and copses and fields now that would make any Christian man cry aloud that England is the most beautiful country in the world. It is the sum of all experience, this autumnal flowering time, when

barred clouds bloom the soft-dying day,
And touch the stubble plains with rosy hue.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

September 27, 1928 (New Style).

September 14, 1928 (Old Style).

Rabia II, 11, 1347 A.H., of the Muslim Calendar.

Tishri 13, 5689, of the Jewish Calendar.

The Maharaja of Burdwan has returned to 20, Kensington Gore.

Princess Irene of Greece left London on September 20 for the Continent.

Mme. Ferid Bey, wife of the Turkish Ambassador, has returned to 69, Portland Place from Stamboul.

Sir Grimwood and Lady Mears arrived at the end of last week at the Hotel Belgravia, Grosvenor Gardens.

Lady (Ross) Alston and Miss Alston joined the s.s. Rawalpindi at Marseilles on September 22 for Bombay.

Sir Charles and Lady Marston have moved from Afcot, near Wolverhampton, to Elmdene, Camden Park, Tunbridge Wells.

Lord and Lady Russell of Liverpool have returned from India, and their permanent address will now be Bury Court, Yapton, Sussex.

Major-General Lord Edward Gleichen and Lady Edward Gleichen returned to Court-in-Holmes, Forest Row, Sussex, on September 20 from Scotland.

The Maharaja Kumar of Vizianagram left London on September 20 in the P. and O. special train to join the s.s. Rawalpindi at Marseilles for Bombay.

The Hon. Mrs. Alexander Hardinge has received a cheque for £1,000 from the Nizam of Hyderabad to endow a room for a mother and child at the Princess Elizabeth Hostel, Cromwell House, Highgate.

The Marquess of Reading will be the principal guest at the annual dinner of the Readers' Pensions Committee, to be held at the Holborn Restaurant on October 20, with Mr. William Harrison in the Chair.

Earl Winterton, M.P., and Countess Winterton arrived at 61, Eccleston Square on September 24 from a tour through Germany, Czechoslovakia, and Poland.

The Indian Government proposes to appoint as Secretary of the Legislative Department Mr. S. C. Gupta, now additional Joint Secretary of the Legislative Department.

Field-Marshal Viscount Allenby and Viscountess Allenby left England for the United States yesterday, when they sailed from Southampton in the White Star liner Majestic.

Mr. John Coldstream, I.C.S., has been appointed a Judge of the High Court of Judicature at Lahore, in the place of Mr. Archibald Campbell, I.C.S., who has resigned.

The Council of State of India has elected Sir Chettur Sankaran Nair, Sir Arthur Froom, and the Raja Nawab Ali to sit on the Central Committee of the Simon Commission.

The new Chief of the General Staff in India, General Sir Philip W. Chetwode, will leave London on October 12 to take up his duties. General Sir Andrew Skeen completes his tenure of the appointment on October 29.

The Under-Secretary of State for Air, Sir Philip Sassoon, will leave England by air on September 29 to visit the Royal Air Force stations in Malta, the Middle East, Iraq, and India. The type of aircraft which will be employed for the greater part of the tour will be a Blackburn Iris flying boat with three Rolls Royce Condor engines and manned by the normal service crew. Sir Philip will spend nine days in India, and will leave Karachi on October 24 for England in the Iris, which is due at Plymouth on November 6.

Mustapha Kemal Pasha returned to Angora on September 21 after a week's tour in Northern Turkey.

The death is announced from Candia of Dr. Stephanos Xanthudides, the eminent explorer and excavator. He was prominent in the establishment of a museum for Cretan antiquities at Candia.

Sir Robert Witt, Vice-Chairman of "British Artists' Exhibitions," has completed arrangements with the Yugoslav Society of Great Britain for an exhibition of British art in Yugoslavia this winter. A selection from those works of art which are present in the British Pavilion at the Venice International Exhibition will be made by Mr. Philip Connard, R.A., Mr. Gerald Brockhurst, A.R.A., and Mr. Reid Dick, A.R.A. They will be transferred in November to Yugoslavia, and will be shown at Belgrade, Zagreb, and Liubliana, with the co-operation of local committees in those places.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Athens Light and Power.

One of the obstacles with which British enterprise in the Near East is only too frequently confronted is what may be termed the political factor. Politics in the Near East, as we have had good reason to know, have become since the War as uncertain as the value of x in an equation, and unfortunately this political instability has reacted on the development of the various countries since the tendency has arisen to introduce politics into the question of concessions. This in the case of Greece, to give an example to which I have referred before, has meant that necessary works of development have been postponed year after year, because political complications prevented a definite decision from being taken. It would now seem that in the country in question the political factor is finding a new field of activity in regard to concessions which are actually in operation. In a note two weeks ago I mentioned the negotiations initiated by the Greek Government with the Power and Traction Finance Company, which holds the concession for lighting, power, and traction in Athens and has formed a series of operating companies to carry out the concession. It may be of interest to state how the trouble arose. The company adopted 220 volts for electric lighting in Athens, this being the standardised rate which was approved by the International Convention of Chicago in 1926. There were unfortunately two casualties, and a Commission was, therefore, appointed by the Greek Government, not merely to investigate the question of the current, but also the conditions under which the company obtained its concession. While the report has not yet been published, intelligent anticipations in the Greek Press and messages from correspondents in Greece to foreign papers make it evident that the report is hostile to the company. The sequel to the report I deal with in my previous reference—the demand that the voltage should be 110 and the raising of the question of the financial and technical control of the company by the Greek State.

A.E.C., Not A.E.G.

The most striking feature of the development is what I might term the Press campaign against the company, a campaign which may be Wentworthian in thoroughness, but is certainly not distinguished for its accuracy of statement. One point brought against the company is that it—a British concern—is operating motor buses in the streets of Athens of German manufacture. Unfortunately for the critics the incriminating letters which have been read as A.E.G. (i.e., Allgemeine Elektrizitäts Gesellschaft) are in fact A.E.C., which stand for Associated Equipment Company. Another point made is that a German company is piercing the tunnel which is to join the electric railway with Kephissia. This is admittedly the case, but the construction of the tunnel has nothing to do with the company, who cannot, therefore, be blamed for its not being done by a British firm. The company's only interest in the tunnel is that, when it is finished, there will be an interchange of running rights with the railway company which is responsible for the work. Another point made against the company is that when the old system and installations were taken over an increase of one-third was made in the cost of travel, light, and power. In considering any increase that may have been introduced, it may be pointed out that the existing companies which were

taken over were losing money, and it would be not only unreasonable but most illogical for the people of Athens to expect to receive modern facilities in the way of lighting, power, and traction indefinitely at a price which would not pay those who are supplying them with these things. Again, there is good ground for saying that there is no truth in the allegation that the materials used by the company are not of British manufacture. The company is bound to supply nothing but British materials.

Sudan Trade Progress.

Further satisfactory progress is shown in the figures for the trade of the Sudan for the first six months of this year. The volume of trade at £7,840,420 shows an increase of £638,454, and the increase is general throughout except in regard to Government imports, which at £993,595 show the small decline of £14,959. There was an increase in public imports of £251,005, a feature of the trade being the increase in the value of cotton piece-goods from £375,758 to £517,549. There was an increase also in the value of the imports of sugar, while other significant increases were in respect of tobacco, machinery, motor cars, tea, and soap. From these increases it is clear that the purchasing power of the Sudan is developing and also that the trade situation is on the up-grade. As a matter of fact, the only marked decrease in the import list is in respect of dura, and it is largely because of the good dura crop in the Sudan that the economic situation there has taken on a more hopeful appearance. The value of the export trade showed an increase of £332,606, for which cotton, gum, and hides were mainly responsible. The second half of the year is normally a period of quiet trade in the Sudan, but the figures for the first six months make it clear that the country is progressing in the right direction, and that as time goes on the market there will be of increasing importance.

Conditions in Egypt.

A very interesting review of the economic and financial situation in Egypt is forthcoming from Mr. E. Homan Mulock, British Commercial Secretary at Cairo, extracts from which will be found elsewhere in these columns. In some quarters an unfavourable view seems to be taken of the outlook for Egypt, but the survey of the position given by Mr. Mulock should go far to dispel any pessimism that exists. The facts certainly justify a modified optimism. For 1927 Egypt had a favourable trade balance of

Bankers :

BANK OF ENGLAND. Messrs. GLYN MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

£1,025,026, as compared with an adverse one of £9,270,979 for 1926, the State finances at the end of the past financial year showed a marked improvement, while the Budget for the current year certainly does not suggest that the authorities take an adverse view of the prospects. The trade balance for 1927 was due partly to a decrease in imports, but more so to a rise in exports owing to higher prices for cotton, and it appears that it is the decrease in imports which has given rise to gloomy anticipations. It is maintained that this development is due to the decline in purchasing power, and that it is illustrated in the fall in trade profits. Mr. Mulock shows quite conclusively that both these points are untenable. As regards purchasing power, he points out that the potential demand of the country has greatly increased as a result of the accumulation of wealth during the past six years. The wealth is, however, not widely distributed, a large proportion of it being in the hands of a minority, the utilisation of whose money in investments and in other ways has, he suggests, a restrictive effect on the flow of trade. The economic position of the felaheen is of primary importance to the country, and what Mr. Mulock has to say on this subject is of great interest. The price of cotton is, of course, everything to the felaheen, and while the area under the crop was restricted prices ruled higher and made up to the tenant for the reduction in the crop. Mr. Mulock refers to the Agricultural Bank returns and to the increase of the imports of cotton piece-goods of nearly £1 million as showing that the felaheen are not in the financial straits attributed to them.

Egyptian Government's Policy.

The policy pursued by the Egyptian Government in economic and financial matters is dealt with in detail by Mr. Mulock. The fact that the country is in the main dependent on two sources for its well-being, either or both of which are liable at any time temporarily to fall short of expectations, makes it the more imperative for the Egyptian authorities to exploit to the utmost all other potential sources of wealth. It is with this end in view that a wide use is being made of the services of European experts, who have been engaged to give advice on a wide range of subjects, such as the fisheries, inland navigation, local industries, petroleum, railway electrification, roads, tariff revision and taxation. The new Customs tariff which is due to come into operation as from February 16, 1930, is now being drawn up by a Commission of three. The development and protection of local production and industries are being aimed at in the new tariff, and a bureau has been set up to which manufacturers, producers, and others interested in the new tariff are invited to submit their claims. Mr. Mulock urges British firms and merchants interested in the Egyptian market to avail themselves of this invitation, and it is to be hoped that they will not fail to take advantage of this opportunity to put forward any necessary points. The Egyptian Government has shown itself keenly sensible of the importance of the trade relations between the two countries, and it may be taken for granted that the fullest consideration will be given to any representations that are made.

Government Trading.

Following the example of the Governments of other countries the Egyptian authorities have not hesitated in recent years to extend their activities into the commercial sphere. The various developments in this direction are detailed by Mr. Mulock in his report. The principal field has, of course, been in regard to cotton, and except in so far as the Government purchases have helped to sustain the price of the commodity—and its effect in this direction is rather a moot point, as the fact that a large amount of cotton is, so to speak, held over the market is bound to have an adverse result—it cannot be said that this venture has been satisfactory. On June 30, 1927, the stock amounted to 479,630 kantars, or roughly 119,907 bales, and the expense entailed in the purchase of the cotton and its storage explains why the Government were so

anxious to take advantage of the opportunity of disposing of a large portion of their stocks to Russia last summer, and therefore, Mr. Mulock points out, acceded to every demand in connexion with this transaction. Unfortunately expectations were not fulfilled, and in the period covered sales only totalled 12,300 bales, the shipments of which began in December at the rate of 2,000 bales per month. A more satisfactory fate has attended the Government scheme for loans on cotton. The sale of the cotton left on the Government's hands by borrowers resulted in a return which considerably exceeded the amount advanced, the interest due, and all other charges. Another field of activity is represented by the Government petroleum refinery at Suez, in regard to which Mr. Mulock points out that "expenditure—including cost of refining and the charges for interest and depreciation on the original cost of the refinery, viz., £230,000—is so high that a net profit on sales of the resultant products to Government Departments is only possible if they are charged prices greatly in excess of world prices." Various other commercial ventures have been entered upon with a view to assisting agriculture, and a scheme has been under view for entering a new field by the establishment of a factory for the manufacture of clothing from locally woven material and possibly boots. I have referred to these varied activities in no critical spirit. Governments and commerce have not proved in other countries to be the most suitable companions, and if in Egypt the authorities in the past few years have shown an enterprise which is perhaps not altogether justified by the position, it has to be borne in mind that the conditions in Egypt are peculiar to that country and that the Government has been actuated by the desire to give a helping hand to the country's economic progress where such could usefully be given.

COMMENTATOR.

TURKISH MARKET FOR JUTE CLOTH AND BAGS.

Large quantities of jute cloth and bags are used in Turkey, constituting as they do practically the only materials used in packing agricultural and animal products for export (says the American Commercial Attaché at Constantinople in a recent report). Owing to the particular manner in which the trade is handled, it is very difficult to obtain exact figures covering local consumption. Leading importers, however, estimate the annual imports of Calcutta jute cloth (Hessian) at about 5,000 bales of 2,000 yards each, and the imports of Continental goods at between 1,500 and 2,000 bales. Present annual imports of new jute bags are estimated at between 3,000 and 4,000 bales of 400 bags each, and of used or second-hand bags at between 1,000 and 2,000 bales per year.

The hearing was reported to be good on the occasion of the first telephone talk between Belgrade and London, which took place on September 19 through Paris.

Engineering Topics.

Burdens on Industry.

A manifesto which I have just read, issued by the Industrial Peace Union, has considerable interest for engineering employers. It points out that the method adopted by the Union is to approach each industry by itself and obtain from it the data for its own case as to what it finds its chief drawback to larger trade in the home as well as in the foreign markets. In the past there has been a good deal of one trade speaking for another, chiefly because it felt that by so doing it could put a keener edge on its own axe. A typical instance of what is meant would be for one interested in the heavy iron and steel trade to take up the cudgels vigorously in support of the proposal to put an import duty on dolls' eyes or petrol lighters.

The following facts, however, taken from the cost book of a large industrial firm tell in striking figures what the present day burdens on industry mean as compared to pre-War days. Social charges increased not less than 225 per cent., rates and taxes up by no less than 300 per cent. Are these superimposed costs which fall on these British industries that employ man power, costs which are admittedly one of the causes which prevent our industries forging ahead, peculiar only to British producers?

The Engineers and Allied Employers' National Federation has already given an indication in the course of a recent memorandum which states that the engineering industry is compelled to raise the selling price of its products by at least nine or ten per cent. to meet increased overhead charges due to heavy taxation and local rating to cover the cost of social services, such social services being the best in the world. The Industrial Peace Union appeals to all engaged in industry to adopt certain principles which it has enunciated, in order to bring about a square deal between employer and employed and consumer, and it feels that in that way the best wages an industry can carry would be ensured to the average worker. Imperial legislation would give security, and a reasonable return would be afforded to the average manufacturer, whilst distributors, both wholesalers and retailers, would obtain a reasonable reward for the work they carried out. The herding of producers and consumers into separate camps which are regarded as being opposed to each other, is a fallacious and even an absurd policy. The great majority of consumers of one class of commodities are producers themselves of some other class. If production fails or even only falls off appreciably, consumption must also suffer; hence the consumer, by paying a fair price for British and foreign produce, will be indirectly but materially contributing to his own or her own economic welfare, and, by securing an all-round equitable bargain, peace in industry would become an accomplished fact, and all engaged in various walks of life would take a personal interest in the well-being of industry.

Road Construction.

Road engineers are anticipating a period of renewed activity and many regard it as practically certain that the traffic-carrying surfaces of most of our existing arterial roads will have to be doubled in width before many months elapse. Even that course, provided motor vehicle production continues at the same rate, and also provided that every owner of a light car sets his face like iron in a grim determination to drive in the centre of the fair way, will be merely a palliative measure, and more and more roads will have to be constructed. We get a curious feature here: It is possible that we shall have to resort to low temperature distillation of coal on a large scale to provide sufficient motor fuel for the great fleet of vehicles that may be expected. That distillation will result in the production of vast quantities of tars and tar oils, and in all probability the new road construction will find some use for these. High temperature distillation produces as a by-product a tar which, as everyone knows, is just the thing for road work. The advent of tar emulsions, in which tar is mixed with certain evaporative materials, has brought about a new era in the surface dressing of roads, and in a cold state these can be used easily and quickly for the patching and even the reconstruction of roads. Further, the road maker no longer fears the vagaries of the English climate, and it is as easy for him to carry out his work in the depth of winter as it is in the height of summer. The application of these emulsions can be made in any weather, including frost. The work can be completed speedily without loss of effectiveness in the resultant surface. Such speed means not only low labour cost but the additional advantage of being able to carry out the surface treatment of a road all the year round.

It is common knowledge that a good deal of criticism has been directed against the use of tar for road work. It should not be overlooked that much, if not all, of this has been brought about by the injudicious use of the material in some places. It is not an uncommon thing even to-day in this country to find crud or inferior tar being used for the spraying of roads and to find, further, that the gritting material used is neither the right kind nor the right quality. From this, as Mr. Cone, speaking on the subject said recently, it is not difficult to foresee complaints arising from motorists and other road users with regard to the "bleeding" of the surface in summer weather, and consequently splashing occasioned by the passage of vehicles over the road. The answer to this complaint is to be found on all roads where tarspraying has been carried out in accordance with the best practice. Given a tar of the right viscosity and otherwise conforming to specifications, whose application has been made in the correct manner with adequacy of gritting materials, immunity from the evil referred to is assured.

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

18, LYCOURGOU STREET, ATHENS, GREECE.

Telegraphic Address: "Pimacracia," Athens.

::

Branch at Piræus: 48, Notara Street

GENERAL MERCHANTS & COMMISSION AGENTS

General Agents for the Shell Company (Hellas) Ltd.

Over 100 Agencies throughout Greece.

Special Branch for Commission Business.

Contractors to the Greek Government for the construction of a Complete System of Roads throughout the Country.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Clothing, Sheets, Blankets, Etc.—The Ministry of the Interior, Egypt, invites tenders for the supply of clothing, sheets, blankets, towels, etc., required for the Department of Public Health during the period September 1, 1928, to April 30, 1929. October 11. (D.O.T.)

Bridges.—The Egyptian Government invites tenders for the construction of two bridges. October 20 and 22. (D.O.T.)

Flanged Beams.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 48 broad flanged beams and 12 steel joists, approximate total weight of 136 tons, for Sharabia subway. October 2, and for 9296 kilos solid drawn copper pipes. October 3.

Steel Boiler Stay Taps.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 128 best high speed steel boiler stay taps and 112 reamers, 47 sets best cast steel boiler patch taps and 3 sets best high speed steel taps and 5 best cast steel taps for bushes.

Lock Gates, Etc.—The Resident Engineer, Delta Barrage Directorate, at Delta Barrage, invites tenders for (1) construction of eight lock gates for Damietta and Rosetta locks, both at Delta Barrage, and their delivery at site and erection in position; (2) construction of twenty regulator gates and their delivery at sites. November 1.

Marble Gauges.—The Inspector of Irrigation, Assiut Barrage Circle, Assiut, invites tenders for the supply of marble gauges. November 10.

Lighthouse Tower, Etc.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the construction of a lighthouse tower and annexes on Daedalus Reef in the Red Sea. November 12.

Clothing, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, soft and woollen, sheets, linen, napkins, blankets woollen, white and brown, material by metres, etc., required for the unexpired period of the year 1928-1929. October 11.

Portland Cement, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones (Cairo Station), invites tenders for the supply of 6,000 metrical tons artificial Portland cement, October 30; and for the supply of materials and works connected with the replacement of the superstructures of 4 fixed bridges of the Sherbin-Kallin line and the adaptation of the abutments to the new superstructures. This project includes, among others, the supply and laying of the following materials: Reinforced concrete, about 3 c.m. and rolled, cast, etc., steel, about 38 tons. November 10.

INDIA.

Pipe Line and Pump.—The India Stores Department invites tenders for the supply of a pipe line and pump. October 14. (D.O.T.)

Radial Gates.—The Indian Stores Department invites tenders for the supply of radial gates for the head and cross regulators for main canals and branches. November 6. (D.O.T.)

TURKEY.

Tape.—The Direction des Achats du Bureau des Postes et Telegraphes at Constantinople invites tenders for the supply of 10,000 rolls of tape. October 17. (D.O.T.)

Grindstones and Emery Stones.—The Military Authorities at Angora invite tenders for the supply of grindstones and emery stones. October 17. (D.O.T.)

Points and Crossings, Etc.—The Direction Generale des Fabriques Militaires at Angora invites tenders for the supply of points, crossings, rails and fishplates. October 25. (D.O.T.)

NEWS FROM ALL SOURCES.

The output of the Anglo-Egyptian Oilfields for the week ended September 21 amounted to 5,081 tons.

Messrs. Dorman, Long and Co., Ltd., Middlesbrough have obtained a contract for galvanised iron for the Egyptian State Railways.

The Yugoslav duty on imported molasses is being reduced on October 1 from 8 to 1½ dinars per 100 kilograms.

The erection has been started at Comarnic of the first artificial silk factory to be established in Roumania.

The Sentinel Waggon Works, Shrewsbury, have obtained a contract for three 100 h.p. special type six-wheeled locomotives for the Bombay, Baroda, and Central India Railway Company.

A recent Syrian Decree establishes a duty of ¼ piastre (gold) per litre on benzine consumed in Syria. Importers are required to notify to the authorities the amount of benzine imported, and the tax will be collected when the product enters the municipal or private depôts.

The Egyptian *Journal Official* publishes a Ministerial Decree which exempts maize and wheat bran, flax thread and tow produced in Egypt from Customs and Quay duties on their exportation.

The Statistical Department of the Egyptian Ministry of Finance announces that the total imports into Egypt during August were £E3,897,627, as against £E3,918,747 in the corresponding period of last year, while the exports totalled £E3,390,767 against £E3,462,146. Of the total exports cotton accounted for £E2,763,585 against £E2,916,734 a year ago.

The Egyptian Ministry of Communications is budgeting in the coming financial year for a number of schemes, including a railway from Kena, on the Nile below Luxor, across the desert to Kosseir on the Red Sea coast, and the extension of the western desert line to Mersamatruh. Further, a sum of £E70,000 is being allocated for the purchase of a steamer which will form the nucleus of an Egyptian mercantile fleet. Provision is also made for the expenditure of £E80,000 for a river steamer and barges, and £E25,000 for motor-cars and motor-lorries.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakand for Calcutta (Birkenhead, September 8).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 3).

British India Line.—S.s. Dumana for Bombay and Karachi (London, September 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, October 6); s.s. Domala for Bombay and Karachi (London, October 20).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, September 29); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool October 13, and Swansea October 16).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13).

P. and O. Line.—S.s. Rajputana for Bombay (London, September 28); s.s. Novara for Calcutta (London, September 29); s.s. Delta for Bombay (London, October 4); s.s. Ranchi for Bombay (London, October 12); s.s. Burdwan for Calcutta (London, October 13).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 9); s.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, October 13).

Ellerman and Papayanni Lines.—S.s. Flaminian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 29); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool October 3, Swansea October 6); s.s. Fabian for Gibraltar, Jaffa*, and Haifa* (Liverpool, October 6); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (Liverpool, October 6); s.s. Polo for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 27). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria. Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

ASSYRIA	Sept. 28	*FLYSIA	Nov. 9
*BRIT NINA	Oct. 9	*CASTALIA	Nov. 27
CALIFORNIA	Oct. 24	*CIRCASSIA	Dec. 11

*First class passengers only. †First and Third Class Passengers. Specially low fares. ‡Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 25.

As the holiday season draws to a close there are signs of an increase in public interest in the Stock Markets. The week has witnessed a moderate turnover of stock, with prices generally firm and attention chiefly centred on the miscellaneous market. Gilt-edged stocks have been fairly steady, the monetary situation militating against buoyancy. The pound remains weak in terms of the dollar, but the Bank of England has further strengthened its position and thus the Bank is easily able to meet any demands for gold that may arise. Home rails have improved slightly on better traffic figures and a more hopeful trade outlook. A feature of the beginning of the week was the strong demand for bank and insurance shares, but subsequently the latter weakened owing to fears of losses due to the hurricane in the Gulf of Mexico. Nitrate shares advanced and cable stocks were also better. The speculative markets have not been conspicuous, tin shares being an exception.

Textile Shares.

There has recently been some interest shown in textile shares, the securities of the larger and more prosperous companies being chiefly in demand. Apparently the outlook for the industry has lately brightened. The American crop promises to be considerably larger than a year ago, thus ensuring cheaper cotton. Moreover, there is a more hopeful feeling with regard to the situation in China and India. It should not be supposed, however, that any very substantial revival is in sight. Nor should the need for the greatest caution regarding textile shares be overlooked. Many companies are in an extremely serious position. This scarcely needs emphasis in view of the grave tone of the reports of the many investigating bodies that have been published. Fortunately, there appears to be increasing recognition of the seriousness of the industry's position, and it is earnestly to be hoped that at long last remedies will be applied on the right lines. Meanwhile, it is noteworthy that some of the large companies are able to earn what must in the circumstances be regarded as fairly good profits. These companies in-

clude the Fine Cotton Spinners and Doublers' Association—whose ordinary shares yield £6 per cent., and the English Sewing Cotton Company, whose ordinary shares return £5 13s. per cent. In particular the shares of the former are in demand for investment purposes. Companies engaged in the finishing section of the industry have maintained a good level of prosperity, the majority having earned between 11 per cent. and 18 per cent. on their ordinary capital. Some shares, including those of the Bradford Dyers' Association and the Calico Printers' Association, give a modest yield, but offer a more reasonable return.

Match Finance.

During recent weeks match shares have attracted attention, since it has been understood that certain re-financing arrangements have been in preparation. Particulars of the first of these arrangements have been announced this week, the company concerned being Kreuger and Toll Company, the great Swedish trust undertaking. Participating debentures have been issued for a nominal total of Kr45,000,000. These debentures rank equally in all respects with the Kr20,000,000 debentures which were placed in July. They carry interest at the rate of 5 per cent. per annum, and are entitled to additional interest at the rate of 1 per cent. per annum for each 1 per cent. by which the dividend on the ordinary shares in any fiscal year exceeds 5 per cent. The present dividend rate on the ordinary shares is 25 per cent. per annum. Of the present issue Kr17,000,000 has been sold to a European banking group, of which Kr8,500,000 are being offered to the present share and debenture holders in the proportion of one for every ten at present held, and Kr8,500,000 are being sold privately, the price of issue being Kr525, equivalent to £29 per Kr100 debenture. The Kreuger and Toll Company and its American subsidiary are the largest stock-holders in the Swedish Match Company which, with its associated concerns, is the largest match manufacturing organisation in the world. An important part of the business of the Swedish Match Company consists in obtaining Government concessions for the sole right to manufacture and sell matches in various countries, and since this has assumed such large dimensions, involving the handling of substantial blocks of Government securities, it has been decided to transfer to a separate organisation the handling of such securities. It is arranged that Kreuger and Toll Company should constitute this organisation.

The First Co-operative Investment Trust.

Many readers of these notes are familiar with the First Co-operative Investment Trust Ltd., which has just issued its accounts for the half-year ended July 31 last. This undertaking, formed four years ago, set itself the task of making a special appeal to the small investor. That it has not been unsuccessful in this direction is shown by the fact that its capital has grown from £28,691 at the beginning of 1925 to £1,408,719 at the end of last July. Doubtless a considerable attraction has consisted in the ability of the undertaking to pay a dividend of 7 per cent. since its inception. The latest accounts, however, show that this rate is not being earned with an appreciable margin. Indeed, it would not be surprising if some shareholders asked the directors whether they had considered the advisability of pursuing a more cautious dividend policy. After paying the dividend at the rate of 7 per cent. per annum the balance forward is only £1,612, which compares with £2,333. No allocation is made to reserve, whereas in the previous two half-years sums were placed to reserves. This is the more noteworthy since the trust—which, it should be remembered, is not old-established—has a reserve for the equalisation of dividends of no more than £6,500. In this connexion it should be noted that interest rates are tending gradually downwards. Finally, the trust's investments are obviously chosen with a view to obtaining a good yield.

THE COMING MOTOR SHOW.

In two week's time we shall have the opening of the Motor Show at Olympia, and it is quite safe to say that this event is awaited this time with even greater interest than usual on account of the rapid way in which the use of the motor is spreading. The attraction of Olympia is obvious for there is to be seen the most comprehensive and largest display of motor cars, accessories and novelties in the world. All motor car producing nations will be represented.

It will be found that the new models are not merely relatively, but actually are, in many cases, below pre-War prices, and for luxury and quality of fittings are vastly superior to pre-War models. Mechanically, too, there is no comparison, the standard in this respect, whether it be for output, speed, reliability, or economy of fuel and oil, being at a higher level than the pre-War standards. Bodywork is also admirable for comfort and the special requirements of the vast proportion of present owner-drivers. The trend is all towards catering for this increasingly important body, and it finds expression in the score and more fittings, layouts and new accessories all making for comfort and elegance.

The important factor of safety is illustrated by such universal fittings as dipping head-lamps, collision fenders, four-wheel breaks, non-splintering glass screens, screen wipers and tyres of a quality and with a longevity never attained before the War. Briefly, no matter what the item Olympia will reveal that it has been anticipated, provided, and standardised as inclusive equipment of the great majority of models.

A Six-Cylinder Year.

1929 promises to be a six-cylinder car year. The small "six" has passed the novice stage of a year or two back, and wonderful results have been standardised as regards accelerativeness, speed, higher compression, better ignition, and carburation, silent running at all speeds, cleanliness of exterior, assisted water circulation, and among larger models, the special economy attaching to a thermostat or self-regulating temperature controller. The "straight-eight" will be found to have increased its hold, and is no longer confined to the more expensive and higher power rated models.

Coil and battery ignition has found more favour with increase of cylinders, and automatic timing by magneto and by coil-distributor promises to be featured. Carburation, too, has not been neglected; indeed, the demand arising from increased cylinders, higher compression and the likely increased use of anti-pinking fuels would not permit this item of essential equipment to be ignored. Superchargers, though still a luxury fitting, will be seen more than at last Show, and in a variety of models novelty will be found in fuel feed systems.

A forward move has been made in insulating engines and other components liable to set up or transmit drumming from vibration. Engines are now comparatively vibrationless; it remains to damp out noise from other sources.

Gear-change is simplified, and a further return to the off-side position of the lever may be looked for. Four-speed gear sets will be found on some American cars, and some novelty in the layout of a few European gear-boxes will be shown. Free-wheels, too, may be looked for though for a while longer they will belong to the list of luxury rather than standardised fittings.

Labour-saving devices and controls in gear change and in braking, are among the novelties promised. The

"Servo" brake control has become standardised, and development of the principle is promised in other directions. Other forms of power-assisted or direct power controlled braking and gear changing, clutch and steering control will be awaited.

Back-axle drives will witness to a larger interest in improved spiral bevel-gear layouts, a notable development being anticipated on the part of two or three leading high-class makers. Gear cutting and gear grinding has raised the standard of gear silence.

Suspension systems have been revised, and the improvements will be found to take such forms as lower frames, anti-rolling devices for cornering at high speeds, shock absorbers of the hydraulic and pneumatic forms, and independent wheel suspension.

Some Improvements.

The increasing army of owner-drivers and owner-mechanics will find a remarkable advance in the things which minister to comfort. Whether they prefer the all metal saloon body or the fabric sort, both types have been made still more competitive and attractive. The all-metal standardised body is free from drumming, while the material of the fabric sort has been softened and smoothed in texture as now to be comparable with a stretched glove. Pneumatic seat cushions and upholstery, vibration-proof rubber matting and flooring will be found to facilitate the cleaning of the car in the home garage. Windows and doors have been improved for silence and the exclusion of draughts, and special attention has been given towards making the driving of covered cars easier in traffic. The convertible (open-closed) type of car holds a few surprises, and several ingenious mechanisms and head layouts are likely to be seen in this connexion.

The "Sports" type of standard chassis and car is likely to be a favourite next season. It is in this type that the efforts of a few designers will be found concentrated. Low weight and the maximum of power have been successfully blended with an elegant appearance. Non-tarnishing fittings are to be featured; a rub of a damp cloth being sufficient both to clean and renew the lustre of chromium treated fittings.

Central oiling and simplified oil points made fewer by the use of non-metallic joints and shackles for suspension springs, will attract attention and approval. Important developments are promised along these lines of labour-saving equipment.

More comfortable bodies may be looked for on chassis which have been widened, and now conform to the 4ft. 8 in. standard for track width. Power-driven tyre inflators will be more prominently featured in medium and large cars; and space for the spare wheel and tyre and for touring requirements has been more amply considered and provided; and the battery has been given a place easier of access where such was desirable.

Accessories.

The largest section of all the Motor Show is that devoted to Accessories and Components. For this year's Show, all records have been beaten for outstanding quality and variety of useful fittings for car and garage and for the comfort of drivers and passengers. Special mention may be made of utility equipment such as inflators, jacks on trolleys, both of the simple straight lift or cantilever forms, tools and tool benches, driving mirrors, parking lights, luggage carriers and trunks, spare wheel outfits and lamps for garage and car.

The Olympia standard of body design and workmanship has been consistently high, and unfettered by the inroads of standardisation. This year's display promises to be worthy of that tradition. British carriage work at some Shows has been ahead of the chassis for which it was intended; this year's display will be in keeping with the trend towards differentiating more expensive cars from others. Several colour and style "creations" are expected, and buyers will have a special difficulty in deciding amid the selection offered.

British Consular Reports

VI.—EGYPT.

The following extracts dealing with trade are taken from the report of Mr. E. Homan Mulock, Commercial Secretary, the Residency, Cairo, on the Economic and Financial Situation of Egypt as at May last :—

The total value of imports into Egypt in 1927, amounting to £E48,685,128, is lower than that for 1926 by £E3,714,931, but as £E491,860 of this is due to a decrease in tobacco, the net decline in the value of merchandise imported, with which the following remarks deal, amounts to £E3,223,071. Strictly speaking, this latter figure, and, of course, the total decrease as well, should be reduced by about £E350,000 as the result of the importation, at the close of 1927, of 35,000 tons of nitrate of soda, which have only been excluded from the customs statistics for that year because the duty was deposited, and will not actually be paid until 1928. It is only fair that the imports for 1927 should be credited with this, because it cancels one of the chief factors in the total decrease by reducing the difference between the value of imports of nitrate of soda in 1926 and 1927 from the formidable amount of £E416,832 to the comparatively modest sum of £E66,832. The resultant decrease in the value of merchandise imported, viz., £E2,873,000, is due to the following factors :—

(a) Increased local production of cereals, flour and rice, consequent on the legislative restriction of the area under cotton, which is responsible for no less than £E1,622,600 of the total decrease.

(b) Reduction in the price of different kinds or categories of articles, of which 36 have increased in quantity although they contribute in the aggregate £E437,500 towards the total decrease.

(c) A decrease of £E445,000 in the total value of imports on Government account.

(d) Replacement of wood for building by reinforced concrete accounting for £E359,000 of the total decrease, and resulting in an increase of £E100,000 in the value of and 45,000 tons in the volume of cement imports.

(e) The effect of increased activity in the local weaving industry on imports of artificial silk cloths, resulting in a decrease in their value of £E31,000, accompanied by an increase in imports of artificial silk yarn of £60,000 kilos in weight and £E23,000 in value.

It will be observed that the sum total of these tangible factors, none of which can be ignored, slightly exceeds the total decrease of £E2,873,000, and that none of them is symptomatic of the alleged decline in the purchasing power of the country.

The principal imports which have increased in value and volume are artificial silk yarn, benzine, cement, cheese, coal, cotton piece-goods, cotton yarn, electric wire and cable, jute piece-goods and sacks, matches, mazout (oil fuel), motor vehicles, nitrate of lime, railway rolling stock, silk cloths, soap, sugar (raw and refined cane), superphosphate, and rubber tyres for motors and cycles. Imports which show an appreciable increase (either proportionate or relative) in value, but whose quantity is not specified, include artificial silk hosiery, electrical and miscellaneous machinery, medicinal preparations, perfumery, printed matter, and wine in casks.

The principal articles, in which an appreciable decrease in quantity and value (i.e., £E20,000 and upwards) has taken place, are boots, shoes (leather), carpets, cereals, flour and rice, copper and brass sheets, dried fruit, fish (salted), gold bullion, iron and steel goods, kerosene, machinery, mineral lubricating oils, printing paper, railway sleepers (wooden), sewing cotton, mixed silk textiles, sugar (beet), wood for building, woollen textiles. Of the 36 imports referred to above, which have decreased in

value but increased in quantity, those which are chiefly responsible for the contribution of £E437,500 to the total decrease in imports are the following (the extent of their respective contributions being shown in brackets after each) :—Coffee (£E119,500), nitrate of soda (£E66,800), tea (£E49,000), railway locomotives (£E45,000), mixed cotton textiles (£E31,000), fresh fruit (£E22,000), jute sacks unspecified (£E17,700), bedsteads (£E13,500), coconut oil (£E10,000), wrapping paper (£E6,400), and cardboard (£E9,000).

It is of interest and importance to observe that the total cargo landed in 1927 was 1,281,210 tons greater than that for 1926. Even allowing for the contribution of coal thereto, viz., 449,131 tons, the resultant net increase in the volume of all other imports is considerable.

British Trade.

The country chiefly responsible for the increase in volume of trade is the United Kingdom, the total cargo landed from British ships in 1927 being 742,011 tons in excess of that for 1926; but although the increase, shown below, in British supplies of coal accounted for so large a proportion of this, it is satisfactory to note there have been noticeable increases, either relative or proportionate, in other imports from the United Kingdom. The comparative statistics given hereunder are eloquent of Great Britain's recovery from the coal stoppage and of her almost complete recapture of this important market :—

	COAL IMPORTS IN 1926 AND 1927.		Value in £E.	
	Metric tons.		1926.	1927.
United Kingdom ...	603,060	1,249,279	853,516	1,856,298
Germany ...	119,518	50,863	232,535	84,617
United States ...	151,885	64,427	359,878	95,058
Other countries ...	63,730	22,755	119,892	36,172
Total ...	938,193	1,387,324	1,565,821	2,072,145

The other imports from the United Kingdom referred to above are cotton piece-goods and railway trucks and carriages, so far as large relative increases are concerned, while noticeable proportionate increases, ranging from £E20,000 to £E42,000, have taken place in mixed woollen and worsted textiles, cast iron pipes and fittings, motor vehicles, electrical and miscellaneous machinery, and electric wire and cable, and cement; and from £E5,000 to £E12,000 in hemp yarn, iron or steel goods unspecified, motor cycles, machine tools, motor vessels, varnishes and stationery. Proportionate slight increases, ranging from £E2,000 to £E14,000, have occurred in silver bullion, household soap, medicinal preparations, tin ingots, bars and slabs, mosquito netting, hemp rope and cord, and woollen yarn.

The principal imports from the United Kingdom in which a marked decrease, either relative or proportionate, has occurred are :—Iron or steel rails and sleepers, constructed works, axle wheels and springs, stationary internal combustion engines and power pumps, steamships and launches, all of which depend wholly or largely on the nature or extent of Government requirements. Those which do not are iron or steel sheets and plates, pipes and fittings, and hoops and strips, wheat flour, cotton yarn, copper and brass sheets.

Although it must be understood that the above lists of imports in which increases or decreases have occurred are not comprehensive, the net result is most satisfactory, as the total value of imports from the United Kingdom has increased by £E1,076,980, or nearly 9.5 per cent., thereby raising her share of the total from 21.8 per cent. to 25.6 per cent.

On the other hand, imports from the rest of the Empire, including the mandated territories of Iraq and Palestine, have fallen by £E1,029,932, or 17 per cent., thus reducing their share of the total from 11.5 per cent. to 10.3 per cent. Thanks, however, to the success of the United

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

Kingdom the British Empire's proportion of the total imports has risen from 33.3 per cent. to 35.9 per cent. The decrease in the case of the rest of the Empire is largely due to the sensational decline in Egypt's cereal, flour and rice requirements, which accounts for all but £E96,000 of the figure quoted above. This balance consists chiefly of a decline of some £E50,000 in coffee from Aden and British East Africa, £E25,000 in mineral lubricating oils from British Borneo and Straits Settlements, and a net decrease in tea of £E20,000.

Competition.

Mention has already been made of the decrease in the value of imports from all of the United Kingdom's principal competitors, excepting Japan (whose increase is entirely accounted for by cotton piece-goods), and there is only one other amongst the principal importing countries to show an increase in value, viz., Russia. In the case of France and Italy this decrease is attributed to reluctance on the part of many wholesale importers of their goods to buy largely owing to the relative stabilisation of their currencies. However this may be, their volume of trade does not appear to have suffered, since the total increase in cargo landed from French vessels amounts to 86,000 tons, and from Italian ships to 82,000 tons, representing increases of 45 per cent. and 15 per cent. respectively. In the case of Germany this increase amounts to 74,700 tons, or nearly 33 per cent., although the value of her share in a large number of imports has decreased in varying proportions. In the case of coal and miscellaneous machinery it is the United Kingdom who is responsible for the loss of German trade, but considerable decreases have also occurred in stationary internal combustion engines, power pumps, ironmongery, chemical manures (unspecified), woollen goods, printing and wrapping paper.

Cotton Piece-goods.—The outstanding features of the trade in the five chief categories of cotton piece-goods have been the following:—(a) A marked increase in volume and value of total imports amounting to 48,991,122 sq. metres and £E854,089 respectively. (b) An increase of 28,706,199 sq. metres in volume and £E363,766 in value of the United Kingdom's share of the trade. (c) The increase in strength towards the close of 1927 of Italian, and throughout the year of Japanese competition, which mostly accounted for a decline in the United Kingdom's percentage of the total volume from 66.06 per cent. in 1926 to 64.43 per cent. in 1927, and in the case of the total value from 61.8 per cent. to 58.5 per cent. (d) The keen competition between Italy and Japan in heavy goods dyed in the yarn, which was mainly responsible for the fact that whereas the Italian share of the total value and volume increased by only £E131,131 and 4,855,897 sq. metres, that of Japan rose by no less than £E344,042 and 13,568,315 sq. metres.

The United Kingdom increased her trade in grey goods, particularly in the lighter qualities, thanks to increased demand for the finer lines rather than to any falling away in competition, the net result being that the United Kingdom's proportion of the total import rose from 56.86 per cent. in 1926 to 60.56 per cent. in 1927. Japanese competition was intense throughout 1927, particularly in cabots, although her percentage of the whole trade fell from 42.20 per cent. in 1926 to 36.22 per cent. in 1927. The United Kingdom more than maintained her position in imports of bleached goods, as shown by the rise in her share of the total business in these lines from 94.86 per cent. in 1926 to 96.14 per cent. in 1927. With the exception of a slight increase in imports from Holland, foreign competition made practically no headway, from which it would seem reasonable to conclude that the repeated efforts by Continental manufacturers to capture the bleached goods trade have not met with the success they anticipated. Although United Kingdom deliveries of printed goods increased during the year under review, her percentage of the total trade declined from 71.94 per cent. in 1926 to 68.81 per cent. in 1927.

The trend of United Kingdom trade in woollen goods

reflected in varying degrees the general falling off in imports, the divergencies therefrom consisting of a slight rise in British supplies of woollen hosiery, and an appreciable increase in those of mixed textiles known as woollens or worsteds, in each case in spite of a reduced total import. In the latter case imports fell from £E330,419 in 1926 to £E278,94 in 1927, whereas the corresponding British share rose from £E71,868 to £E100,435, thereby elevating the United Kingdom from third to first place, while Italy had to undergo the reverse process, France in each year being a close second. Further, the decline in British imports of woollen and worsted cloths was not so acute as that of the total from all countries, with the result that the British share of the 1927 total, viz., £E567,440, was 53 per cent., as compared with 48 per cent., of the 1926 total, i.e., £E687,704. The only country whose imports of these goods increased, and only slightly at that, was France, who was the United Kingdom's chief competitor in most lines of woollen textiles in 1927, with Czechoslovakia, Germany and Italy vying with each other for the third place as a general rule. Owing to the normally short winter season in Egypt the woollen goods trade in articles of wearing apparel is necessarily somewhat circumscribed, but there are always openings during the buying season for lighter weights and variety articles.

Machinery and Engineering Goods.

So far as the future is concerned British engineering firms who specialise in railway material must bear in mind that the three years' abnormal renewals programme of the Egyptian State Railways came to an end with the completion on April 30, 1928, of the financial year under review, and that, consequently, rapidity of delivery will only in exceptional cases be a primary consideration.

It should be pointed out that the imports of stationary internal combustion engines and power pumps do not include those ordered from the United Kingdom in connexion with a Government contract for a pumping station at Amria, worth £E53,000, which was secured some time ago by a British firm. For reasons given in the report dated May, 1927, this material has been delayed, and has only recently been delivered. It will therefore figure in the imports for 1928, as will also an appreciable proportion of the engines and pumps required for the execution of five contracts for pumping stations recently placed by the Egyptian Government of a total approximate value of £E498,345. Although only one of these contracts, viz., that for Belqas, was secured by a United Kingdom firm, it is some consolation to know that it was the most valuable of them, the tender price being £E181,325 for the supply and erection of three 2,500 k.w. turbo-alternator groups and accessories. The success of foreign competition was due partly to consideration being given to price rather than to quality, and partly to the preference of the Egyptian Government for the old "open" type of Diesel engine over the more modern "closed" design.

It is satisfactory to note in connexion with British imports of machine tools in 1927 that Germany, who held pride of place in 1926 with £E19,769 worth, has fallen to second place in 1927 with a total of £E10,976.

British imports of electrical machinery trebled in 1927 and raised the United Kingdom from second to first place with a share of £E61,756 out of a total from all countries of £E212,260, which in turn is nearly 40 per cent. higher than the 1926 total. Imports from Italy and the United States remained constant, but Belgian and Swiss supplies were respectively nearly trebled and doubled, while German imports appreciably declined, and France, in spite of a slight increase, dropped from first to second place.

It is also satisfactory to note that although France is principally responsible for the rise in the total value of miscellaneous machinery imports from £E556,273 to £E601,852, the corresponding British share, which continues to be predominant, has increased from £E243,847 in 1926 to £E268,990. Imports from the other principal importing countries, viz., Belgium, Germany, Holland,

Switzerland and the United States, have increased in varying degrees.

Motor Vehicles.

The insignificant part taken by the United Kingdom (in spite of an appreciable proportionate increase in her imports over 1926) in this ever-expanding market is clearly shown by the following statistics:—

MOTOR CARS AND CHASSIS COMPLETE.

	1927.	£E
United Kingdom	360	71,060
France	658	150,090
Italy	1,187	224,195
United States	2,559	371,767
Total, including other countries ...	4,870	840,509

MOTOR TRUCKS, 'BUSES, AND LORRIES.

	1927.	£E
United Kingdom	37	14,012
France	81	27,245
U.S.A.	616	60,849
Total, including other countries ...	753	107,386

It should be noted that the number of motor 'buses imported in 1926 and 1927 amounted only to 21 in each year, of which 10 came from the United States, 4 from France and the remainder from other countries.

Although, pending the enforcement of new motor 'bus regulations which will exclude all of the existing vehicles that are composed of jerry-built bodies precariously perched on light lorry chassis, there is no demand for the finished article among the 300 odd native owners of one or two such makeshift 'buses, it would popularise British made motor 'buses in advance, if manufacturers were to show more enterprise than has hitherto been apparent in introducing their products to the Cairo public. There are at the present moment four British-made motor 'buses in circulation, which have been acquired by one of the chief local 'bus proprietors, but as there are 33 different 'bus routes in Cairo and no less than 464 'buses actually running in the city, and over 500 in the provinces within the jurisdiction of the Cairo traffic authorities, the potential advertising value of these four pioneers is necessarily very limited. It should also be remembered that the potential market for motor 'buses is by no means confined to those for public use; the number of hotels, schools, clubs and religious institutions which either own or hire such vehicles is steadily increasing.

So far as the market for private cars and taxi-cabs is concerned, United Kingdom manufacturers ought to be able to secure more than the present 8 per cent. of the value and 7.4 per cent. of the number imported from all countries in 1927 by giving more adequate support to their local representatives and to the opportunities offered them of facilities for increasing sales. An outstanding instance of both of these factors is afforded by the possibilities of the hire-purchase system as applied to motor sales, in respect of which encouragement might well be given to the local representatives of British manufacturers.

These principles have already been applied effectively in connection with public vehicles; and thanks to the enterprise of, and special facilities, the bulk of the taxi-cabs now in circulation have been supplied by them, and many are now owned by their drivers.

There has been a considerable increase, thanks to the prevailing preference for the British product, in the total number and value of motor cycles imported. The number has risen from 241 to 455 and the corresponding value from £E11,351 to £E20,240, the British share in 1926 being 168 valued at £E7,983 and 378 worth £E17,016 in 1927.

The Bulgarian Government has informed the foreign Legations in Sofia that it is unable to consider the recent protest against the increase in Customs duties.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows on market conditions for the week ended September 15:—

Sultanas.

The estimated arrivals on the Smyrna market since the opening of the season total 14,300 tons as against 16,400 tons for the corresponding period of 1917; the estimated sales to date are put at 11,200 tons as against 13,000 tons.

Closing prices Smyrna, per cwt., c.i.f. London, for types 12 to 17 and 1, 3, and 5:—34s. 6d.; 36s.; 38s. 6d.; 41s. 6d.; 45s. 6d.; 53s. 6d.; 62s.; 65s.; 42s.; 36s.

Market Conditions.—Business throughout the week continued active, sales recorded totalling about 4,000 tons. In this figure is included a good deal of fruit purchased for account of the Alcohol Monopoly which came on to the market this week for the first time this season.

The Alcohol Monopoly purchases have had a very steadying effect on prices, especially for low grades, as needy sellers find a prompt sale for all inferior fruit at what is now practically established as a bottom price on the market, representing the equivalent of about 34s. 6d. c.i.f. Liverpool or fls. 38 c.i.f. Hamburg.

The belief obtains that low grades will not decline below the present level, and this will certainly be the case so long as the Monopoly continues operating, as their actions appear to be inspired by Government policy. Prices generally over the week have been well maintained, and, on balance, show some slight improvement as compared with last week's closing level.

Figs.

The arrivals on the Smyrna market since the opening of the season are estimated at 9,582 tons as against 11,980 tons for the same period of last year; the sales to date are put at 9,186 tons as against 11,164 tons.

Market Conditions.—Throughout the week the market has ruled very firm on an active demand, closing strong with indications of an upward tendency in prices being soon established. It is now a definite fact that the general quality of this year's production is disappointing and that in all grades a certain proportion of smutty figs cannot be avoided.

Just now and over the coming fortnight the movement of the crop is at its highest point, and it will be possible to ascertain with some degree of accuracy over the next ten days how far short of expectations the yield is likely to prove.

CYPRUS CROPS.

The August report on Cyprus crops states that the threshing of wheat is nearly completed. The crop is anticipated to be 30 to 40 per cent. less than that of last year. Prices are stationary at about 6s. 6cp. to 7s. per bushel. The production of barley is about equal to that of last year. Prices range from 3s. per bushel. The production of oats is about 50 per cent. below that of last year. The price is 3s. per bushel. The collection of carobs has commenced. The production will be much below that of last year. Prices opened between 22s. and 25s. the kantar delivered at stores, as compared with 18s. the kantar at the same time last year.

Planting for the winter crop of potatoes is still proceeding; the area, owing of shortage of water, will be less than last year. The export of the summer crop to Greece and Egypt continues. The quality is not up to that of the previous year owing to attacks of *lila*. The onion crop is excellent; the production is in excess of last year. The price is £6 per ton. The production of cotton is less than last year owing to the lack of rain. The price of seed cotton is 4s. 2d. per stone. The new crop is coming in and the price is tending to fall. The gathering of the tobacco crop is going on, and the production in both quality and quantity is expected to be good. Opening prices for unfermented leaf are 4½d. to 7d. per lb. for average quality.

The production of oranges is below that of last year owing to abnormal weather conditions in the spring. The lemon crop is fair; offers are 13s. per 1,000. There is a record grape crop and a good wine year is in prospect. Large quantities of grapes are being exported to Egypt, where they realise 1s. 8d. to 2s. 3d. per stone. The drying of raisins has commenced. The production of pomegranates may be a little less than last year, owing to the trees being attacked by an insect pest. Exporters are now offering 6d. to 10d. per stone. The fig crop is good; the price is 1s. 5d. per stone.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 19:—

Egyptian Futures.—Sakel Contract.—Values in this market have declined steadily for the greater part of the week, poor Alexandria advices, restricted trade support, and more optimistic crop reports all combining to encourage "bearish" sentiment and to create a distinctly nervous and unsettled undertone. For some time past producers of fine yarns both in this country and on the Continent have met with a very disappointing demand, and this has undoubtedly led to the substitution on an extensive scale of other and cheaper varieties; we are now in process of determining at what difference Sakel cotton will regain its former prominence. In this connexion it has to be noted that our contract has further closed in value with the American market during the week to about 725 points; under present conditions this figure seems excessive and one which, whilst the offtake may show some improvement, is not yet sufficiently attractive to cause a general turn round in favour of our cotton. With the crop movement just about to commence, the Alexandria market is obviously feeling the effects of the lack of new crop orders. In a normal year exporters accumulate forward sales, which in part neutralise the early hedging; this season, in the absence of this support and with the declining tendency of other growths, their contract is having to face more than the customary weight of "hedge" selling. Whilst generally speaking the trade at this side are looking for still lower prices, they have shown more disposition to cover their near requirements. More business would develop if prices stabilised; in the meantime, spinners will probably observe their present conservative policy. We think that considerable caution should be exercised at the present level. On the one hand, those who start working on the "short" side, with Alexandria in the neighbourhood of 32 dollars, appear to be risking the possibility of the Egyptian Government stepping in with some scheme of stabilisation; on the other hand, we consider that whilst the trade offtake is slightly better, that support from this quarter is as yet insufficient to force a permanent upward movement.

Upper Contract.—A fairly large business has been transacted in this option during the past week, and with consistent selling orders coming into the market from Alexandria, values have weakened materially; in addition, the decline in values in the American market has unsettled holders. Some trade buying has been in evidence, but the support from this quarter at the present juncture appears insufficient to offset the increase in weight of the crop movement. From reports received from the other side, the Alexandria market has been subject to heavy selling, mainly hedging operations on the part of banks and interior merchants. The result of this is that a fairly wide difference has now been worked up between the two markets; in fact, almost an import parity has now been established. A further shrinkage in our premium over the American contract has to be recorded, and during the past two or three days this has been taken advantage of in some quarters to get out fair lines of straddle cotton. Prices now appear to have worked down to an attractive level, but we hesitate to advise purchases until more of the crop has been marketed and also to such time as the American markets begin to give evidence of a greater resistance to further declines.

Egyptian Spot.—With the futures markets suffering from selling pressure and showing consistent declines day by day, it could hardly be expected that actual cotton would receive anything but the scantiest attention. It is, therefore, somewhat remarkable to find that the week's sales show signs of expansion, and we have not the slightest hesitation in saying that in so far as "cotton to arrive" is concerned the trade has shown a steadily increasing interest, all of which points to the fact that spinners want cotton and, up to a certain point, must have cotton.

The trend of the local inquiry has shown little change and once again we have to report that the bulk of the business has been done in Upper growths, about which there appears to be only one opinion, which is that they are "right" at current levels. The full weight of the crop movement has yet to be felt, however, and we shall not be surprised if the premium which these growths hold over staple American cotton is still further reduced. Naturally, as this premium lessens, more attention will be attracted from the American section of the trade, which in recent years has shown a decided preference for this cotton whenever the "difference" has become sufficiently attractive.

The demand for Uppers has embraced a wide range and practically all grades have benefited at one time or other. Sakel, in spite of its heaviness, has been in fair request for certain qualities, but buyers have been working very much on the hand-to-mouth principle. "Pass to 100 on" cotton has been in slightly better demand, but it is the "off" cotton which has again attracted most of the business. Pilon from 150 to 250 on has been in good demand, but buyers have experienced great difficulty in finding their requirements. White, Nahda, Maarad, etc., have been neglected. Sudan growths have moved off steadily, but no weight of business has transpired, and it has been the medium qualities of Tokar that have been mostly in request. Manchester reports have become rather more optimistic and an improvement in c.i.f. business has been reported.

Forwardings last week were returned as 5,910 bales Egyptian and 706 bales Sudan. Estimated spot sales for the week, 2,000 bales Egyptian and 900 bales Sudan. Quotations of Sakel show a decline of 105 points; those of Upper and Pilon are 70 to 80 points lower. F.G.F. Sakel to-day, 17.05d. F.G.F. Upper to-day, 11.20d. F.G.F. Pilon to-day, 12.65d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 12, state:—

The market during the past week has slumped badly, and the tone at the close to-day was barely steady. The week's summary of price movements is as follows:—Sakellaridis: November, 34.12 dollars, 2.76 dollars down; January, 34.45 dollars, 2.55 dollars down; March, 34.65 dollars, 2.60 dollars down. Ashmouni: October, 20.90 dollars, 1.90 dollars down; December, 21.20 dollars, 1.90 dollars down; February, 21.65 dollars, 1.92 dollars down.

Sakellaridis.—The bad drop on the week must be attributed more to the continued absence of trade demand than anything else, the American Bureau Report published on the 8th inst. proving to be a factor of but secondary importance. The crop is rapidly coming into sight, but there are still no signs of a revival in the demand; the mills report that there is practically no offtake for fine yarns except at prices well below cost of production, and it is but natural, under these circumstances, to let spindles go idle. Demand is the controlling factor of price and for the time being there is practically no demand. Most of the selling during the week has been in liquidation of speculative bull position; up to now there has been but little hedge selling, and it is to be hoped that some demand springs up before the crop starts to come down. The Sakel/Ashmouni straddle has narrowed in to 1,322 points, against 1,408 points a week ago and 1,022 points a year ago.

Uppers.—This market has likewise declined heavily on the week but to a less extent than Sakel. The demand from abroad, while

rather better than for Sakel, is still very poor and not by any means sufficient to offset the daily increasing arrivals. The Ashmouni/American straddle has narrowed down to 288 points, against 384 points last week and 650 points at the same time last year. The present difference is the lowest for many years, and unless the American staple crop turns out much larger than at present anticipated, we do not think that this narrow straddle can continue. Upper at the moment is relatively the cheapest staple in the world, and any increase in demand will first be reflected in this market.

General.—Up to now but little interest has been shown by growers in the Government scheme for financing their crops. Officials are optimistic and expect a considerable demand for money during the next few weeks, but the fact remains that growers are, for the moment, more disposed to sell than to take advances. In this connexion, however, it should be mentioned that the natives of Upper Egypt are less disposed to borrow money than those of Lower Egypt, and it may be that quite a different attitude towards the scheme will be shown when the Delta crop starts to move.

The week's receipts amount to 87,723 kantars, against exports 62,011 kantars; the stock in Alexnadia stands at 1,148,007 kantars.

Spot.—Total sales amount to about 10,000 bales, of which we estimate 1,800 bales Sakellaridis, 8,100 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: Little interest has been shown in this variety. There has been a small demand for the better grades, but spot differences remain unchanged.

Ashmouni and Zagora: The top grades have not been much in favour, but Fully Good Fair and Fully Good Fair to Good are still keenly sought after and high premiums have been paid for new crop lots.

Other Varieties: There has been some inquiry for new crop Pilon but, so far, little of this cotton has made its appearance on the

market. A few lots of White have changed hands at about last week's differences.

Crop, 1928.—Crop news is, on the whole, fairly satisfactory. On the Upper Egyptian crop there is now very little to say. In the southern districts the crop has not proved the unqualified success which was expected, but this is compensated by the excellent results obtained in Middle Egypt, so that the Uppers crop, as a whole, will be a good average one. In Lower Egypt, the Zagora, Pilon and Nahda crops are proving less good than expected, perhaps even slightly below average in grade. The Sakel crop has not suffered to any serious extent; it is progressing satisfactorily and looks like being an average one. Ginning yields are showing all round better than last year and crop ideas are already being considerably influenced by this factor; yields better than last year to the extent of 3 and 4 per cent. are not uncommon. Temperature is about normal.

In commemoration of the proclamation of Ahmed Zogu as King of Albania a special stamp has been issued in two designs. These have the inscription of the late Republic, "Republika Shqiptare," but the portrait, instead of being in civilian dress, is, according to the *Daily Telegraph*, adorned with full military uniform and decorations. These stamps, which had been prepared some months ago in Paris, had not been put into circulation without overprint, but on the occasion of Ahmed Zogu's elevation to kingship they were overprinted with an Albanian inscription reading, "Kujtim i Mbledhjes Kushtetuese 25.8.28." There are ten denominations, the nine low values being of normal stamp size. The highest value, one franc, is of large size and bicoloured. The values are: 1 qindar, red-brown; 2 qindar, grey; 3 qindar, green; 10 qindar, red; 15 qindar, brown; 25 qindar, blue; 50 qindar, red-lilac; 1 franc, blue and grey.

Notes of the Week.

Greece and Italy.

The Treaty of Friendship, Arbitration and Judicial Settlement between Italy and Greece, which was signed in Rome on September 23, adds yet another to the long list of regional pacts that ought not to be necessary in view of the existence of the League of Nations with its formal Covenant, but which have become fashionable among countries that experience difficulty in living up to the spirit of the League. In a more perfect world they would be regarded as doubly superfluous; first, because they merely serve to underline the pledge implied in membership of the League of Nations, and secondly, because they are in essence political, whereas to-day the attention of small Powers such as Greece should be concentrated wholly on internal reorganisation and economic development. With regard to the first point, it may not be out of place to recall that the signatories to the Covenant of the League of Nations are pledged "to promote international co-operation and to achieve international peace and security by the acceptance of obligations not to resort to war, by the prescription of open, just and honourable relations between nations by the firm establishment of the understandings of international law as the actual rule of conduct among Governments, and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organised peoples with one another." While there is nothing in these regional pacts that prevent them from being regarded as within the four corners of the League Covenant, there is rarely any definite provision of importance in the pacts which is not already covered by "the prescription of open, just and honourable relations between nations." Thus the first three Articles of the Italo-Greek Treaty deal with the altogether improbable—not to say impossible—contingency of an unprovoked attack during the next five years. It is difficult to believe that in either Italy or Greece any special store is set on these particular Articles. On the other hand, the existence of the Treaty, as has been shown by its counterparts between other pairs of

countries, can always be cited as an excuse for nervousness and consequent intrigue on the part of countries that affect to regard themselves as prejudiced by the formal understanding between Italy and Greece.

The Whole Duty of Balkan Statesmanship.

In the case of Greece it can be argued that, without the Pact with Italy, she was handicapped in any attempt to induce a spirit of sweet reasonableness on the part of Yugoslavia with regard to the Salonika Free Zone and other issues outstanding between the two countries. Whether it is better for Greece to come to an agreement with Yugoslavia by means of waving an Italian hammer over her head, or to win her over more pleasantly to the conviction that Balkan solidarity is one of the paramount interests of both States may be a matter of opinion. For the moment the question has been settled by M. Venizelos's predilection for opportunities of entering Europe's Council Chamber. The chief drawback to this weakness is that it encourages all the other Governments or Foreign Secretaries of the Balkans to do the same, and a definite European trend is given to Balkan policy, thereby distracting the attention of each country from matters far more vital to its own welfare. Now that his victory at the elections has placed Greece in the hollow of his hand, M. Venizelos has an opportunity to set an example of statesmanship to the whole of the Balkan Peninsula by stressing the importance of internal economic development. If, on the contrary, as he suggested in a statement made by him in Rome, he is bent on signing treaties of friendship "with, if possible, the whole world," his tenure of office may prove as sterile of practical achievement in the internal reorganisation of Greece as were the two years that preceded it. The whole world is quite prepared to take Greece's friendship for granted. What concerns it most is that Greece should set her own house in order, with a view to pulling her full weight in the economic rehabilitation of Europe. If, side by side with that, the influence and prestige of M. Venizelos avail to give a

similar lead to Greece's Balkan neighbours, then there will be a better prospect of the whole Peninsula, with its forty million inhabitants, equally pulling its full weight at a much earlier date than might otherwise be expected. As a separate geographical entity, Roumania being included, the Balkan States, if acting together, have it in their power to cut themselves adrift, for some time to come, from the see-saw of European politics. Any Balkan statesman, therefore, who tries to cut a figure in the Council Chamber of Europe at the present time is doing a disservice to his own country and to the interests of the Peninsula as a whole.

Choses Jugées.

M. Venizelos, who has always had the courage of his convictions, has lost no time in making it clear that the omission of all reference to the Dodecanese in the Italo-Greek Treaty was not an oversight. He has placed on record his view that no Dodecanesian question exists between Greece and Italy, just as no Cypriot question exists between Greece and Great Britain. Opinion in Greece will be as little inclined to endorse the bracketing of the two questions as to welcome the decision in regard to the Dodecanese, however inevitable. Yet M. Venizelos is right in telling the islanders not to nurse the vain illusion that Greece is strong enough to detach them from Italian jurisdiction. Circumstances may conspire to persuade Italy to hand the islands over to Greece one day; but the date cannot be foreseen to-day, and for the present the islanders will study their own interests by making the best of the situation. In the meantime, although M. Venizelos could not make this point, the "acid test" of Italy's friendship for Greece will be found in her more generous treatment of the inhabitants of the Dodecanese. By no stretch of the imagination can the position in regard to Cyprus be regarded as on all fours with that of the Dodecanese, except in regard to the fact that Greece has nothing to do with the status of that island, and it is fair to successive Greek Governments to say that they have always recognised the fact. The value of M. Venizelos's message to the Cypriots lies in the possibility of its having some effect on the Greek leaders, to the extent of inducing them to abandon a barren agitation and to show some measure of common sense in combining with the Government for the promotion of the Island's interests. It is to be feared, however, that the Greek Archbishop, who leads the agitation, will be more inclined to follow the example of an Athens colleague and perform the ceremony of publicly anathematising M. Venizelos, if his political activities allow him time for an ecclesiastical service.

The Boycott in Yugoslavia.

The Peasant-Democrat Coalition in Yugoslavia has decreed a boycott of the Government, its parties and its supporters. As the political struggle can no longer be carried on in Parliament—"in which the ranks of the ruling parties shoot and murder and in which a lawful fight is met with the organised murder of the Opposition's representatives"—so runs the Decree, the fight for equality and equal rights, for freedom and the rights of the peasants, must be transferred to the people themselves. Accordingly, "with the representatives of the Government and the Government parties, who are responsible for the existing régime of force and inequality, all social intercourse is to be broken off. The same applies to all those who with the authority of their worldly or ecclesiastical position support the régime. For the followers of the Government parties who in any way show their sympathy with the present régime and hinder the success of the national fight, the feeling of the Nation must be indicated in the conduct and attitude of those among whom they live. He who opposes himself to the Nation is no national man and does not belong to the national community." Possibly, since the Cardinal-Archbishop of Reims delivered his anathema on the thief of his ring, never was heard such a terrible curse, and it remains to be seen whether, as in that historic instance, what gave

rise to no little surprise, was that no one felt a penny the worse. The true home of the boycott is China, and there it can be made a terrible weapon. In Greece, during the worst stages of the Venizelist-Constantine struggle, the rival parties tacitly boycotted one another; but, as far as is known, it was a spontaneous movement on both sides, and not enjoined by decree. In Yugoslavia the Belgrade Government has already shown that it is afraid of the Croat weapon, as steps have been taken to strengthen the official element, if an attempt is made to extend the boycott to the fiscal sphere. The onlooker will be tempted to regret the extreme measures adopted by the Croats, if only for the reason that ultimately Croats and Serbs must pull together in their common interest, and the wider the breach is made to-day, the longer the process of bridging it.

Belgrade and Macedonia.

A Press telegram to the effect that the appointment of M. Lazitch, Chief of Public Security in Yugoslavia, as Vice-Minister of the Interior is taken as an indication that the Cabinet wishes Macedonian affairs to be conducted "with a stronger hand" has, at first sound, an ominous ring about it, in view of the general interpretation attaching to a strong hand in the Balkans. Yet M. Lazitch, who not long ago was the victim of an attempted assassination in his own office in Belgrade, is accounted as well disposed towards the Macedonians, and the dastardly attack on his life was attributed to the Macedonian Revolutionary Organisation, in its desire to embroil the relations between the Yugoslav and Bulgarian Governments. It is, therefore, to be hoped that the new appointment implies that the Yugoslav Government is anxious to see its official policy interpreted more strictly on the spot by local officials. This policy has not always been what it is claimed to be at the present time; but there can be no doubt that, under one incentive or another, the Belgrade authorities are prepared to see a more enlightened régime introduced into Southern Serbia. In common with other parts of the Balkans this region has suffered quite as much from the incompetence and irresponsibility of the officials on the spot as from any vicious policy dictated from the capital. More might, perhaps, have been done to see that the Government's intentions were not so deliberately thwarted; but it is satisfactory to know that for some little time past an improvement in the situation has been recorded. If M. Lazitch's appointment is to represent Yugoslavia's *quid pro quo* for a more careful supervision in Bulgaria of the Macedonian Revolutionary Organisation's activities, then it is permissible to hope that a brighter day is in store for this vexed region, and, in consequence, for the whole of the Balkans.

Land Reform in Egypt.

The Egyptian Prime Minister, Mohamed Pasha Mahmoud, has lost no time in giving effect to his Government's intention to meet some of the country's more pressing needs and to justify its claim to be a business Government. Last Saturday he inaugurated the Cabinet's land programme by distributing in Fayum two thousand acres of State domains among peasants owning less than ten acres. Under the proposed scheme the cultivator pays one-tenth of the purchase price in cash and the remainder by instalments spread over fifteen years. In all fifty thousand acres are earmarked at present for distribution in this way. Not the least part of the interest attaching to the Government's action lies in the fact that it constitutes official recognition of an agrarian question in Egypt. In view of the rapidity with which the population has increased and of the necessarily restricted area which can be cultivated owing to dependence on Nile irrigation, it would be strange indeed if Egypt had escaped such a question. It is presumably not contended by the Government that the distribution of these State Domains will solve the problem, which undoubtedly will call one day for far more comprehensive treatment. As

a preliminary measure, capable of immediate adoption, the move is a sound one. Anything in the way of a complete agrarian reform, such as has been introduced in Roumania and elsewhere, must follow a careful study of the subject with due consideration of Egypt's special circumstances. Both in Roumania and Yugoslavia reform was complicated by the different conditions prevailing in different parts of the two countries. Egypt presents a homogeneous whole, and will be in a position to give more generous compensation to expropriated landholders than either of the two Balkan States could. It will be of interest to see whether the success attending Mahmoud Pasha's first steps in this direction will encourage him to tackle the bigger problem. There can be little doubt that the whole body of fellahs would rally to the support of the leader who could carry through a well-thought-out scheme of land reform.

Abyssinia.

The assumption by Ras Tafari, Prince Regent of Abyssinia, of the title of King, which is reported to be imminent, implies no change in the political status of the country, but must be presumed to be intended to regulate the Prince's anomalous position. He is Regent and Heir to the Throne, but, as the Empress Zauditu is titular ruler, Ras Tafari has had to depend on his own abilities and personality to raise himself above the level of other Rases and to keep within his own hands the powers of government. The Sovereign of Abyssinia bears the title of Emperor of Ethiopia and King of Kings, a resounding phrase that seems in the case of the present Empress to have troubled grammarians as to whether the feminine of the secondary rank should be "Queen of Kings" or "Queen of Queens." A definite ruling on this point in favour of the former alternative might conceivably be used to embarrass the new King; but fortunately the relations between the King-Regent and the Empress, who is his first cousin once removed, show a tendency towards steady improvement, and it is to be hoped that his assumption of the higher title is evidence of a period of closer co-operation.

The Wailing Wall.

Few Days of Atonement now pass in Jerusalem without some violation of the feelings of Jews or of Muslims or of both. Nor was there any exception this year. For on September 24 the orthodox Jews, in accordance with Judaic regulations, had taken measures at the Wailing Wall, to separate the male from the female worshippers. Unfortunately they bethought, for this purpose, of erecting a wooden partition at the foot of the Wailing Wall. Now this area does not belong to the Jewish community but to the Muslim Wakf; the erection constituted, moreover, an infringement of the rule that nothing in this thoroughfare must impede the passers-by. The Muslims appealed, therefore, to the police to remove the offending partition. This the authorities did, with the inevitable result that the Jewish service was interrupted. The Jews thereupon protested strongly; and two days after this incident the Government issued a *communiqué* explaining that, although the Jewish attendant, on the eve of the Day of Atonement, had promised that the partition would be removed, it had not been so removed, and that the police were, therefore, compelled to take away the partition, which was in itself a violation of the *status quo*. This official explanation, however, has by no means appeased the Jewish community, who have taken the opportunity to contrast the treatment by the authorities of their Faith with that accorded to other Faiths in the Holy Land. To the outside observer this all sounds rather petty, but no one who is familiar with the daily life of Jerusalem—which, despite many changes since Palestine came under the British Mandate, has in many respects remained unaltered for centuries—will fail to realise how much such things weigh in the minds of the local community. Rivalries as between the various Christian sects

in the Holy Land are far from dead yet; nor does the solution of this persistent problem of the Wailing Wall seem to be yet in sight.

After the Jidda Conference.

It appears to be generally thought, on the Iraqi side, that little more will be heard of the frontier dispute between Iraq and Najd which a few months ago set so many facile tongues a-wagging and even more empty pens a-scribbling. The differences between the Government of the Hijaz and Najd, on the one hand, and the British Government and the Government of Iraq on the other, have been most amicably discussed, although they are by no means resolved: King Ibn Saoud has made his point; and the posts in Iraq have been duly erected. Nor is there any fear that, during the next few months, at any rate, there will be any violent manifestation of Wahhabi disapproval of these posts. What may happen when the normal winter raiding season begins is a matter of opinion, but it is to be hoped that counsels of peace will prevail. The King of the Wahhabi now understands, although he can hardly be expected to sympathise with, the position which the Iraq Government has taken up, and it is not inconceivable that he may be able to persuade his *Akhwan* that their rights, immemorial and real, will not be infringed by these posts on the other side of the frontier—or, as they may prefer to put it, towards the Iraqi end of their customary wanderings. The whole problem of the desirability, the practicability of having a hard-and-fast line to demarcate the boundary through the desert is, of course, another matter; but since the Iraq Government and its British Advisers have decided in one way, it is to be trusted, for the sake of peace that King Ibn Saoud will be able to impress upon his tribesmen the wisest procedure to follow.

Britain, Iraq and the Hijaz.

No harm is ever done in listening to the other side in a dispute, and for this reason the whole-hearted support which our well-informed correspondent in Jidda gives to the contentions put forward by King Ibn Saoud in his recent negotiations with Sir Gilbert Clayton may well stand side by side with the opposite view which has been consistently endorsed by THE NEAR EAST AND INDIA. We may hope, indeed, that King Ibn Saoud has among his subjects those who no less whole-heartedly are supporting the British standpoint and are urging him to make some concession to the spirit of progress and extra-Desert mentality. The tradition of the Desert recognizes no

frontiers and its denizens think in terms of wells. With the inexorable march of time civilization in the Arabian Peninsula is setting a ring fence round the desert and in the interest of peace has called for frontiers. That wise Desert statesman, King Ibn Saoud, has recognised the force of the argument, but is not prepared at present to carry his recognition to its logical conclusion. He could not bring himself at first to accept the Treaty of Muhammarah with its hard-and-fast frontier, but subsequently was persuaded to agree to it on the understanding that his tribes retained their rights of grazing and watering on both sides of the frontier. With this arrangement, all was well for a time. Then came the day when Iraq in the cause of law and order within its own territory proceeded to set up police posts, necessarily near wells, at a distance of sixty or seventy miles from the frontier. The action was resented by King Ibn Saoud's tribesmen, who raided the unfinished posts and killed the workers—not wholly after desert methods, because women and children were also killed by them. Negotiations between Great Britain and the Hijaz followed, but came to nought, because, as our correspondent points out, according to desert mentality the principle counts for more than practical considerations, when it is a question of determining whether an agreed neutral zone should be limited to fifty or a hundred miles or must be vaguely regarded as co-extensive with the Continent of Asia. To-day King Ibn Saoud favours the latter view, and Great Britain the former. The matter hardly calls for tears whether in the Hijaz or in Great Britain, for time must be given for the King of the Hijaz and Najd to adjust yet further his views to the Western conception of frontiers, with or without fixed neutral zones.

Suspense in Syria.

The peoples of Syria would in all probability get the shock of their lives if a definite decision were made upon their country. For they live in a series of suspenses. They waited long for their Constituent Assembly, which had no sooner been convoked than it was suspended; they drew up a Constitution, which, however, was so unacceptable to the Mandatory Power that discussion of it was peremptorily postponed. And now they are awaiting the return from France of their High Commissioner, M. Henri Ponsot, who unquestionably is facing his extremely difficult position of endowing Syria with a polity with considerable courage and pertinacity. What decisions will be reached in France upon such disputed questions as the control of Syria's foreign policy, the

right to proclaim martial law, and so on, we can only guess: the important matter is, how can France's responsibilities as Mandatory Power be made to tally with the expressed desires of the Syrian Nationals? No jibing is now possible at the lack of generosity on the part of France towards Syria; she has, indeed, shown herself to be very generous towards a people, or set of peoples which does not, apparently, quite know its own mind. The Permanent Mandates Commission, in fact, has gone so far as almost to reproach the Mandatory Power with an excess of liberalism, and it has just recorded its hope that, until the moment for the emancipation of Syria by self-government arrives, France would "retain such a measure of authority as would fully enable it to continue to lead and superintend this evolution and fulfil all its obligations to the League." Few people fully appreciate, indeed, the change that has recently come over Syria, nearly all the inhabitants of which now perceive that collaboration with the Mandatory Power (which, to its credit, be it said, has responded worthily to this change of sentiment) is the only possible policy.

INDIAN NOTES.

The Departure of the Commission.

"The steady backing of all parties in the State," which Sir John Simon, in his farewell speech at the Aldwych Club, rightly cited as one of the advantages which he and his colleagues enjoyed in facing the difficult task before them, was emphasised by the scene at the Commission's departure on Thursday. Mr. Ramsay MacDonald, to whose "bold and clear pronouncement at a critical moment last February" Sir John Simon made particular reference, was perhaps the outstanding figure in an exceptionally representative gathering. Unfortunately, while the political situation throughout India has undergone, as we pointed out last week, a decided change for the better, the atmosphere in the Assembly has by no means improved. And the tension has been increased by the attitude of the Speaker, Mr. V. J. Patel, who has scarcely fulfilled his early promise and, possibly inspired by the success of his brother's tactics at Bardoli, has departed somewhat far from the admirable sentiments with which, an avowed Swarajist of the most extreme type, he prefaced his somewhat unexpected acceptance of that office three years ago. The latest example of political intransigence was the Government's defeat on the Public Safety Bill for the expulsion of Communist agents, with which our Bombay Correspondent dealt at some length in last week's issue. According to a Reuter telegram from Simla, the Government have decided, following the dramatic rejection of the Bill on the casting vote of the Speaker, who ruled that the case for the Bill had not been established, not to proceed further with the measure during the present session. Although the ostensible reason for the postponement, also, of the Bill to amend the Indian Penal Code, with the object of penalising the publication in the Press of statements calculated to disturb peaceful relations between the Government of India and foreign States, is the indisposition of the Foreign Secretary, we are afraid the tension in the Assembly is at least a contributory cause. Opposition to the Public Safety Bill is simply an expression of a comprehensive annoyance with Government in general, and with Sir John Simon in particular, and there is no reason to suppose that Pandit Motilal Nehru and Mr. Srinvasa Iyengar would have the slightest sympathy with any attempt to set up a Communist régime now or hereafter in India. But the attitude of Sir Purshotamdas Thakurdas, who strongly opposed the second reading of the Bill on the ground that the Government had contributed to the causes of industrial unrest by not fixing the rupee at 1s. 4d., shows to what ridiculous lengths even the most level-headed members of the non-co-operation party are prepared to go at such times.

THE BALKANS FOR THE BALKAN PEOPLES.

Once again it is M. Venizelos who seems to hold the destiny of the Balkans in his hands, and for a month he will have turned his back on his own country with its numerous pressing problems in order to engage abroad in the congenial play of international politics. Fate has not been uniformly kind to M. Venizelos, and in a less enlightened age he would be reputed to be the unconscious object of the attentions of two fairy godmothers, the one good and the other evil, with alternate sway over his fortunes. Much of the good that he has done has been short-lived, upset, as it might be, on the usurpation of power by the evil godmother. His genius for strife brought him into prominence in Crete; when he formed the Balkan League it was to declare war on Turkey. At the beginning of the General War Greece had an opportunity of maintaining neutrality for a period, but at the bidding of M. Venizelos threw it aside, at the cost of a rift in the country which has not yet been wholly filled in. His next short cut to war was the creation of a Greater Greece carved out Turkish territory in Asia Minor, but, like the Balkan League, that too proved of brief duration. From this point, however, the good fairy godmother would seem to have come into her own. M. Venizelos left Greece long enough for the country to realize that it had no one to put into his place. The political peace that had been won without him had proved to be the unruffled surface of stagnation, and the last of the Greek Republic—virtually his own creation—promised to be worse than the first. Into this false calm the veteran statesman threw a few well-directed stones, and the whole of Greece vibrated to his challenge. The people, tired of two years' inertia, rallied to his support, so that to-day the Greek State is M. Venizelos, to a greater degree than it has ever been before. One effect of this concentration of power is to disguise, as it were, with the cloak of an artificial national unity the urgency of domestic problems, and to provide M. Venizelos with an excuse to indulge his flair for foreign affairs. The inter-relation of domestic problems and foreign affairs is often close, and for many States it may be a moot point in which order the two difficulties ought to be taken in hand. M. Venizelos has decided without hesitation in favour of settling foreign questions first and has left Athens on a visit to Rome, Paris, London and Belgrade.

The order of the day for the Greek Prime Minister is no longer war, but peace. Before 1914 peace was a much depreciated stock in the world's markets; to-day it is a word to conjure with in all capitals, and M. Venizelos has it in his power to place peace in the Balkan Peninsula on a sounder footing than it enjoys at present. He has allowed his Oriental shrewdness to assert itself

in beginning with Italy. If the Balkan States were wholeheartedly united, Italy would mean little more to them than a useful and convenient neighbour for trade purposes. The States, however, are not united, and, as far as Greece is concerned, if not all the others as well, the main difficulty is Yugoslavia. It is an obvious tactical move, therefore, on the part of M. Venizelos, on the eve of delicate negotiations with the Belgrade Government, to emphasize Italy's good will for Greece. The actual terms of these agreements count for less than the fact that they record that an understanding, more or less close, exists between the two countries. If differences between two small Powers were allowed to reach a critical phase, the advantage directly or indirectly would lie with the State that could claim the more practical support of a Great Power, and a formal treaty, however innocuously worded, presupposes the will to lend such support. Assurances to the effect that the Italo-Greek treaty is essentially an instrument of peace are hardly necessary; certainly they would not justify M. Venizelos's railway fares to Paris and London, in order to deliver them in person to the French and British Governments. The actual terms rule out any other interpretation. Both M. Venizelos and Greece have had to make sacrifices for Italian friendship; the former in receiving nothing to set against, in the eyes of his countrymen, the drawing of the veil over the Corfu incident, and the latter in abandoning their kinsmen of the Dodecanese. M. Venizelos is undoubtedly right in allowing nothing to stand in the way of the treaty with Italy, and it is to be hoped that the Greek people will be confirmed in this opinion after his visit to Belgrade.

No opinion can be formed at this stage as to the course that the negotiations between the Greek and Yugoslav Governments are likely to take. M. Venizelos, it is certain will act fully up to his new rôle of peacemaker, using all his powers of persuasion to bring about an understanding over the questions of the Salonika Free Zone, the Ghevgeli Railway and the other points at issue between the two countries. The only chance of settling all Balkan disagreements and bringing the different States into a reasonable spirit of unity lies in sinking their relatively petty squabbles in some great over-ruling advantage that will instinctively appeal to them all. Such an advantage consists in a federation, political and economic, which will raise four or five Minor Powers, acting together, to the status of a Great Power. When the different peoples appreciate this aspect of the question their present differences will fade into insignificance. Unfortunately they have persuaded themselves that federation is impossible, until they have eliminated the present differences, and they are, therefore, approaching the Balkan problem from the wrong end. M. Venizelos is in a position to point to the better way. Federation—on however loose a basis at the beginning—will not only help to solve inter-State disagreements, but will also leave harassed Governments more time to devote to urgent problems at home. In regard to their respective domestic situations no Balkan State can claim to adopt a superior attitude towards its neighbours, and in most cases the political trouble has an economic basis. Even with an Opposition reduced to almost Turkish limits M. Venizelos will realize that the interests of Greece require his presence in the country. His business with Yugoslavia, it is true, is important, and it may be that the only way to reach the Belgrade Government was *via* Rome. Visits to Paris and elsewhere, on the other hand, tend to distract the attention of the Greek people from the more urgent business that they have on hand. The First Balkan League was brought into existence without entailing a day's absence from Greece for M. Venizelos, and a second and better federation, which has no need to be formed in secret, can also be created from Athens.

Baghdad, September 9.

Parliament.

Criticism of the Budget continues apace and with undiminished ardour on the part of the Opposition. A vernacular paper, encouraged, doubtless, by the vigorous attacks on the Government in Parliament, caused some stir on August 30 by announcing a grave Cabinet crisis and the imminent fall of the Government. A *communiqué* in contradiction was issued the same night by the Press Bureau.

Discussion in the House of the work of the Health Department centred round the fact that only Rs.24,000 had been added to this year's budget for that service. Members pointed out the existence of liwas in which 200,000 souls were dependent on one qualified doctor, and urged the need for more adequate sanitary arrangements in the towns. One deputy remarked that, until the high rate of infant mortality was reduced, the population of Iraq would never increase sufficiently to provide

the labour required for large development schemes. The unequal distribution among the liwas of such funds as were available for the Public Health service was complained of. After so much carping, it was pleasant to find the deputy for Kut admitting that the department was "rendering valuable services unknown to us during the Turkish régime," and urging that, if doctors were expected to go to such remote stations as Rowanduz or Fao, they should be offered more attractive emoluments. The discussion closed with a reference to the large number of Indians still employed in the Health Service, a point which offered an opportunity to Mahmud Effendi Ramiz for an attack on the Government on the subject of the employment of foreigners in general.

The debate on the budget of the Ministry of Education led to an interesting discussion opened by Saiyid Abdul Mahdi Effendi, ex-Minister of Education, with a criticism of the "defective" system at present in force. He complained of the grave lack of technical instruction—"our schools are a factory for the production of officials and employees only"—and urged that the scholars should be taught something of practical use in life. He also remarked that illiteracy still prevailed in large areas of the country.

Amin Zaki Beg, another ex-Minister of Education, made a long speech, in the course of which he said that the Government was not paying equal attention to all liwas in respect of the provision of schools; only six new schools were being opened this year, the number throughout the country was inadequate to its needs, and was, moreover, unequally distributed. He urged the necessity of introducing school books locally compiled under an expert committee, and recommended that new taxes should be levied purely for educational purposes. If Basrah levied one rupee per ton of dates, and Amarah one rupee per ton of rice, these liwas would each have at least a lakh of rupees a year to be spent by their local authorities on education.

Questions were asked in the Chamber of Deputies as to what action had been taken in the matter of some cars and lorries commandeered in Persia from Iraqis by the Persian authorities. The Prime Minister replied that the British Minister in Teheran had, on the request of the Iraq Government, made immediate representations to the Persian Government, and had secured the release of the cars. He was assured of the Persian authorities' good will and sincere wish for an understanding with Iraq.

The Iraq delegation has returned from Jidda, but the Prime Minister has not yet been able to fulfil his promise to Parliament of an early statement on the results of the Conference.

Criticism has again been levelled in the House of Deputies against the Ministry of Interior for its continuance of the practice of paying subsidies to tribal shaihs for the maintenance of law and order. A proposal to discontinue the allowance of Shaikh Ajil al Jowwar (Paramount Shaikh of the Shammar) was, however, rejected by the House.

The Haifa-Baghdad Railway.

The proposals made to the Iraq Government by Lord Wemyss, who recently visited Baghdad, are of the greatest interest to all who are watching the development of Iraq. If the company of which Lord Wemyss is a director undertakes to construct the Iraq section of the Baghdad-Haifa railway—a distance of some two hundred and fifty miles, the other section being in Trans-Jordan and Palestine—a tremendous step will have been made towards linking this country with Europe, without any financial burden to herself. Baghdad, with the prospect of becoming once more a great trading centre and a vital point on the world's highway to India, sees a rosy future opening ahead.

Conscription.

At a private meeting of the Progressive Party, convened by the Prime Minister, the Kurdish deputies made an emphatic declaration of their firm opposition to any form of enforced military service. In spite of this, it is understood that the text of the proposed Conscription Bill is to be circulated among the members of the party during the recess, in order to enable them to decide whether or not the Bill should be submitted to Parliament.

Water Supply for Karbala.

An attempt is being made by the Railway authorities to solve the problem of water for Karbala, where the perennial shortage is accentuated in the pilgrim season by the arrival of thousands of Shiahhs to visit the shrines of Husain and Abbas. A number of wells are to be sunk near the railway station in the expectation of finding fresh water sources, and it is hoped to have a good provision of drinking water before next Muharram.

Baghdad Customs House.

A proposal has been made to collect the customs duties on all sea-borne goods at Basrah instead of on arrival at Baghdad, in order to obviate the necessity of building a new customs house and wharf when the permanent bridge across the Tigris is built at Baghdad. By making such a change the Government would save not only the costs of building—estimated at fifteen lakhs—but at least two lakhs of rupees a year for the future. The merchants of Baghdad, however, at a meeting of the Chamber of Commerce, unanimously condemned the scheme in a resolution the terms of which the Acting Director of Customs was asked to convey to the authorities concerned. They contended that by clearing their goods at Basrah duty-paid, and then bringing them up to Basrah for sale, they would lose interest on the money paid by them at Basrah for clearance, to the tune of a yearly total of nineteen lakhs or more. An increase in the earnings of the port of Basrah, or the takings of the Railways, would entirely fail to console the Baghdad merchants for their large personal losses.

— ♦ ♦ ♦ —

THE HIJAZ.

Jidda, September 10.

The Conferences at Jidda and Haifa.

In resuming my letters to THE NEAR EAST AND INDIA I may, perhaps, be allowed to explain that their interruption, far from being accidental or due to a press of other work, was due to my consciousness that your outlook and policy must debar you from giving the hospitality of your columns to the views which I felt bound to express, if I was to express any. No one is or has been more anxious than myself to see a satisfactory solution of the difficulties which have arisen between the British Government and King Ibn Saoud. At the same time it must have been patent to any intelligent observer that no solution would be possible, unless the question of the forts could be disposed of by the simple process of their demolition, if only as a preliminary to the reconsideration of the real implications of Article 3 of the Protocol of Uqair, which King Ibn Saoud quite honestly regards as having been infringed. All other matters were comparatively simple, but this was a basic factor of the situation, which it was impossible to ignore; and those who may have harboured the hope that it was not so have been enlightened and disappointed by the result of Sir Gilbert Clayton's negotiations, which were carried on throughout in the atmosphere of genuine friendliness, as was to be expected from the character of the two chief negotiators. That King Ibn Saoud is left with a feeling of bitter disappointment at the attitude of the British Government cannot for a moment be gainsaid; that he will not countenance any disturbance of the frontier peace by his subjects in consequence of his disappointment need not for a moment be doubted. What is far more important is the unfor-

tunate impression created by the failure of the negotiations far and wide throughout Arabia, which inevitably remains suspicious of the aims of British policy. The fallacy of the British standpoint is, surely, evident when the Government in the same breath declares its inability to reconsider the question of the forts on the ground that such a step would infringe the sovereign right of the Iraq Government to do exactly what it likes in its own territory, and suggests that Article 3 of the Uqair Protocol envisaged the prohibition of forts only within 25 miles of the frontier. Does it really affect the principle at stake, if the zone in which the Iraq Government may not do exactly as it likes in its own territory is 25 miles wide or 50 or 100? The argument is obviously *ad hoc* and entirely defeats itself, and the limitation of the sovereign rights of a country is a matter entirely within such country's competence in agreement with its neighbours. Is not the recent treaty for the renunciation of war as an instrument of policy a case in point? It is fortunately not yet too late to remedy or minimise the effects of the failure either by the executive action (which is, perhaps, not to be expected) or by arbitration, and it is to be hoped that the British Government has not altogether barred the door to the latter alternative. So much for the Iraq frontier—may peace be upon it.

The Haifa negotiations for a settlement of the long outstanding problem of the Hijaz Railway were doomed to inaction from the beginning, as it is evident that the Mandatory Governments have not the slightest intention of divesting themselves of the smallest particle of the executive management of those parts of the line which lie within their territory. The Lausanne proclamation of 1923 is but the ghost of a forced stillbirth haunting the lobbies of mock-conferences. It is inconvenient that such a pronouncement was ever made and it is difficult to understand why it was ever made. The proposed Muslim committee sitting at Madina to advise Great Britain how to manage the line could never have been anything but a howling farce. But there are more serious aspects of the matter. Up to last year France held the lion's share of the locomotives and rolling stock intended for the service of the line; Great Britain had the rest, except for a few derelict engines in the Hijaz. Both Britain and France realised that such a situation left them open to reasonable criticism, and last year, at a conference to which King Ibn Saoud was not invited to send delegates, a redistribution was agreed upon under which the material in the hands of the two Powers was pooled and divided up on a 50-50 basis between Great Britain and France. The Hijaz was somehow forgotten. Surely it is high time that the rightful share of the Hijaz should be restored to it as an act of conscience. If the Governments of Great Britain and France for strategic reasons cannot relinquish the administration of the Palestine and Syria sections of the line, let them say so openly and push the rightful proportion of the engines, etc., across the frontier to remove the blot on their escutcheons. Then the payment of the value of the line taken into secular custody to the Waqf exchequer would be a graceful act, abstinence from which is scarcely to be excused on the ground of financial stringency.

[Reference to the subject of the Hijaz Conference is made in Notes of the Week.—ED.]

The King's Departure.

After the breakdown of the Jidda negotiations the King proceeded to Mecca, whence after a few days he went to Taif. There he disposed of all business demanding attention, while awaiting the arrival of a new consignment of motor cars, and on September 4 the royal convoy of 62 cars left for Riyadh, where it was expected to arrive on the 7th by way of Muwaih Hakran, Shara and Marrat. His Majesty was accompanied by his two brothers, Muhammad and Abdullah, six sons and several nephews. During his stay at Taif a good deal was done to restore the wrecked prosperity of this charming hill-station, which suffered greatly when the Turks were besieged and bombarded there during the Great War by the Amir Abdullah's forces, and it had not recovered when in September, 1924, it was taken and partially sacked by the Wahhabis. Since then Ibn Saud has been too busy with other matters to visit the place or attend to its requirements, but the future promises to be bright.

Jidda in the Dog Days.

Its monotony broken by the interlude of the Clayton negotiations in early August, the hot weather has slowly but surely proceeded on its merciless course, developing venom for its tail. The summer here has a method of its own, scorning anything in the way of fantastic temperatures for the adornment of statistical tables and maintaining a steady simmer in the neighbourhood of the 90's, which produces the body heat which is called prickly, with other less desirable by-products. The humidity is appalling, and a few days ago all remembered records appear to have been broken by a 24 hours' spell during which the maximum temperature was 90 and the minimum no less than 85. Many of the local residents of Jidda have recently enjoyed the respite of a visit to the Taif highlands, and the greater part of the European population has departed on leave to Europe and Asmara in Eritrea. Some of the remainder contemplate an early flight and some few are doomed to stay to the bitter

end. And some of those gone or going return no more, having run their appointed course.

Shipping Topics.

The Khedivial Mail Line Company has replaced its old ships by two new ones named respectively the Taif and Telodi (for Tall 'Auda), which have now been running for more than a month and are an admitted improvement on their predecessors. The Company has, however, forgotten to consider the long-overdue reduction of passenger rates for which we have all been hoping so long, while the rival Italian company has gone a step in a retrograde direction by raising its fares to nearly the same level as the Khedivial. Four pounds are charged for an eighteen hour crossing to Port Sudan, but in this case a reduction is under active consideration; the £12 to Suez is a local grievance, while the Italian line's charge of £8 from Jidda to Massawa (36 hours) is considered exorbitant.

Another notable sea-mark of Jidda which has disappeared for ever is the old Hijaz Government steamer Radhwa, which after more than two years of seemingly permanent attachment to the bottom of Jidda harbour has departed in peace under the escort of a Dutch tug to be broken up in an Italian dockyard. It was practically the last solid link with the almost forgotten days of the Sharifian régime.

Aeroplane Flights.

Another such link has, however, survived to deserve more than a passing mention and perhaps to form the still small cloud of Wahhabi history in the air. Since May 1926, when they were overhauled by a famous British airman, the D.H.9 aeroplanes imported by King Ali to protect him from the Wahhabi invasion have lain idle in their hangar on a purely maintenance basis. It was assumed that they were no longer airworthy, but the fallacy of that assumption has been demonstrated during the past two months by a Polish engineer, formerly

HAIFA.

in the Sharifian Air Force and more recently in charge of the local ice-machine. With a courage and skill worthy of all commendation even in these days of astounding feats in the air he has not only succeeded in reconditioning the old machines, but also in vindicating their unimpaired capacity for flight. His trial flights over Jidda were followed some weeks ago by a journey to Rabigh (90 miles) and back, while at the present moment he is away on a more ambitious project—a trip to Yanbu and Wajh and back. It is undoubtedly a great achievement, which may yet exercise a profound influence on the history of Arabia.

Port Improvements.

The Condenser has long been in full working order and the Jidda water-supply may be regarded as assured against all the caprices of Nature. The last notable rainfall in Jidda was in November, 1926, and it is to be hoped that the coming season will make amends for the past two years of drought. On the 16th there was a good fall of rain at Mecca, where the streets were running with water, and on many days the skies here have been heavily overclouded by the skirt of the monsoon. A new condenser is in contemplation for Yanbu against next pilgrim season.

Prohibition.

Mention should, perhaps, be made of a recent extension and stricter application of the law against the importation of liquor into the Hijaz. Hitherto European residents at Jidda have been allowed the special concession of importing such liquor as they required for their own use under special permit, stating the quantities allowed in each case, though all trafficking in liquor has been strictly forbidden. Now the privilege has been withdrawn, and the importation of liquor has been forbidden to all alike, with of course the exception of the Consular representatives of the various States, who enjoy the usual diplomatic immunity. Prohibition is more likely to be successful here than it appears to be in the United States, and the new dispensation has been accepted with reasonable equanimity by those affected. Tobacco remains to offer such consolation as it can and its import is freely allowed, though public smoking is mildly discouraged. On the whole it must be admitted that the gradual oncreep of Wahhabi discipline over a population once notorious for its licence has done no harm. And the strict application of the religious laws of Islam can scarcely be urged as a reasonable excuse for abstinence from the pilgrimage by the overseas devout.

The Pilgrimage.

Statistics show that of rather more than 100,000 pilgrims who attended this year's pilgrimage 49 per cent. came from Java and Singapore, while Egypt and India came next with 14 and 13.5 per cent. respectively. No other country produced more than 3 per cent. of the total. It is still too early to estimate prospects for next year's gathering, but the probable absence of frontier scares and the fact that the culminating ceremony is expected to fall on a Friday suggest numbers at least up to the record of 1927. The motor-transport companies are at any rate preparing for a good season, and the new rules requiring that any company desiring to operate must have a minimum of 30 cars and must refrain from fare-cutting are likely to have good results. The fare to Madina and back has been reduced from £15 to £14 including the Government tax of £6. For residents in the Hijaz the fare is fixed at £5 only including the Government tax of £2. If a profit can be made out of the latter figure it follows that the pilgrim-traffic is a gold mine for the motor-transport companies. The high fares necessarily result in a great majority of the poorer pilgrims going by camel, and it is of course in the interests of the camel-owners that the fares have been fixed so high for those who prefer to go by car.

Cairo, September 22.

The Egyptian Press.

The chief political event of the week has perhaps been the suspension for four months of *Al Balagh*, the main Wafdist organ, and of *Rosa El Yussef*, the illustrated weekly, which the party created as a reply to the very effective political weekly of the Liberal Constitutionals, and the issue of a warning to the Wafdist second string, *Kawkab Ash-Shark*. Neither of the two papers now suspended can have any complaint that they did not know what awaited them, if they continued the course on which they had embarked. Twice already they had received an official warning to desist from the campaign of false news and incitement of public opinion against the Government in which they were indulging. But each warning seemed merely to excite them to further efforts in the same direction, and they have fully merited the punishment which has befallen them. *Kawkab Ash-Shark*, which earned its warning for deliberate incitement of the students, will also have to mend its ways, if it does not wish to meet with a similar fate.

It is indeed a surprise that drastic action was not taken earlier in regard to these organs, and the Government cannot certainly be accused of not having been tolerant or patient. Two courses were open to it. One to bring the offending papers and their responsible editors before the courts, or to deal with them administratively. The former course has been tried before on more than one occasion and, apart from the question of the resulting decision, it has been invariably found to have the regrettable effect of procuring widest publicity for the articles complained of as well as providing exceptional opportunity for counsel specially engaged by the parties to which the offending papers belonged, to indulge in court in political speeches and in statements which they could not have made outside and which under the law had to be reproduced *in extenso* in the Press. In the circumstances Mohamed Mahmoud Pasha has been fully justified in making use of the administrative powers which the law gives him.

The Government is credited with the intention of introducing a new law or a new set of regulations dealing with the local Press. Certainly something must be done, and that right soon, to put an end to what has become a really scandalous conditions of things. No one who had not actually perused the so-called political section of the Egyptian Press would credit for one moment the limits to which it had gone in the matter of abuse and mendacity, while the papers which lay themselves out to pander to the lower instincts of their readers by dishing up the most scandalous, very often quite unfounded, details of the private life of prominent persons have increased beyond all conception both in number and in licence. Nothing approaching it has even been seen in any other country, and the Nationalist leader, Hafez Bey Ramadan, was fully justified when the other day he refused to give an interview to the representative of one of the Arabic dailies on the ground that the tone of the Egyptian Press had become so deplorable that he had no wish to have any dealings with it. There are, of course, one or two exceptions, such as, for example, *Al Mokattam* which continues the even tenour of its way with the

temperate comments and in great measure accurate news for which it is so well known. But these rare exceptions merely make the backslidings of other organs and political sheets all the more glaring.

Sir Jagadis Bose at the Geographical Society.

The local scientific world had an intellectual treat this week, when it attended a lecture given at the Royal Geographical Society by the eminent Indian scientist, Sir Jagadis Bose. For this it had to thank the Minister of Agriculture, Nakhla Moutei Pasha, who had met him at Geneva this summer and, being struck by his conversations with him, considered that the passage of Sir Jagadis through the Canal on his way back to India presented a unique opportunity for Egyptians to hear something of the great work that had been done at the Bose Institute. Sir Jagadis gave a most illuminating account of his research work in connexion with animal and plant life, revealing that plants are every bit as sensitive as, in fact in some cases more sensitive than, human beings, and he positively electrified his audience by illustrating, by means of the delicate instruments invented by himself, the reaction of plants to poison and antidotes in every way similar to that of animal and human life.

The Foreign Legations.

The appointment of Hassan Nashat Pasha as Minister in Berlin in the place of Seifullah Yusri Pasha, who resigned last spring, of Sadek Wahba Pasha as Minister at Brussels, of Hamed Khulussi Bey as Minister at Teheran and Ibrahim Bey Ratib as Minister at Angora, have now been approved by the Council of Ministers and the decrees promulgated. Nashat Pasha, it may be remembered, went to Teheran about a year ago under protest, but with a promise that at the first opportunity he would be transferred to a post which would be more suitable to his health. It had been on the insistence of the Liberals, who claimed to have suffered very much at his hands during 1925-1926, that he was removed from the Palace and sent to Madrid, and in the circumstances his transfer to Berlin may be regarded as a further illustration of the impartial character of the present régime. Nashat Pasha's successor is the Governor of the Canal province, to which post he was recently promoted from Secretary to the Council of Ministers.

Sadek Wahba Pasha is the son of the veteran ex-Premier Yussef Wahba Pasha. For many years he was in the Palace, and from Chamberlain to His Majesty he was appointed Minister at Brussels when the Egyptian Diplomatic Service was first created in 1922. On the suppression of his post by the Chamber of Deputies he was transferred to Athens, where he has been ever since. The revival of the Brussels post has given great satisfaction to the Belgian community in Egypt, which fortunately understood what lay behind the decision of the Chamber and was able to clear the atmosphere in Belgium in circles which at first were considerably upset at this, to them, wholly unjustified action on the part of the Egyptians.

Meanwhile the post of Minister in London remains unfilled. The difficulty is, admittedly, not merely the personality of the man, but also the expense of the post. Only £E5,000 is allowed in the Budget, which is, of course, wholly insufficient to meet the heavy expenses attaching to a London Legation. Izzet Pasha, whose resignation is everywhere deplored, found that it was necessary to dive deep into his own pocket every year to make both ends meet, and there are not many men qualified for the post who could afford to draw on their own income to the extent that he did. The Egyptian Government is fully alive to the inadequacy of the emoluments, and these will be materially increased; but it has as yet not been possible to find a Minister for this most important Egyptian Legation abroad.

Ibrahim Bey Ratib is a welcome addition to Egypt's Diplomatic Corps. The grandson of one of Mohamed Ali's most capable officials, he comes of a good family, is very cultured and has a pleasing personality and a wide knowledge of the world's affairs. He recently came into prominence owing to the courageous manner in which he expressed his disapproval of the methods of the Wafd, of which he has always been an active adherent. He was in fact peremptorily evicted from the Wafd shortly after the dismissal of Nahas Pasha from the Premiership because at a meeting of the party he criticised as revolutionary the terms of the manifesto that it had decided to issue. Ratib Bey has, since early boyhood, been known for his independence of mind and moral courage, and it is gratifying to find that the services of a man of his qualities are being made use of by his country in the sphere where they can be turned to the best national advantages; for he has an intimate acquaintance with Turkish life and affairs, having lived in Turkey for some time during the War and having served both in the Turkish Army and after the Armistice as Professor in the Military School in Constantinople.

Lieut.-Col. L. V. Thurston has taken over the command of the Egyptian military hospital at Moascar, where he is at present stationed.

The Turkish Government has decided that from December in this year all Turkish newspapers must be printed in the new Latin characters instead of the Arabic at present in use.

Dr. Hafez Bey Affi, Egyptian Foreign Minister, has instructed Nashat Pasha, Egyptian Minister in Teheran, to proceed to Kabul to sign the Afghan-Egyptian treaty of friendship before leaving for home to take up his new appointment to Berlin.

The *Times* Sofia correspondent states that, according to reports in the Bulgarian newspapers, Bulgars in certain districts of the Dobruja had been forced to leave and to surrender their belongings to Roumanian colonists brought there from Greek Macedonia by the Roumanian authorities.

We learn from the *Sphinx* that Major E. W. Slaughter, who retired from the post of Works Manager of the workshops of the Ministry of Public Works in 1927, is being appointed to supervise the erection of machinery in the new Egyptian State Railways workshops that are to be built at Khanka. He will be engaged on a three years' contract.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 13.

Nehru Report.

The voices that are now loudest about the Nehru Report are those that have none too much love for it. The All-India Muslim League has refused to set its seal of approval on the Report, the disclaimer coming from Maulvi Mohammed Yakub, in the absence of Mr. Jinnah, permanent President of the League. A point that Maulvi Mohammed Yakub calls attention to is that, although two or three cablegrams were sent to Mr. Jinnah, asking for his blessing of the Nehru Report, no blessing was vouchsafed. "He was bound by the Calcutta resolution," says his wary leader, "and could not approve the Report in its present form." Elsewhere in the disclaimer, however, the Report is described as "a skeleton which would serve as a basis for discussion." It might make a poor feast, those articulated bones.

There has been a Muslim manifesto on the subject of the Report, and speaking of it, Mr. Fazal Ibrahim Rahimtoola said: "The statement issued by the Muslim members of the Central Legislature should show my Hindu brethren that, if they want Dominion Status, their methods should be radically changed. The Nehru Committee's Report has brought unity in the different Muslim camps." It will be as difficult, in fact, to get Muhammadans and Hindus to agree about the Constitution as to get people to adopt the same spelling "Moslem" or "Muslim," "Muhammadan" or "Mohamedan."

For a last word this week on this subject, be it added that Dr. Ansari, the President of the recent Lucknow Conference, has issued a statement in reply to the criticisms levelled against the resolution passed by the Conference, and, incidentally, against his conduct in disallowing certain amendments. You can secure unanimity of opinion, if you sit hard enough on the throats of those who do not agree with your views.

The Statutory Commission.

The cablegrams will have informed you of the Swarajist and Nationalist parties' reaction to Sir John Simon's telegram to the Viceroy regarding the composition of the Committee of the Central Legislature to co-operate with the Statutory Commission; the telegram in which it was suggested that the Council of State should elect its three representatives, and that His Excellency should nominate the other members. It has been described as a "slight on the dignity of the Assembly," and it does look a little like one. Nonetheless the Council of State, whose liberty to elect its three representatives no one can question, is attending to the matter, Sir Muhammad Habibullah taking the lead. A lobby rumour credits the Viceroy with the intention of nominating six members of the Assembly. The Central Legislature would then have its Committee of nine, as against the Committees of seven of the Provincial Legislatures. That might be felt as restoring the dignity that Sir John has slighted.

The Communists.

It now seems unlikely that the Public Safety Bill will be passed during the Simla session; for the Bill has met with a good deal of opposition. The Swarajists have learned the gentle art of obstructing. It is a gentle art. If the Government, deeming the Communist activity to constitute a public menace, introduce legislation, and, in proof of the soundness of their view that legislation is necessary, produce and publish such a document as Roy's letter, their strongest card in this present matter, all you need do, as a leader of an opposing party, is to stand up and accuse the Government of "dishonesty in publishing Roy's letter to create an atmosphere favourable to the Bill." That is easy to do. If the Government, for some reason, had withheld the letter, then dishonesty would have consisted in their doing that. If the Government say "black," that is their dishonesty; if they

say "white," that is the proof. No one considers what "dishonesty" means. Lala Rajpat Rai is abusing the Government—that is what the Assembly takes in, and whether his language is as strong this time as it was the last time. If it is not, then the Lala's sun is setting, and there will soon be a new leader.

"Forward" Newspaper.

Any talk of abuse brings *Forward* to one's mind. There is a word of that organ of public opinion in the Government Resolution on the Assam Police Administration Report for 1927; this word, namely: "A newspaper which allows its columns to be used merely as a gutter for unrestrained and libellous abuse forfeits all claim to serious consideration." Unfortunately there is little ground for thinking that serious consideration was ever what *Forward* was out for.

Khargpur and Tatas.

The Khargpur situation is reported to be easier, but not many details have been published. One does not know if the worst of the *goondas* are being "moved on" by the police, and one does not believe the place can ever be quiet for long until they have been. The long-drawn-out strike at Tatas' is ended. The terms of the settlement are in this morning's newspapers. They would not be of much interest to you.

Calcutta Bridges.

Calcutta, like London, has its bridge problems. I wrote about ours some months ago. Since then one of the Alipore bridges has sunk, and has had to be closed even to pedestrians. It carries the water mains; so it has that additional importance. There has been a joint conference, since I wrote, of representatives of the Local Government, the City Improvement Trust, and the Corporation. The Port Trust declined to participate. The conference appears to have been abortive, unless it served to clear the air a little. Even that is uncertain. The fact is, any question of a bridge hypnotises this City of Calcutta. Under hypnosis we can only moan and groan; we cannot decide what to do.

Rats and Bandicoots.

According to a writer in the *Indian Medical Gazette*, most Calcutta houses are overrun with rats, while bandicoots abound in most Calcutta compounds. May be, may not be. I have not seen a rat for longer than I can count, and, though this is my twenty-ninth year in Calcutta, I have still to set eyes on my first bandicoot. I have made friends with a long-tailed mouse and a short-tailed mouse, and leave four grains of gram for them every morning in a cup.

TOC H IN INDIA.

Mr. W. R. Elliot, secretary to the Toc H Council for India, who is on a visit to London, states that the work of Toc H is steadily growing in India. The first All-India Conference, during which the Viceroy is being initiated a member of Toc H, will be held in Calcutta in December. There are three branches and seven groups in India with one mark, and three new groups are in the process of formation.

"Too often in the past," Mr. Elliot states, "the young Briton newly arrived from home has cut adrift from his traditions as a result of having to spend his first year in India in the soul-destroying loneliness of a boarding-house. The mark in Calcutta has been getting down very successfully to the problem for 12 months past. As soon as the newcomer is discovered he is invited to a branch guest night. The branch happens to be a strong one, and includes men of all ranks in the life of the city. The new arrival finds congenial friends almost at once, and Toc H provides him with interests in his spare time. Three bedrooms in the mark are specially kept for him and his kind."

A great deal is being done by Toc H to help the poorer class of Indian. Four Indian members of Toc H in Madras have worked among prisoners in the gaol. Many European members are running Scout-troops for Indian boys. During a strike in an Indian mill area recently Toc H was called in to supervise the free feeding of the strikers' children.

The list of jobs which branches and members are doing in India is a long one, and among the most appreciated is the visiting of leper hospitals. In South India groups of Toc H in the hill stations of the Nilgiris and Ootacamund are bringing together planters, missionaries, and soldiers.

THE ANGLO-INDIANS AND THE STATUTORY COMMISSION.

(From a Correspondent.)

The position in India of those persons of mixed descent who are nowadays known as Anglo-Indians, and who were formerly styled Eurasians, is generally recognised as being one of peculiar and increasing difficulty. It is, therefore, satisfactory to see that, in stating the European case for the Simon Commission, the European Association has not forgotten this community. The legal position of the Anglo-Indian is, to say the least of it, curious. With reference to civil employment in the service of the State, he is defined officially as a Statutory Native of India; but for purposes of education, and for military service in the Indian Auxiliary Force, his status is that of a European British subject. This anomalous situation ought obviously to be cleared up. Recognising this, the European Association has wisely suggested that the legal position of the Anglo-Indian should be reconsidered; that the community should be definitely recognised as one of the communities of India; and that its members should be fully entitled, with the members of all other Indian communities, to enter into Government service. The Anglo-Indians themselves—in a memorandum which they have submitted to the Commission—agree that they should be classed as Statutory Natives of India, subject to the proviso that their military, educational, and economic claims are not thereby prejudiced. They point out, however, that where Government appointments are concerned the Indians refuse to recognise them as Statutory Natives of India; and, in support of this assertion they quote recent interpellations by Indians in the various legislatures. On the other hand, they are not, they complain, recognised as European British subjects when it is a question of obtaining commissions in the Army, although they are regarded as such for service in the Auxiliary Force. They are not numerous, as numbers go in India, seeing that there are not more than about 150,000 of them according to the last available estimate. It is natural to assume that the community should include all persons of mixed descent living in the country; but in point of fact it does not, as some of the best elements in it are able to classify themselves as Europeans. They cannot be blamed for so doing, as they thereby escape from the anomalous position in which the Anglo-Indian is placed. At the other end of the scale Christians, generally of pure Indian stock and belonging to the depressed classes, are apt to style themselves Anglo-Indians in order to better their social status.

Apart from this question of the legal position of the community, the Anglo-Indian problem is, as the European Association shows, largely economic in character. There are comparatively few avenues of employment open to Anglo-Indians or domiciled Europeans who, in consequence, are employed chiefly on the railways, in the telegraph and postal departments, and to a lesser extent in other branches of Government service. The Memorandum which the community has placed before the Commission states that 14,000 Anglo-Indians and 3,000 domiciled Europeans are employed on the railways. Of these about three-fourths are married, making the total number dependent on this source of employment about 68,000—counting three children to each family. In the Government Telegraph Service there are—according to the Memorandum—about 2,000 Anglo-Indians and domiciled Europeans or say a total, including wives and children, of about 8,000 persons. Both classes are also employed, but to a smaller extent, in other departments of the Central and Provincial Governments in commercial and industrial pursuits. The problem which the community has to face is largely economic, because the Anglo-Indian has acquired, and is maintaining to the best of his ability, Western standards of living. But he has to struggle in economic competition with the Indian, whose

standards are simpler and cheaper; and, in addition, he is being caught in the political contest which is in progress in India. Every section of the purely Indian communities is demanding the Indianisation at the earliest possible moment of all branches of the public service. The Indian insists that the European must give place to him in every State department. He does not hesitate to put the claim of race first, and the need for efficiency second. And by the term Indianisation he means the exclusion not only of the European brought from England, but also the domiciled European and the Anglo-Indian.

In their memorandum the Anglo-Indians assert that this clamour on the part of the Indians has seriously affected their interests. "Every measure of reform granted to India has witnessed," they say, "the process of Indianisation of the Services accelerated at the expense of the Anglo-Indians and the domiciled Europeans." They claim that there has been a continuous displacement in many departments, and they instance the Postal, Forest, Salt, Survey and Excise departments. The cumulative effect of this displacement has been, they maintain, to drive more and more Anglo-Indians into subordinate posts in the Railways, the Telegraphs and the Customs. But, they add, that even in these services attempts are being made gradually to push them out. It will be of course for the Statutory Commission to test the accuracy of these statements. But the fact that they have been publicly made is of itself evidence that the community is seriously alarmed at the present position. The remedy suggested in the memorandum is that there should be a definite reservation of employment to the community for a period of years, in those departments which have hitherto largely recruited Anglo-Indians and domiciled Europeans. This suggestion is put forward also by the European Association and it would seem to be worthy of attentive consideration. Another important recommendation which has been made by the European Association is that the whole question of European education in India should be examined. It is part of the prescribed task of the Statutory Commission to inquire into the growth of education in India; and to help it in this investigation it has appointed a special educational sub-Committee under the Chairmanship of Sir Philip Hartog. The European Association is proposing to make a representation to this sub-Committee, but in the meantime it has endorsed and supported the claim of the Anglo-Indians for special educational assistance. It is beyond question that the improvement of the educational facilities at the disposal of the community is urgently necessary. For both Anglo-Indians and domiciled Europeans are handicapped by the fact that their educational equipment is not all that it ought to be. Serious efforts have been made in recent years to improve the standard of European education in India, but much more still remains to be done.

When the Reforms scheme was introduced in 1919 representation in the Central Legislature and in the Provincial Legislative Councils was accorded to the Anglo-Indians. But so far as regards the Central Legislature it was restricted to one seat in the Assembly. The European Association does not hesitate to pronounce this to be insufficient—an opinion based on practical experience. The departments in which the community is chiefly interested are under the control of the Central Legislature; and it is thus in the Assembly that the community needs to be more strongly represented. The Association suggests that there should be four members to be elected respectively by the community in Bengal, Bombay, Madras and the Punjab.

The Maharaja of Patiala, Chancellor of the Indian Chamber of Princes, arrived in London on October 1 from the Continent, to preside over a series of informal conferences in Town of Indian Princes and statesmen with counsel, in preparation for the re-assembling of the Indian States Committee, under the chairmanship of Sir Harcourt Butler, on October 15.

THE INDIAN STATUTORY COMMISSION.

A most cordial send-off was given to Sir John Simon and the other members of the Statutory Commission on their departure from Victoria by the P. and O. Bombay express on September 27. It is expected that the Commission's second and final Indian visit will necessitate their absence from England for about seven months. Landing in Bombay on October 12, the Commission hope to have completed their tour and examination of witnesses by the middle of April, and to devote the remainder of next year to the preparation of their Report.

The Commission consists of Sir John Simon, M.P., Lord Burnham, Lord Strathcona, Major C. R. Attlee, M.P., Mr. Edward Cadogan, M.P., Colonel Lane-Fox, M.P., and Mr. Vernon Hartshorn, M.P. They were accompanied by Lady Simon, Mrs. Lane-Fox, Mrs. Attlee, Sir Amherst Selby-Bigge and Sir George Anderson (members of the Auxiliary Committee on Education), Mr. S. F. Stewart, Mr. J. W. Bhore, and Mr. R. H. A. Carter (secretaries), Mr. Robert Stopford (private secretary to Sir John Simon), and Mrs. Carter. Mrs. and Miss Hartshorn joined the party at Marseilles. Mr. E. W. Perry, I.C.S., one of the joint secretaries to the Commission, left a fortnight earlier to take over the Delhi office.

The Prime Minister sent a farewell message to Sir John Simon and his colleagues wishing them a successful tour, and expressing regret that his unavoidable absence at Yarmouth prevented his coming to the station. Lord Birkenhead, Secretary for India, was kept away by his family bereavement, but Lord Winterton, the Under-Secretary, was present with Colonel S. B. A. Patterson (Political A.D.C.), Mr. D. T. Monteith (private secretary), and Mr. G. H. M. G. Cartwright (assistant private secretary to Lord Birkenhead). Sir Arthur Hirtzel (Permanent Under-Secretary) and Lady Hirtzel are in Italy; but Sir Malcolm Seton, with Lady Seton, and Sir Louis Kershaw (the Deputy and Assistant Under-Secretaries) took part in the farewell. The High Commissioner for India has gone on official business to Berlin, but Lady Chatterjee was present.

Among others on the platform were Mr. Ramsay MacDonald, M.P., Sir Herbert Samuel, Sir Charles Hobhouse, Mr. A. Mackenzie Livingstone, M.P., Mr. Kingsley Griffith, M.P., Sir Montague Barlow, Major Crawford, M.P., Mr. A. S. Comyns-Carr, Mr. Percy Harris, M.P., and Mr. W. T. Layton.

The gathering also included the Maharaja of Burdwan, Lord Inchcape, Sir Harcourt Butler, Sir Muhammad Rafique, Major-General Sir Frederick Sykes (Governor-designate of Bombay), Sir Robert Holland, Mr. J. C. B. Drake (Secretary to the High Commissioner for India), Sir Stephen Demetriadi, Lady Strathcona, Sir K. V. Reddi, Sir Walter and Lady Willson, Sir Austin Low, Sir Edward MacLagan, Lady Anderson, Mr. L. F. Rushbrook Williams, Lady Selby-Bigge, Mrs. Bhore, Mr. A. L. Saunders, Mr. and Mrs. J. E. Ferard, Mr. E. Haward, Mr. S. K. Brown, Mr. R. K. Sorabji, Mr. Francis W. Hirst, Dr. Quayle, Mr. D. N. Kandalawala (Presidency Magistrate, Bombay), Mrs. Corbett Ashby (Women's Liberal Federation), and Mr. Rowlands Evans.

Immediately on landing the Commission will proceed to Poona, where the first sittings in India will be held. There the Commission will be joined by both the Bombay Provincial Committee, elected by the local Legislative Council, and the All-India Committee of the Central Legislature. Of the latter three members—Sir Sankaran Nair (the Chairman), Sir Arthur Froom, and Raja Nawab Ali Khan—have been elected by the Council of State. The remaining six members have been nominated by the Viceroy from among the members of the Legislative Assembly, viz., Sardar Shivdev Singh Uberoi, Nawab Sir Zulfikhar Ali Khan, Sir Hari Singh Gour, Dr. A. Suhrawardy, Mr. Kikabhai Premchand and Rao Bahadur M. C. Rajah.

Further details are now available of the Commission's tour programme, in amplification of the particulars given

in THE NEAR EAST AND INDIA of September 20. The Commission's stay at Poona will extend from October 12 to 28. The Punjab evidence will be taken at Lahore between October 30 and November 9. After three days at Karachi and three days at Peshawar, the capital of the North-West Frontier Province, the Commission will spend a week (November 21-27) in Delhi, and then go to Lucknow for the United Provinces' evidence (November 28 to December 11). Eight days will be spent at Patna, for Bihar and Orissa, and a short Christmas break at Calcutta will follow. After the Assam sittings at Shillong from January 2 to 11, the Commission will spend a fortnight at Calcutta for the Bengal portion of the inquiry.

Burma has been put late in the tour programme, as a general election for the Legislature takes place in a few weeks, and the new Council will nominate its Committee. The visit to the Province will extend from January 29 to February 15. For the Southern Presidency the Commission will sit at Madras from February 18 to March 3. The Central Provinces, which alone stands outside the circle of co-operation, is to be visited at Nagpur from March 13 to 23. It is intimated that while the place indicated for each Province is the headquarters at which the Commission will spend the greater part of their time, they may visit other places in the Province.

The final work of the Commission in India will be at the winter capital of the Central Government, Delhi, from March 25 to April 11. Sir John Simon and his colleagues will embark at Bombay on April 23 to return to this country for the preparation of their report, to which, if the Indian Central Committee so desires, its report will be attached as an annexe. It is essential that, subject to slight readjustments, the programme of the tour should be adhered to. In each provincial capital, with the possible exception of Nagpur, the Commission and Committees may comprise together 23 members; but there must be a time limit for interrogation of witnesses.

The Rev. W. E. Careless, rector of Farmington, Gloucestershire, and formerly Senior Chaplain, Indian Ecclesiastical Service, has been instituted to the vicarage of Pyrton, Oxfordshire—patrons, the Dean and Chapter of Christ Church, Oxford.

Mr. Seth Gourisankar Goenka, of Khurja, for the purpose of promoting the traditional methods of intensive specialisation in important branches of Sanskrit literature, has placed £11,250 at the disposal of the Government of the United Provinces as a trust fund, whence annual gifts may be awarded to pandits of distinction.

SCIENCE AND PROPAGANDA.

"DACIA." By the late Professor Vasile Parvan. (Cambridge University Press. Illustrated. 7s. 6d. net.)

"POLAND'S WESTERN TREND." By Ernst Hansen. (George Allen and Unwin, Ltd. 3s. 6d. net.)

The late Professor Parvan did more for the cause of research into the history and proto-history of his native land, Roumania, than any man now alive, though we may reasonably hope for further valuable results from the younger men whom he trained and infected with his zeal. He was an indefatigable field-worker and a careful student. His course of lectures in the spring of 1926 on the early civilisations of the Carpatho-Danubian countries was, therefore, an event of importance, and it is right that the University Press should publish a translation of them as a memorial of a great scholar and of his work.

In Roumania one hears much of the country being a Latin island in a sea of Slav barbarism, and nothing delights the Roumanian more than to talk of his Roman descent. Apart from the language, most foreigners profess some incredulity as to these claims, and it is a little unfortunate that the Professor seems to have thought it his duty, as a patriot, to shape his lectures into a defence of this theme. Almost all that does not bear on it has been omitted. Thus, instead of beginning at the beginning of things, we find ourselves being unaccountably started from the Fourth Bronze Age. There is a reason for this, as it was in this age that the Carpatho-Danubian countries first came into contact with the North Italian Villanovan form of art and civilisation. This contact was long and close and the interrelations between the two areas are well brought out and documented. The invasion of the Scythians introduced an element hostile to this intercourse and we can only regret that this period, yielding mainly facts which do not fit in with the picture which the lecturer desired to present, is passed over with far less exposition than we could have wished for. The same insistence on looking at things from one angle has, we think, largely marred the treatment of the occupation by Celtic tribes, which can hardly have made for civilisation in this area and for the opposite everywhere else. But we are grateful for the very interesting outline of the relations with the Greek Danubian colonies, due largely to the author's own researches.

It is with the arrival of the Romans on the scene that the book becomes less lop-sided. The lecture on "Carpatho-Danubians and Romans" is one of extraordinary interest. Specially we admire his proof of the penetration throughout the country of the Italian trader and man of business, the quick spread of Latin among the inhabitants and the large growth of peasant proprietorship among the veterans of the Roman army. Dacia was abandoned by the Roman Emperors long before the direct influence of Italy ceased to act on the other parts of the Danubian region, but the work had been done and its results are clearly visible to the present day. There is no evidence of any large settlement of Romans or even of Italians in the country, for the veterans were certainly mostly men recruited in or near the country. But they had gone through the mill and had been latinised by their army training. So, while we judge that Professor Parvan has failed to show that Roumania is racially in a different category from its neighbours, he

does show that the Italian tradition is one of very many centuries' standing.

While we are grateful to the translators for making this interesting work available to the English student and for many and very helpful illustrations which accompany it, we cannot but regret that the opportunity was lost of giving us that first historical sketch which Professor Parvan only could have given. We had hoped that academic circles, even in the countries round about the Balkans, would have been able to shake off the dread disease of propaganda which infests all other circles there in more dangerous forms. The book is good and innocent propaganda and full of interesting and valuable matter, but it is imperfect history.

In approaching Herr Hansen's book we find ourselves in troubled waters. Troubled waters mean mud and there is a lot of mud here. The decision of the inhabitants of Ermland and Masuria to remain Germans was a bitter pill to the Poles. So was the final decision about the "corridor" and about the partition of Silesia. It is, therefore, hardly to be wondered at that some foolish Polish publicists should agitate for the absorption of East Prussia and for the extension of Polish territory in Silesia. We do not gather, however, even from Herr Hansen's very one-sided presentation of the case, that many really serious Poles have any idea of putting these aspirations to a practical test. It seems a pity, therefore, to write an angry book on the subject with the view of convincing the public of Europe that the Poles mean mischief. Books of this kind can do no good and must necessarily tend to the growth of bad feeling exactly where it is the duty of every good European to do all he can to foster the growth of a precisely opposite tendency. In any case, one would have thought that the writer would have remembered the proverb about glass houses and would have refrained from throwing boomerangs.

C. S-W.

THE CHANGING EAST.

"EASTERN MEDITERRANEAN LANDS. TWENTY YEARS OF LIFE, SPORT AND TRAVEL." By Colonel P. H. H. Massy, C.B.E. (London: George Routledge and Son, Ltd. 12s. 6d. net.)

In the nineties of the last century Colonel Massy was appointed British Military Consul in Cilicia, and for the ten years or so that he remained in Turkey he travelled widely in Asia Minor. As he had already acquired a knowledge of Turkish before he took up his first post at Mersina, he had an exceptional opportunity for understanding the people among whom his lot was cast. The Armenian question was at the time engaging the attention of Europe, and part of Colonel Massy's duties consisted in befriending the victims of Turkish oppression. The Englishman was not a familiar object in Asia Minor in those days, although the name carried with it due respect. The presence of a British Consul walking about unconcerned in a town sufficed to keep a whole district quiet and to protect the Armenian population which, but for him, would have shared the fate of compatriots even then being massacred in other parts of Asia Minor. Thanks to a sympathetic nature which reciprocated the kindness and friendship that it evoked, Colonel Massy's days in Turkey stored up for him the happiest memories, and when in 1925 the lure of the East took him back again over familiar as well as new ground, it was with the same readiness to be interested in all that he saw and with the same powers of keen observation and understanding.

The present volume serves the double purpose of contrasting the Turkey of thirty years ago with the Turkish Republic of to-day, and of providing a running and readable account of what the traveller to the lands of the Eastern Mediterranean will want to see. Of the many books on the Near East that have appeared since the War we know of none that covers the ground so adequately and so attractively as this does. Colonel Massy has steered with complete success between the Scylla of

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

irrelevant detail and the Charybdis of guide-book monotony. The book, with its admirable selection of photographs, forms an indispensable companion to any tour in the lands with which it deals.

The first section of the book is devoted to conditions in Turkey as the author found them during his official career as Military Consul. Not the least of its value consists in the insight that it gives into the character, beliefs and manner of living of the people of those days. Outwardly the Turkey of thirty years ago is passing rapidly, but during his last visit to Asia Minor Colonel Massy was able to establish that behind all the changes linger some at least of the old life, the old customs and superstitions. His tour of three years ago took him to Palestine, Syria, Turkey and Greece, and thence home by the Adriatic. It is a tour that hundreds take in whole or in part every year; few, we venture to believe, are able to see these countries with quite the same amount of pleasurable understanding as Colonel Massy did.

There are many passages in the book which lend themselves to quotation, but we will be content with one which gives the author's impressions of Angora:—

I recall many impressions of my visit, but the affability of every class of person I met at Angora is certainly one of the most pleasing. I found the people more genial in this new capital than in any other place in Turkey I had visited since the War, which is saying much, because the Turks are affable wherever met. Nevertheless, life did not appear so easy-going and leisurely as it had been when I was in Turkey before. The old fatalistic spirit was disappearing except in more remote parts, and many things the old-fashioned Turk used to attribute to the act of God alone were being accepted at a more practical valuation. The Turk seemed to be gradually realising that he must work for what he wants and not wait for it to come to him from the Almighty. The expression *Insha-Allah*—if God wills—was not so frequently heard.

INDIAN NOTES.

(Continued from page 380.)

The Separation of Sind.

It is interesting to observe the importance which is being given in the discussions of Indian politicians to the future of the little Province of Sind. The separation from Bombay, which has been asked for by the Muhammadan majority in Sind, and has been supported by the Muhammadan politicians of Upper India, if only on the ground that it will increase the Muhammadan Provinces by one unit, however small, has now been accepted, at least in principle, by the Hindu leaders, in the Report of the Nehru Committee. That Committee regards the proposed separation as justifiable on linguistic and geographical grounds, as well as for the sound democratic reason that it is the will of the majority. They admit that the administrative and financial difficulties have not been sufficiently examined, and are apparently ready to accept as a fact the view that a financial deficit would face the Province, if separated from Bombay. They somewhat airily assert, however, that these are matters for subsequent adjustment, and that they do not affect the question of separation. The Hindus of Sind naturally regard themselves as deserted by their own co-religionists, and protest against any such separation without further preliminary inquiry and without safeguards for themselves. It seems, however, probable that Sind is merely being used as a pawn in the game, if not by both of the great religious parties, at least by the Hindu leaders. They probably believe, and are indeed alleged so to have informed their outraged fellow-religionists in Sind, that actual separation is so remote, and can be so delayed by preliminary objections, that its admission in principle can carry little risk with it comparable with the advantage of presenting an apparently united front on the general question of the Indian Constitution.

A Half-Way House.

In our opinion, the truth, as often, falls between the two contentions. Sind has no real sympathy, and only an

artificial connexion, with the people and culture of the Bombay Presidency. It suffers greatly from the control of its land revenue and irrigation from a distant centre, and it can never reach its full development except by the free play of its own talents and instincts. On the other hand, separation can hardly be made with safety without inquiry into ways and means. We are, however, inclined to believe that the financial difficulty is greatly exaggerated. Of course, the Province cannot bear the cost of what the anti-separationists somewhat irreverently call "the white elephant of a Governor." But there is some force in the contention that the Provinces of India should not seek, or be obliged, to conform to one standard of development or of government. Let each Province start at the stage of progress which it has actually reached, and proceed towards complete autonomy as its circumstances admit. In this particular case, Sind could well start as a Chief Commissionership, under the suzerainty of the Bombay Government and the Bombay High Court, and develop into independence of any other Provincial Government as its circumstances expanded. If there is a financial deficiency, which may well be doubted, the value of Karachi as a place of export and also as the air port of India, to the whole of India and to the Punjab in particular, might well entitle Sind to favourable consideration in the inevitable revision of the Meston Settlement. As matters stand, however, the future status of Sind is likely to remain the pawn of Indian politicians: and, like most pawns, is likely to meet the untimely fate of being swept aside when the bigger pieces are moved.

M. VENIZELOS ON TOUR.

M. Venizelos, Prime Minister of Greece, arrived in London late on the evening of September 30. He was met at Victoria Station by M. Caclamanos and the Staff of the Greek Legation, Mr. Oliver Harvey, representing Lord Cushendun, and by many members of the Greek colony in London. From the station M. Venizelos drove to the residence of Sir Arthur and Lady Crosfield in Hampstead, where he stayed the night. On Monday the Greek Prime Minister saw Lord Cushendun, Acting Secretary of State for Foreign Affairs, in order to explain to him the nature of the Italo-Greek Treaty of Friendship and Arbitration which he signed in Rome on September 23. Subsequently he was received by Mr. Baldwin, and on Monday evening was entertained to dinner at the Greek Legation. On Tuesday M. Venizelos left London for Paris.

On leaving Rome, M. Venizelos, accompanied by Mme. Venizelos and his son, was the guest at lunch of the King of Italy on September 25 at the Royal Villa at San Rossore, near Turin. On September 26 M. Venizelos arrived in Paris, where he had meetings with M. Briand. During his stay in Paris he also had two conversations with Dr. Marinkovitch, Yugoslav Minister for Foreign Affairs, with a view to preparing the ground for his visit to Belgrade, when he hopes to lay the foundations of an understanding between Greece and Yugoslavia.

The Greek Prime Minister has been invited to pay a visit to Angora on leaving Belgrade, in order to discuss with Ismet Pasha, the Turkish Prime Minister, outstanding points at issue between Greece and Turkey; but it is understood that he will return to Athens before his visit to the Turkish capital.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE TROUBLES OF THE SUCCESSION STATES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It was with the greatest interest that I read Mr. Arthur Andrews' letter upon "The Troubles of the Succession States" in your issue of September 13, and I trust you will allow me to justify some of the statements made by me in my previous letter, to which he takes exception.

In the first place, I note that Mr. Andrews' chief authority upon Hungarian conditions is Professor Oscar Jaszi, whose Communist sympathies were shown clearly enough in his article upon the Kossuth celebrations, published last April in the *Nation*. A writer who holds up to admiration as "the magnanimous Count Karolyi" the man who, more than any other, was responsible for the ruin of Hungary, can hardly be accepted as an impartial judge of conditions in that country. As well might one take for literal truth the fulminations of certain Socialist members against our own Government.

Secondly, I cannot help observing that the Slovaks of America, though they are obviously free from the coercion which their European brethren suffer at the hands of the Czechs, are for that very reason none too well qualified to speak in the name of Slovakia. Abuses which are real and vital enough to those who suffer them can scarcely be seen in their proper proportion across the Atlantic Ocean. Allow me, therefore, to quote the testimony of a Slovak of Slovakia—no less than Mgr. Hlinka himself: "The Czechs may continue to drag us before their tribunals but they cannot compel our silence. They can crush us, humiliate us—but we never will be Czechoslovaks. It is true that we are now nothing but slaves—the Slovak nation is a nation of slaves!"

This was the voice of the leader of the Slovaks six years ago, before the Czech Government had found means to stifle it. But though Hlinka, by his compromise with the oppressors of his people, has dropped out of the ranks of the Slovak patriots, his party has abated nothing of its protest against Czech exploitation, as is seen in Dr. Kromery's article in the *Slovak* of March 25, 1928: "The Slovaks are blotted out from amongst the nations, the Slovak language is declared to be merely a dialect of the Czech, the name of Slovak has been changed into Czechoslovak, and there is no end to the acts and procedures tending to make Czechs of Slovaks."

In this connexion it is interesting to note that the Czech language, through being so closely akin to the Slovak, exercises a power of assimilation which the totally different Magyar tongue entirely lacked, as is shown clearly enough by the fact that the Slovaks who emigrated to Hungary in the 18th century still preserve their language, their costume, and their national characteristics almost untouched; in fact, the Slovak villages in Hungary differ scarcely at all from those which I saw in Czechoslovakia, except that in general they appear more prosperous and better-kept, showing none of that industrial decline which is such a sad feature of the once-thriving towns in Slovakia proper.

I am glad that Mr. Andrews acknowledges that his knowledge of the Slovakian problem is largely second-hand, since otherwise I should find it hard to understand his giving credence to the base insinuations so sedulously propagated by the Czechs against Father Jehlicka. It is true that their propaganda, in common with their electoral methods, presupposes that all their opponents are venal (and in many cases, alas! their own success in diverting opposition by judicious bribery has encouraged them in this idea)—but there happen to be non-Czech elements to whom this convenient theory does not apply. I have the honour to number Father Jehlicka amongst my personal friends, and I am convinced that if Mr. Andrews were to hear him—as I have done—describing with tears in his eyes and a voice broken with emotion the sufferings of his beloved Slovak people in their struggle for independence, he would no longer credit the accusations of "treachery" and "dependence upon the Magyar propaganda office" quoted in his letter. Incidentally, I would point out that Hlinka's statement: "No real Slovak... calls for reunion with Hungary" is in direct contradiction with his own paper, the *Slovak*, which stated in a leading article on May 15, 1927: "The Slovak people throughout the whole of Slovakia, people of all political parties without exception, are saying 'We were better off in Hungary!'"

Since Mr. Andrews quotes Mgr. Hlinka in support of his assertions, I think it only right to give a brief account of the relations existing between these two Slovak leaders. Ten years ago they were acting in close co-operation; together they found the Populist Party and its organ, the *Slovak*; together they went to Paris in 1919 to demand a plebiscite for the Slovaks, or at least full political autonomy. When Dr. Benesh prevented them from accomplishing their mission, Hlinka first begged the Polish Government for military help to drive the Czechs out of the country; then, when this was not forthcoming, asked Jehlicka to go to Budapest, in order to treat with the Hungarian Government for Home Rule for Slovakia under Hungary. Three years later, being still in active opposition to the Czech Government, Hlinka issued the Memorandum of Zilina (August 3, 1922), entitled: "A Cry of the Slovak Nation, doomed to

death, to the civilised world." It was not until January, 1927, that, tired of fighting and seduced by material advantages offered to his party by the Prime Minister, Svehla, he abandoned his original programme, the chief point of which was full political Home Rule—whereupon the people left him. At the Communal elections in the autumn of 1927 he lost more than 100,000 votes, so that to-day he may be considered as a general without soldiers.

Mr. Andrews has completely missed the significance of the fact that most of these votes have gone to the Republican Agrarian Party, but those who are in close touch with Slovakian politics have no illusions as to the meaning of this transfer of votes *en bloc* to the Left. In a few years time, if nothing is done to check this tendency, the Slovak people will become completely Bolshevik, owing to the economic ruin following the exploitation by the Czechs, and the incessant propaganda of Czech Communists. And herein lies the great danger, not only for Slovakia but for Europe in general. "We want," says Father Jehlicka, "not to be a bridge leading from red Bohemia to red Russia, but on the contrary a wedge between these two empires."

I should be interested to see what figures Mr. Andrews can produce in support of his assertion that Slovak ports, trade and industries show a steady improvement, since all the statistics in my possession refer to Czechoslovakia as a unity. It is this very fact that all true Slovak patriots deplore, and they invariably maintain that, whilst the Magyars acknowledged the Slovaks and their language, the Czechs deny even their existence. The Czechoslovak Constitution does not even mention Slovaks, and the official statistics take no notice of them, recognising only Czechoslovaks. Moreover, the assertion is in direct contradiction with the evidence of Hlinka's own paper, which stated on July 30, 1927: "The new frontiers have brought us economically to the ground, and Englis, the Finance Minister, says that even what we still possess no longer belongs to us but to the Czechs."

In quoting Major Temperley's article in *Foreign Affairs* (April, 1928), Mr. Andrews omits the illuminating passage which states that ethnic considerations were deliberately ignored, in order that Czechoslovakia should have some measure of economic viability. "No one denied that violation at the time," admits Major Temperley. "What the Allies said was that in this case economic necessity was a more compelling force than ethnic justice." In other words, the very principles upon which the Peace Treaties were based had to be violated, before the artificial State of Czechoslovakia could be given any chance of existence.

In conclusion, I must point out that Mr. Andrews creates a false impression by his reference to the Magyars "exploiting the resources" of Ruthenia and Slovakia. The relation between these provinces and the manufacturing towns of Hungary was one of close economic co-operation, upon which the peasants of the mountain districts depended for their very livelihood. Not only did the trade in raw materials bring prosperity to the regions that provided them, but the agricultural workers in these districts were accustomed to spend the summer months working in the Hungarian plains, from which they returned with sufficient wages both in money and in kind, to support themselves during the winter. Now that this economic union has been destroyed, the Ruthenian peasants are on the verge of starvation. Even if the Czechs had made any real effort to compensate them for the loss of their natural market—and I maintain that there is no evidence to show that they have done so—not all their ingenuity can modify the bend of rivers or cause the valleys to turn westwards. Economically and spiritually, the provinces of Ruthenia and Slovakia are bound to Hungary, and no amount of propaganda can alter that fact. As for the racial bond between Czechs and Slovaks, it has been tersely summed up in the following phrase: "People speak of the brotherhood of these two races. . . . Cain and Abel also were brothers!"—I am, etc.,

Hotel Moderne, Paris.

DUDLEY HEATHCOTE.

September 20, 1928.

[We shall not be able to publish any more letters on this subject.—Ed.]

NEWS IN BRIEF.

The German Chargé d'Affaires in Durazzo has notified the Albanian Prime Minister of Germany's recognition of King Zogu and of the monarchy of Albania.

Dr. Hikmet Bey, the Turkish Communist who was acquitted at Constantinople several months ago on the charge of spreading Communist propaganda, was again arrested last week, as the police found compromising documents at his house.

The Foreign Office announces that the King has approved the following appointments in his Diplomatic Service:—

Mr. Charles Henry Bentinck, C.M.G., H.M. Minister in Addis Ababa, to be H.M. Minister in Lima; and

Mr. Sydney Philip Perigal Waterlow, C.B.E., H.M. Minister in Bangkok, to be H.M. Minister in Addis Ababa.

Among other diplomatic appointments, Mr. Bentinck served as Counsellor at Athens in 1920 and was four times Chargé d'Affaires there between 1921 and 1924. He was appointed Minister and Consul-General in Addis Ababa in 1925 in succession to Mr. Seeds, on the latter's transfer to Albania.

THE PRESS IN THE NEAR EAST.

The Italo-Greek Treaty.

As was to be expected, M. Venizelos's tour and the pacts which are to result from it are receiving close attention in the various countries of South-Eastern Europe. While due recognition is given to the value of each fresh agreement as a contribution to the maintenance of peace, it is not always possible to disguise an undercurrent of misgiving at Italy's penetration of the Balkan Peninsula, even where her devotion to peace and the honesty of her intentions are most stressed.

After recording all that is claimed for the Italo-Greek Pact in the two countries primarily concerned, *L'Indépendance Roumaine*, a semi-official organ of the present Rumanian Government, writes:—

"There is no need to doubt the accuracy of this declaration. Greece can desire and put into practice only a policy of peace. Italy has the same interest. But when this is said, it is difficult not to call attention to the constant progress that Italy is making in the Balkans, in regard to which progress the agreements with Albania, Turkey and Greece, as well as the very friendly relations established by the Rome Government with Bulgaria, mark the stages of penetration. 'The Balkans for the Balkan Peoples' does not signify 'The Balkans for the Serbs,' writes an Athens newspaper, and it expresses the hope that this truth has at last sunk home in Belgrade. It is certain that the actual situation to-day is due in part to the slightly imperious tone adopted by certain politicians of Belgrade during the first years after the War in regard to the other Balkan capitals. The realisation of a Greater Serbia, such as they had never dared to hope for, having given them exaggerated ideas, they succeeded in ranging against their country all the other States of the Balkans, which were resolved not to allow Yugoslavia to assume the hegemony of the Peninsula. Perfect equality between the Balkan States, absolute liberty and unchallenged integrity for each in its sovereign rights, such is the political doctrine which this part of Europe has proclaimed and imposed during recent years for each of the States concerned. Yugoslavia, racked for some time past by political crises and internal and external difficulties, and exposed notably to an extra-Balkan policy which, so it is believed in Belgrade, tends to isolate her and even to encircle her, did not delay to rally sincerely to this doctrine, but it was too late. The movement of reaction against the earlier Yugoslav post-War policy had already begun in the other Balkan States, and Italy's subtle diplomacy knew how to profit by the occasion. To-day, Italy occupies in the Balkans a position obviously more important than in the past. Her merit for having succeeded in concluding even with Greece a treaty of friendship is the greater because the Greek nation remains inconsolable over the loss of the Dodecanese."

The official organ of the Bulgarian Government is content with a more objective analysis of the position, but ending, inevitably, with the usual references to Bulgaria. *La Bulgarie* considers that M. Venizelos is anxious to dissipate the atmosphere of suspicion of Greek policy which the Italo-Greek *rapprochement* would seem to have created in "certain Western circles." It points out that the new Greek Government hesitated a long time before committing itself to the foreign policy of its immediate predecessors, and thus gave rise to reports abroad that M. Venizelos intended to abandon the agreement with Rome which had been initiated by M. Michalakopoulos. It continues:—

"The evolution of Greek policy, such as it appears to be since the recent electoral victory of the Liberal Party, imposes a categorical denial on all the pessimistic views of the international Press. Far from reacting against the policy of *rapprochement* with Italy inaugurated by the Cabinet of M. Zaimis, M. Venizelos has devoted himself to assuring its triumph in crowning, so to speak, the work undertaken by M. Michalakopoulos. What is more, the Cretan knows how to take advantage of his influence and personal connexions to assure for his country the advantages of an alliance with Rome without allowing himself to lose anything of his former acquisitions as a result of his close collaboration with the West. It is for this reason, no doubt, that he is visiting Paris. . . . It would be permissible to expect a real clearing up of the Balkan horizon, if certain proceedings of our confrères of the South and West did not throw a shadow on this attractive picture and did not often cause even the least sceptical minds to entertain doubts on the subject. Thus, while the Greek Prime Minister proclaims *urbi et orbi* his country's will for peace, the newspapers of Athens and Salonika carry on a campaign against Bulgaria, who is accused of plotting against the safety of her neighbours. Voices in unison are raised in the same sense in Belgrade. The recent Ministerial crisis in our country has furnished numerous Press organs with an occasion to try to win credence for the most unlikely fables and fabrications directed against Bulgarians. . . . This is not the way

to contribute to the normal development of inter-Balkan relations, so indispensable to the success of the common task of our Balkan peoples."

The Greek Press of all denominations approves of the treaty with Italy. The royalist newspapers, however, couch a tentative lance on behalf of the Dodecanese. Thus the *Proia* says:—

"... The signature of the Italo-Greek Pact by M. Venizelos constitutes, one may say, the happy realisation of a will manifested for a long time on one side and on the other. This fact has an importance which must not be forgotten. The Pact between Greece and Italy is not the isolated diplomatic act of a certain Hellenic Government, that of to-day; it corresponds with the political conception of the whole of the country, and with the comprehension, on the part of all Greek public opinion, of the interest attaching to a consecration of the friendly relations and pacific collaboration with Italy in the Eastern Mediterranean. This is what gives to the Pact its real importance.

One should also add that at the time when the Greek desire for consolidating friendly relations with a neighbouring Power is being realised, Greek public opinion does not forget that in this same Eastern Mediterranean exists a grievous point for Italo-Greek friendship. But the fact also that, even without forgetting this point, there is no one in Greece who disapproves of the signature of the Italo-Greek Pact, in the certainty that advantage to both nations will result—this fact, we say, increases further the importance of the document that is about to be signed."

The *Kathimerini*, also royalist, is more candid. It says:—

"We welcome without joy and without enthusiasm the announcement of the signature of the Italo-Greek Pact. Having several times uttered bitter truths on this subject, we consider it superfluous to return to the question. Assuredly, the fact of the conclusion of the pact of arbitration and friendship with a Great Power cannot be regarded as not satisfactory. But the agony of an enslaved people, the Dodecanesians, is a fact of much greater importance for us than the dubious advantages of a pact."

THE SULTAN OF MUSCAT.

The Sultan of Muscat and Oman arrived in Edinburgh on September 26 by motor car from Melrose. He was met on his arrival at the Caledonian Station Hotel by Lord Provost Sir Alexander Stevenson and Bailies John Hay and Dr. T. G. Nasmyth. Later in the evening the Sultan was entertained at a civic dinner in the City Chambers. The following morning he travelled by motor car from Edinburgh to the Trossachs, proceeding thence to Glasgow. The Sultan left for Ireland on September 28.

SALONIKA REUNION SERVICE OF REMEMBRANCE.

Last Sunday (September 30), the tenth anniversary of the Armistice with Bulgaria, the men and women who served in the Salonika Army during the War assembled on the Horse Guards' Parade, under Brigadier-General H. E. T. Kelly, chairman of the Salonika Reunion Association, for their annual muster and service of remembrance. They were formed up in a square for inspection by Field-Marshal Sir George Milne, Chief of the Imperial General Staff, who was the commander of the British Salonika Force. After the inspection a short service was conducted by the Chaplain-General. Members then marched in column of route to Great George Street Gate and along Whitehall, dividing to pass on each side of the Cenotaph, where wreaths were laid on behalf of those who served in the British Salonika Force and also by representatives of Great Britain's Allies in Macedonia. After passing the Cenotaph the column returned to the Horse Guards' Parade, when the national anthem concluded the proceedings.

The Spanish Government has decided to recognise the new monarchy in Albania.

Five lives were lost last week in a level-crossing accident near Novisad, where a train ran into a motor car.

Mr. Abdullah ibn Yusuf-Ali, C.B.E., I.C.S. (ret'd.), will read a paper entitled "Education in India: The New Outlook" before the Royal Asiatic Society, 74, Grosvenor Street, W.1, on Tuesday, October 23, at 4.30 p.m.

Mr. G. A. W. Booth, Royal Counsellor to the Egyptian State Legal Department, who was a Judge of the Mixed Tribunal from 1918-1926, succeeded Sir John Percival on October 1 as Judicial Adviser to the Egyptian Government.

The value of the new Albanian stamps which are being issued this month in commemoration of the coronation of King Ahmed Zogu will be added when the stamps arrive in Albania from Paris, where they are being printed, to avoid any possibility of fraud by means of stamps lost or pilfered in transit.

THE WEEK AT HOME

London, Tuesday Morning.

The Conservatives' Conference.

If the Conservatives are pleased with their Conference at Yarmouth, the only deduction is that our masters are not difficult to placate. For of inspiration, of the victorious rallying cry, there was little trace. One recognises, of course, that the Administration of Mr. Baldwin does not stoop to the wiles of the cheap-jack, but even so, more might have been made of the situation. The only things which formerly were uncertain and are now certain are that additional industries may be safeguarded; and that the Conservative Party will not go beyond public opinion in its fiscal policy: in other words, that expediency is to be the ruling factor.

But that which may have given the ordinary member of the Conference full heart for the next General Election was the fact that the Conservatives' organisation is now nearly perfect. This fact was illustrated in a timely way by the result of the Cheltenham election, at which the Conservative was returned on a minority vote. Organisation can almost always beat inspiration, and when inspiration among the Opposition is lacking, as it now is, a child can foretell the result. If no miracles intervene, such as a pact or common programme between Liberals and Labour, the return of the Conservatives next year is certain.

To assert, however, that there is any considerable enthusiasm at the prospect of another long tenure of office by the Conservatives, would be possible only to the good and, therefore, narrow Party man. The general opinion, as far as I have been able to discover it, is that the Conservative Party will be returned simply *faute de mieux*.

The Labour Conference.

Yesterday the annual Conference of the Labour Party began at Birmingham. The programme would seem to indicate that the Party has definitely committed itself to the doctrine of "gradualness," not so much from inward conviction as from realisation of the fact that, even if the Labour and Liberal members are at the next election in a majority over the Conservatives, the checks on the Progressives' power will be so numerous that it would be folly to set out now an "advanced" programme, such as the I.L.P. desire.

Sympathetic observers call this attitude one of idealism tempered by realism; harsher critics would accuse the Labour Party, as they would accuse the Conservative Party and what is left of the Liberal Party, of not scrupling to sacrifice genuine conviction to the dictates of expediency. In other words, that is to be put forward which it is estimated will obtain the greatest suffrage. But perhaps 'twas ever thus in politics.

Decision of the Bishops.

Last week the Bishops decided to sanction the use of the later version of the Revised Prayer Book. They stipulate, however, that all clergy must keep within the limits of the Revised Book (when, that is, they depart from the Prayer Book); and also that parishioners must be consulted when incumbents wish to use the Revised Book.

The justification of this action, which, coming after a double rejection by Parliament, might seem to be a little puzzling, is that, since the Revised Book was accepted by Convocation and the Church Assembly, its use cannot be regarded as inconsistent with the principles of the Church of England. The Bishops' decision is, however, being strongly attacked, on the ground, apparently, that they are setting themselves up as an authority rival to Parliament, and that a pretension to such power will inevitably end in worsening the condition of the Church of England.

On the other hand, there is being manifested very marked sympathy with the Bishops in their attempt to find a way out of the present intolerable confusion. When

loyalties are dual, the one that pertains to spiritual often appeals with stronger effect, and if in this matter the State's decision is discreetly ignored, not all Englishmen will be found to declare that the country is on the way to perdition.

The "Heresy Hunt."

The "heresy hunt" which I mentioned last week in connexion with the Church Congress at Cheltenham continues to attract attention. The interesting fact has come out since I last wrote that the attack on Dr. Major, the Modernist of Ripon Hall, is no mere "Anglo-Catholic ramp," led by Lord Halifax, but is also strongly supported by the Evangelical Party, to whom Dr. Major's creed is equally repugnant.

But there seems little possibility that Dr. Major will not be allowed to speak to-morrow upon "The Anglican Interpretation of the Christian Faith." Yet the question is being pointedly asked whether this learned man ought, *qua* member of the Church of England, to be allowed to continue to propagate his opinions, which are very far from being accepted as Christian. Of course, there would be talk of his "being hounded out of the Church"; but really the Church, even the tolerant Anglican Church, must draw the line somewhere.

Those who are protesting at Cheltenham are, of course, not protesting again Dr. Major's right to hold, in a proper position, any religious views that he likes; but in claiming that the Anglican platform is not one from which those views can properly be preached, they are, it seems, on fairly solid theological ground.

The upshot of this dispute may conceivably be such a quarrel between Orthodoxy and Heterodoxy as has not been seen in this country for many years. In any case, the reports of the Cheltenham Church Congress should make extremely interesting reading.

"Spoonerisms."

An interesting, although scarcely a surprising, fact, was made public last week, when Dr. Spooner celebrated his golden wedding: that he himself was responsible for but one of the multitudinous "Spoonerisms" that have amused a credulous world. The best of these stories set about by impostors is, I think, the one (recalled by the *Manchester Guardian*) of the aged doctor wandering distractedly about Dulwich looking for a certain hostelry. He failed to find it—not unnaturally, because he said that he was looking for "The Dull Man at Greenwich!"

Others that concern the undergraduate's hissing the mystery lectures and tasting worms are far too clever ever to have been said. The sort of thing that does occasionally get said is what I myself heard an undergraduate at the Cambridge Union utter. He was, I think, protesting against the Chestertons' attack on the integrity of the ordinary party politician, and declaimed indignantly against the "insinuations" and "innuendoes" of his opponents.

The Talking Film.

Last week, at the Piccadilly Theatre, there was held a "first night" of the talking film. Estimates upon its future in this country vary very considerably. It is held by some who were present that the theatres and orchestras will be very badly hit. It is held by others that musicians, far from suffering by this mechanical competitor, will rather benefit by it, just as they have benefited (so at least it is alleged) by the introduction of broadcasting. Nor is great anxiety being shown by the regular theatre managers, who pretend that the voice-cum-action play will never rival the real play in popularity; and the great Mr. Cochran, who ought to know when danger is looming, says that people will no more desert the regular theatres for the "talkies" than they will begin to prefer tinned salmon to fresh.

So that those who are not experts must just wait and see.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

October 4, 1928 (New Style).
 September 21, 1928 (Old Style).
 Rabia II, 18, 1347 A.H., of the Muslim Calendar.
 Tishri 20, 5689, of the Jewish Calendar.

Princess Eudoxia of Bulgaria left London on September 26 for Germany.

Sir Henry and Lady Bax-Ironside have arrived at 23, Grosvenor Place from abroad.

Sir Ernest Blackwell has returned to 28, St. James's Court from a visit to Egypt.

Earl and Countess Winterton arrived at 61, Eccleston Square on September 24 from Paris.

Princess Cécile of Greece, who had been on a visit to the King and Queen at Balmoral Castle, left on September 26.

The Hon. Mrs. Harold Nicolson arrived on October 1 from France at her Kent residence, Long Barn, The Weald.

Mr. C. B. Chartres, President of the European Association of India, left London on September 27, to join the s.s. Maloja at Marseilles, on his return to India.

Lord Plumer, late High Commissioner for Palestine, has accepted the presidency of the Society of Miniature Rifle Clubs, in succession to the late Earl Haig.

The Nawab of Bhopal, accompanied by the Begum, embarked in the Ranpura at Bombay on September 22, and is expected in London *via* Marseilles on October 6.

M. Caclamanos, Greek Minister in London, returned to 51, Upper Brook Street, W.1, on September 7 from Paris, in order to receive M. Venizelos on his arrival in London on September 30.

Lady Irwin, accompanied by Lady Beatrice Ormsby-Gore and the Hon. Anne Wood, left Marseilles on September 28 in the P. and O. liner Maloja to join Lord Irwin at Government House, Delhi.

The Bishop of Wakefield, Dr. G. R. E. Eden, who retires to-morrow (October 5) has, on the invitation of the Bishop of Egypt and the Sudan, accepted the winter chaplaincy at Aswan on the Upper Nile. Dr. Eden will leave England about the middle of November.

PERSIANS AND ARABS IN THE PERSIAN GULF.

We have received from the Persian Legation the following statement regarding the seizure of a boat in the Persian Gulf during August:—

"As a result of investigations made by the Customs authorities into the case of the dhow recently seized off the island of Tamb, the proceedings of the sittings held clearly establish that the boat belongs to a man named Abid, a Persian subject, and contained five passengers. According to the statement made by Abid, and duly attested by him, the cargo consisted of sugar, lump and granulated, and tea, which was being conveyed to the island of Kishm. The dhow and its captain, as well as the passengers, have been released, and the cargo being contraband, and having been seized in Persian coastal waters, has been confiscated. The statement emanating from other sources that the dhow was not owned by a Persian subject, is absolutely without foundation."

THE LATE SARWAT PASHA.

The remains of Abdul Khalek Pasha Sarwat, twice Prime Minister of Egypt, who died in Paris on September 22, were transferred from Marseilles on September 26 by the steamer Providence to Egypt. On arrival at Alexandria the coffin was taken by special train to Cairo, where the State funeral took place on September 30. The coffin, conveyed on a gun-carriage, draped with the Egyptian flag, was accompanied by a procession nearly a mile long, with a military escort of all arms. Among those who followed the bier were members of Sarwat Pasha's family, the Prime Minister, Mahomed Pasha Mahmoud, and other Ministers, Tewfik Pasha Nessim, representing King Fuad and members of the Diplomatic Corps.

Marshal Pilsudski, who has been undergoing a rest cure in Roumania, arrived in Bucharest on September 29 to pay an official visit to the Roumanian Government.

Mgr. Dimitrije, Patriarch of the Church of Serbia, has contracted pneumonia. Prayers were being said last week in the churches for his recovery.

The chief of the Yugoslav Department of Public Security, M. Lazitch, has been appointed Vice-Minister of the Interior. M. Lazitch is known for his sympathetic interest in Macedonian matters, and is expected to have charge of the Macedonian department.

A draft decree for creating a Supreme State Audit in Egypt has been published. The new Department, which is to be autonomous as regards its staff and answerable only to the Prime Minister, will control all State expenditure and will be empowered to call for any documents or information which its head, who is to have the rank of Minister, may consider necessary for the execution of his duties.

Where to stay in the East

170, Strand, London, W.C.2,
Tuesday Morning.

The Smyrna-Aidin Railway.

Shareholders of the Ottoman Railway from Smyrna to Aidin will have become accustomed by now to a tale of woe from the Chair at their half-yearly meetings. Last week's meeting was no exception to the rule. The past half-year, the President announced, was an exceedingly poor one, but he added the cryptic remark that "the prospects" of the current half-year "ought to be better." As the Board entertains hopes of making up some leeway for the first half-year of the year, the President's intention, no doubt, was to give shareholders to understand that there was some prospect of the working of the current half-year proving more favourable in spite of the reports of a famine in half-a-dozen vilayets. The Company is still handicapped by the refusal of the Turkish Government to ratify the agreement of increased tariffs from January 1, 1928. Ever since the new order in Turkey complaints as to the Company's difficulty in hitting it off with the Turkish Government have been frequent. No one contends that the Turks have been easy people to negotiate with of recent years, but the time has come when British companies must stop to consider whether failure to reach agreement with the Turkish Government does not imply something amiss on their side as well as on that of the Turks. Lack of success in negotiations with foreigners is not confined to British dealings with Turkey; but frequently, when the facts are known, it is found that the fault is not always on the foreign side. British companies will do well to realise that negotiation with the East is an art not possessed by all Britons, whatever their qualifications in other directions.

Pending Greek Loans.

The brief visit of M. Venizelos, the Greek Prime Minister, to this country, has no connexion with any financial developments, though it is possible that before he leaves this afternoon he may have had conversations with financiers. There are, it may be pointed out, a number of loans on the tapis, notably one for the City of Athens with which Hambros Bank are concerned and whose proposals are understood to have met with approval in Athens, and one for productive works for which a number of American houses are in competition. Nothing will be done officially in the case of any of these projected loans until the return of M. Venizelos to Greece. Judging by the proposals with regard to the 8 per cent. internal loan the policy of the new Greek Government is likely to be very critical to foreign loans, but its attitude is likely to be tempered by the existing circumstances. It must remain a very moot point whether it is advisable for Greece at this particular moment to contemplate a reduction of interest on the internal loan, as the step is apt to indicate the possibility of arbitrary hands being laid on other investments.

Oil Resources of Iraq.

Very naturally special attention is paid in the report recently presented by H.B.M. Government to the Council of the League of Nations on the administration of Iraq in 1927 to the development of the petroleum resources in that region by the Turkish Petroleum Company and the Anglo-Persian Oil Company. While the country is not by any means devoid of other resources, such as the expansion of grain production and cotton growing, on which to establish a sound economic basis, oil, if it exists in adequate quantities (as may now be assumed to be the case in Iraq), offers such great prospects for the development of a country that it is only to be expected that it should loom largest in importance on the economic horizon. Developments during last year, it is pointed out, had an encouraging effect on markets not connected with the oil industry, while the large amounts disbursed in wages by the companies had a most favourable effect on the purchasing power of the areas concerned. During the year it is pointed out that the Turkish Petroleum Company made great strides in the development of their programme for the testing of the concession area. Altogether eight wells were started, these being many miles apart, and, as our readers will remember, success attended the drilling at Baba Gurgur, where on October 14 an important strike of oil occurred. In the other wells no important oil or gas flows were encountered during the year. The Khaniqin Oil Company continued the testing of their concession area in 1927, but progress was slow, great caution having to be exercised on account of the high pressures encountered from time to time in the Naft Khana field. In the area on which the company are concentrating—an area about fourteen miles long and four miles wide—twelve sites had been tested or were under test at the close of the year, and in the Iraq side of the field 10,436 feet had been drilled. The well brought into production in this field in 1926 produces sufficient crude oil to meet the requirements of the throughput of the refinery.

The Trade of Iraq.

The trade statistics for 1927 showed a considerable improvement on those for 1926, the value of the imports being Rs.1,120,69,386 as against Rs.974,33,665, while that of the exports was Rs.617,00,916 as against Rs.414,77,984. The transit trade, too, showed an improvement at Rs.582,18,445 as against Rs.556,12,230, the total volume of trade being Rs.2,319,88,747 as against Rs.1,945,23,879. If, however, the statistics are taken for the financial year 1926-27 a decrease is shown as compared with the previous twelve months, the figures being Rs.2,092,03,815 as against Rs.2,279,68,601. The conclusion to be drawn from these two sets of figures is obviously that, in common with neighbouring regions, Iraq emerged from the period of trade depression in the later part of last year. Both as regards imports and transit trade the figures for 1927, it is pointed out, do not completely represent the increase in the volume of trade. As regards imports, commodities such as textiles and sugar, which represent the chief imports of Iraq, decreased in price. As regards the improvement in the export trade, it is to be noted that the harvest of 1927 was above the average, while the date crop and the wool clip were both satisfactory, and the export of hides and skins was also good. It is noteworthy that the increase in the grain exports is to be attributed not only to the satisfactory climatic conditions but also to the extension of the area under cultivation. Irrigation pumps are now in much more extended use, and it is remarked that cultivation by pump is not dependent to such a degree as cultivation by rainfall on climatic variations, from which it follows that Iraq henceforth will not be to quite the same degree at the mercy of bad harvests as has been the case in the past. As will be evident from the trade figures, the commercial situation in Iraq in 1927 was satisfactory. A feature of special interest noted in the report is that cotton growing is increasing in popularity, as it is now being recognised that cotton is a remunerative crop.

The Roumanian 1913 Loan.

Details were issued last week of the agreement which was arrived at between the Roumanian Government and Messrs. J. Henry Schroder and Co., in regard to the Four and a Half per Cent. Loan of 1914 on July 4 last. The agreement has now been ratified by the Roumanian Parliament, and will come into operation as soon as the Committee of the London Stock Exchange has restored the quotation of the loan to the Official List. As I have already indicated the agreement is far-reaching, providing, as it does for payment to be made as arranged in time of war as well as in peace time and "whether the holders be citizens or subjects of a friendly, hostile, or neutral state without requiring any declaration or evidence as to the then present or former nationality, domicile or residence of such holders or any previous holders or as to the length of time such holders have held such bonds or the coupons attached thereto." These conditions are the natural outcome of difficulties which have arisen in respect of many loans as a result of the war, and it will be interesting to see whether in the case of future loans, particularly for Near Eastern countries, similar conditions are inserted.

COMMENTATOR.

THE PROGRESS OF THE SUDAN.

A much more cheerful story is told in the annual report of the Central Economic Board of the Sudan Government for 1927-28 than was unfolded in last year's report. The latter covered a period of economic depression, the causes of which have been dealt with in these columns: while the present report covers a year in which the Sudan, owing to a good harvest, has been making a rapid recovery—a recovery which, it may be emphasised, has been in evidence in every sphere of the country's life, and to which the trade statistics bear abundant witness. As harvest conditions have been good this year it may be taken for granted that the position in the Sudan will now be normal, and that steady progress may be looked for until the turn of a bad harvest comes again—apparently an occurrence of every five or six years. These set-backs are inevitable interruptions in the history of all agricultural countries, and while their effect on the position in the Sudan has been most unfortunate, it is happily the fact that as the country has been steadily progressing the incidence of these periodical depressions has been growing less. Of the recent visitation the report says:—

Looked at as a mere matter of business and organisation, conditions which threaten famine can now be handled effectively in the Sudan. The real difficulty lies in their psychological effect on a native population and the spread of rumour, which takes its colour from the general feeling of doubt and despondency and creates a tendency to panic. . . . It appears to be generally agreed that on this last occasion the people have been less inclined to lose their heads than in times past. There has been hardship and in some cases distress, but no panic. The early action taken by Government to help the people through their troubles has no doubt done much to keep them in good heart.

A feature of the past crisis which shows plainly how rapidly the Sudan is advancing economically was the activity of the merchant class in looking for fresh supplies of grain both in the country and abroad. It is very significant that the Government should have found it possibly to rely on them in this direction and to have confined its own purchases "to the minimum needed to maintain control of prices and to prevent starvation." The development of communications, it is pointed out, has had much to do with the activity of the local merchants, for the advent of the motor and the rapid extension of the road system have made the greater part of the Sudan accessible in the dry season. This building of roads, which is steadily being proceeded with, will in the end result in making of the Sudan a single compact entity instead of consisting of a number of districts to all intents and purposes isolated one from the other. Another important development in communications is the extension of the railway from Kassala to Makwar. The area served by this railways is at present scantily populated, though once the inhabitants were numerous and the production of produce was considerable. "The railway is certain to attract settlers," says the report, "and, in time, especially if settlement is actively encouraged, this part of the country should attain great prosperity." Reference must also be made to the development of Port Sudan. In the brief space of a few years this centre has grown almost out of recognition. It now has first-class shipping facilities, and its importance is indicated by the number of shipping lines which now run direct services to it. As

the gateway to the Sudan it has become a port worthy of the development that is going on in the country.

Needless to say, the great cotton growing scheme in the Gezira remains the most significant development in the economic history of the Sudan. It has been pointed out in these columns that the effect of the scheme has been in the main confined so far to the Gezira district, but even so its influence throughout the Sudan has been profound, and it promises to become an outstanding factor in the progress of the country as the scheme is extended. Full attention is devoted in the report to the results which have attended the great extension of cotton growing following the completion of the Makwar Dam. The report says:—

The most powerful new factor in the situation, which it has influenced profoundly, is the great cotton growing scheme on the Blue Nile in the Gezira. Its effects have been far-reaching in many directions and it has proved the mainstay of the country during the last two years of depression. It was most fortunate that gravitation water from the Sennar Dam became available for the first time just at this critical juncture, enabling 80,000 acres to be put under cotton and large areas to be cultivated with grain and forage crops, and that in the second year of shortage this area of cotton was increased to 100,000 acres and that of dura to 50,000 acres. Large crops of beans were also raised and utilised by the poorer people for food.

The money received by the tenants in both years did much to assist trade, but it is emphasised that from the general point of view the value of the scheme has been that it afforded employment in subsidiary services such as hoeing and picking to thousands of people. It is estimated that of the seasonal labour 40,000 were Arabs, 14,500 of them coming from the White Nile Province, while 15,000 were West African immigrants. The Gezira region has also provided forage for large numbers of animals. A further advantage of the scheme, it is pointed out, is that it assists in the preservation of the grain supply. It is noteworthy that in 1927 some 23,600 tons of grain were grown on the irrigated area in the Gezira. The region thus provides more than sufficient for local requirements, and in difficult times prevents another region from being added to the areas of scarcity. The last cotton crop, as already pointed out in these columns, showed a decline on the previous year's figures, due to indifferent climatic conditions in the Gezira. This year sees a further extension of the area under cotton (and equally under grain) and it is to be anticipated that the year's results will show a further marked step forward in the career of the Sudan as a potentially great cotton growing region.

It is announced by the Department of Overseas Trade that Mr. E. H. Mulock, Commercial Secretary for Egypt, will leave for England on October 7, preparatory to his being transferred to another Commercial Diplomatic post. Mr. R. M. A. Turner, O.B.E., Commercial Secretary at Athens, has been selected to succeed Mr. Mulock in Egypt and will take over his new duties at Cairo on October 6.

NEWS FROM ALL SOURCES.

The Customs duty on motor spirit imported into the Sudan has been increased to 15 per cent. *ad valorem* with effect from August 22.

Sir W. G. Armstrong, Whitworth and Co., Newcastle-upon-Tyne, have obtained a contract for thirty-two boilers for main-line express locomotives of the Bengal Nagpur Railway.

M. Skeferis, Greek Consul-General, left Alexandria in the middle of September for Athens on two months' leave. M. Zamaria, Vice-Consul, will act for him during his absence.

The Assam Railways and Trading Company recommends a final dividend of 7½ per cent. on the "B" stock, making 12½ per cent. for the year, subject to confirmation at the meeting fixed for October 24.

The death occurred recently in Paris of Baron Jean de Neuflize, who was a director of the Bank of France, Vice-Chairman of the P.L.M., a member of the Paris Committee of the Ottoman Bank, and Chairman of a number of companies. He was 78 years of age.

The Department of Agriculture in Cyprus is holding an inquiry into the causes of the decline in the production of wheat in the Island. While ten years ago the export of wheat from Cyprus amounted to 77,960 cwt., the exports in 1927 only amounted to 1,115 cwt. Ten years ago the imports of flour amounted to 1,047 cwt., but last year the imports reached the record figure of 255,703 cwt.

The British Consul-General at Salonika reports that the number of motor vehicles registered in Greek Macedonia and Thrace as at June 30 last was 2,113. Of this total Salonika accounted for 1,105; Serres, 176; Drama, 142; Kavalla, 220; Zanthi, 75; Komotini, 44; and Kozani, 194. Salonika registrations comprised 838 passenger cars, 198 lorries, and 69 omnibuses; Serres, 149, 26, and 1; Drama, 108, 33, and 1; Kavalla, 167, 50, and 3; Komotini, 37, 6, and 1; and Kozani, 75 passenger cars, 117 lorries, and 2 omnibuses. In Zanthi there are 69 passenger cars and 6 lorries.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, October 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakand for Calcutta (Birkenhead, October 8); s.s. Mathura for Calcutta (Birkenhead, October 18).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 17).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, October 6); s.s. Domala for Bombay and Karachi (London, October 20).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, and Patras (Liverpool and Swansea, October 5); s.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz if inducement (Liverpool October 20, and Swansea October 23); s.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, November 10).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 3). (This steamer will be the last sailing of the season to the Danube ports.)

P. and O. Line.—S.s. Ranchi for Bombay (London, October 12); s.s. Burdwan for Calcutta (London, October 13); s.s. Ranpura for Bombay (London, October 26); s.s. Nankin for Calcutta (London, October 27).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 9); s.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, October 13).

Ellerman and Papayanni Lines.—S.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Swansea, October 6); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 6); s.s. Trentino for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 6, Swansea October 6); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 20); s.s. Polo for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 27). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 2.

Business men have now for the most part returned, like Shakespeare's schoolboy, unwillingly to their tasks—the unwillingness being prompted by the abnormally fine weather of the holiday period. They find the general tendencies in the world of stocks and shares very much the same as when they left it. Speculators are still flitting like butterflies from one novelty to another, and the end of the "selective boomlet" does not appear to be in sight. Among more responsible investors the chief pre-occupation remains the pursuit of opportunity for sound industrial investment, and for this reason the business outlook for the autumn is being discussed with more than usual interest. On the whole the outlook is more encouraging than for some time past. The great staple industries remain depressed, and the great bulk of unemployment for which they are responsible can only be expected to decrease slowly. But the reports from the chief industrial centres reveal a satisfactory stirring of autumn demand. Labour, with belligerent ideas discredited, is co-operating more than for many a long year in promoting efficiency. World crops are good. The competitive power of British manufactures in world markets is mainly restored. These, and other reasons, support the policy of those who are seeking not quick profit in the deferred shilling shares of speculative ventures, but sound investment in established industrials of proved capacity.

Argentine Railway Dividends: A General Review.

The whole of the Argentine railways have now announced their dividends for the past year and consequently it is possible to make a general review of the situation. In the main, the dividends were in accordance with expectations. Taking the trunk lines, each of the companies repeated last year's distribution. Thus the Buenos Ayres Great Southern pays 8 per cent., and the Buenos Ayres Western, the Buenos Aires and Pacific and Central Argentine each pay 7 per cent. Several of the companies, and especially the Central Argentine, had a very good year from the revenue point of view, the previous year being also favourable. It was only to be

expected that the companies would pursue a cautious dividend policy, however good their revenue may have been, since there were a number of uncertain factors. In particular, the belief that the Argentine Government wished to effect certain tariff reductions suggested the need for conserving resources. The Government's intentions in this connexion have, in certain cases, since been made known. Though at first they gave rise to some uneasiness, there is now a feeling of greater confidence and security prices are fairly well maintained. The junior stocks give yields which range from about $7\frac{5}{8}$ per cent. to 8 per cent. Doubtless the favourable economic outlook of Argentine has had a steadying influence. The Cordoba Central repeated last year's dividend of 2 per cent., and during the week there have been rumours that negotiations with the Argentine Government for the purchase of the line were about to be resumed. The Entre Rios Company increased its distribution from 6 per cent. to 7 per cent.

The Arrangement of Capital.

The autumn new capital issue campaign is now in full swing, the investor's breakfast table and newspaper being flooded with prospectuses most mornings. The average prospectus of to-day is novel in many ways. The character of the companies which are being floated, for instance, is distinctly different from that of ten or twenty years ago. But perhaps there is no difference so striking to those whose memory goes back to pre-War days as the arrangement of capital in the modern prospectus. Before the War the investor was accustomed to look—at least so far as the best companies were concerned—for fairly definite ratios between the capital and debenture debt and again between the preference and the ordinary capital. It was realised that it was imprudent to have too heavy fixed charges, for in bad years it might be difficult to meet them; the inability to meet interest charges was regarded as damaging to a company's credit as well as to the immediate contentment of shareholders. The pre-War practice afforded valuable protection to the investor. Where there was a substantial amount of ordinary capital, it frequently meant that an undertaking had to fall on very lean times before it failed to meet the interest on its prior charge capital; in short, there was some point in its being called prior charge capital. Moreover, in the event of a reconstruction becoming necessary, the prior charge capital was fairly safe. But to-day these points seem to be largely overlooked. The whole object seems to be to raise as much capital as possible in the form of preference or preferred securities and as little as possible in the form of junior stock—the latter, be it noted, obtaining full voting control. In these circumstances the term preference or preferred—and this will be discovered in bad times—is a misnomer. Perhaps, as the new investing public becomes more experienced, it will insist, for its own safety, upon a wiser arrangement of capital.

Tin and Tin Shares.

An outstanding feature of the week has been the advance in the price of tin, which has been reflected in a rising tin share market. This has been largely based upon important measures taken to "rationalise" the industry. Efforts are being made to organise supplies of tin by bringing the principal British producers together. In Nigeria considerable progress has already been made in this direction, the Associated Tin Mines of Nigeria having brought together many of the largest producers in that area. It is now proposed to apply the same measure to Malaya, thus securing better results for producers and enabling them to co-operate with the three other main tin fields of the world. In order to effect this consolidation a company with the title of the London Malayan Tin Trust has been formed, with an issued capital of £1,250,000, which together with its associates will control 16 important Malayan tin companies. Of these shares, £1,249,000 were offered at par (£1) during the week-end. There can be no doubt that the

tin industry is in need of some such "rationalisation" and it is not surprising that the Stock Exchange is viewing the future of the metal with greater confidence. Present signs suggest that there is no cause for anxiety regarding consumption. The United States used 1,800 tons more of tin during the eight months ended August than in the corresponding part of last year, while the activity of its motor and canning industries points to the maintenance of absorption at a high rate for the rest of this year. So far as can be seen, the increase of output does no more than keep pace with the requirements of industry. Stocks are not excessive, being, in fact, less than 44 days' supply. It is advisable, however, to bear in mind that the price of tin is subject to wide fluctuations.

M. Marinkovitch, Yugoslav Minister for Foreign Affairs, arrived in Paris from Geneva on September 20 on a visit lasting about ten days.

The traffic receipts of the Suez Canal from September 15 to 21 amounted to 3,480,000 francs, as compared with 3,650,000 francs for the corresponding period of last year.

The Acting Yugoslav Secretary for Foreign Affairs on September 18 instructed the Yugoslav Chargé d'Affaires in Tirana to notify the Albanian Government of the recognition of the new monarchy by Yugoslavia.

A Bill granting a fifty-year concession to a British syndicate for the provision of tramways in Baghdad was passed by the Iraq Chamber of Deputies on September 21, the Bill being adopted by 59 votes to 9.

There are two and a half miles of corridors at the new headquarters of Imperial Chemicals Industries in Millbank and the whole stretch of them have been laid with rubber tiling. This record order has been given to Macinlop, Ltd., who are producing the design for it created by the architect, Sir Frank Baines.

CORRESPONDENCE

GAS INDUSTRY RESTRICTIONS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Gas undertakings, whether operated by municipalities or companies, are each regulated by a private Act of Parliament, the main provisions of which date from 1847 and 1871. Most of the restrictions thus imposed, whilst reasonable at that time, are now quite out of date and unsuited to modern industrial conditions. The progress of the industry is thus seriously hampered by disabilities, of which the following are typical:—

- Inability to raise fresh capital without the consent of Parliament.
- Lack of facilities to obtain capital at reasonable rates.
- Inability to offer shares to consumers, shareholders, or employees without first offering by public auction or tender.
- Undue limitation of borrowing powers.
- Inability to depart from old-fashioned methods of charge by introducing two-part tariffs.
- Inability to establish Joint Gas Boards.
- Inability to hold shares in, or lend money to, other gas undertakings or to contribute to companies laying inter-connecting mains.
- Lack of facilities for joint working of research.
- Inability to lay mains outside own area.
- Need for a statutory minimum dividend.
- Need for amendment of the Gas Regulation Act of 1920.

All these facilities are necessary for the scientific organisation, production, and distribution of gas on national lines, and would be of immense benefit to consumers, employees, and shareholders. The gas industry is therefore urging in the coming session immediate legislative action to provide these facilities, and the attention of all M.P.'s is being directed to the matter.

The gas industry serves 36 million of users through 9,000,000 meters, with 314,500 million cubic feet of gas per annum. It employs 113,000 workers, and pays £15,000,000 a year in wages. It uses 17,000,000 tons of coal a year, and is the largest customer of the coal mines. Its by-products comprise coke, tar, fertilisers, dyestuffs, and chemicals of essential importance to industry. Four thousand distinct trades use gas in their manufacturing processes.—I am, etc.,

A. USHER.

London, September 29.

EGYPT'S EXPORT TRADE IN 1927.

The increase in the value of Egypt's exports in 1927 amounting to £E6,581,112, or 16 per cent., is due primarily to the improvement in the price of cotton (says the British Commercial Secretary at Cairo in his annual report on Egyptian conditions). The chief commodities, beside cotton, in which an appreciable increase in value and quantity has occurred are benzine, cigarettes, cotton-seed, cottonseed oil, hides (both tanned and untanned), manganese ore, onions, phosphates and rice.

The increase in cottonseed of 768,608 ardebs and £E916,000 is attributed partly to the decline in the American crop and partly to the need for obtaining elsewhere the oleaginous seeds that China used to supply to Europe. In the case of rice, which has risen by 19,429 tons and £E198,000, the increase is due to the fact that cultivators, in view of the restrictions of the cotton area, disposed of a larger quantity of rice abroad than usual.

The United Kingdom has been, as usual, the principal buyer of many of Egypt's principal products, viz., cotton, cottonseed cake and oil, eggs, onions and light sheepskin leather, but owing to the fact that British purchases of Egyptian cotton have decreased both in value and quantity the United Kingdom's share of the total exports, though actually £E216,936 higher than in 1926, has dropped from 45 per cent. to 39 per cent. Further, the share of the Rest of Empire is so small as compared with that of the United Kingdom that there is not sufficient margin for a counter-balancing increase, with the result that in spite of about £E230,500 in their share, the contribution of the British Empire to the total exports has fallen from 47.5 per cent. to 41.7 per cent.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent
on application to

Motors and Motoring.

By G. B. B.

The Paris and London Shows.

Messrs. Rolls Royce Ltd., have favoured me with advance information regarding both the Paris Show, which opens to-day and the Olympia Show which will open on October 11. At the former event their exhibit will consist of a 40-50 h.p. Rolls-Royce enclosed limousine with bodywork by Barker, a 40-50 h.p. Rolls-Royce Sedan with body-work by Hooper, and a 20 h.p. Rolls-Royce saloon with body-work by Binder, several of which have been sold in India. Seven other Rolls-Royce cars will be shown at the Paris Salon. On Messrs. Barker's stand there will be a 40-50 h.p. Rolls-Royce fabric Sedan de Ville and a 40-50 h.p. Rolls-Royce enclosed limousine. On Messrs. Hooper's stand there will be a 40-50 h.p. Rolls-Royce saloon and a 40-50 h.p. Sedan with quarter lights. On Messrs. Thrupp and Maberly's stand there will be a 40-50 Sedan. On Messrs. Binder's stand there will be a 40-50 h.p. Rolls-Royce Sedan and on Messrs. Conti-Cancel's stand a 20 h.p. Rolls-Royce Coupe de Ville with body-work by Messrs. Binder.

So far as the Olympia Show is concerned there is no doubt that, as regards excellence of exhibits Rolls-Royce will retain the place they have held for so long. They will be showing a 40-50 h.p. Rolls-Royce enclosed limousine with coachwork by Barker, a 40-50 h.p. Rolls-Royce enclosed Sedan de Ville with coachwork by Hooper, a 20 h.p. Rolls-Royce Sedan de Ville with coachwork by Windover and a 20 h.p. Rolls-Royce enclosed limousine with coachwork by Thrupp and Maberly. Naturally one does not only see Rolls-Royce cars on the Rolls-Royce stand. Bodybuilders, in particular, like to build bodies for Rolls-Royce chassis; we shall find many examples of this at the Show. On Messrs. Barker's stand will be a 40-50 h.p. Rolls-Royce enclosed limousine de Ville and a 40-50 h.p. Rolls-Royce Sedan; 40-50 h.p. Rolls-Royce Sedans will also be shown on Messrs. Hooper's and Mann Egerton stands, and a 40-50 h.p. Rolls-Royce enclosed limousine on the stand of Messrs. Thrupp and Maberly. There will be 40-50 h.p. Rolls-Royce enclosed limousines on the stands of Messrs. Windovers, Cockshoot, Arthur Mulliner and the Connaught Motor Co., and a 40-50 h.p. Rolls-Royce enclosed landaulet on Messrs. Rippon Bros.' stand. Messrs. H. J. Mulliner and Co. will exhibit on their stand a 20 h.p. Rolls-Royce fabric covered "Sunshine" saloon, and Messrs. Caffyns will display on their stand a 20 h.p. Rolls-Royce enclosed landaulet.

The prices of the Rolls-Royce chassis will remain as before, the 40-50 h.p. chassis being: short model £1,850, long model £1,900 and the 20 h.p. chassis at £1,185. Both models are fitted with six brakes.

The Triumph "Super-Seven."

The competition amongst makers of "Baby" cars has been rendered keener by the impetus given recently to the Triumph "Super-Seven," a car which should become highly popular. The Olympia Show should bring this model to the front and deservedly so, as my readers will agree when they remember the high opinion of the Triumph engine held by all users. The specification of the new model for the Super-Seven is as follows: h.p. is 7.9; four cylinders cast en bloc in iron with detachable head; 56.5 m.m. bore by 83 m.m. stroke, capacity 832.24 c.c., compression ratio 5.1 to 1, R.A.C. rating 7.9 h.p.,

mechanism entirely enclosed and readily accessible, side by side valves with adjustable tappets, camshaft and magnet chains driven with automatic jockey pulley chain tensioner mounted on roller bearings, detachable valve cover plate held by two knurled nuts, separate adjustable chain drive to dynamo. The cylinders are cast in one with the crankcase which is split horizontally below the crankshaft centre, making the big end bearings and connecting rods readily accessible; main bearings are phosphor bronze white metal lined and connecting rods big end bearings are of white metal die cast in connecting rods, aluminium alloy die cast pistons with three rings, bottom ring is arranged for a scraper ring, gudgeon pins definitely located in small end of connecting rod of "H" section. Pressure feed lubrication to camshaft, three bearing crankshaft and big ends by means of spur gear oil pump situated in the oil sump feeding through drilled oil ways in the crankcase. Oil feed to chain drives. Oil release valve, pressure gauge on dash, conveniently placed oil filler and dip stick. Hot spot square section inlet manifold, detachable tubular type starting handle, unit construction engine and gear box with four point attachment. Starter mounted on engine and operating on gear teeth of flywheel. The car has three forward speeds and reverse, with central change; there are four internal expanding brakes on the wheels, hydraulically operated by a foot pedal, with a hand brake on the transmission, and the equipment includes instrument panel with a speedometer, ammeter, etc., switches, electric starting and lighting, electric horn with complete set of tools, lifting jack, etc.

Near East Markets

THE DRIED FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows on the local market position for the week ended September 22 :—

Sultanas.

The estimated arrivals on the Smyrna market since the opening of the season amount to 17,200 tons against 21,500 tons for the corresponding period of the previous year, while the sales to date are put at 14,660 tons against 17,300 tons. Closing prices, Smyrna, per cwt. c.i.f. London, for types 12 to 18 and 1, 3, and 5 are:—32s. 6d.; 34s.; 36s. 6d.; 39s. 6d.; 43s.; 51s.; 58s.; 65s.; 40s.; 34s.

Market Conditions.—The market opened steady, and prices were maintained during the early part of the week, with no indication of the sharp break that was to take place on Tuesday afternoon. On Wednesday weak holders continued forcing their fruit for sale, disorganising the position still further and upsetting all estimates of values. The market found itself somewhat demoralised with a declining tendency until the close on Thursday. Stability was only re-established on the reopening of the market on Saturday, when heavy purchases exceeding 80,000 boxes were recorded.

Sales for the week total 3,460 tons as against about 4,000 tons the preceding week. The falling-off in demand during the third week of September, generally regarded as the most active period of the season, is interpreted as a bear factor. The Alcohol Monopoly is continuing purchases, but sales are being forced in excess of its capacity of absorption.

Figs.

The arrivals on the Smyrna market since the opening of the season are estimated at 14,250 tons against 14,870 tons for the same period of the previous year; the sales to date are put at 13,350 tons against 14,370 tons.

Market Conditions.—This week has witnessed a general advance in values for all qualities. Figs suitable for Layer and Pulled packings have been very firmly held notwithstanding the fact that arrivals in these sorts appear in abundant supply, but buyers have had to accept sellers' ideas of values.

Outstanding qualities continue in very short supply. Natural figs are coming to market in smaller quantities than is usually the case at this time; sellers are taking full advantage of the shortage to hold up prices against shippers who cannot delay the filling in of end September engagements. Prospects are for continued firmness during the coming week. It is reckoned that half the yield has now come to market.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date September 29 :—

Currants.

It is a debatable point whether the prolongation of the summer well into the month of September, which has been exceptionally bright and fine, has delayed the opening of the season's trade. The fact remains that, whatever circumstances may be responsible, the arrival of overland samples of new season's fruit received very scant attention from buyers. Possibly more business would have transpired by now had the first consignments come to hand, as is usual, in the early days of the month; but the initial cargo did not appear until the 27th, the latest date on record during living memory.

During the month old fruit proved difficult to sell, and prices continued to sag, buyers showing pronounced apathy to the article and latest sales of ordinary quality were done at 47s. 6d. to 48s., Patras 49s., Zante 49s. 6d. to 50s. 6d., Vostizza 52s. to 55s. Forward

business in new crop was exceedingly disappointing, buyers showing very little interest. S.s. Hatasu, the first cargo of the new season, arrived during the closing days of the period under review. Buyers have not displayed any exceptional anxiety to purchase, and the small progress made centred on Cleaned varieties:—Gulf, 56s.; Small, 55s. Patras, 54s.; Amalias, 52s. to 53s.; Pyrgos, 51s. In addition to above sales, the steamer had a small consignment of Vostizza, and these were disposed of at 64s. Bold, 52s. Smalls. Bactria and Lesbian are close at hand with further supplies.

Sultanas.

With the declining c.i.f. quotations for shipment from Smyrna, it is not surprising that the trade has concerned itself little with fruit afloat for this port, of which samples were to hand. Possibly with the arrival of s.s. Hatasu more attention will be paid to the article. Shipments are very light, and latest estimates reduce the exportable quantity available to below 35,000 tons. The increase in imports of Californian will be more than sufficient to counterbalance any shortage of supplies from other countries. A little business was put through on samples mentioned on the basis 52s. to 53s. landed terms.

Cretans.—Overland samples of coloury fruit attract attention, and business is passing at 70s. to 82s. 6d. for parcels on the water.

Greeks.—A little activity is reported on tin samples of fine fruit of good colour at 80s. landed terms.

New Fruit.—Good coloury has commanded some attention and sales were 58s. to 62s., with a few special lots 65s. to 72s.

Figs.

The s.s. Hatasu with the first new arrivals was available the last few days, and sales were:—Large boxes Layers, 58s. to 80s.; small boxes, 72s. 6d. to 76s.; Locoums, 90s. to 140s.; bags genuine, 34s.; bags choice, 42s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Lighthouse Tower, Etc.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the construction of a lighthouse tower and annexes on Daedalus Reef in the Red Sea. November 12.

Portland Cement, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones (Cairo Station), invites tenders for the supply of 6,000 metrical tons artificial Portland cement, October 30; and for the supply of materials and works connected with the replacement of the superstructures of 4 fixed bridges of the Sherbin-Kallin line and the adaptation of the abutments to the new superstructures. This project includes, among others, the supply and laying of the following materials: Reinforced concrete, about 3 c.m. and rolled, cast, etc., steel, about 38 tons. November 10.

Bridges.—The Egyptian Government invites tenders for the construction of two bridges. October 20 and 22. (D.O.T.)

Steel Boiler Stay Taps.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 128 best high speed steel boiler stay taps and 112 reamers, 47 sets best cast steel boiler patch taps, and 3 sets best high speed steel taps and 5 best cast steel taps for bushes.

Lock Gates, Etc.—The Resident Engineer, Delta Barrage Directorate, at Delta Barrage, invites tenders for (1) construction of eight lock gates for Damietta and Rosetta locks, both at Delta Barrage, and their delivery at site and erection in position; (2) construction of twenty regulator gates and their delivery at sites. November 1.

Marble Gauges.—The Inspector of Irrigation, Assiut Barrage Circle, Assiut, invites tenders for the supply of marble gauges. November 10.

INDIA.

Radial Gates.—The Indian Stores Department invites tenders for the supply of radial gates for the head and cross regulators for main canals and branches. November 6. (D.O.T.)

PERSIA.

Canning Factory.—A proposal is on foot to erect a canning factory at Hamadan. The individuals concerned desire to receive quotations for a canning machine and a machine for making tins. (D.O.T.)

TURKEY.

Tape.—The Direction des Achats du Bureau des Postes and Telegraphes at Constantinople invites tenders for the supply of 10,000 rolls of tape. October 17. (D.O.T.)

Grindstones and Emery Stones.—The Military Authorities at Angora invite tenders for the supply of grindstones and emery stones. October 17. (D.O.T.)

YUGOSLAVIA.

Ice Plant and Refrigerator.—The Municipality of Zagreb invites tenders for the supply of an ice plant and refrigerator. October 8. (D.O.T.)

British Consular Reports

VII.—ABYSSINIA.

The British Consul at Addis Ababa, in his report on the commercial and economic situation of Abyssinia in the year ended June 30 last, mentions that there has been a decline in the imports of cotton goods, while artificial silk, in which Italy has greatly increased her trade, is being imported in considerable quantities. Other features of the import and export trade are as follows:—

Iron and Steel.—The principal imports under this heading are corrugated sheets and bars. In the first-named a fair amount formerly came from Great Britain, but the bulk of the business has now gone to Belgium owing to the willingness of Belgian manufacturers to meet the requirements of this market with a gauge which offers better value for money. These sheets are sold by the ton, and a merchant getting, say, 4,500 kilog, sheets obtains more sheets per ton than the merchant who buys 5,000 kilog. sheets. The iron and steel bar business has gone entirely to Charleroi. Belgian mills seem to work through concessionaires, who run large stocks of every size and length and who act as wholesale agents for all the small foreign markets. Thus any order, however small and assorted, is sure of satisfaction. The agent, moreover, works on a narrow margin and his prices always challenge British competition.

The bulk of the cement imported comes from Belgium and Italy. Normally the business is very small, as the heavy freight and Customs duty (over 150 per cent. on c.i.f. Jibuti price) kills it, but in the past year the Government has imported large quantities. About 150 cars were sold during the year, of which 80 per cent. were American, 10 per cent. French and 10 per cent. Italian. British tyres are making a good showing, and compete well with those of foreign manufacture. A considerable trade in native bottles and glasses is done with Belgium, owing to the fact that the manufacturers have studied the market and catered for it.

Salt.—This is an important article of import, and comes mainly from Jibuti, with subsidiary sources of supply in Zeila and the Sudan. Owing to the railway, the Jibuti salt has the greatest sale, but is also superior in quality to Zeila salt, costing 9 dollars per 100 kilog. bag as against 8½ dols., in spite of the greater difficulties of transport from Zeila. Projects are in hand for the improvement of the Zeila salt pans and of the means of transportation into Abyssinia; Zeila would then become a more important competitor of Jibuti.

The values of the leading imports into Abyssinia from and via the Sudan in 1927 were: cotton and silk goods, £32,225, as compared with £83,331 in 1926; salt and products of the Sudan, £12,502 (£11,710); and Maria Theresa dollars, £4,783 (£5,070).

Exports.

The exports of hides from Abyssinia has, from a variety of causes, been decreasing for some years past. It is believed that the high prices ruling during the past season artificially stimulated a waning supply—a theory which can only be proved by results during the next year or two. It is, however, certain that the collection of raw hides in Abyssinia is on a very much smaller scale than formerly. The average caravan during this year has not carried more than 500 hides, whereas in the past caravans of 5,000 to 10,000 hides were not unknown. The quality of Abyssinian hides is in general not high, partly owing to lack of care in preparation, and disease, and partly to water damage. An interesting experiment has been made by a German firm of tanners at Fitché, the capital of Salali, a province bordering on Addis Ababa. The local hides and skins are collected wet and shade-dried on frames. The resultant product is not equal in quality to the Addis Ababa butchery hide or skin, but it is far ahead of the ordinary sun-dried article of the same district and commands a very much better price. It is possible that

rise in the value of Abyssinian hide exports can only come through improvement of the product on these lines. The bulk of the exports during the year went to British and German ports, France and Czechoslovakia coming next, with relatively small shipments to Italy, Spain and the Balkans. Very little went to the United States, and those mainly light hides.

Goatskins.—This article, depending as it does principally on North American buyers, has moved quite independently of the hide market. From June to November, 1927, a fair average was 25d. per skin c. and f. From then on there was a gradual advance to about 29d., at which level American buyers are beginning to hold off. There is, however, an increasing demand for the better-class skins from German and French tanners, who have recently paid as much as 32d. a skin. Available supplies have been extremely light, and the quality has also been below normal. It is said that the percentage of hides and skins exported to Aden merchants for final grading and bailing for shipment to Europe and the United States is now but very small. It is anticipated that exports will continue to decline in the case of goatskins as in that of hides. Shade drying already applied in Addis Ababa to the goats slaughtered there, would make a distinct increase in the value of the exports in spite of their diminishing bulk.

Sheepskins.—The trade in these skins only began about five years ago, at which time they were regarded as of doubtful value to tanners, and could be bought locally for two or three dols. a score. The quality was, however, steadily improved with the increasing demand, and local merchants have paid up to fifteen dols. per score in the past year. It is believed that France takes the great proportion, Germany and England taking the rest. Butcher sheepskins, that is, from beasts killed in and near Addis Ababa and shade-dried—total production possibly one hundred thousand skins per annum—have steadily risen in value during the year, from 34d. each in June, 1927, to 42d.

Coffee.—A demand which, owing to lack of transport facilities in the interior, has continued to outrun supplies, has kept prices on the increase during the year—roughly from ten to twelve dols. per farasula in the local market. At recent prices the margin for exporters has practically disappeared. Exports, in spite of the restrictions on supply, have probably exceeded those of previous years, and quality continues to improve.

The chief exports from Jibuti in 1927 were: hides, 9,522,134 kilogs., as compared with 8,200,544 kilogs. in 1926; coffee, 13,224,808 kilogs. (11,096,289 kilogs.); and wax, 372,527 kilogs. (305,232 kilogs.). During the first quarter of the current year the totals were: hides, 4,048,617 kilogs.; coffee, 4,618,102 kilogs.; and wax 56,244 kilogs. Exports from Abyssinia to and via the Sudan last year were: coffee, £164,604 (£214,369 in 1926); wax, £823 (£6,842); and other goods, £15,133 (£24,775).

For the first seven months of the current year Bulgaria's imports amounted to 4,038 million leva, while the imports totalled 3,305 million leva, there being an adverse balance of trade of 733 million leva. It is expected, however, that exports of rape, tobacco, and barley in the concluding months of this year will considerably diminish this adverse balance.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 26:—

Egyptian Futures.—Sakel Contract.—Rather erratic fluctuations have been experienced in this market during the past week, but on the whole we consider the undertone has shown some improvement; certainly sentiment has become more mixed, and those who have been working rather confidently on the short side are now beginning to show more caution in their dealings. During the earlier days of the week, under the influence of better trade support and a strong reactionary movement in the American market, values started to appreciate; the recovery was gradual in its initial stages, but later, with "stop-loss" orders becoming uncovered, the advance became more precipitate, at the peak about 120 points over last Wednesday's close being paid. At this level the market began to run into more cotton; consistent selling orders from Alexandria started to come in, and with trade sources withdrawing their previous support we have since lost much of the earlier gains, to-night's close being 60 to 70 points higher for near and 64 to 68 points dearer for more distant options since our last circular. The most satisfactory feature of the week has been a slight improvement in the trade outlook; a healthier offtake for yarns appears to be developing, but it has been significant that business in actual cotton fell away materially as soon as prices moved up strongly. It thus appears that spinners, and quite rightly so, are not going to be stampeded. The crop is only just starting to move, and, whatever happens later on, there appears no justification at the moment for any runaway tendency. Under normal conditions a Sakel crop of 2,750,000 kantars—and this seems a most optimistic figure for this season's outturn—would prove barely sufficient for requirements; but so many mills have turned on to other cottons, particularly the Upper varieties, that we doubt last season's consumption being maintained. Certainly at a difference of 725 points over American values, we cannot visualise consumers now using other cottons, under present trade conditions, reverting to Sakels. Our latest advice from reliable sources in Egypt is to the effect that the recent advance has checked demand and that prices have receded under the weight of arrivals and speculative liquidation. A more important bit of information is added to the effect that the Sakel crop has deteriorated latterly, the condition being now barely average. We rather look for prices to fluctuate round the 17d. level for the immediate future. Should, however, fresh pressure develop, easing the level off, say, fifty points from this figure, we think that a policy of down-scale purchases would be a fairly sound proposition.

Upper Contract.—Some brisk trading has taken place in this option during the past week. In the earlier days, substantially higher American values, helped by liberal trade purchases, caused a recovery of nearly 1d. per lb. from the recent low level. More latterly, some heavy hedge selling has resulted in part of the earlier advance being wiped out, to-night's close showing 67 to 70 points rise for near positions and 68 to 76 points rise for distant positions on the week. Straddle purchases of Uppers against sales of American at about the present difference continues to be a favourable operation. Whilst cotton covered by this contract certainly appears comparatively cheap in comparison to other qualities, the crop is now moving rapidly, consequently hedging and importing transactions furnish the market with a continual supply of contracts. Owing to this it appears probable that those who are entering into the above straddle may have to wait some little time before the desired widening takes place; in fact, at the time of writing it rather appears as if weight of cotton may easily force a temporary narrowing in the ruling difference. For the near future values will probably be closely governed by American crop news. Should a material decline from the present level be witnessed, we think opportunity ought to be taken to enter into moderate commitments.

Egyptian Spot.—The market has displayed a better tone recently, and purchases of actual cotton have been made on a freer scale than has been the case for a long time past. The upward movement which started last week, partly as a result of storm damage in America and partly because price levels looked reasonable to consumers needing cotton, carried F.G.F. Sakel (Spot) to 18.03d. and F.G.F. Upper to 12.10d., a recovery from the lowest of 125 points and 90 points respectively. The advance failed to hold, however, as it was generally felt that it had been too rapid. Probably, it is all to the good, from a trade point of view, that it has not held, as there would have been grave danger of buyers being "driven" out again. As it has turned out, there has been but little diminution in the turnover; price levels still remain attractive (particularly for Upper), and, provided that the present reaction is not overdone, there seems to be every prospect of a steady business continuing.

Uppers continue to attract most attention owing to the favourable parity at which they stand with staple American and "outside" growths, such as East African, etc. Offers from Egypt appear reasonable at the present time, and, in spite of the fact that a large crop is expected, we are of the opinion that consumers, who are in a position to do so, should certainly secure a portion of their requirements for the coming season before the basis hardens, as it is almost certain to do later on.

Sakels are not so attractive. F.G.F. and above have been difficult to move at current differences, and, in spite of the fact that recent reports have not been quite so optimistic regarding the ultimate

outturn of the crop, very little attention has been attracted. Probably the difference between Sakel and Upper will have to narrow by a further 1d. per lb. before the trade finds Sakel a commercial proposition. Pilon has been in good request and undoubtedly looks reasonable at current prices. Low cotton of all descriptions has been in popular request at from 6d. upwards. Maarad, Nahda, White, etc., have rather suffered from neglect. A steady business has again been done in Sudan and Tokar qualities, mainly in the medium or lower grades.

Manchester reports have been higher, and quite a lively c.i.f. business has taken place. Forwardings last week were returned as 5,599 bales Egyptian and 688 bales Sudan. Estimated spot sales for the week, 3,200 bales Egyptian and 700 bales Sudan. F.G.F. Sakel to-day, 17.55d. F.G.F. Upper to-day, 11.75d. F.G.F. Pilon to-day, 13.20d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 20, state:—

The market since our last report has been fairly active. Prices show a decline since last Thursday, but the tone at the close to-day was decidedly better than it has been for some time past. The week's summary of price movements is as follows:—Sakellaridis: November, 33.63 dollars, 0.49 dollars down; January, 34.00 dollars, 0.45 dollars down; March, 34.40 dollars, 0.25 dollars down. Ashmouni: October, 20.40 dollars, 0.50 dollars down; December, 20.97 dollars, 0.23 dollars down; February, 21.45 dollars, 0.20 dollars down.

Sakellaridis.—There is nothing new in the Sakel situation and the market has been a distinctly professional one; both speculators and commercial houses have bought to-day, but during the early part of the week there was little outside interest whatsoever. Demand shows little, if any, improvement, and the holders of the November position are becoming anxious. The crop has deteriorated recently, but, for the time being, it is the grade that has suffered, not the quantity. The Sakel-Ashmouni straddle stands at 1,323 points against 1,322 points last week and 1,048 points a year ago.

Uppers.—This market has been weak under the weight of the

arrivals, which are now about 4,000 bales a day. There has been no speculative interest and the hedge selling has resulted in a widening of the October/December straddle to 50 points. This difference is more than a carrying premium, and any widening will probably send some of the hedge selling on to the distant months.

The demand from spinners shows some improvement. We do not think that the demand reflects an improvement in the yarn trade, but rather an appreciation of the cheapness of Uppers as against American; spinners seem disposed to take advantage of present levels to secure probable requirements, hedging with American in the interim. This does not constitute a real improvement in the demand, but, on the other hand, it may eventually mean the using of Uppers in the manufacture of yarns usually spun from American staples and a consequently increased share in any revival in the demand. The Ashmouni/American straddle is 272 points against 288 points last week and 705 points at this time last year.

The week's receipts amount to 166,103 kantars, against exports 81,897 kantars; the stock in Alexandria stands at 1,232,213 kantars. Spot.—The past week has seen a recrudescence of activity at Minet el Bassal and we have had a series of busy markets. The Upper Egyptian crop is now moving freely, and, with the premiums on the distant months as they now are, spot cotton bought on the October contract looks an attractive proposition, the more so as present spot differences for the better grades are undoubtedly reasonable. Upper Egypt looks very reasonable to-day compared with any other growth and should attract spinners' attention. Sales for the week amount to about 12,650 bales, of which we estimate 1,550 bales Sakellaridis, 10,600 bales Ashmouni and Zagora, 450 bales Pilon, and 50 bales other varieties.

Sakellaridis: As yet is not in favour with spinners and only a small

business has been done. Spot differences are without much change. Small lots of new crop cotton keep arriving on the market, and, though no real guide to quality, seem at least as good as last year.

Ashmouni and Zagora: Have been in good demand with buyers, and a good business has been done in all grades. Spot differences are somewhat easier for Good and better and unchanged for the other grades. The bulk of the cotton which has arrived hitherto is from the Southern districts, which do not produce the best cotton in Upper Egypt, and not much from the better districts has appeared, though it will arrive from now on in daily increasing quantities. Without committing ourselves to a definite opinion, we think that the staple is as good as last year, but the average grade is not quite as good. Such Zagora as we have seen compares very favourably with last year, especially in staple.

Pilon: Has met with a very fair demand and a good business has been done. Spot differences are rather irregular.

Other Varieties: A small business has been done in White and Nahda.

Crop, 1928.—Crop news is slightly less satisfactory. The Sakel fields are now being picked and the results obtained at the first picking are not up to expectations. The quantity picked per feddan is below that of last year, and the top grades will not be in such full supply. The plants are still carrying plenty of bolls, and, given good weather for three or four weeks longer, they will produce a lot of cotton, enough to make the crop an average one as regards quantity. Weather conditions are fairly good; both temperature and humidity are about normal, although one or two morning fogs are reported. Worm attack shows a small increase on the week. The factories in the Delta will probably start working regularly in about 10 days.

Notes of the Week.

Greece and Yugoslavia.

The negotiations that are taking place this week in Belgrade between M. Venizelos and the Yugoslav Government will not have opened under the happiest auspices. In signing a treaty—albeit of friendship and non-aggression—with Italy and in making preliminary visits to Paris and London, the Greek Prime Minister has hoped to secure tactical advantages over the dour politicians of Belgrade. Whether Serb psychology will react in the way that he evidently anticipates remains to be seen. It has become an *idée fixe* among Yugoslavs that from one direction or another a policy is afoot to isolate their country. France has hitherto been regarded as an opponent, or at least a stranger, to any such scheme, and Greece was supposed not to be of sufficient account to need to be drawn into it. With the return to power of M. Venizelos the situation in regard to Greece underwent, in Yugoslav eyes, an ominous change. When the Greek Prime Minister immediately proceeded to make common cause with Italy, the worst was feared, and now, on the top of all, he has apparently been able to neutralise France. M. Venizelos will, therefore, find the atmosphere of Belgrade charged with suspicion, and his own personal popularity will be obscured under resentment at his "slimness." It will be a great tribute to his powers of persuasion, if he is able to overcome these drawbacks and to win the Yugoslav Government to his own way of thinking in connexion with the Salonika Free Zone. The Belgrade authorities are handicapped by the political situation in the country, as they will be fearful of giving their Croat opponents any further handle against them. M. Venizelos's tactics may testify to his diplomatic cleverness and may even achieve their end, in an agreement on paper with Yugoslavia. A great opportunity, however, has been missed of consolidating the Balkans by offering Yugoslavia a chance of coming to terms with Greece *pro bono Balkanico*, instead of perpetuating, as M. Venizelos has done, the suicidal policy by which one Balkan State tries to steal a march on another by flaunting its reliance on one or more Great Powers.

The Isolation of Yugoslavia.

When Yugoslavia complains of isolation, she needs to make sure that it is not the isolation of Ishmael, whose "hand was against every man, and every man's hand against him." Italy would have been powerless to throw—or to scheme to throw—a ring-fence round Yugoslavia, if that country had not delivered itself into Italian hands by making itself unpopular among its Balkan neighbours. The most glaring instance of the hand-to-mouth existence which serves Belgrade as a foreign policy is to be seen in the Yugoslav attitude towards Albania. If any country could have been relied upon to adopt Yugoslavia as a big brother, it was Albania, when she rose up and drove the Italians from her midst. Yet the Belgrade Government could think of no better plan for winning Albanian friendship and co-operation than to seek to take the place of the dispossessed Italians. When this policy failed, she became wholly bankrupt in ideas, and resigned herself to looking out for every fresh grievance that she could exploit; in so doing, she inevitably drove Albania farther into Italy's hands. As soon as Italo-Yugoslav antagonism was seen to be inevitable, Yugoslavia should have left no stone unturned to rally her Balkan neighbours round her. Her actual policy has been the reverse. She has lost no opportunity of bullying and insulting Bulgaria, when her own armed strength and superior resources ought, if nothing else, to have made her tolerant of any mild Bulgarian attempt to kick against the pricks; and now she is apparently prepared to push to extremes an obstinate antagonism to Greece, when the original importance that a Free Zone in Salonika possessed in Yugoslav eyes has been superseded by port and railway developments on the Adriatic coast. Yugoslavia has celebrated this week the tenth anniversary of the victory on the Salonika front. It would have been of happier augury for the Balkans and for Europe, if she could have commemorated the anniversary—even the first—of Balkan or, haply, Yugoslav unity, for the intransigence shown in foreign affairs would seem to be reflected in the unhappy divisions in the country itself.

A Bulgarian Anniversary.

October 3 was the tenth anniversary of the accession of King Boris and on it was also commemorated the twentieth anniversary of the proclamation of Bulgaria as an independent Kingdom (October 5, 1908). Earlier in the year the country celebrated the jubilee of its creation as a separate State. Modern Bulgaria has crowded much history into these few years, and it is inevitable that the recurrence of the various commemorations should challenge a domestic stock-taking. At the present time, however, it is to the interest of all Balkan countries to have their gaze fixed on the present rather than on the past. Bulgaria, indeed, is prevented by force of circumstances from building much on a future which, she is persuaded, is dependent more on the actions of others than on her own activities. Within her existing frontiers she regards herself as too cramped to do herself justice; she is convinced that, at the least, she needs a port on the Ægean, and at present she can obtain one only by the favour of Greece. Yet Bulgaria has little cause for despair. It may seem a long road to the attainment of her aspirations, but her face is set in the right direction. In many respects she has nothing to fear in comparison with her neighbours. The most prominent feature of last week's celebrations was the personal popularity of King Boris—no small asset for a country these days, and in Bulgaria it spells a national unity of which nearly all her neighbours have occasion to be jealous. It may well be that the advent to power of M. Venizelos brings nearer a settlement of the question of a port on the Ægean Sea. Any Greek suggestion must almost necessarily be an advance on the Dedeagatch offer. This time Bulgaria will have to decide whether it may not be better to accept something short of her desires for the sake of helping on the cause of Balkan unity and co-operation, in the knowledge that when the latter goal is reached it will be easier to meet the full requirements of individual States.

Reforms in Afghanistan.

If it be true that King Amanullah's attempt to introduce the immediate abolition of *purdah* in Afghanistan has had to be abandoned in face of the fanatical opposition that it has aroused in the outlying districts, his failure will afford an object-lesson of the value of a disciplined nation such as Mustapha Kemal Pasha has to deal with in Turkey. The Turk is a born soldier to some purpose in the modern scheme of things. Military experience has not only provided the Ghazi with capable helpers to carry out his schemes, but has also predisposed the Turk to obey the orders of his superiors. King Amanullah's problem promises to be more difficult. He may console himself with the reflexion that similar difficulties present themselves, in different circumstances, in Egypt. There the proposed reform of Al Azhar University encounters the same kind of opposition as his own reforms. Public opinion in Egypt may enable the ulama to be overruled in the matter of University reform, but Afghanistan has no reason to be disappointed with the progress already made since the King's return from his foreign tour. Mustapha Kemal Pasha had not to contend with the extensive tribal system that is a feature of King Amanullah's country, and he was supported to no little extent by perhaps the most civilising agent of all, a railway system. A few railways in Afghanistan will do much to spread the fashion of the towns to the tribes, and in the meantime a safe beginning is being made in the dispatch of women among the young people who are being sent from Afghanistan to study abroad.

Iraq's High Commissioner Designate.

The official intimation that Brigadier-General Sir Gilbert Clayton is to succeed Sir Henry Dobbs as High

Commissioner for Iraq considerably post-dates general anticipation in this regard. For the fact that the actual High Commissioner has for some time expressed a desire to lay down the burden which he has borne on such broad shoulders for more than five long years, coupled with the distinction of the services which Sir Gilbert Clayton has already performed on behalf of Iraq and the omission to grant him a definite post during the years since he retired from the Chief Secretaryship for Palestine, has left the road to Baghdad exclusively open to the negotiator of the Treaties of Bahra, Hadda, and Jidda. The work of Sir Henry Dobbs, who is due to retire early next year, in consolidating Iraq, and in rigidly separating fact from fancy in the new Arab State, we shall have another opportunity of appraising. Suffice it to say at this moment that to Arabia in general the appointment of Sir Gilbert Clayton, who has made friends of the Arabs wherever he has gone—in Egypt, Palestine, Syria, Iraq, the Hijaz, or the Yaman—will certainly be welcome. To Iraq in particular, the fact that a man who, probably, has a unique knowledge of the origins of the Sharifian movement, has been appointed to collaborate with King Faisal in training the young country to independence may seem doubly gratifying. If one were asked to single out the chief feature of the High Commissioner Designate in his dealings with Oriental problems, one would refer to his tact and his caution. Both these qualities will possibly be required in full measure before the consummation of Great Britain's supervising period in Iraq comes to an end with the admittance of the Arab Kingdom into the League of Nations.

The End of an Epoch.

We have referred in our leading article to the fact that the termination of Sir Henry Dobbs' High Commissionership may in a sense be regarded as the end of an epoch in Iraq. Sir Gilbert Clayton will go to a country whose frontiers are now definitely fixed (except in regard to Syria), although, unfortunately, relations with neighbouring Persia and Najd are not all that could be desired. Previous High Commissioners have gone to an unstable charge, both in the internal and external sense: Sir Gilbert will proceed to one that at least has fixed boundaries. But in yet another sense his appointment marks, if not a departure, at any rate a sign of the times. For Sir Gilbert Clayton, unlike Sir Arnold Wilson, Sir Percy Cox, and Sir Henry Dobbs, has little experience of India: his conceptions of the governance of Oriental States derive from nearer London. To the Arab Nationalist this fact may be not without significance. In congratulating Sir Gilbert Clayton on his appointment, we may also be allowed to express the hope that to him will fall the privilege of guiding the young State into the harbour of independence.

INDIAN NOTES.

The Simla Conference.

After a short interval for preliminary study of a work which Lord Irwin has aptly described as "the most complete creative document hitherto published for the furtherance of the rural regeneration of India" the Central Government and the Provincial Governments have now begun to set about the more difficult task of implementing some at least of the Linlithgow Commission's recommendations. It has already been stated that a Bill will shortly be introduced into the Legislative Assembly to establish a Central Council of Agricultural Research. We understand that the measure, which is likely to come up at the next Delhi Session, will differ from the Commission's recommendations in that connection to the extent that the proposed organisation will be divided into two parts. One, to be called the Governing Body, will consist of a dozen members, of whom three will be nominated by the Central Legislature, and the other, to be

known as the Advisory Body, will be composed mainly of experts in the particular branches of agriculture. Meanwhile the Punjab and several other local Governments have convened special conferences of departmental officers to discuss the report and decide upon the action called for in such matters, as the initiative rests with the provincial administration. But as the Viceroy, whose intense interest in and experience of the subject are well-known, observed at the opening session last week, co-ordination is the one magic key to success in any attempt to grapple with the vast problem of rural reconstruction in India. Particular interest, therefore, attaches to the Conference between representatives of the Central and Provincial Governments which met at Simla last week to consider how far and in what direction concerted action was either desirable or feasible. It is, of course, for the Provinces to decide whether they are prepared to accept the principle of the proposed Central Research Council, but Lord Irwin made it plain that this Government were of opinion that no delay should be lost over its institution and that its establishment, on the terms above indicated, would in no way restrict the freedom of the Provinces in regard to the administration of a question which is now a transferred subject in the control of the Provincial Governments. The Conference, which lasted one week, appears to have been a great success, complete unanimity, we understand, being forthcoming as to the desirability of accepting the Report as a whole as a basis for rural reconstruction and agricultural development, and also as to the necessity for the progressive application of the Commission's main recommendations as the circumstances of each province permit. At the same time, as we anticipated, stress was laid by the Provincial representatives on the number and variety of the financial implications of the recommendations, which made their immediate or simultaneous adoption impossible. And that unfortunately is likely to be the crux of the whole matter so long as the financial resources of the provinces are still regulated by the Meston Settlement.

Calcutta's Record Year.

During the year ended March 31, 1928, the tonnage entering the port of Calcutta was greater than in any previous year. It amounted to 4,639,569 tons, representing 1,418 vessels. In 1912-13 more vessels entered, the number being 1,730. But they represented a gross tonnage of only 4,367,222. The quantity of merchandise handled last year by the Calcutta Port Trust was likewise the heaviest on record. It looks, therefore, as if a state of trade not unlike that which prevailed immediately before the War has been established in Calcutta. If this proves to be so, it is very satisfactory, not only in the interests of India generally, but also because the great new dock is now approaching completion. There will thus be a very large extension of port accommodation and facilities, which means that there will be plenty of scope for trade development. The revenue fund, which the Commissioners established three years ago to safeguard them against possible deficits at the time when the new dock should come into operation, has made great progress. In fact it is now such that, instead of having to charge higher rates when the Dock is in use, the Commissioners are actually contemplating a reduction. This will be a triumph for them, and will bring them well-merited congratulations on the skill and foresight with which they have planned and completed so notable an undertaking.

The satisfactory progress which has been made by the Dock Scheme is in striking contrast to the delays which appear to be inseparable from most large public works in Bengal. We mentioned in these columns twelve months ago that after a discussion extending over fifteen years it had been decided to build a new Howrah Bridge of very much the same type as had been recommended by a competent Committee of Engineers at the beginning of that long period. It was hoped last year that the end of the discussion was at hand, and that definite steps in the way of building the bridge would be taken forthwith. But,

to judge by the most recent available information, the scheme would appear to be in very much the same position to-day as it was at this time last year. In the meantime the old pontoon bridge goes on. It was built in the early seventies of the nineteenth century, and it is admittedly at the end of its career of usefulness. Of necessity it is constantly under repair, which means heavy expenditure. It has to carry a ceaseless stream of heavy traffic as there is no other bridge between Calcutta on the east bank of the Hooghly and the large and busy town of Howrah on the west bank. Its reconstruction has been for years the most urgently necessary public improvement in Calcutta, if not indeed in the province, but it makes no definite progress.

A Brighter Outlook.

Although the latest dastardly attempt to wreck the Allahabad-Bombay mail train falls in a somewhat different category, it is unfortunately symptomatic of the general state of industrial unrest in which the instigators of such crimes find ready instruments for their lawless activities. Fortunately, the past few weeks have witnessed a welcome improvement in other directions, in spite of the Government's failure to secure the Legislative Assembly's assent to the passing of the Public Safety (Removal of Communist Agents) Bill and the further postponement of the long-overdue legislation on the lines of the English Industrial Courts Act. Following the settlement reached last month at Jamshedpur and the successful handling of the trouble which threatened to develop on H.E.H. The Nizam's State Railway, comes the welcome news of the calling off of the Bombay cotton mill dispute. After prolonged negotiations the operatives, we understand, have agreed to return to work on the rates of wages in force in March last year, while the millowners' proposals for the reorganisation of the industry are to be referred to a Committee of Inquiry to be appointed by Government. As the appointment of the Committee, and the terms of reference to that body, were agreed to by both parties as far back as August last, the terms of the provisional settlement will no doubt be acclaimed as a victory for the operatives, whose rates of pay, pending the publication of the Committee's findings, are to be those ruling prior to the commencement of the trouble. In point of fact major credit must in fairness be given to the millowners for their conciliatory attitude, and they can view with every confidence the outcome of the inquiry, especially if, as is probable, the personnel of the Committee is similar to that appointed on the last occasion, in 1924, on which recourse was had to the same method of adjudication.

PERPLEXITY IN IRAQ.

He would, indeed, be an optimist who, studying the present condition of Iraq, would aver that he could already see the solution of the problem which the Mandatory Power and the people of Iraq set themselves, when a form of constitutional government for the young Arab State and an indefinite period of tutelage were decided upon. In other words, perplexity upon the political future of Iraq is fairly general. Neither Arab nor Briton is prepared, so far as our knowledge goes, to assert that by such and such a date Iraq will possess complete independence. The year 1932, as one in which Iraq may possibly enter the League of Nations, is alternatively regarded with hope, doubt, or fear. In this speculation there is unity among neither the Iraqis nor the representatives of the Mandatory Power. What is the reason for this unsatisfactory state of affairs? It would appear to lie, not in the personality, either Arab or British, of those working the system, but in the system itself. The plain fact is that talk of Iraq's sovereignty and independence is apt to be regarded as an idle dream, so long as Great Britain has to appear year by year to answer for her charge of Iraq before the Permanent Mandates Commission at Geneva. Iraq, says the Baghdadi politician, has abolished the Mandate. Nominally, yes; but in actual fact it is this very responsibility which rests upon the shoulders of British Advisers in Iraq that seems to be the stumbling block of the more vocal section of Iraqi "public opinion." In the smaller things of Iraq's life, this dilemma is of little account; but in the larger domain, such as concerns the defence of Iraq, the "interference" of the British—which derives solely from their sense of responsibility, that is, their reading of the necessities of the situation—becomes little short of determined opposition in the eyes of the Iraqi eager for his country's complete independence. Is there, then, a direct conflict between the real facts and the alleged facts of the existing situation in Iraq: is there an essential disparity between the letter of the Anglo-Iraqi Treaty and the obligations of the Mandatory Power towards the League of Nations? Zealous observers on both the Iraqi and the British sides may be tempted to supply a hasty affirmative. Either the British or the Iraqis, they will say, must govern Iraq; Crown Colony Government we understand, complete independence we understand, but this scent without the taste of full sovereignty is both unpleasant and unhealthy. This mandatory system, they continue, breeds neither gratitude, trust, nor good-will; nor, until hypothesis is made reality or reality made hypothesis, will there cease to be on both sides suspicion, mistrust, and belittlement of respective achievements.

Now that there are grounds for such an analysis we should not be disposed to deny; in the larger view, however, we believe both these British and Iraqi critics of the present system to be mistaken. That differences of opinion arise between Iraqi Cabinets and British Advisers is inevitable in the very nature of things; but that fact in itself obviously does not damn the mandatory system. It is true, moreover, howsoever cynical observers may deny the fact or howsoever Iraqi enthusiasts may prematurely assert it, that Iraqis do possess honesty, that they do possess ability, and that they are acquiring experience. Examples of the contrary can no doubt be found; they can be found in the administrations of every

country in the world. But in the less conspicuous elements of governance—the elements in which, in the long run, a country is most progressive or reactionary—Iraq has during the last few years made unquestionable advance. It is over the more prominent matters, such as the problem of creating a patriotic, or Iraqi spirit, the problem of Iraq's assuming full responsibility for external defence and internal security, the problem of the unification of the country, not only in the correct treatment of minorities, but also, as we have been reminded by the recently issued Report on Iraq for 1927 to the League of Nations (Colonial No. 35), in the collaboration of Sunni and Shiah, and of tribesman and townsman, that a cloud of perplexity is seen to hang. But out of these peculiar problems there must be found a way; no Mandatory Power could leave a country without indicating a solution (and the mere presence in a new State of a foreign civilised Power will not in itself help to assuage existing differences—rather, unless wisdom guide its steps, the contrary). How the question of the defence of Iraq is to be answered we confess we do not precisely know, but it is manifestly unsatisfactory that so large a proportion as a third of the Budget should have to be spent, as it is now spent, on the Army. When the demand for Conscription is left to the Iraqis themselves to respond to, the key to this particular door will have been found. Conceivably it may involve a longer period of British tutelage than those who advocate Conscription would like; conceivably it may hasten further British evacuation. That is one great subject of perplexity; the other, not unconnected with it, is the possibility of reconciling the Shiah majority to the present share of power which a predominantly Sunni Administration enjoys. Round this particular obstacle there should certainly be found a path, for as the Shiahs in Iraq become better educated and trained, their demand for posts, for representation in the country's counsels, can obviously brook no refusal. There is reason to hope that wise advice will be given in this matter of co-operation with the Sunnis by the Shiah leaders (reference is not made in this connexion to the *ulama* of the Holy Cities), and the better brains among the Sunnis will presumably not neglect to avail themselves of the general support in the country which permission to the Shiahs to participate in the Administration would bring—even were their attitude guided by no higher motive, as one would like to believe it will increasingly be guided, than this. In short, the setting out, the display, and the exposition of the two prominent problems of Iraq which may now be said to have been achieved, do in themselves help, as all such exposition helps, to the fundamental solution of the country's future.

It may be said, in fine, as the High Commissionership of Sir Henry Dobbs approaches its end, that the first and hardest stage of Iraq's career as an independent State has been passed. Her main difficulties, internal and external, are now fully known; and the sources of her future and undoubted prosperity are also now sufficiently laid bare. It is recognised that mistakes, serious mistakes, have been made; several of the geese of the early days of King Faisal's State are now seen to be swans; and generally speaking there is less tendency to be deceived by the mirages of early enthusiasm and premature judgment. Nor will Iraq suffer through this contact of sentiment with reality; the foundations are most truly laid of that State whose early days are spent in a hard school. Much water, of course, will have to flow down the Tigris and Euphrates before the average Iraqi becomes what the Western world would understand by an Iraqi citizen; the old love of tribe, the still more persistent conception of the advancement of the family—and this latter sentiment is a curse in Oriental politics, in which the Occidental idea of merit as a qualification for position sometimes appears to play only an accidental part—such features as these die lingeringly, stubbornly, even romantically. But die they will, as the Iraqis gain in experience of administration and in knowledge of Western European ways.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, October 4.

The Political Situation.

While there are no real grounds for optimism, the black pessimism with which the political situation was regarded in Belgrade a few months ago has passed, and signs are already discernible, faint but enheartening, that a way out may yet be found from the apparent *impasse* which resulted from the murders in the Skupshtina on June 20. The difficulties of the situation are still enormous and are added to by the foolish declarations of extremists on both sides—those in Belgrade who talk of ruling the Croats with a firm hand, and those in Zagreb who declare that they will be satisfied only with complete and absolute independence. The Peasant-Democrat Club, despite the predictions that it would fall to pieces after Raditch's death, still remains to all appearances firmly united; but its policy of social boycott has proved a failure and is rapidly becoming merely farcical. Its extremist members declare that they can never negotiate with anyone even remotely connected with those in power on June 20, while in Belgrade it is pointed out that it would be foolish for the present Government to resign and a crisis to be opened, until preliminary negotiations had proved the possibility of an agreement being reached. Even the very solidarity of the *Prechanski* parties serves to make an agreement more difficult, since it is preventing the open split of the Radical Party which would otherwise take place between the supporters of the present régime and those favouring the National Executive Committee of the party, which has dissociated itself from all responsibility for the events leading up to the tragedy of June 20 and for the policy adopted by the Belgrade Government from then onwards. Now the very faintest signs are to be seen of disaccord in the Peasant-Democrat ranks, and, if this develops, it will make an agreement far more easy.

Politika reports also that, following on a chance meeting between Dr. Dragotin Koyitch, a member of the Radical Executive Committee, who has always demanded that steps should be taken to come to an agreement with the Croats as soon as possible, and Dr. Sv. Popovitch, a well-known member of the Independent Democrat Party, a further meeting was arranged and held last night. Besides Dr. Koyitch and Dr. Popovitch, M. Milosh Savchitch, another Independent Democrat, was also present. M. Savchitch had earlier in the day been received in audience by King Alexander, and immediately after the meeting Dr. Popovitch left for Zagreb, where he will take part to-day in a meeting of the Peasant-Democrat Club. It is hoped that an attempt is being made to find a formula for the renewal of relations between the Peasant-Democrat Club and the Radicals of the National Executive Committee, inasmuch as it is believed that the only chance of agreement is with those Radicals who openly opposed the policy of the Government before June 20 and have constantly attacked M.

Velya Voukitchevitch and his group ever since. Small though it is, a beginning seems to have been made, and it is to be hoped that it will lead to a speeding-up of the work of those who are trying to bring about the reconciliation of the Serbs of Belgrade with the *Prechanski* Serbs and the Croats.

Dalmatian Agriculture.

The vexed question of the Dalmatian Agriculture Regulation Bill which has been brought forward many times and has always been postponed almost caused a split in the Government Coalition last week and made M. Grg. Anjelinovitch, a Dalmatian, and the only Croat Minister in the Cabinet, threaten to resign. The matter has been postponed again, as have many other important matters on which the Four-Party Coalition cannot agree, but this merely indicates that, if the present Government remains long in office, it will be faced with difficulties which will make reorganisation necessary.

Tenth Anniversary of the Salonika Victory.

Outside Belgrade a great camp of fully armed men has grown up within the last few days, and her streets resound again to the once familiar sound of marching troops. The houses are gay with national flags and festoons of the flags of the Allies are hung across the main streets. The air is thick with aeroplanes, and a foreigner arriving here unwarned might think that we were on the eve of another war. It is, however, only the preparations which are being made for the celebration of the tenth anniversary of the brilliant success on the Salonika front, which caused the Austrians and Bulgarians to make their peace and brought the end of the War in sight. General Franchet d'Esperey, who was Commander-in-Chief of the Allied Forces, and General Sir Charles Briggs, who commanded the XVIth Corps and later the whole of the British troops on this front, are expected to arrive in time for the official celebration, which is to begin on October 7, and their coming is considered as a tribute to the valour of the Serbian troops, the fury of whose attacks, as they neared the fatherland from which they had been exiled for over three years, was largely responsible for the sudden and complete collapse of the enemy.

M. Venizelos's Visit.

Considerable importance is attached to the approaching visit of M. Venizelos to Belgrade. While it is understood that no definite steps can yet be taken immediately to solve the many outstanding problems between the two countries, this visit is expected to make possible the renewal of negotiations for the conclusion of a pact of Friendship and will also serve to allay any nervousness which may have been occasioned by M. Venizelos's pact with Mussolini. Not that this Greco-Italian Pact has been taken too seriously in Belgrade, where it is understood that this is but one of a whole series of similar pacts which M. Venizelos is preparing to sign with neighbouring States, and that Greece has now far more interests in common with Yugoslavia and far greater difficulties outstanding with Italy.

Constantinople September 27.

Salvage of Sunken Vessels.

A foreign group of shipbreakers whose identity has not been divulged, have applied to the Prefecture of the City of Constantinople for authority to retrieve the hulls of vessels lying at the bottom of the Golden Horn, in much the same way as salvage operations have been carried out for some time past among the derelicts of the German fleet at Scapa Flow. The foreign group have apparently taken the pains to ascertain approximately what profit the operation is likely to yield before making a bid, as it has been calculated that 130 vessels of varying tonnage, the bulk of them warships, have gone to the bottom of this narrow waterway since Sultan Abdul Aziz ascended the throne. The foreign group offer to turn over to the Prefecture everything that they are successful in salvaging, provided that they are allowed to retain 50 per cent. of the copper and brass taken out of the raised vessels. The proposition is a somewhat unusual one, and, as the Prefecture of the City has little experience in maritime matters, it is anticipated that some time must elapse before the applicants receive an answer.

Salvage operations, undertaken by an Italian firm, have been proceeding for some months past at the Dardanelles on Allied warships sunk during the Great War. Activities have so far been confined principally to searches by divers, and about a month ago, a few silver-plated spoons, inscribed "Ward Room Mess" were retrieved from the hull of H.M.S. Majestic which was torpedoed off Morto Bay by an enemy submarine in the early part of 1915.

Departure of the Ghazi.

The return journey of Mustapha Kemal Pasha to Angora has been marked by a series of enthusiastic receptions at every port of call on the Black Sea coast where the Izmir, the vessel in which he embarked at Constantinople, put in, and by festivities and dinners at which he was the principal guest in the picturesque inland towns of Amassia, Tokat and Sivas. Many institutions, many customs and many traditions in this country have latterly gone by the board, but it is pleasing to know that the old up-country reputation for hospitality to the wayfarer, be he Prince or beggar, is as alive to-day as it was in those far-off days when the foreign sojourner, travelling through Anatolia, was put up and boarded in the village rest house as a guest of the community.

The Ghazi took the opportunity, in the course of his journey, of examining the senior Government officials with whom he came into contact in their proficiency in the new Turkish characters. Those, naturally, who had a grounding in the French language passed with flying colours, but certain others who are still occupied in learning the Latin alphabet were reprimanded for their backwardness.

An Archæological Discovery.

M. Eugène Pittard, Dean of the Faculty of Science at the University of Geneva, has lately spent two months in Asia Minor whence he has returned with information which will prove of the greatest interest to Scientists throughout the Western world. At Adi-Zamman, situated half-way between Malatya and Diarbekir, the Professor discovered what he describes as a "paleolithic factory" dating back to the Aurignacian period. Should the Professor's theory prove to be correct, it will go a long way to establish that Anatolia was inhabited by an autochthonous race tens of thousands of years before either Greek or Roman had been heard of. M. Pittard is reported to have found not only a goodly collection of paleolithic implements and weapons, but also actual traces of the workshops which manufactured and sold these implements and instruments to the then inhabitants of the highlands of Anatolia.

Cairo, September 29.

The Death of Sarwat Pasha.

Throughout this week little has been talked about except the sudden death of Abdel Khalek Sarwat Pasha. Mohamed Pasha Mahmoud's tour in Upper Egypt, which would normally have proved an absorbing topic, has had to take second place, and the funeral of the "Father of the Constitution," as Sarwat Pasha has often been called, which is to take place to-morrow, is likely to give further impetus to the discussions in regard to the past in which Sarwat Pasha had such an outstanding place, and to the future which will have to be envisaged without his guiding spirit. The death of Sarwat Pasha is undoubtedly a tragedy, a tragedy for his friends, who expected him to continue to play, for yet another decade at least, the dominant rôle in every political situation which he has played since 1918 and who hoped that during that period he would succeed in putting through the settlement of Egypt's outstanding questions, and a tragedy for Egypt herself, since he was the one man on whom she could count in times of stress and in whom most of her hopes for the future reposed.

Sarwat Pasha leaves a blank—a blank far greater than that left by Zaghloul Pasha. The leader of the Wafd was in many respects a great man. But for his courage and tenacity the movement which he headed would never have reached the point it did. But for his peculiar knowledge of how to handle, and appeal to, the people national unity would never have been achieved. Yet Zaghloul Pasha never achieved any really constructive results. On the other hand, Sarwat Pasha was constructively personified. He, like Zaghloul, aimed at the independence of his country, but in addition he had a positive policy which the head of the Wafd sadly lacked. The result has been that, whereas Zaghloul allowed opportunity after opportunity for achieving something definite for his country to escape when these opportunities were actually within his grasp, Sarwat was able to turn what appeared to be an *impasse* into an occasion of profit for Egypt. He was the Cavour, as Zaghloul was the Mazzini, of Egypt, and history will undoubtedly allot to each of them a rôle very similar to

that played by those two Italian patriots in the Renaissance of their country.

Sarwat Pasha will be sorely missed by all who came into contact or worked with him. He was affable, courteous, loyal to his friends, tolerant of his adversaries. Even his bitterest enemy could never complain that in his intercourse with, or his reception of, him Sarwat Pasha had ever displayed the slightest impatience or coolness. Indeed, herein lay one of his great sources of strength in dealing with his fellow-men. No Egyptian has been more pilloried than he. Yet he never for one moment showed any resentment of these calumnies, no matter how violent or unjustified they might be, nor did he display any animosity towards those who he knew were responsible for them. Rarely did he deign to reply to those attacks, and on the rare occasions when he did his answer confounded his traducers. As a debater he was indeed without equal, and Zaghloul Pasha himself, who feared no man in the public forum, always took particular care never to cross swords with him, for he knew well that he would have the worst of the encounter. And when the time came for a reconciliation, none was more pleased than the "Rais El Mahbub," for he had come fully to appreciate the value of the man whose loyalty he had been foremost in impugning.

An able lawyer and administrator, he left his mark in all the developments which he directed. He alone of all his contemporaries showed qualities of statesmanship—indeed, the past forty years have produced no one in Egypt to approach him in this respect—and his subtle and fertile brain, breadth of view, and grasp of detail, coupled with his more personal qualities, made of him, from the Egyptian point of view, an ideal negotiator.

Sarwat Pasha's name will ever be associated with the great change in Egypt's political status introduced by the Declaration of February 28, 1922, of which he was admittedly the main inspiration, and, although events proved too strong for him, and he could not obtain acceptance in Egypt of the Treaty, which, single-handed, he offered his country last February, his apparent failure will always stand to his credit in regard to both the courageous patriotism and the ability which he showed in putting through the negotiations with Sir Austen Chamberlain and Lord Lloyd.

The Premier's Tour.

Mohamed Pasha Mahmoud has just completed a very successful round of official visits to Upper Egypt. The tour has included Assiut, which is for all practical purposes the capital, Minia, Beni-Suef, Deirout, and Giza, and at each point the Premier had a most enthusiastic reception. The popular demonstration was, however, not restricted to those towns, and the steamer by which he made the trip was met at every available point by "feluccas" bearing shouting fellahin, who also crowded on the river banks to greet the Premier. To a certain extent the reception which Mahomed Mahmoud Pasha has had south of Cairo is a tribute to his family, which has always held a great place amongst the "Saidis," and

particularly to his father, who is greatly venerated. Nevertheless the fact that nowhere was there a discordant note, that at no place was there any pro-Wafdist demonstration of even the smallest dimensions, shows clearly that even in places where the Wafd has always been supposed to have a strong following, feeling has veered over towards the new régime.

Undoubtedly Tanta has had a tremendous influence on the whole country. The Premier was, indeed, very wise to insist on first visiting the enemy's stronghold, and he has received the reward of his courage by the manner in which that visit revealed the utter failure of the Wafd provincial organisation and by the success of his subsequent tour. It must be admitted that the respective tactics of the two leaders have counted for much in this revulsion of opinion and feeling. Nahas Pasha, never a very sympathetic personality, has been able to do nothing but repeat his plaint that the country had been betrayed, and that he and the Wafd alone could save it from the loss of its rights which the present Cabinet has sacrificed for personal ends. On the other hand, Mohamed Mahmoud Pasha, instead of railing at the Wafd and dwelling on its backslidings, has concentrated on laying before the country a constructive policy of economic and social reform, which has appealed to the masses who have for long wanted some such assistance, and he has managed astutely and without any apparent effort to place the Wafd in a thoroughly bad position, from which none of its efforts can really extricate it.

Mohamed Mahmoud Pasha has indeed proved a complete "surprise packet," even to his friends, none of whom ever suspected that he possessed the qualities which he is now revealing. His three months of office have proved most satisfactory, and his administration has had just that touch of the dictator which the country wanted. So far at any rate—and in these matters it is the first weeks that decide—he has succeeded in stultifying the efforts of the Wafd to create throughout the country an agitation making the task of the Government impossible and in drawing the people towards himself by giving them something practical and of advantage to their country to think about. If he and his colleagues can continue along the path on which they have embarked, the end of the three years, which they have set as their term of office, should record a complete transformation in the life and outlook, economic and political, of the country, and its rescue from the stagnation which the Wafd régime introduced and the ruin with which that régime threatened it.

by Greek members of the Bar. The case is to come before the Court for hearing on October 11.

Dengue Fever in Cyprus.

Great anxiety prevails regarding the danger of introduction of dengue fever, especially from Greece, where an epidemic of this disease has had such fatal results. A paper states that in August there were at Athens and the Piræus 589 fatal cases: 270 of males and 319 females. There are also cases in Egypt. One case has occurred in the Famagusta district, and it is suspected that there are others. The Medical Department is taking measures for very strict examination of passengers desiring to land in the island. Among those suffering in Athens is the Bishop of Kitium, Nicodemus, who has been visiting Greece. The Bishop of Papho, Jacobus, has also been seriously ill, in Cyprus, for some time (not from this disease) but is said to be much better. He is very popular in his diocese.

Progress of the English Language.

The number of natives who passed the public examination in English recently, some with distinction, was large, and candidates tend to increase. Many have been taught in the English School at Nicosia, founded by Canon Newham. Not only is the number of native youths rapidly increasing, but there is now also a remarkable number of Greek girls who are proficient in the language. Miss N. Chrysafini, of Nicosia, has recently obtained a certificate of proficiency in English at the London University, and others are studying in England.

A Great Island Fair.

The great fair of Omodhos, a large village of the wine-producing district of Limassol, is held annually on September 27, and is always largely attended. A Church and Monastery of the Cross are the centre of attraction, and near them are pitched numerous stalls, booths, etc. Much business is transacted, including the purchase of animals. Horse races are held and prizes given. The fair is generally held to mark the break up of summer, and the approach of the rainy season.

Paper Money.

According to a Government notification, paper money notes of £5, £1, and 10s. will be legally current till August 31, 1930.

Sofia, October 2.

Bulgarian Minorities.

The problem of the Bulgarian minorities in the Balkans was raised at a special conference which, assembled in conformity with the decision of the last Congress, at The Hague, of the International Association of League of Nations Unions, was held on September 29, at Prague, under the presidency of the British deputy, Sir Willoughby Dickinson, to hear the complaints of the Bulgarian delegation and the explanations of the Roumanian, Yugoslav, and Greek delegates.

In this connexion, it is stated that the Bulgarian League of Nations Union has elaborated, for the use of this conference, two detailed *exposés* on the condition and claims of Bulgarian minorities in Roumania (the Dobruja) and in Yugoslavia and Greece (Macedonia). The situation in these two provinces, peopled by a population essentially Bulgarian, is depicted in this Report as quite intolerable and in contradistinction to the régime for minorities stipulated in the Peace Treaties.

The Dobruja.

The Union complains that the question of the nationality of the population is regulated in a defective, partial, and complicated manner, owing to which a great number of the inhabitants domiciled in the country at the moment of the Roumanian occupation, on July 28, 1923, are refused the right to be regarded as Roumanian subjects and have in consequence been placed in a most precarious position, because the rural property of all these inhabitants is wholly expropriable in virtue of the law of Agrarian reform—and that almost without compensation. Rural property is generally subjected to exceptional and profoundly unjust legislation, with the result that the indigenous population, Bulgarian and Turkish, is forced to emigrate to Bulgaria and Turkey to make room for Roumanian colonists coming *en masse* to the Dobruja where, to obtain this end, the Roumanian functionaries—there are no others—apply a régime of expropriation, confiscation, *corvées* and arrests, all quite arbitrary and under all sorts of imaginary pretexts. And when this procedure does not immediately bring about the desired result, they have recourse to a simpler and more radical method, which consists of installing these colonists by force in the homes of the indigenous people and of compelling these others to leave. The Roumanian State similarly confiscate all the properties belonging to the schools, the Churches, the mosques, the religious communities—in fact, to all institutions of culture and good works.

Before the Roumanian occupation, the Bulgarian population of the country possessed two complete *lycées*, ten *progymnases* (superior elementary schools), and ninety-eight elementary schools. All these schools have either been closed or turned into Roumanian schools. It is only in Silistria, Dobritch, Baltchik, and Cavarina, formerly endowed with admirably organised scholastic institutions, that the Roumanians have permitted the re-opening of four Bulgarian schools, after having taken away all the property therein which had been obtained through gifts of the population in Bulgarian and even in Turkish times. The carrying on of these schools, which are placed under strict control, is a matter entirely of individual initiative, the State refusing them any subsidy. The Bulgarian population is thus obliged, even in

the villages which are exclusively Bulgarian, to send their children to schools where only Roumanian is taught. As for the Bulgarian churches, they have been, except in isolated cases, occupied by Roumanian priests and their property has become public property. Moreover, the Bulgarian schools and churches in the Dobruja very often date as far back as the times of Turkish domination. At this period, these institutions, as well as their property, were administered by autonomous scholastic and ecclesiastical committees, elected by the population. Their origin coincided with the Bulgarian renaissance. But the Roumanian legislator has put an end to their existence, and the Roumanian State has appropriated to itself all the wealth collected with such pains through scores and scores of years.

Naturally, the iniquity of this economic, political, and cultural oppression is not failing to have regrettable but inevitable repercussions on the soul of the local population, which is passionately attached to the soil and to its scholastic and religious acquisitions. Thousands and thousands of peasants who formerly lived in ease and even in opulence are to-day reduced to misery and to flight. Can we wonder, then, that certain of them, in despair, allow themselves to be won over by promises of subversive propaganda and are led on to commit acts hostile to the authorities of the new country to which they find themselves annexed? Rather is it to be wondered at that the proportions of the revolutionary movement in this province (which was formerly the granary of Bulgaria) have been so small.

A general amnesty is badly needed in the Dobruja. An amnesty has been foreshadowed by certain organs of the Roumanian Press, as an efficacious means of establishing calm and peace in the country. But this measure will not prove efficacious if the present injustices are not suppressed, if seventy-five per cent. of the land of the population is not restored to it—not only land, but also forests, vineyards which the Roumanian State has confiscated—if schools, churches, and mosques are not re-established, and if legal action does not follow all the crimes committed by the civil and military functionaries, without regard to the position or the personality of the guilty ones. For it is impossible for the present position to obtain any longer, in flagrant contradiction as it is of all conceptions of justice and equity. The minority population is obliged to expatriate itself, abandoning its property or selling it for ridiculous prices, and is swelling the already excessive number of refugees in Bulgaria, as well as in Asia Minor, where the adverse climate has fatal effects. This oppressed population grows poorer day by day; it is despairing of its future and becomes all the more easy a prey for the Bolshevik agents.

In Macedonia.

Nor are things any better in Macedonia (divided between Yugoslavia and Greece) where, as we read in the Memorandum of the Bulgarian Union, after having suppressed all the liberties and national rights of the Bulgarian population, the Yugoslavs and Greeks are making exactions which are a shame to humanity. Arrests and ill-treatment, pillage and extortion, physical and moral constraint, a system of different customs dues for different regions, a law for the defence of the State under which every citizen in Macedonia is classified, a situation which is in fact a permanent state of siege in which the exclusive rights of the military and civil authorities are all-powerful, the intervention of "occult factors," such as the Serbian Military League, *Bela Rouka* ("The White Hand") and the Greek organisation called "The Greek Fist" directed against the "Bulgarian bandits"; the expulsion *en masse* of the Bulgarian population, the enforced "Grecisation" or "Serbisation" of that section of the population which remains in its home; civil and military authorities who persecute and deliberately exterminate the Bulgarians, not even stopping short of massacre—as in the instance of the murder at the village of Tarlis, in the region of Drama, ordered by a Greek officer, Captain Doxakis, and

of the still more cruel murder in the village of Garvan, in the region of Radovishte, ordered by the *Joupan* Matkovitch; the pitiless condemnation at Skoplye of the Macedonian students who had committed the crime of wishing to organise a brotherhood of youth for the cultivation of their language and for the political defence of their character as loyal minority subjects of King Alexander, and the systematic assassinations of Bulgarians who were the most refractory to the denationalisation undertaken by the Governments of Belgrade and of Athens to stamp out Bulgarian nationality in this province, which was formerly the cradle of the Bulgarian renaissance, at the beginning of the nineteenth century—all these things constitute a sorrowful reality whose remedy is urgent, if tragedy is not to ensue and if the original Macedonians are not to go over definitely to the famous Revolutionary Organisation, which is now the sole protecting agency against Serb and Greek oppression.

Finally, the Bulgarian Association formulates the four following claims, the moderation of which must be recognised and which would result, not in detaching the Dobruja and Macedonia from the States in which they have been joined by the Peace Treaties, not even in raising up, as has been generally feared, a separatist or autonomous movement, but in suppressing the causes of discontent now existing and in reconciling the Bulgarian population in these two provinces with the respective Powers who are strangers to them. These claims are:—(1) To apply the clauses relative to the protection of minorities, that is to say, to re-establish the cultural rights (language, church, and school) which the population possessed before the War; (2) to put an end to the existing situation, in which the Macedonians and the Dobrujans are deprived of all rights and to introduce complete equality in the exercise of the civil and political rights; (3) to give full amnesty to all emigrants and the possibility, to those who desire it, of returning to their homes; and (4) guarantees on the part of the League of Nations that all these demands shall be satisfied.

SALONIKA ANNIVERSARY.

Lieut.-General Sir C. J. Briggs represented the British Army at the celebrations in Belgrade on October 7 and 8 on the occasion of the tenth anniversary of the Allied Victory on the Salonika front in 1918. In addition to General Briggs, who left London for Belgrade on October 4, the British delegation included Colonel Giles, British Military Attaché in Belgrade. The French delegation was headed by Marshal Franchet d'Esperey and a Rear-Admiral. The Italian delegation consisted of twelve members, led by two Generals and an Admiral. There were also Czechoslovak, Belgian, Roumanian, and Greek delegations.

KING OF ABYSSINIA.

The Regent and Heir-Apparent of Abyssinia, on whom the Empress Judith has conferred the title of Negus, or King, was crowned in Addis Ababa on October 7. Invitations to attend the ceremony were sent to the Governors of British and French Somaliland and the Italian Governor of Eritrea. The King-Regent Tafari is the senior representative in the male line of Saleha Selassié, King of Shoa, grandfather of the Emperor Menelik II., who was the present Empress's father. The King-Regent, then Ras Tafari Makonnen, deposed her nephew, the Emperor Lij Yasu (Joshua), in September, 1916, and placed her Majesty on her father's throne as Empress and Queen of Queens of Ethiopia, the official name for Abyssinia.

Captain Bennet Baggs left Croydon Aerodrome on October 3, flying an Armstrong-Siddeley Atlas reconnaissance aeroplane, for Constantinople, where he is demonstrating the machine in an effort to obtain for Britain aircraft orders which it is understood that the Turks are about to place.

The Executive of the English Zionist Federation has protested against the action of the Palestine Administration in their interference with the Jewish worshippers at the Wailing Wall in Jerusalem on the Day of Atonement, and has invited the British Government to make impossible any similar incident in the future.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 20.

The Statutory Commission.

The problem that Sir John Simon and his colleagues have been set to untangle gets more tangled every week. There have been so many memoranda; there is the Nehru Committee's Report; there has been, this week, the criticism of that Report by a group of Muhammadan members from Bengal and the Punjab that met in the house of Malik Firozkhan Noor in Simla; there has been, also this week, the challenge of the Report by Sir Manubhai Mehta, formerly Dewan of Baroda and now Prime Minister of the Bikanir State, a challenge in which the treatment of the question of the Indian States in the Report is characterised as "superficial and light-hearted;" a challenge in which Sir Manubhai Mehta said: "The Princes do not acknowledge the paramountcy of the Government of India. The only paramountcy which they admit is vested in the Crown of England." Lastly, this morning, we have the memorandum of the European Association. The chief proposals of this last memorandum, as summarised in the *Statesman*, are:—

An increase in the proportion of nominated non-official seats in the Assembly to strengthen the Executive.

No extension of responsible government as far as the Central Government is concerned.

The introduction of responsible government in the Provinces subject to a number of safeguards.

No extension of the present franchise in the Provinces.

No further reduction of the British element in the Services.

The building up of a federation of Indian States to develop an All-India Government.

The reorganization of the legal position of the Anglo-Indians.

Other matters of interest connected with the Statutory Commission, but I cannot do more than just mention them, are that the Council of State has adopted a motion for the election of three members on the Committee of the Central Legislature, and that the Legislative Council of the United Provinces, reversing its former decision to boycott the Statutory Commission, has decided to appoint a Committee to co-operate. Have not I said from the beginning that the leading Indian politicians' boycott of the Commission would end in smoke?

Public Safety Bill.

The Government, contrary to some expectation, won the day over the Public Safety Bill, the Assembly, after a four days' debate, agreeing on Saturday to refer the Bill to a Select Committee. The voting was very close, 62 against 59. The Committee's work is understood to have been completed already, with no little improvement to the Bill. It may be anticipated that it will soon form part of the law of British India, and that the Communist menace, of the extent of which not much information has been given out, will have been met to some extent.

The Assembly and its President.

Last Friday Pandit Motilal Nehru brought to the notice of the Assembly a telegram published in the *Daily Telegraph* suggesting that the President's ruling in connexion with the Public Safety Bill was a party move. The Pandit also drew attention to matter that had appeared in the *Times of India* and the *Pioneer*. There was a debate that made interesting reading. The President spoke last. He deferred his decision for a week. We shall hear more of it.

The Assembly and its Secretariat.

There has also been a debate on the question of the Secretariat of the Assembly and its separation from the Legislative Department of the Government of India, and we have had the *Statesman*, in a leading article on the

question, writing such things as: "... Mr. Crerar's heart has been in the right place throughout on the matter, and indeed it was impossible to suppose that there was any member of the Government who did not feel intensely humiliated at the position to which the Secretary of State had publicly reduced it. By the mails we receive photographs of Lord Birkenhead yachting at Cowes or disporting himself at other centres of pleasure. The mails also bring us his bright and breezy contributions to the Press on non-political subjects, while the cables speak of projects for making money in the City. But we have..." but as your Correspondent is not sure that the rest is not rebellious, he will quote no more.

The European Association and Education.

The European Association has also prepared a memorandum for presentation to the Hartog Committee on the subject of the state of education in India. Nothing may be said in it that has not been said one hundred thousand times already. That anything should be said that has not been said already was not to be expected. What is said, however, does not matter so much sometimes as who says it, and there may be more attention paid to the Association's expression of well-worn views than was paid on the one hundred thousand prior occasions on which they were expressed. The point sought to be made, to put it briefly, is that there is much so-called university education given in the country, where there are very few good schools, so that it is an attempt to do, before what has to be done first has been done, what can only be done after that first thing. It is as if you all tried to shave before lathering your chins. The Association would, further, have all the standards raised in the university examinations, and would have that done, no matter how great an improvement had been wrought in the teaching of the schools. Very right and proper.

Education of Women.

The Assembly spent a day debating a motion concerning the education of women in India. In the course of the debate the Secretary in the Department of Education, Health, and Lands made a speech that was listened to with interest. The Government of India are to appoint a Committee to investigate the whole problem. Perhaps that must be done, but one would have supposed that the problem had already been investigated. In my view, what is wanted is not a Committee and its hurriedly expressed views, this year or that year, but some thinking minds working out of sight all the time.

On November 1 the *Pioneer* of Allahabad will reduce its price from two annas to one.

Ten political prisoners sentenced to death under the Defence of the Realm Act have been reprieved by the King of Bulgaria on the occasion of the tenth anniversary of his accession, and their sentences commuted to imprisonment.

Nine lantern lectures on Greek art are to be given by Dr. Percy Dearmer during the autumn term in the Great Hall, King's College, Strand. The first lecture, dealing with Greek architecture, was given on October 9.

A tablet in memory of its late vicar, the Rev. F. Penny, formerly of the Indian Ecclesiastical Establishment, and author of "The Church in Madras," has been placed in St. Mary's Church, West Twyford, the smallest church in the diocese of London.

Sir John Stratheden Campbell, K.C.S.I., C.I.E., of Regent's Park Road, N.W., successively Magistrate, Deputy Commissioner, and Commissioner for the United Provinces of India, who died on August 16, aged 64, left estate of the gross value of £19,890, with net personalty £19,666.

Owing to the scarcity of interpreters in foreign languages in India, it has been decided to send a number of selected officers to various countries for a year's study. In November twelve officers will go to Turkey, Iraq, Persia, Kurdistan, and the Baltic States. Hitherto the bulk of interpreters in foreign languages have been furnished by the British Army, while the Indian Service has specialised in the dialects of that country and adjacent States.

THE MASSES OF INDIA.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

[Well known to readers of THE NEAR EAST AND INDIA as an able exponent of the Indian point of view on current constitutional and economic problems, Sir Phiroze Sethna, in the following extract from the (Parsi) New Year number of the "Sanj-Vartaman," discusses various means of improving the economic condition of the masses.]

No other internal problem of India is of such vital importance as that of improving the condition of the masses and raising their general level of existence. The masses form nearly seventy per cent. of the total population of India, and it is obvious that the improvement of their condition is an essential and vital factor in the future development of India as a self-governing, progressive and strong nation. If we neglect their condition or refuse to face the problems which a harmonious development of their national, mental, moral and political condition has brought into existence or prominence, we can do so at our own peril. The most notable and satisfactory feature of the modern State is that it concerns itself much more thoroughly and actively with the interests of the masses, their well-being and progress, than States of the old type used to do, and in Soviet Russia this solicitude for the supposed interests of the masses has been carried to such an extravagant or extreme length that what is called the dictatorship of the proletariat has been established, with the result that serious injustice has been done to other classes and their legitimate interests sacrificed before the Moloch of proletarian requirements. Of course Soviet Russia represents an extreme type and happily there is very little possibility of her example being followed by other countries. But no State can in these days justify itself or vindicate its character as an enlightened and progressive State if it does not seek to do all that is humanly possible to elevate the masses, to improve their status, to raise the general level of their life and to qualify them for the enjoyment of the rights, and for the discharge of the responsibilities, of citizenship.

The problem of improving the condition of the masses and enabling them to take their proper place in the general life of self-governing India is a gigantic, and, by no means, easy one. Nor can it be solved except by patient and strenuous efforts extending over several years. But it can never be solved satisfactorily, unless Government and Indian leaders form a just appreciation of their character, of both their virtues and their faults, and have correct ideas of their requirements and the part they are to play in the future evolution of India.

The Indian masses with all their faults possess considerable innate wisdom; they have a culture of their own inherited from the remote past and, though they are highly conservative by nature, they are yet not so utterly lacking in the spirit of progress as some people are apt to think. Masses all over the world are more or less conservative, and the conservativeness of the Indian masses need cause no surprise. It is none the less true that even they are touched by the modern spirit, and will not be averse from improvement in every sphere of their life, if only they can be made to realize its benefits. Again the *Mahab* attitude hitherto adopted by officials and national leaders in dealing with them must be given up; such an attitude tends to repress their personality and all but sterilizes their thought centres. This method of paternal autocracy, however benevolent it may be, must be replaced by the process of education of natural understanding, and of spontaneous unfoldment of individuality, however slow and toilsome it may be. Nothing tends so much to stereotype a mode of existence, keeping it to the same dead level, than benevolent despotism, be it social or political, and unless the Indian masses are made to see,

think and decide for themselves and to become more self-reliant and more self-progressive, their improvement will never be real and lasting. The real function of the Government is to set in motion those forces, economic, intellectual and political, which will slowly but surely bring about this result.

After these general observations, the importance of which is by no means minimised by their general character, let us consider some concrete aspects of the problem.

The most outstanding aspect is, of course, the economic. The economic condition of the masses is, in general, so low that it is really little short of a disgrace both to Government and to the Indian community. The Imperialistic character of British rule has resulted in the steady deterioration of the economic condition of the masses, while on the other hand, the national leaders have made no strenuous efforts to work among them and promote their economic improvement even within such narrow limits as are possible under foreign economic domination and exploitation. It is only recently that both seem to have realized that the masses constitute a problem which must be faced. Personally, I am not sanguine that with all the unanimous recommendations of the Agricultural Commission Government will do anything but tinker with the problem. No important Indian problem have Government faced in a spirit of far-seeing and courageous statesmanship. Their imperialism, their irrepressible desire to prolong their political and economic domination make them delude themselves with the thought that such statesmanship demands rather that every such problem should be tinkered with, and not really and permanently solved, and I own to a misgiving that in spite of the heavy labours of the Linlithgow Commission, the same will happen with the problem of the economic condition of the agricultural population who form the vast bulk of the masses of this country.

This is, however, by the way. The economic condition of the masses, whether agricultural or non-agricultural, can be improved only by raising their income. The average income of the Indian population is very low, so low indeed that a decent standard of existence is impossible. The Agricultural Commission has expressed its conviction that the cultivator must have the will to achieve a better standard of living and that no substantial improvement in agriculture could be effected without such a will. In other words, in the judgment of the Commission, the root of the problem is psychological, which ultimately means educational. Change the psychology of the cultivator by education, let the will to achieve a better standard of living be created in him, and he will then spontaneously utilize every means of improving agriculture, his average income will be increased and his general economic condition raised. While there may be some force in this, on the other hand, the cultivator is not so blind to his own economic improvement that he will not seek to profit by all means within his reach whereby he can improve his agriculture and add to his income. The experiences of the War have proved beyond doubt that when a farmer gets more income, it naturally leads to an improvement in his standard of living. What is wanted therefore is to promote better and more intensive cultivation, to relieve the peasant of his indebtedness, to lessen the pressure of population on agriculture, to establish a more liberal and less vexatious land revenue and also irrigation, and to foster and develop new indigenous industries. The utmost agricultural output, the highest possible industrial development of which India is capable so that a proper balance may be established between agriculture and non-agricultural industries—this is the keynote to the economic salvation of the masses. And when this is achieved, the operation of modern civilization and modern world-forces to which India, like every other country, is exposed, will inevitably bring about a better standard of living.

(To be concluded.)

AN EGYPTIAN ANNIVERSARY.

The eleventh anniversary of the accession of King Fuad was the occasion of loyal celebrations throughout Egypt on October 9, and on the following day a Reception was held by Sesostri Sidarouss Bey, Chargé d'Affaires, at the Royal Egyptian Legation in London, in honour of the event. The keen personal interest taken by the King in all branches of public life and particularly in the material development of the country and the social welfare of the nation has had the effect during the last eleven years of bringing the Throne and the people in close touch. King Fuad's tour in Europe last year still further identified the Sovereign with the national aspirations.

As the King's accession took place in the third year of the Great War, each returning anniversary serves as a landmark in the progress of the country since that upheaval. In spite of the controversy that has ranged round its interpretation, Egypt's independence remains the watchword of King Fuad's régime. For the world at

KING FUAD I.

large, in regard to all the ordinary relations that characterize the dealings of countries in normal times of peace, Egypt has attained full independence, as the points still outstanding between her and Great Britain may be said to lie outside those dealings. Material development is marked by the gradual improvement of irrigation and, no less, by the growing appreciation of what is yet needed in this respect for the adequate provision of water in the country. On a problem of this kind there is inevitably a clash of opinions, and Egypt has been no exception to the rule that little can be done until the talking is over. While, however, big projects, which seem now to be on the eve of being taken in hand, have been delayed, improvements at the other end of the intricate irrigation system have been introduced.

In other directions the most notable progress that has been made in the last decade concerns public instruction and the social life of the people. With possibly twelve to fifteen per cent. of the population literate, the country has much ground to cover in the education of the people.

The last few years have seen a marked stimulus, by the expenditure of more money on public instruction and the building of schools; and it is stated that to-day there are 670,000 pupils in the various educational establishments. Public hygiene has received special attention on the part of the Government, and the general welfare of the country has been considered in the steps taken to promote the interests of the cotton industry and the improvement of agriculture in general. Mainly at the instance of King Fuad Egypt's interest in the advancement of science has been shown in the number of international congresses to which he has offered hospitality—the International Geographical Congress of 1925, the International Navigation Congress of 1926, the International Congress of Cotton Manufacturers and Spinners of 1927, and this winter will see an International Congress of Tropical Medicine and Hygiene held in Cairo.

If achievement has lagged behind intention, Egypt will not be singular in this respect; and it would be strange, if a country where politics have been placed on such an exalted pedestal had proved as efficient in execution as it was prominent for eloquence. With the change of Government last July the new Ministry found that, whereas Parliament might debate reforms and even pass them, their practical application presented almost insuperable difficulties so long as executive authority found it necessary or expedient to remain subservient to the prestige of the legislature. The suspension of Parliament has thus been the signal for the carrying out of a number of measures which are no longer in danger of being thwarted or delayed by the subtle means that are never wholly lacking when a deputy may overrule local officials. Among these measures may be mentioned the clearance of insanitary ponds—a question which has been a problem of village life in Egypt for nearly forty years, until to-day there must be as many as four thousand of these forcing beds of disease—the supply of clean water in villages, and the provision of better accommodation under healthier conditions for the working classes in towns. Further there is to be a rapid extension of hospitals throughout the country. It is proposed to construct one hundred and fifty in all during the next five years, fifty in the chief towns of the various districts and one hundred in villages, at the rate of ten county-town hospitals and twenty village hospitals each year. The practice of selling State Domains is to be placed on a systematic footing as a measure of agrarian reform, and already two thousand acres have been distributed in Fayoum in lots of two-and-a-half acres among peasants without land or owning not more than ten acres. The purchase price is fixed at a low rate, one-tenth being paid in cash and the balance in instalments spread over fifteen years.

"WORLD DOMINION."

The October issue of *World Dominion*, an "international review of Christian progress," contains certain articles which will specially interest readers of *THE NEAR EAST AND INDIA*. The Editor touches the East at several points in his "World Movements of Moment," and other essays of particular import are "A New Day in the Near East," which describes the tendency of Islam to break down in favour of materialism; "The Inner Situation in Egypt To-day," which is a balanced exposition of the position as it was before Mahmoud Pasha's coup; and "The Religious Situation in Hungary" and "Transylvania in Transition," which concentrate on what is too often overlooked in this peculiar problem—the spiritual qualities of the lands the future of which is at present so much in dispute.

King Ibn Saoud is reported to have returned last week to Riyadh, in Najd, from the Hijaz.

A motor car in which the Chief District Finance Superintendent was travelling was held up by bandits in the neighbourhood of Czernowitz (Roumania). The party is reported to have helped themselves to a sum of about £20, after which they allowed the car to proceed. The same party later stopped a funeral procession and stripped the mourners of all their valuables.

THE QURAN.

[We are privileged to publish extracts from the paper on "The Quran" which M. A. Gad el-Mawla, Delegate of the Egyptian Government, read on August 31 to the Seventeenth Orientalist Congress, held at Oxford. Gad el-Mawla Bey divided his subject into a Description of the Quran, its Contents, and its linguistic, social, moral, and scientific influence. It is his remarks upon those influences which we print below.—ED.]

Its Influence upon the Language.

The tribe of Quraish had the greatest influence, and was largely responsible for the unification of the various dialects of the Arabic tongue, because they inhabited the province of the Hijaz which was the ultimate destination or nucleus of pilgrims and merchants; where most of the Arab dignitaries, poets and orators of both sexes used to meet and challenge one another by reciting to the public poems, and delivering discourses or speeches touching on their genealogical glory and splendour in the most elegant style and eloquent composition. This afforded the Quraish the opportunity of storing and turning into advantage the purest of these Arabic dialects, which thus played an important part in refining their own dialect, in improving and polishing their style, and in developing their language to such an extent as to render it the language of Revelation. It was, therefore, no wonder that the Quran should have been revealed in the language of the Quraish, which was not only the pulp and essence of the Arabic language but was also the language of the Apostle (may God bless him) who was also a Quraishite, and it was quite natural that the Quran should become the high standard of diction, for the tribe of Quraish had distinguished themselves by possessing several ingredients of leadership which the Arabs had acknowledged and which they *a fortiori* recognised in the speech revealed by God the Almighty.

Had the Quran been revealed in a language other than that of the Quraish of which the Prophet (may God bless him) was conversant, the counterpoise between the style of the Quran and the speech of the Prophet (may God bless him) would have been lacking—this would have led each Arab tribe to decide its own dialect, thus causing an irreparable schism.

The language of the blessed Quran was so elegantly styled that it could be easily read, even by the Arabs with their various dialects, without depriving it of its lustre of elocution which lay in its construction or composition—a linguistic policy which brought the Arabs to one tongue and subsequently to one solid body.

Thus the sacred Quran had the conspicuous influence in unifying, spreading and arranging the language as far as its aims, its vocabulary and its style were concerned, and in addition it insured to the language a long happy life.

The Quran was composed in one language, the beauties of which were stuffed therein—thus becoming a complete embodiment or example to which the votaries unanimously adhered irrespective of the various conditions and circumstances in which they lived. Owing to the absence of a linguistic standard or control for reference before the Quran, each tribe had been under the impression that the language they spoke was more refined, and that its rhetoric was more elegant and forcible. It was certainly beyond the power of man to measure or gauge the capacity or impotence of a nation in something abstract as a language, unless such a man had reached the stage of utter perfection.

Since utter perfection belongs to God alone, His words should naturally form the highest ideal.

Without the Quran it would have been impossible for anyone to trace anything about the Arabic language, its orthography or pronunciation; but the constant transmission of the text of the Quran has perpetuated and reserved to us the Arab mode of pronunciation.

The Arab races in Egypt, Syria, Morocco, and other

countries speak the Arabic language with more or less variation in the dialect, according to the distance separating them and the various conditions under which they live. Had it not been for the Quran, each race would have had an independent language, obscure and incomprehensible by the others, as has been the case with the branches of the Latin language (French, Spanish, Italian, etc.), but the preservation by the Arabic speaking races of the language of the Quran, and their reference to it in their writings and speeches, have insured the maintenance of a permanent standard to which all the various Arabic dialects owe their origin.

This is why the Quran is considered the finest book that ever appeared among men. From the point of style alone, it is nothing less than a miracle, as great a miracle as ever was wrought. It is nothing but the eternal utterance of God.

Its Trace in the Scientific World.

Up to the time of Islamic Dispensation, the Arab world, properly so called, restricted within the Peninsula of Arabia and some outlying tracts to the north-west and the north-east, had shown no signs of intellectual growth. Poetry, oratory, and judicial astrology formed the favourite subjects of pursuit among the pre-Islamic Arabs. Science and literature possessed no votaries.

The words of the Prophet gave a new impulse to the awakened energies of the race.

"To listen to the words of the learned, and to instil into the heart the lessons of science, is better than religious exercises."

The definition by the Imam Jaffar al Saddik of science or knowledge gives some idea of their faith in the progress of man.

"The enlightenment of the heart is its essence; Truth, its principal object; Inspiration, its guide; Reason its acceptor; God its inspirer, and the words of man its utterer."

The study of the history of modern science shows that the Quran was the basis of the Islamic revolution which had preserved, refined, and filtered the knowledge of ancient lore. It afforded the human mind freedom of thought to examine, discuss, deduct and induct. The revolution was, therefore, regarded as the foundation of scientific history in Europe: the Quran having become the sole factor which sent forth the human mind from its embryo to its present complete form. Do you see that it encourages and emphasises the necessity of speculation, reflection, and induction as shown in the following verses of the Quran?

"Or do they not contemplate the Kingdom of Heaven and Earth, and the things which God hath created, and considered that peradventure it may be that their end draweth nigh? And in what new declaration will they believe after this?"

"There is no beast on earth, no fowl which flieth with its wings, but is a people like unto you."

"Say this is my way, I invite you unto God, by an evident demonstration, both I and he who followeth me."

Such and similar verses, have naturally led to the scientific emancipation of the human intellect, with the result that as soon as Europe got a brand of it, it revived, taking the lead of the world and directing it to its general interests. That the Quran has been the cause of the Islamic Revolution is shown by the fact that when men of learning made a deep study of it, they adopted various modes of thinking:—

Reading authorities who directed their attention to the control of pronunciation.

Grammarians who took interest in the syntax of the Quran.

Diction authorities who were enraptured by the multitudinous presence of logical arguments in the Quran.

The authorities on Jurisprudence who, investigating the meanings thereof, discerned between the general and particular applications of the rulings therein.

Historians and narrators who studied the narratives of past centuries and nations gone by.

Preachers and orators who became alive to the aphorisms, proverbs and admonitions therein.

Others devoted themselves to the study of the ruling of inheritance and the calculations attached thereto.

Computers who dedicated themselves to the study of the conspicuous signs which speak of the marvellous wisdom of the creation and travel of the night, the day, the sun, the moon, and the stars.

Thus it transpires that the Quran, which was revealed in the wilderness to an illiterate man among illiterate nomads who owned only their tongues and their hearts and distinguished themselves, therefore, in sentimental effusions and in the art of talking which was limited to description and proverbial sayings, led the people of learning to the formulation of different arts and sciences, each of which branched out through the hand of time and accounted to the development of science during the Islamic civilisation which forms the pith of the modern generation.

Those who still pursue a deep study of the Quran do not fail to find some reference to the latest inventions or an explanation to some of the scientific points which have hitherto been obscure or abstruse; such as being attested by the Quranic verse: "Do not the unbelievers therefore know that the Heavens and the Earth were solid and we clave the same in sunder"—which strongly confirms the theory held by scientists that the earth clove through the influence of the solar system.

Again, the verse: "And He has thrown upon the earth mountains firmly rooted, lest it should move with you," concurs with the view expressed by scientists that had it not been for the mountains, the rotation of the earth would have been disturbed and irregular.

Further the verse: "O ye collective body of genii and men, if ye be able to pass out of the confines of Heaven and Earth, pass forth; ye shall not pass forth but by absolute power," refers to aviation, and to the fact that it will be within human power to fly.

In short, it was the intellect that has been capable of understanding the Quran, excavating its rich mines and unfolding its secrets in the course of time, since he to whom the Quran was revealed was the last of human prophets and since human perfection or decency requires nothing more than sound intellects which awaken or arouse one another. It was for this that God says: "Hereafter we will show them our signs in the regions of the Earth, and in themselves, until it become manifest unto them that this book is the truth. Is it not sufficient for thee that thy Lord is witness of all things?"

A careful examination of all human science would clearly show that collectively speaking they all come within the pale referred to by God in the above verse: "In the regions of the Earth and in themselves." The more deeply one meditates over the contents of the Quran, and the better the means of studying it, the purer the truths of nature manifest themselves and the clearer the signs hidden within its folds illuminate, "For God is well able to effect His purpose, but the greater part of men do not understand."

Its Influence on the Social Conditions.

When the Quran was revealed, the Arabs were still in their primitive state: proud and boastful. The Quran directly gave a lie to their thoughts and waged an implacable war against idolatry, sweeping away their false notions about the Divine Beings and their system of superstitious ceremonies. They resigned themselves to the teachings of the Quran which brought about them a complete change, and which made them look, and seem as if they had inherited the teachings of the Quran from their ancestors for a long time of the past ages.

This radical change took place in conformity with the Prophet's saying: "The age in which I live ranks the best, then the age that follows and so on."

The Quran introduced vital changes into the customs, traditions, and beliefs of those who embraced its teachings. Under the influence of the Quran, the Arabs caught up the lessons of wisdom from the east and the west,

fitting them to the teachings of the Quran and thus combining both the qualities of the soldiers and scholars.

It was only a short time ago that the Arabs' minds were saturated with idol-worship, silly habits and foolish beliefs, but when the Quran came with its magical power which they could not resist, it changed their character and did away with their pride and arrogance. They tried to oppose it with all possible force and not to pay any heed to its powerful teachings, but at last they succumbed to its eloquence; otherwise the Quran would have been in no better position than that of other Holy books to-day.

Had not the Quran been so full of eloquence as to become a miracle in the style in which it was introduced to them, it certainly would not have reached the pedestal that it has occupied, and its fate would have been the same as that of poetry and fiction.

Arabs, as a rule, used to boast of their forefathers, but the Quran came between them and their false pride, urging them to action and to build for themselves, and announcing to them plainly that Nature was under their control, so that they should not be subdued by Nature. It further explained to them that the greatest virtue of the Prophet lay in the fact that he was a man of work and deed, and was neither a poet, a braggart, nor a man of superstitions. He taught them perseverance on which the present civilisation and culture stand. The Quran says: "If they accuse thee of imposture, say I have my work and ye have your work; ye shall be clear of that which I do, and I shall be clear of that which ye do."

We do not find a single man among the historical personages, who had the courage to reform a nation in this manner, particularly a nation like the Arabs who adore bravery, frankness and similar virtues. No one except the Prophet, could invite such a nation to change itself totally, and submit themselves to truth to which they were not accustomed to give their hearts entirely and do away with their customs. They were certain that he desired no earthly power, or cherished worldly ambitions, yet they said: "Our hearts are veiled from the doctrine to which thou invitest us; and there is a deafness in our ears, and curtain between us and thee."

Nevertheless, he would not treat them with hypocrisy nor employ flattery or falsehood; nor would he pretend to adopt their belief in order just to inveigle them to go under his colours as most statesmen and politicians are known to do. The secret of his leadership and implicit obedience of Arabs lay in the fact that in spite of his being the weakest, he by his teachings of the Quran conquered their hearts and minds, for the teachings of the Quran were in harmony with Nature.

"This because God is truth, and because what they invoke besides him is vanity, and for that God is the High, the Mighty."

It was the Quran that gave an impetus to the Arabs, carrying their influence to the four corners of the world, so that the frontiers of the Islamic Empire spread to distant lands; whereas a short time before the Quran, the Arabs were but shepherds, worshippers of idols and full of superstitions. No philosophy has ever so wonderfully succeeded in moulding the nature of a nation as the teachings of the Quran had been able to mould the character of the early Muslims who were noted for their dignity, faith, honesty, sense of justice, submission to the truth and other great virtues.

Its Influence on Morals.

Ethics alone is not all that is required to ensure the moral advancement of humanity, since it fails to unfold all truth about human nature; its function being to deal generally with human weakness, to improve and correct same by the use of powerful arguments and conclusive reasoning. The result is not always satisfactory, for if it succeeds in convincing the mind, it often fails to satisfy the heart. It is only a cultural teaching.

The Quran, however, is something quite different: it enters with the soul, forces its way to human nature, and

fills with wonders the minds of those who comprehend its contents and the savants who are well versed in understanding the meaning and subtleties of the Arabic language. This coincides precisely with the saying of the Prophet: "He who reads the Quran embarks himself to prophethood, but does not receive a revelation."

The Quran has not put so much emphasis on anything more than it has on good conduct, and it has glorified it to such an extent that in praising the Prophet, it only described him thus: For thou art of a great and noble disposition.

The Quran contains much of a noble and deep moral earnestness and sententious oracular wisdom. It is, in the eye of Muslims, the standard of all laws and all practice. The Quran has based ethics on one virtue, and that is piety.

After reading the verses referring to piety and the pious it is quite imperative that a man should avoid matters injurious to himself or harmful to other members of human society, so that the principles of equality in a society should be deeply rooted, inasmuch as it may be guarded against any defect or deterioration, as stated in the following verse: "We have created you of a male and female; and have distributed you into nations and tribes that yet might know one another. Verily the most honourable of you in the sight of God is the most pious of you."

The verse clearly points out the fact that the social aim of humanity is to cultivate mutual acquaintance—a term which comprehends all social virtues, and which does not admit any vice to its pale. In this verse the Quran has established the foundation of morality, because it considers the pious man, who is a member of a society of equal state, to be the most honoured only on account of his piety, irrespective of his wealth, knowledge, power wisdom and so forth.

In truth piety is the perfect and the highest virtue, and for this reason justice is the nearest to piety, as is explained in the following verse: "Let not hatred towards any induce you to do wrong; but act justly; this will approach nearer unto piety." The Quran has embodied piety in three things: to bid people do good and forbid them do evil and to believe in God. These three virtues are the embodiment of all canons of ethics and social principles. The Quran says: "Ye are the best nation that hath been raised up unto mankind; Ye command that which is good, and ye forbid that which is evil, and ye believe in God." Good means anything which is taken as true by sound reason, and inviting to do good cannot be realised except when there is strong and independent will. Evil is that which is denounced by sound judgment, and to forbid people do evil requires freedom of reasoning and faith in God.

To believe in the existence of God and in God only, requires the complete freedom of one's self from the chain of evil customs and superstitions, by observing the wonders of the creation and pondering over them.

This is the faith which inspires a man and encourages him to command good and forbid evil, and does not let any of the human defects like cowardice, hypocrisy and love of worldly things, enter into his mind. Since these defects are the result of worshipping power, despotism, passion and similar vices.

Every one who has read the Quran carefully cannot but admit that it gives every man his social will based on freedom. The Quran says: "The truth is from your Lord; wherefore let him who will, believe, and let him who will, be incredulous." It was owing to this that when the early Muslims practised its teachings, making them their goal, this social will came into existence.

Had the Arabs been endowed with the treasures of science and philosophy instead of with the Quran, they would not have made such miraculous achievements, since the intellectual reasoning which is based on knowledge alone does not necessarily lead towards practical will. But the teachings of the Quran about morals derive to practical will, for the Quran lays great stress on action

and deeds. It says: That a burdened soul shall not bear the burden of another; and that nothing shall be imputed for righteousness, except his own labour.

He who meditates over the verses of the Quran will readily realise that all its teachings aim at spreading the social spirit among the Muslims. Such spirit was the paramount cause of the spreading of Islam, even amongst the bitter enemies of Islam such as the Tatars and Mongols, who tried to eradicate Islam from its very roots and who later ranked amongst its strongest supporters and ardent votaries.

THE "ASIAN CIRCLE."

The contributions to the October issue of the *Asiatic Review* by the "Asian Circle" are an anonymous one upon "The Sultanate of Muscat and Oman" and an article, by Mr. W. E. D. Allen, on "The Turkish Mirror." The first of these articles, which is very happily timed in view of the present visit to London of His Highness the Sultan of Muscat and Oman, contains obviously authoritative information upon a part of the world which, as is pointed out at the end of the article by Colonel M. J. Meade, formerly Political Resident in the Persian Gulf, provided at the end of last century a somewhat knotty international problem. The whole article is of considerable interest as providing an idea of the later development of Muscat and Oman and conditions obtaining there at present.

Mr. Allen's study of Turkey to-day is an admirably dispassionate yet vivid review. He neither dogmatizes nor generalises. The Turkish peasant, he says, has changed in this: that he now understands the motor-car and the gramophone—and he leaves it to his readers to speculate on whether the much-advertised changes in Turkey have gone deeper than that. He points out the force in the State which the well-to-do farmer now is: an element which, if a crisis emerged, would support a protagonist of "the older ways." Another excellent observation is that the Turkish Revolution (like the Russian) was "the result of exterior forces," of siege conditions in fact. Mustapha Kemal Pasha is the Revolution: it is his personal prestige which has made reforms and innovations possible without open civil war. His followers, or rather, his immediate entourage have no hold upon the popular imagination: the military leaders who with him won the independence of Turkey are living in obscurity or retirement. If the Ghazi were to disappear, he would leave behind him a party composed (with two or three exceptions) of "the aggressive and optimistic exponents of an adventurous experiment, men out of touch for the most part with the masses of the people." Such an article it is impossible to summarise: it should be read and studied by all observers of the Near East to-day.

The Bulgarian Minister in Washington has been authorised to sign the Kellogg Pact on behalf of his country.

The Persian Government has officially notified the State Department at Washington of its intention to sign the Kellogg Anti-War Pact.

M. Venizelos arrived in Belgrade on October 9, the King having sent his own train to the frontier to meet him and bring him to the Yugoslav capital.

Lieutenant-Colonel Robert T. K. Auld, who assumed command of the 1st Bn., Welsh Guards last week, will take the unit to Egypt on February 16 in the hired transport *Neuralia*.

The double anniversary of the accession to the throne of King Boris, and the proclamation of Bulgaria's independence, was celebrated in Sofia on October 3 by the chanting of a solemn *Te Deum* in the Cathedral.

A 19-mile section of narrow-gauge railway which has recently been opened between Belgrade and Obrenovatz gives direct communication without breaking bulk *via* Shabatz and Serayevo to Dubrovnik (Ragusa) and the South Dalmatian ports on the Adriatic.

An action is being brought by the Turkish Government against the Banque Perrier for the return of £200,000 paid into the bank as the last instalment on the purchase price of the Reshadiyeh, which was requisitioned for the Royal Navy and became H.M.S. *Erin* at the beginning of the War.

In honour of the coronation of Ras Tafari as Negus of Abyssinia, a commemorative overprint is to be applied to the as yet unused postage stamps of that country, which have been impending for the past 18 months, according to *The Times*. The superscription, in Amharic characters, reads: "Moa Ambeca Zemeguede Yeouda" (Conquering Lion of the Tribe of Judah), and the face values of the stamps are $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, 2 mehalects, 1, 2, and 3 thalers. Certain denominations present a portrait of Ras Tafari, while the others portray the Empress Zauditou. All former issues of Abyssinian stamps are demonetised as from October 1.

Greece and the Dodecanese.

As was to be expected, the declaration made by M. Venizelos after the signing of the Italo-Greek Treaty that there was no Dodecanese question between Greece and Italy has not been allowed to pass without comment in Greece. While the Monarchist Press tries to make what political capital it can out of the "betrayal" of the Dodecanesians, Republican newspapers are inclined to restrict themselves to endorsing M. Venizelos's contention that the question of the Dodecanese must not be allowed to be an obstacle in the way of good relations between Greece and Italy. They cannot, however, resist the opportunity of reminding their political opponents that, if the Dodecanese does not form part of Greece to-day, it is because the policy adopted by the Restoration of 1920 had the effect of annulling the Tittoni-Venizelos Convention which gave the Dodecanese to Greece. The semi-official *Messenger d'Athènes* amplifies the hint already given by M. Venizelos by reading the Italians a long lesson on the way in which the Dodecanese ought to be administered, and it concludes the homily by quoting with approval the explanation of M. Venizelos's remarks given by a Dodecanesian exile:—

"Venizelos seems to say to the Dodecanesians: 'No. Never imagine that it is possible that Greece and Italy should collaborate on one side and that on the other a section of Hellenism should be in a state of servitude under Italian occupation.' That could not be, for it would be something false, not sincere and, what is worse, stupid. No! In future you will be governed by Italians, but you will not be slaves. On the contrary, you will become the spoilt child of Italo-Greek collaboration and you will serve as the touchstone of the sincerity reigning between the two countries. The way in which the Italians treat you will constitute infallible evidence of the sincerity of their attitude towards Hellenism. Therefore, have no fear. You are not on the threshold of an era of oppression, humiliation, suffering and annihilation. On the contrary, there now opens out for you a period of security, protection, progress, prosperity. All you have to do is to take stock of the present situation, to forget the past, to look upon the Italians not as tyrants but as protectors, to change your antipathy for them into sympathy, esteem and respect, and finally, and above all, to have faith in Providence which alone rules over all."

Against these counsels of perfection has, unfortunately, to be set the official declaration of the Central Committee of Dodecanesians, domiciled in Alexandria.

"The Central Committee of the Dodecanesians, having taken cognisance of the declarations made at Rome by the President of the Council, M. Venizelos, is obliged to point out—expressing at the same time the opinion of the population, compulsorily dumb, of the Dodecanese—that, although these gratuitous declarations in no way diminish the strength and justice of our cause, our grief is great at seeing Greece, who regarded it as a duty of honour to formulate, in a letter addressed by the President of the Hellenic Delegation at Lausanne to the President of the Conference, reservations in regard to the definitive solution of the Dodecanese question, has to-day judged it to be in her interest to declare that there exists between Greece and Italy no Dodecanese question. However that may be, our Central Committee considers it to be its duty to emphasise the fact that the sacred campaign in favour of the liberation of the Islands will continue with greater intensity and until times more propitious and a more equitable verdict of the Powers crown our efforts."

The Italo-Greek Treaty.

The inference that the signature of the Italo-Greek Treaty on the eve of the reopening of negotiations between Greece and Yugoslavia was intended to induce an attitude of greater reasonableness on the part of the Belgrade Government is borne out by the tenour of the Greek Government Press. Note is taken of the restrained tenour of French comment on the subject of the Pact, but a warning is sounded in regard to the French contention that substantiation of the claim that the Italo-Greek Treaty is not directed against any third party will be provided by the conclusion of an agreement between Greece and Yugoslavia. It is pointed out, in effect, that it takes two to make an agreement, and Yugoslavia is informed that Greece has already fixed the furthest limit of the concessions that she can make. From these limits there can be no withdrawal on the part of the Greek Government,

and Yugoslavia is warned that, if the Greek offer is not accepted, the negotiations will be broken off.

Possibly, M. Venizelos will be more tactful and conciliatory than his Press.

It is unfortunate for the Greek Prime Minister that he had to make his declaration about the Dodecanese, for it can hardly fail to disappoint some of his supporters. The Monarchist Press, which, at first, was inclined to stress the value of an understanding with Italy, now sees an opportunity of making party capital out of the Treaty and waxes very sarcastic. Thus *Kathimerini*:—

"Signor Mussolini has received the Dodecanese, which until yesterday was still Hellenic. And M. Venizelos, what has he received? To our mind—we are not and will not be his friends—it is impossible that M. Venizelos should have received only the twenty-eight Articles that have been published. In vain we try to discover in them anything whatsoever that is worth even the smallest concession. In vain we try to find a word worth even the smallest fraction of the concessions officially made. Must we then admit, as between the two 'High Contracting Parties,' that the one has been intelligent and the other stupid, or that the one has wished to serve his country and the other to harm his? We should like to think that M. Venizelos does not act stupidly and does not lend himself to any act directed against the interests of Greece. But the Articles? The Dodecanese? Why this exchange? Why so much territory and so large a Greek population in exchange for so many smiles and so many words?"

"M. Venizelos has published the twenty-eight inoffensive Articles of our Pact with the Italians and has concealed those in exchange for which he gave the unfortunate Dodecanese. Surely it must be so. But if it is not? If it is not so, then he and we and Greece and the Greeks deserve—we should say the gallows, if the word did not belong to the condemned past."

Yugoslavia cannot be expected to wax enthusiastic over the Italo-Greek Pact, and it follows that a certain bitterness characterises the Press comments. The *Morgenblatt* of Zagreb writes as follows:—

"The effect of the new Greco-Italian friendship on Greece's attitude remains to be seen. Perhaps it will now strengthen her desire to meet us half-way. Mussolini is carrying out a long-sighted policy. It is not easy to bring Greece and Turkey under one hat. . . . Italy's intentions in the Balkans are tolerably clear to everyone concerned, and all these friendship and non-aggression pacts are merely the fashion of the day for old-style diplomacy. It is a case neither of heart-to-heart friendship nor of non-aggression, but of political alliances which serve no purpose."

The *Morgenblatt* considers that M. Venizelos is not going to prove any more amenable to the Yugoslav point of view than M. Michalakopoulos, and that the Salonika question has reached its dead-point and will remain there. It adds:—

"It is the irony of history that all these friendship and non-aggression pacts serve neither the general friendship of the nations nor the avoidance of attacks. They are rightly regarded as a cloak for something quite different, and reach their full effect in moments of unrest. . . . To pit regional policy against this regional policy is merely a half-beginning. Against this system of unrest, for which Italy's numerous single-friendships stand can be set in the main only the great international policy of universal peace embracing all peoples."

To commemorate the formal recognition of the new Arab State by H.M. Government, the full series of contemporary postage stamps of Trans-Jordan has, according to *The Times*, been overprinted in Cairo with the Arabic word *Dastour*, signifying "Constitution," in which form it was placed in circulation for a period of one month only, from September 1. No more than 5,600 complete sets have been thus treated, and the issue is already obsolete.

THE WEEK AT HOME

London, Tuesday Morning.

The Labour Conference.

The Labour Conference at Birmingham last week followed fairly closely the line of political expediency at which I had hinted. The "extremists," as those Socialists are called who want peaceful reforms to be put through at the rate of a revolution, were relegated to the corner; no quarter whatever was given to the Communists; even the Soviet scheme for total disarmament was pooh-poohed; in short, the whole conference was a triumph for the "Moderates."

But even from these Moderates there proceeded an amount of stimulation, or at least of subject for reflexion, which seldom is manifested at the Conferences of the rival Parties. Mr. Ramsay MacDonald, for instance, said bluntly that the remedy for preventing British industries from being undermined by sweated products from abroad was, not safeguarding, but prohibition. This is a profoundly important declaration, which may be found to have considerable influence on the future of the Labour Party.

Mr. Philip Snowden, again, sketched in such a vivid way as we have not had before the coming of Socialism through public corporations. This he believes will be brought about by inducing the best business brains to run the corporation, although, of course, that corporation would be owned by the public. He could point, moreover, to the B.B.C., which, while not under the control of Whitehall, is owned by the State. Here, apparently, is a perfect example of nationalisation without the curse of bureaucracy which the opponents of Socialism always assert that nationalisation involves. This speech of Mr. Snowden upon Labour finance was a remarkable one, and deserves to be most carefully studied by all observers of contemporary English politics.

Unquestionably there was shown a degree of sincerity at this Labour Conference, and, in consequence, a degree of enthusiasm engendered, which may prove to be lacking in the camps of the older parties. But still I see no chance of a Labour victory at the election next year.

For if the Conservative and Liberal parties are divided within themselves—as they certainly are divided—the Labour Party seems to be even more so. Take, for instance, this declaration of Mr. MacDonald on the prohibition of imports. It is, as we know, dead against the convictions of Mr. Snowden, who is a fanatical (or, as those who are dead against all protective tariffs would say, a staunch) Free Trader. This declaration has delighted the Tories, who profess joy at this assertion of "economic frightfulness"; and it has dismayed the Liberals, who pretend that war with other countries would be the inevitable result of such prohibition. It is thought—but no one knows—that the mass of the Labour Party are with Mr. MacDonald rather than with Mr. Snowden over this question: which may account for the tolerance with which open-air meetings of Conservatives advocating Protection are now listened to. In any case, there is to be more excitement, more diversity of opinion than would have been thought to be possible a few months ago.

The Church Congress.

The bleatings at the Church Congress at Cheltenham which ended last week were unusually numerous: but we wonder how much wool has been gathered. Certainly no heretics were burned at the stake; the authorities, indeed, stood resolutely at the side of those who were called heretics, supporting them on the principles of the tolerance of the Anglican Church and the fallibility of human understanding. It must be admitted that seldom in the history of the Church of England can there have been permitted such a variety of opinion, such a statement of the individual's right to peculiar interpretation. If tolerance were the distinguishing mark of the highest form of organised Christianity, the Church of England would assuredly rank first.

Without question this generous attitude towards other members of the Anglican Church who think differently makes it easier for the Church to gain recruits from among the intellectuals—in fact, the difficulty of persuading the educated son and daughter of the char-woman to accept the old presentation of Christian doctrine was expressly mentioned at this Congress; without question also, there is, as Dr. Major himself said, an obvious "danger" from the intellectuals' standpoint, in "contingentalising" the Anglican Church instead of keeping it purely English. But what is the price of this lack of discipline? Is it—one is only asking the question—is it the emptying of the "Latitudinarian" churches in England? The individual observer himself, who studies the congregations of, say, the Roman Catholic Churches, the High Churches, and then the Broad Churches, must make answer. For myself, I do not disguise the belief that in this very generosity, this "width of view," as the broad (and occasionally empty) minded like to call it, there lies the menace of Christianity's degenerating into an emasculated Unitarianism. Such a prospect, I know, is by no means deplored in all quarters; but those quarters should, in my very humble opinion, be in connexion with the Anglican Church absolutely extra-mural.

The Decay of England.

That, however, is mere personal judgment. But the decay of England is proceeding is a much more visible way. I refer, of course, to the erosion and the flooding of various parts of the coast. This erosion is going on all the time, although it is to some extent counteracted by reclamations.

Last week there were recorded serious losses of land in Norfolk, in the neighbourhoods of Hunstanton and of Trimmingham. Protection against the North Sea is an impossibility, unless the country as a whole takes the matter in hand. Localities do what they can. A big effort is made to build a sea-wall, and it suffices for a time; but back again comes that "old debbil, Sea," and homes are once more in danger. A roar of falling boulder-clay, and sections of graveyards, mangold wurzel fields, and so on, become parts of the ocean-bed. The old fisherman now catches fish where fifty years ago he was wont to play on dry land with other boys.

In Essex, too, thousands of acres of agricultural land are to be left to the whims of the sea. Last January a tidal wave swept up by Clacton, Maldon, Lower Crouch, and so on, breaking sea-walls and sluice gates. Owners of the invaded lands cannot afford to rebuild defences; the Ministry of Agriculture can give no help; in fact, 8,000 acres are potentially under the sea.

Stimulating Art.

For many reasons, I imagine, there will be many visitors to the exhibition of water-colours and oils which Mr. C. R. W. Nevinson has just opened at the Leicester Galleries, Leicester Square, although the one that—purely artistic reasons apart—may most appeal to readers of this journal is the fact that he is the son of H. W. Nevinson, a finely combatant journalist, who has been at some time or another in most parts of the Near East.

In this present show there is any amount of vigour, skill, and versatility. Mr. Nevinson does not specialise, but personally I think his river scenes—whether on the Thames, the Seine, or less important thoroughfares—are as satisfying as anything. There is a distinct edge to his interpretative ability, and possibly for that reason his better medium appears to be oils. Direct irony is not lacking, but for the most part his outlook on life is fresh without being romantic, and penetrating without being *blasé*. Altogether it is a highly engaging exhibition.

In another room at the same Galleries, by the way, is a small collection of sculptures by a young Russian, Mlle. Dora Gordine, which is quite remarkably expressive. Some of the Oriental heads depicted show a faithful ability which makes the introduction of her to London by Mr. G. Eumorfopoulos the obvious course to have been taken.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

October 11, 1928 (New Style).

September 28, 1928 (Old Style).

Rabia II, 1347 A.H. of the Muslim Calendar.

Tishri, 27, 5689, of the Jewish Calendar.

Lord and Lady Meston have returned to 38, Parkside, S.W., from abroad.

Sir Ronald and Lady Storrs left London on October 6 for Salonika, where they embarked in H.M.S. Bryony for Cyprus.

General Sir Philip and Lady Chetwode leave London to-day (Thursday) for India to take up his duties as Chief of the Staff.

His Highness the Sultan of Muscat and Oman returned to London this week after touring through England, Scotland, and Ireland.

Field-Marshal Lord Plumer and Lady Plumer have returned to their permanent residence, 22, Ennismore Gardens, S.W.

Sir Manubhai Mehta, Prime Minister of Bikanir, and Lady Mehta, who arrived last week in London, are staying at the Carlton Hotel.

The Amir Zaid, the youngest brother of King Faisal of Iraq, left London on October 3 to rejoin his father, ex-King Husain of the Hijaz, in Cyprus.

Mr. Abdullah ibn Yusuf Ali will read a paper, entitled "Education in India: The New Outlook," to the Royal Asiatic Society on October 23. The meeting, which will take place at 74, Grosvenor Street, will begin at 4.30 p.m.

Sir John Campbell, who retired from the Indian Civil Service in 1922, has been appointed Financial Adviser to the Government of Iraq, in succession to Mr. R. V. Vernon.

The Nawab and the Begum of Bhopal, who arrived in England on October 6 from Bombay, have leased Coombe Springs, Coombe Lane, Kingston Hill, during their stay in England.

General the Right Hon. Sir John Maxwell and Lady Maxwell have returned from Paris to 4, Queen's Gate Place. For the present this will be their permanent address.

In celebration of the accession of King Fuad, the Egyptian Chargé d'Affaires, Sesostri Sidarouss Bey, received members and friends of the Egyptian colony yesterday (Wednesday) afternoon at the Egyptian Legation, 75, South Audley Street, Mayfair.

At a dinner given at the Legation by the Greek Minister on October 1, in honour of M. Venizelos, the following guests were present:—Princess Antoine Bibesco, Sir Arthur and Lady Crosfield, Sir Lucas and Lady Ralli, M. Lambros, Mlle. Rodocanachi, Mme. Rose, and M. and Mme. Romanos, M. Collas, Mme. Benachi, and Mr. Wickham Steed.

Papers will be read to the East India Association on October 15, November 12, and December 10, upon "Aboriginal Uplift in Chota Nagpur," "Indian Education," and "Village Uplift in India, by Rev. Father T. Van der Schveren, J. A. Richey, and F. L. Brayne, respectively. These three meetings, which will be presided over successively by the Earl of Lytton, the Earl of Winterton, and the Marquess of Linlithgow, will all begin at 4.30 p.m., and will be held at the Caxton Hall, Westminster, S.W.1.

Mr. E. M. Drower, Judicial Adviser to the Government of Iraq, and Mrs. Drower left London this week on their return to Baghdad via Beyrout.

The Maharaja of Nawanagar has returned to London from Ballinahinch Castle, County Galway, where he has been entertaining parties for the past six weeks.

Admiral the Hon. Sir Stanley Colville embarked on October 6 at Marseilles on the P. and O. liner Rajputana for Port Said. Passengers proceeding to India included the Nawab Sahib of Palanpur, the Raja and Rani of Nanpara, Sir Dhunjibhoy and Lady Bomanji, Sir Dinshaw and Lady Petit, and Sir Jehangir Kothari.

H.E. Monsieur Caclamanos, Greek Minister in London, gave a luncheon at the Greek Legation on October 2, in honour of M. Venizelos. Among those present were the French Ambassador, the Italian Ambassador, the Hon. Sir Ronald Lindsay, Field-Marshal Sir George Milne, Mr. T. P. O'Connor, M.P., Admiral Sir Richard Webb, Mr. Vansittart, Mr. Oliphant, Sir Otto Niemeyer, Sir Henry Strakosch, Mr. Howard-Smith, Mr. Bland, Mr. Harvey, M. Collas, M. Romanos and M. Lambros.

Sesostri Sidarouss Bey, C.V.O., Counsellor of Legation and Egyptian Chargé d'Affaires, has been appointed Envoy Extraordinary and Minister Plenipotentiary of H.M. the King of Egypt to Greece. In the absence of a Minister, Sidarouss Bey has long been responsible for Egyptian interests in Great Britain, and his popularity both in the Diplomatic Corps and among a very large circle of friends his departure from London will cause him to be widely missed. He will not be leaving for Athens until the vacant post of Egyptian Minister to London has been filled.

The Colonial Office announces that the King has approved the appointment of Brigadier-General Sir Gilbert Falkingham Clayton, K.C.M.G., K.B.E., C.B., to be High Commissioner for Iraq in succession to Sir Henry Dobbs, K.C.S.I., K.C.M.G., K.C.I.E., who will vacate that office early in the new year. The son of Lieut.-Col. W. L. Clayton, of Sandown, Brigadier-General Sir Gilbert Clayton, who is 53, entered the Army in 1895 from the Royal Military Academy. He was with the Nile Expedition in 1898; was Director of Intelligence in Egypt, 1914-17; Chief Political Officer, Egyptian Expeditionary Force, 1917-19; Adviser to Ministry of Interior, Egypt, 1920-2; Chief Secretary to Government of Palestine, 1923-5; Special Commissioned to Najd and the Yaman, 1925-6; and to King Ibn Saoud, 1927.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Land Reclamation in Greece.

While the objects of the visits to Paris and London of M. Venizelos were primarily political, I was able to indicate last week that he would possibly take advantage of his presence in London to have conversations with financiers, and it so happens that the first visible results of the tour are economic in character. For something like a year negotiations had been in progress between the Greek authorities and Messrs. Henry Boot and Sons, the public works contractors, of London and Sheffield, in regard to a large scheme of land reclamation, and during his visit M. Venizelos saw Mr. Charles Boot and intimated that the Greek Government had decided to entrust the work to the English firm. The lands which it is desired to have reclaimed are situated in Thessaly, in Epirus, and in other parts of Greece, and it is proposed to settle on them refugees from Asia Minor who are at present a drag on the country, but who, it is hoped, will become, as has been the case with the other refugees who have been settled on the land, an important factor in the economic life of Greece. The preliminary survey of the area, a task which, it is estimated, will last two years, is to be begun immediately, and is to be carried out on behalf of Messrs. Henry Boot and Sons by Sir Murdoch MacDonald, M.P., of MacDonald and Partners, Consulting Engineers, of London. It is understood that the works involved will ultimately cost at least £10,000,000, which will be spread over a number of years.

A Big Undertaking.

It is impossible to give a definite statement as to the area of the reclamation scheme as the undertaking embraces a number of schemes. The lands now to be surveyed comprise some of the most promising tracts in the country, but their utility is spoilt by the fact that they are always liable to flooding. Various watercourses intersect these lands, and by bringing down silt from the hill country build up their own beds, so that they are sometimes higher than the surrounding country. Then when the rains come the inevitable happens and the regions are flooded. It is proposed to deal with these channels, and also to regulate the flow of water. The scheme provides for the storing of water where possible, so that the reclaimed land may have adequate irrigation through means similar to those which have been employed with such success in other countries, such as Egypt and the Sudan. It is anticipated that the result of the reclamation scheme will be that Greece instead of, as now, having to import wheat will have a surplus of this grain for export. Wheat, however, will be only one of a number of crops that will be grown, others being tobacco and probably cotton, if the land is considered suitable for that crop.

Aden Harbour Improvement.

Messrs. K. L. Kalis, Sons and Co., of London, have just received an important contract for the improvement of the entrance channel at Aden and the extension of the inner harbour. The improvement scheme, which is expected to take from three to three and a half years, is needed because of the existing congestion at the port, as there is not sufficient deep water for ships and the entrance channel has been shoaling up in the last fourteen years. The successful tenderers, it may be mentioned, have a large dredging contract at present in the Thames in connexion with the Tilbury Docks extension scheme.

The Bulgarian Stabilisation Loan.

The next Near Eastern issue to make its appearance will be the Bulgarian stabilisation loan which is being floated under the auspices of the League of Nations. It is understood that the loan, which will be for an amount of £5,000,000, will be issued before the end of October. This loan is required for a variety of purposes. In the first place £1,500,000 is to be used to repay to the National Bank a considerable part of advances it has made, thus strengthening its position. Then amounts of £500,000 and £150,000 respectively are earmarked for the Agricultural Bank and the Central Co-operative Bank with a view to restoring these institutions to a sufficient state of liquidity. Further, a sum of £1,100,000 is allocated for Budget arrears, while £1,250,000 is to be used for the development of communications, the balance of £500,000 being for expenditure entailed in connexion with the disastrous earthquake. The loan, it may be added, is secured by a first charge on the Customs Duties, the yield of which is at present considerably over £1,500,000, this arrangement having been reached by an agreement with the Reparation authorities. It is provided that if the yield of these duties should fall below 150 per cent. of the annual service of the loan other revenue will be assigned to the service to bring the total yield to that percentage.

BANK OF ROUMANIA LIMITED

Manchester and the Sudan.

The example Lancashire is setting to the rest of England in keeping in close touch with those regions with which she is most intimately concerned has been a most praiseworthy and significant development in the last few years. Cotton is all in all to the northern county, and in welcoming the first Egyptian Minister to London and then King Fuad, and last week the Governor-General of the Sudan and a number of eminent officials of that region, Manchester, through the medium of the British Cotton Growing Association, has shown in the most practical manner the deep interest taken in the cotton county in cotton growing developments overseas. What the cotton growing countries such as Egypt and the Sudan want, is to know the special requirements of the consuming regions, and this personal contact which these meetings in Manchester is establishing is calculated to be of the best possible value to both producers and consumers.

Sudan Cotton Growing.

In welcoming Sir John Maffey, Manchester was paying tribute to the representative of one of the youngest of the cotton growing countries and one which has every claim to be regarded as potentially one of the more important. It is not many years since the Sudan Plantations Syndicate embarked on their enterprise, and the development within a brief space has been little short of marvellous. Already the Sudan is a factor in the world's markets for Sakellaridis, which is only another way of saying that it counts in Lancashire. Last season, as Sir John Maffey pointed out in his speech on this occasion, a summary of which will be found on another page, the production of the Sudan suffered a slight set back, this being due to the fact that the yield per feddan was only $3\frac{1}{4}$ kantars as compared with $4\frac{3}{4}$ kantars. The latter figure was, however, exceptional, just as the former is lower than might reasonably be expected, and with the steady increase in the region under cotton (the area will amount in 1930 to 170,000 feddans as compared with 105,000 last season and 131,000 this season) the Sudan promises to loom larger and larger among the world's cotton producers as time passes. But this is only as regards Sakellaridis, and Manchester is looking to the Sudan also for American cotton and that in large quantities. Here, too, the future is full of hope, for the rapid development of the communications of the Southern Sudan and the provision of other necessary facilities is bringing about a situation in which the cultivation of American cotton on a considerable scale will be a possibility. Without the assistance of the motor such an outcome could not be visualised, and Manchester in the coming years may have every reason to bless the motor age.

An Important Oil Deal.

It had been obvious for some time that developments of importance were on foot in the oil market, but all the same last week's announcement by the Burmah Oil Company that it had arranged to acquire a large block of Ordinary shares of the Shell Transport and Trading Company with a view to promoting closer co-operation between the British and the Royal Dutch Shell group, came in the nature of a surprise. The number of shares acquired is 833,333, the price paid being 5 1-16, but as these shares carry the right of taking up one new share at par for every five, that means that the Burmah Oil Company's holding in the Shell Company will ultimately amount to a million shares. The shares now acquired are to be paid for by an issue of £4,000,000 $5\frac{1}{2}$ per cent. Debenture stock which will be offered to the Company's

Preference and Ordinary shareholders at par. The new stock, which is repayable at par on November 1, 1953, but all or part of which may be redeemed by the Company on or after January 1, 1934, carries a conversion option of considerable importance. The Burmah Oil Company, as is well known, has an extensive holding of Anglo-Persian Oil Company Ordinary shares; actually its holding totals 3,561,990 shares. Of these 700,000 are to be made into a voting trust which will bear the title of the B.O.C. Anglo-Persian Share Trust Limited. Holders of the Debenture stock will have the right up to November 1, 1933, to exchange their stock for shares in this trust on the basis of £6 of Debenture stock for one share. Shareholders in the Burmah Oil Company who take advantage of the Debenture stock offer will therefore be in a position to acquire Anglo-Persian shares minus their voting rights at £6 per share. The option is one which in view of probable further developments, is likely to prove most valuable.

Greece's Internal Loan Policy.

It is not always the case that distance lends enchantment to the view, and it seems that M. Venizelos's visit to Europe has induced new reflections as to the advisability of the proposed action with regard to the reduction of the interest on the internal loan. At any rate, in an interview he gave he stated that the Greek Government has not yet absolutely committed itself to this course. No doubt the possible consequences to Greece's credit were brought to his notice and he was made to realise that while it is only an internal loan that is in question there must, if this policy be carried out, be doubt in the future on the part of overseas lenders whether there may not at some time or other be a development of this easy method of reducing State obligations. The result of the existence of an idea of this kind would be that Greece would find it a matter of some difficulty henceforward to obtain accommodation on the foreign money market.

Athens' Loan for Sanitary Works.

The recent epidemic of dengue fever in Greece has had the natural result of drawing attention to the question of sanitation, and I understand that the Municipal Council of Athens is to float a loan of forty million drachmæ to finance the execution of certain projects for the improvement of sanitary conditions in that city. Certain water-courses there are at present little better than open drains, and it is proposed that these should be built in with concrete. The cost of this work is estimated at thirty-seven million drachmæ, and the balance of the loan will be devoted to the establishment of a permanent sanitary service. It is stated that the amount of the loan will be advanced to the Municipality by the State for one year, free of interest, provided that the works are approved by the competent Government authorities.

Lake Copais Company.

A great improvement in results was recorded by the Lake Copais Company for the past year, the net profits being £32,367 as compared with £13,216 for 1926. The conditions were not favourable during the year, the area under cultivation being restricted on account of drought and other circumstances, and the satisfactory results are due to the quality of the crops. It may be noted that the net profits would have been considerably greater but for the expenditure of £7,319 on repairs to the roof of the Karditza Tunnel consequent upon the fall which took place in June, 1927. The balance of profit carried to the credit of the "A" and "B" Debenture stockholders' interest account is £23,359. A year ago only the "A" stockholders received interest, but this time the payment is also proposed of $4\frac{1}{4}$ per cent. on the "B" debenture stock, the interest in both cases being payable in "A" Debenture stock.

COMMENTATOR.

RECORD TRAFFIC OF MADRAS.

The appointment for the first time of a former railway official specially versed in traffic problems as Chairman of the Madras Port Trust in succession to Sir Bradford Leslie invests with more than usual interest the latest administration report of that body. In regard to total tonnage handled of both exports and imports the twelve months ended March last again constituted a record. Of the aggregate of 1,444,000 tons, which represented an increase over the year of 27.4 per cent., importations accounted for 1,047,000 tons and exports for 397,000 tons, the improvement in the latter case being one of no less than 37 per cent. The outstanding feature was the large quantity of groundnuts which passed over the Port Commissioner's premises, the advance of over 63 per cent. being attributed to the improved demand from Europe, a large crop and better transport facilities on the Continent.

Of incoming traffic the main increases reported were in railway plant, coal, kerosene oil and rice, while tanning materials were also brought in from South Africa in considerably greater quantities than usual. The trade improvement was naturally reflected in the Trust's own financial position. Although the actual result of the year's working was a deficit of just over Rs.4½ lakhs, against the previous period's surplus of Rs.4,32,700, the deficiency was merely on paper, due to the transfer of Rs.16½ lakhs as a contribution to capital account. The rise in ordinary expenditure was inconsiderable and receipts at Rs.45 lakhs constituted another record, exceeding the highest previous total—in 1926-27—by 20.5 per cent.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1). EGYPT.

Microscopes and Accessories.—The Department of Public Health, Egypt, invites tenders for the supply and delivery of microscopes and accessories. November 15. (D.O.T.)

Electric Lighting Installation.—The Minister of the Interior invites tenders for the supply and erection of a complete electric lighting installation for Sohag. November 24. (D.O.T.)

Internal Combustion Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of one 30-B.H.P. internal combustion marine unit required for the Government Workshops, Bulaq, Cairo, November 1; one 45-B.H.P. internal combustion marine unit required for the Government Workshops, Bulaq, Cairo, November 1; and the supply and erection of one 100-B.H.P. internal combustion unit required for stone crushing plant at Ghamra, Cairo. November 10.

Lighthouse Tower, Etc.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the construction of a lighthouse tower and annexes on Daedalus Reef in the Red Sea. November 12.

Portland Cement, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones (Cairo Station), invites tenders for the supply of 6,000 metrical tons artificial Portland cement,

October 30; and for the supply of materials and works connected with the replacement of the superstructures of 4 fixed bridges of the Sherbin-Kallin line and the adaptation of the abutments to the new superstructures. This project includes, among others, the supply and laying of the following materials: Reinforced concrete, about 3 c.m. and rolled, cast, etc., steel, about 38 tons. November 10.

Bridges.—The Egyptian Government invites tenders for the construction of two bridges. October 20 and 22. (D.O.T.)

Steel Boiler Stay Taps.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 128 best high speed steel boiler stay taps and 112 reamers, 47 sets best cast steel boiler patch taps and 3 sets best high speed steel taps and 5 best cast steel taps for bushes.

Lock Gates, Etc.—The Resident Engineer, Delta Barrage Directorate, at Delta Barrage, invites tenders for (1) construction of eight lock gates for Damietta and Rosetta locks, both at Delta Barrage, and their delivery at site and erection in position; (2) construction of twenty regulator gates and their delivery at sites. November 1.

Marble Gauges.—The Inspector of Irrigation, Assiut Barrage Circle, Assiut, invites tenders for the supply of marble gauges. November 10.

INDIA.

Radial Gates.—The Indian Stores Department invites tenders for the supply of radial gates for the head and cross regulators for main canals and branches. November 6. (D.O.T.)

PERSIA.

Canning Factory.—A proposal is on foot to erect a canning factory at Hamadan. The individuals concerned desire to receive quotations for a canning machine and a machine for making tins. (D.O.T.)

TURKEY.

Enamelled Number Plate Blanks.—A Constantinople firm are desirous of receiving quotations for the supply of white and red plain enamelled iron plates to be used for automobile numbers, house plates, etc. (D.O.T.)

Points and Crossings, Etc.—The Direction Generale des Fabriques Militaires at Angora invites tenders for the supply of points, crossings, rails and fishplates. October 25. (D.O.T.)

Tape.—The Direction des Achats du Bureau des Postes and Telegraphs at Constantinople invites tenders for the supply of 10,000 rolls of tape. October 17. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Birkenhead, October 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, October 18); s.s. Maihar for Calcutta (Birkenhead, October 30).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 17).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, October 20); s.s. Domala for Bombay and Karachi (London, October 20).

Cunard Line.—S.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz if inducement (Liverpool October 20, and Swansea October 23); s.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, November 10).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 13); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 3). (This steamer will be the last sailing of the season to the Danube ports.)

P. and O. Line.—S.s. Ranchi for Bombay (London, October 12); s.s. Burdwan for Calcutta (London, October 13); s.s. Ranpura for Bombay (London, October 26); s.s. Nankin for Calcutta (London, October 27).

Prince Line.—S.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, October 13); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 3).

Ellerman and Papayanni Lines.—S.s. Mardinian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 17); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 20); s.s. Roumelian for Philippeville, Algiers, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 27, Swansea October 27); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 27); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume. *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

*First class passengers only. †Specially low fares. ‡Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 9.

The week has witnessed considerable activity in the Stock Markets, the miscellaneous industrial share market again being the chief centre of interest. Prices tended to be somewhat irregular, but on balance there have been few heavy falls. During the past week or two the gilt-edged market has been distinctly firm, despite an unfavourable monetary position. It is not surprising, therefore, that there have been rumours of an impending Government loan to provide for the £100,000,000 National War Bonds and £73,000,000 of Treasury Bonds which fall due for redemption on February 1 next; £31,000,000 of Treasury Bonds mature on April 1 next. It has been rumoured that there will be an offer of £200,000,000 3 per cent. Treasury Bonds at 92 or 93 per cent., redeemable at par in 1933. The terms would represent a departure in Treasury policy, and it has been suggested that the bonus of £8 per cent. obtainable on redemption, not being subject to income-tax, is designed to give the bonds an attraction for the ordinary investor rather than the professional investor. There have been further substantial exports of gold from the Bank of England, but the Bank is in an exceptionally strong position to meet demands. Home rails have continued to improve. We make reference to gramophone shares and to important developments in the oil industry in subsequent paragraphs. Tin shares have been rather less favoured owing to an increase in stocks.

The Oil Industry : Important Developments.

A week or two ago we referred to rumours that an agreement aiming at closer co-operation between the leading oil groups had been effected. An announcement of great importance to the oil industry, made this week, largely confirms these rumours. As a step towards this co-operation, the Burmah Oil Company has arranged to acquire a large block of ordinary shares of the Shell Transport and Trading Company, and to provide the greater part of the purchase money by an issue of £4,000,000 of debenture stock. The number of Shell shares purchased is 833,333 (with the right to take up other shares) and the price paid is 5 1-16 each. The new

£4,000,000 debenture stock of the Burmah Company will bear interest at 5½ per cent., and be offered to the company's preference and ordinary shareholders at par. The new stock is repayable at par on November 1, 1953, but the company reserves the right to redeem all or part at 102 per cent. on or after January 1, 1934. The new debenture stock carries an important option. Of the Burmah's holding of 3,561,990 ordinary shares of £1 each of the Anglo-Persian Oil Company, 700,000 are to be put into a voting trust, entitled the B.O.C. Anglo-Persian Share Trust, Ltd. Holders of the debenture stock will have the right at any time up to and including November 1, 1933, to exchange their stock for shares of the new trust on the basis of one share for each £6 of debenture stock. That is to say, they will have a five years' option upon what are really Anglo-Persian ordinary shares minus their voting rights at £6 per share, as compared with their present price of about £4 12s. Apparently the directors regard this as a valuable option. This preliminary step towards agreement will no doubt be widely approved and further developments will be awaited with interest.

Booming Gramophone Shares.

During the past week or two, and especially during the last few days, the activity in gramophone shares has once more been one of the outstanding features of the Stock Exchange. As on previous occasions, there has been considerable interest in the shares of the old companies; but a remarkable development during the past few weeks has been the growth of conspicuous speculation in the shares of the new companies. There are now signs, however, that a halt has been called in the latter group—for the present at least. This is not surprising and not unwelcome. In the past month a number of shares have practically doubled in value. The shares of the Metropole Company, for instance, have risen by no less than 300 per cent. in a month, the present price being 22s. To a large extent these advances are doubtless the reflection of a desire for a gamble facilitated by the shilling share, the majority of the new companies having issued their junior securities in this denomination. There can be little doubt that current share prices bear small relation to investment values. The chairmen of the new companies are, naturally enough, speaking with the utmost confidence regarding the future. But a day of reckoning is unescapable. Sooner or later—perhaps in the not very distant future—stocks will begin to accumulate and there will follow talk of price reductions and other alarming symptoms of over-production. There are few booms which are not wrecked by the impression that they will continue indefinitely, thus encouraging the participation of all and sundry.

The Shipping Outlook.

Sir Frederick Lewis is a recognised authority on shipping, and his views, expressed at the meeting of Manchester Liners held this week, therefore merit attention. Sir Frederick has not been a reckless optimist and his latest pronouncement shows that he has not changed his viewpoint. "I regret," he said, "that I cannot speak as optimistically as I would like to do, as shipping in general is still suffering from a plethora of tonnage." The shipping industry has a long road to travel before it reaches a state of general prosperity. This is evident from the fact that the average level of "whole-cargo charter" freights to-day, as measured by the index of the *Economist*, is 7 per cent. lower than a year ago and remains below the average for 1913, although operating expenses are, of course, appreciably higher. But so far as certain companies are concerned there are mitigating circumstances. This particularly applies to two companies—namely, the Cunard Company and the Furness Withy Company. The profits of the Cunard Company have tended to remain at a remunerative level. Last year the company showed a considerable expansion in profits, and during the present year the company is again enjoying

the benefit of cheap fuel. There will be a saving, it has been estimated, of some £700,000 as compared with a year ago, and it would not be surprising if part of this saving were passed on to shareholders at the end of the current financial year. At present the shares return approximately £4 6s. per cent. The Furness Withy Company is primarily a shipping undertaking, but has its interests highly diversified. It is expected that sooner or later the profits from subsidiary sources will, owing to the strength of the balance-sheet, be reflected in the dividend declaration. The current yield on the shares is approximately £5 per cent.

The gross production of crude oil of the Phoenix Oil and Transport group of companies for September was 28,896 tons.

The production of Hamilton's Oil Concessions (Roumania) for September was 4,090 tons (28,630 barrels).

The India Store Department have given a contract for bridge-work for Adamwahan Bridge to P. and W. MacLellan, Glasgow.

The Brightside Foundry and Engineering Co., Sheffield, have received a contract from the Tata Iron Company, Bengal, for a rolling mill.

The Stock Exchange Committee have ordered the undermentioned security to be quoted in the Official List:—Roumanian Government.—£387,862 Four-and-a-Half per Cent. Loan, 1913 (London Issue). Bonds payable in accordance with the Second Schedule of the Agreement of July 4, 1928, Part 1.

New extensions of the Dunlop cotton mills at Rochdale in Lancashire now make these the largest in the world under one roof. They have 35 acres of floor space, 286,400 spinning spindles, 100,000 double spindles, 3,000 workers (at least), 14,500 h.p. of electricity. Every week 1,100 bales of cotton are turned into half-a-million lb. of yarn, which is doubled and made into cord for Dunlop products, chiefly tyres.

COTTON GROWING IN THE SUDAN.

Sir John Loader Maffey, Governor-General of the Sudan, with Mr. A. J. C. Hudleston, Financial Secretary to the Sudan Government, Mr. H. P. Hewins, Director of the Central Economic Board of the Sudan, and Mr. R. Hewison, formerly of the Sudan Government Service, was entertained at luncheon by the British Cotton Association in Manchester on October 1, and gave an account of developments in the Sudan with special reference to cotton growing.

Sir John Maffey said there had been a falling off in the production of Sakellaridis cotton. Last season 570,000 kantars were produced, and this season the crop was down to 470,000 kantars, this being because of a diminution in yield of from $4\frac{3}{4}$ to $3\frac{1}{4}$ kantars per feddan. But this was a comparison between abnormal seasons, the former figure being too good and the latter unusually low. In the coming season 131,000 feddans would be under cotton, as compared with 105,000 this year. Good reports were to hand already from Tokar and Kassala. Looking still farther ahead, in 1930 there would be 500,000 feddans under cultivation, of which 170,000 would be under cotton. The Gezira had a prosperous and contented population, and presented the prospect of a community of many races for whom something had been made out of nothing.

Dealing with American cotton in the Sudan, he said that irrigated cotton was not of very great importance at the moment, and he knew Lancashire was looking in the direction of the rain-grown crop. There had been an increase from 34,000 to 41,000 kantars in the yield under irrigation, but the rain-grown crop had remained stationary at 20,000 kantars. They hoped to do better, for there were great tracts of land on which cotton could be grown and which were not growing cotton. In 1926 they promised to produce 50,000 kantars of rain-grown cotton. They had failed to do that owing to two years' drought. The people had had to grow food instead of cotton, and much of the cotton seed went to feed pigs and cattle. A more normal stage was now being approached and hopes were entertained that the area of rain-grown cotton would steadily increase.

His only fear of the progress of the Sudan itself was that it might be too quick. They had built 100 miles of railway a year for the past five years. Nearly £300,000 had been spent on improvements in the quay of Port Sudan. About 3,500,000 tons of shipping was handled every year in Port Sudan, and the Sudan Light and Power Company at Khartoum had spent £700,000 on electric trams and other developments. The north lent itself naturally to motoring. In the south they had to make roads, and were spending about £40,000 a year on motors. There were now 2,000 in the country. The country's external trade was £11,500,000 a year. He added that his last word must be a testimony to the persistent influence of the personality and name of Gordon throughout the Sudan. The country was not a big one or a wealthy community, but it was built up on a British tradition that contemplated something more than the mere material prosperity of the people, and with that tradition the name and work of Gordon were still inseparably connected.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for September was 60,370 tons (as compared with 44,603 tons for the corresponding period last year). This is an increase of 2,100 tons over the August production, which was the highest monthly production obtained by the company.

The Automatic Telephone Manufacturing Company, Liverpool, have received a contract for the erection of an automatic telephone exchange at Mansura, Egypt. The contract for the main equipment for an automatic exchange at Cairo has been awarded to Standard Telephones and Cables, Ltd., London, and the contract for subscribers' instruments to the value of about £16,000 for the same exchange has been awarded to the Automatic Telephone Manufacturing Company.

Engineering Topics.

By G. B. B.

Road Engineering.

Probably the largest development of highways in this country within the next decade will be, apart from the construction of more arterial roads, the improving and widening of the secondary and feeder roads, and many who are congratulating themselves on the preservation of our country lanes will see them widened and "improved" so that almost all, if not all, of their present charm will disappear. Road engineers, however, recognise that in this it may be as well to hasten slowly. The mistake should not be made, in dealing with roads of this character, of creating a type in excess of requirements. Much more can be done by teaching motorists to drive, not in the centre of the roadway, but to the side, a lesson which should be given to owner-drivers of small-powered cars. It is the habit of hugging the centre of the road, and so compelling overtaking vehicles to edge over to their wrong side and so obstructing those coming from the opposite direction, which causes the greater part of the road congestion of which we hear so much. From the technical point of view, any road that may be expected within a year or so to carry 200 vehicles per day should have a better foundation and a better surface than have most of our present rural highways. In this, the question of maintenance costs has to be considered; whether it is better to make a higher capital expenditure and so construct roads that will cost comparatively little for upkeep, but will have a heavy overhead charge in the shape of interest, etc., or to expend as little capital as possible at the risk, if not the certainty, of having to pay more for maintenance. It has been said that the tendency in the design of modern motor cars is to develop speed, and the development of speed must have, as an inevitable result, the construction of roads that will permit of such speeds being attained as are within the capacity of the vehicles. The proposal has been made, and may be shortly carried into effect, that toll roads should be constructed to provide special service to motorists. A toll road of the kind intended may be defined as a roadway all elements of which are designed for high speed operation; a road designed for the use of all types of high-speed vehicles. "Time is money" may now be altered to "speed is money" when it is applied to motor transport, and speed is dependent upon speed facilities and an absence of elements that cause congestion or slowing down. The cost of accelerating a car, stopping it, and the wear and tear on tyres and brakes, together with other operating costs incidental to traffic congestion, is far more than most imagine, and it would be poor policy to economise in road costs if the economy resulted in an increased cost of motor traffic. The whole question is one that bristles with difficulties and which needs very careful handling.

Road Surfaces.

With regard to this question of roads numerous instances might be given of the resurfacing of old gravel and macadam streets and roads with asphalt. An association interested points out that when a roof becomes defective we do not consider it necessary to replace the entire building; we merely repair or, if necessary, replace the roof. When a fire destroys a building but leaves sound foundations, we do not dig these up but utilise them for the new building. When our macadam roads become worn we are apt to overlook the fact that thousands of tons of stone and gravel have been hammered and pressed, by hoofs and tyres, into a formation which merely needs a sound, dustless, and durable surface carpet, a carpet that can be provided by asphaltic or bituminous preparations at a low cost. It is an economic crime to tear up a macadam road merely because the surface has become badly worn. To emphasise this point it may be worth

while to consider that a mile of road 18 feet wide, built of water-bound macadam and of an average depth of 12 inches, contains about 2,240 cubic yards, or nearly 60 car loads of broken stone. At present prices for material and labour, the reconstruction of such a road would cost about £2,500 per mile. It could be resurfaced with one or other of the many advertised preparations and gritted with good chippings for a fraction of that sum.

An Unchokeable Pump.

Particulars are to hand of an unchokeable pump which can be used for unscreened sewage, heavy sewage sludge, wet gravel and sand containing large stones, crushed rock, clay, mud, oils, pulps of all kinds, sugar beet, liquid cement, dye works sludge, fish refuse, grains, and practically all kinds of chemicals. It is a special form of centrifugal pump of simple design and is claimed to be the practical solution of endless pumping difficulties, as it will do work that no pump merely designed for dealing with water could carry out. It will deal with any fluids carrying any solids in suspension; whatever may be their character, whether soft, hard, small, large, heavy, light, spongy, stringy, stiff, or flexible, this pump will pass them without choking. It is further claimed that its use entirely obviates the expense and labour involved in screening, cutting, and clearing liquids or sludge. All details connected with the pump, such as the special impeller, casing, shafts, bearings, etc., are of robust construction, and it may be mentioned that the casing is fitted with a renewable cut water block and the impeller has renewable blades, both of which parts are easily and cheaply replaced.

Colouring for Cement.

Cement, which has come to the fore so much of late years for construction work, has the disadvantage of possessing a rather dismal grey colour, and many processes have been devised to overcome this, either by dyeing the cement, mixing colour with the raw material, or painting the finished constructional work. An Edinburgh chemist, says the *Stone Trades Journal*, has brought forward a new process for which certain advantages are claimed. In a demonstration recently a surface of 2,000 sq. ft. of grey cement was treated. The method consists of applying a spray of water to the cement or stone face, followed by a stream of dry cement-like coloured powder. The powder adheres to the film of water, with which it combines and ultimately becomes hard, and so colours, waterproofs, and preserves the cement face. One of the outstanding features of the process is that it leaves all ornamentation, etc., standing out as sharply and distinctly as in the original cement wall. It is understood that other forms of building material, as brick, metal, stone, and wood, may be treated in this manner.

The draft of the new Roumanian Customs tariff is being submitted to the chambers of commerce and other interested bodies for consideration.

As from October 5 the supplementary letter mails dispatched on Fridays by air to Marseilles to overtake the mails for Egypt, India, Australia, etc., dispatched on the previous evening have been discontinued.

Motors and Motoring

Another Ariel Success.

A further triumph of the Ariel motor cycle was recorded in Mr. James Taylor's climb to the summit of Ben Nevis on his 497 two-port O.H.V. Ariel and sidecar on September 29 in 4 hours 49 minutes. A report on this feat states:—"Whilst it cannot be said that the machine did the 5 mile climb unassisted, assistance being required at places was not due to lack of power or inability of the driver to handle it, but solely to the fact that wheel grip could not be obtained at some points where the shingle was so loose and deep, and also through lack of ground clearance. The work done on the hill to enable the Ford to climb it recently was not of any great advantage to a sidecar machine except at some of the hairpins where naturally the widening of the bends did help. The chains fitted to the driving wheel did not seem to help greatly, and were ultimately taken off. Progress then became quicker, and the Dunlop tyres stood the gruelling work admirably. The machine required no attention whatever during the whole climb or descent, and was as sound at the finish as at the start. Trouble might have been expected from overheating considering the very slow speed made at times compared with the engine speed, but the good lubricating arrangements combined with the oil used, and no signs of trouble were apparent at any time.

"The clutch and gear box behaved perfectly, as did the brakes which held the whole outfit easily at every point where they were required to do so, both ascending and descending. It was really a remarkably wonderful performance for the same standard machine which had already been through two Scottish six days trials, various other trials, and moreover made a record climb of Ben Lomond last year. If Mr. Taylor's time is beaten it will only be by having more and fresh helpers distributed up the hill at the most difficult points where assistance is absolutely necessary for a two track machine using the ordinary type of driving wheel or wheels, as a great deal of time can be lost, as it was on Saturday, by Mr. Taylor having to wait till the helpers made up on him after he had made a considerable amount of progress where the road conditions permitted."

DAIRY FARMING IN CYPRUS.

Mr. M. T. Dawe, Director of Agriculture in Cyprus, describes in an article in a recent issue of the Cyprus Gazette the position of dairy farming in the Island. He points out that the records of the Athalassa stock farm show that the Government has done much to import and establish in the Island good breeds of cows. Cyprus is an importer of milk on a large scale, the value of the imports of milk in 1927 being £6,282, which compares with an average for the five years up to that year of £5,351. Then in 1927 the Island's imports of butter totalled 959 cwt. of the value of £8,679, these figures comparing with an average for five years of 1,067 cwt. and £9,112. Cheese has been imported on an increasing scale, the figures for 1927 being 997 cwt. of the value of £5,351 as against an average for five years of 408 cwt. of the value of £2,398. For the past five years the average imports of dairy produce aggregated a total value of £16,861. Mr. Dawe emphasises the point that there is room for the better development of dairy farming in the Island and particularly for the production of cheese, but he remarks that dairy farming can never develop on big lines in Cyprus because of the long, dry season and the absence of suitable pastures and the high cost of raising exotic pastures by irrigation. He is convinced that much can be done in a small way by individual farmers and co-operative societies in supplying the large towns with milk and in the production of butter and cheese. Goat and sheep farming are also of considerable importance to

the Cypriot farmer at the present time, and the export of cheese made principally from sheep and goats' milk constitutes a substantial item in the trade list. In 1927 the export of this cheese amounted to 5,349 cwt. of the value of £22,717, and the average for the five years was 5,012 cwt. of the value of £21,185. It is interesting to note that Egypt is the Island's best customer for this commodity, Syria coming next, while the cheese is also exported to Greece, Turkey, Palestine, France, the Sudan, the Dodecanese, the United Kingdom, America, West Africa, Australia, and even China. Incidentally the average value of the export of this cheese for the five years exceeds that of the imports of dairy produce by £4,324, and Mr. Dawe suggests that while the keeping of cows and dairying should be encouraged the main efforts should be directed to the improvement of the goats and sheep.

ROUMANIA'S AGRICULTURAL POSITION.

A report of the Roumanian Ministry of Agriculture covering the period down to September 10 gives some interesting figures with regard to the principal crops. The area under wheat this year was 3,206,368 hectares (1 hectare equals 2,4711 acres) as compared with 3,101,153 hectares for 1927 and the average for the previous five years of 3,118,394 hectares. The yield showed a great improvement, the estimate being 35,515,906 kg. (1 kg. equals 2.204 lb.) as compared with 26,327,073 kg. in 1927 and the five years' average of 26,393,785. The figures for rye have also increased. The area rose from 284,255 hectares for 1927 to 295,704 hectares, which compares most favourably with the five years' average of 277,853, while the yield is estimated at 3,005,786 kg., which compares with 2,368,136 kg. for 1927 and an average of 2,242,042. As regards barley, the area declined slightly, but there was a great increase in production. The area was 1,759,010 hectares, as compared with 1,764,260 hectares and an average of 1,749,802 hectares, while the production is put at 16,465,751 kg. as against 12,616,202 kg. in 1927 and an average of 11,921,975 kg. The position with regard to oats also shows an improvement. The area was 1,116,161 hectares, as against 1,084,408 hectares and an average of 1,185,931 hectares, while the production is estimated at 9,327,676 kg. as against 8,681,434 kg. for 1927 and an average of 8,575,304 kg. As regards maize, which is a very important crop in Roumania, the lack of rain has had a serious effect. At the time of the report the position was good in the north of Transylvania, the Bukovina, Moldavia, and the Carpathian region, but there was a shortage in Oltenia, Bessarabia, and the departments of Tulcea, Arges, Jalomitza, Buzau, Tutova, and Maramuresh. It is anticipated that the total production will be much below that of the previous year.

ROUMANIA'S INCREASING OIL PRODUCTION.

The figures for the production of oil in Roumania for the first six months of this year show a further substantial improvement, the output being 2,005,000 tons as compared with 1,758,000 tons for the corresponding period of 1927. The average monthly production has risen to 334,000 tons, while the daily output for the period averaged 11,135 tons as compared with 9,760 tons in 1927. The production is divided as follows between the different oil areas:—Prahova, 1,378,200 tons, or 69 per cent.; Dambovitza, 537,000 tons, or 26.5 per cent.; Buzau, 56,500 tons, or 2.5 per cent.; and Bacau, 32,000 tons, or 2 per cent. As regards the production of the departments, Moreni leads with 773,500 tons, or 38.6 per cent., Gura-Ocnitzei being second with 306,200 tons, while Ochiuri and Runcu-Scuteni are equal third with 231,000 tons.

Near East Markets

THE YUGOSLAV MARKET FOR SHOES.

Price is the most important factor in determining the possibility of importing shoes into Yugoslavia, because the majority of purchasers prefer to buy a cheap shoe rather than an expensive one, regardless of quality (says an American Consular report). Strong, rough shoes are purchased by the rural class, which represents about 5 per cent. of the people. But there is a noticeable trend in larger cities toward buying the more expensive and better goods.

The domestic footwear industry is fairly well developed, most of the factories being located in the territory of the former Austro-Hungarian Provinces of Slovenia and Croatia-Slovenia. The only really important shoe factory in Serbia is the factory "Boston" of Belgrade. Besides larger factories, a number of small shops are scattered throughout the Kingdom. These shops produce shoes of low grade and also the footwear locally called "opanka," which is a kind of large sandal or low moccasin, which consists of a thin sole and roughly made upper part, tied to the feet by thin strips or leather strings. Such moccasins are usually worn by the peasants over thick knitted socks. Almost the entire population of villages and small centres having a semi-rural character wears "opankas." The better grades of domestic shoes are entirely consumed in the country and never exported abroad, as their price and quality do not allow local manufacturers to compete in foreign markets.

The materials used in the manufacture of shoes are purchased partly in the country itself and imported partly from Austria, Germany, and France. Fine leather is imported from these countries and also from the United States, as well as patent leather and silvered, gilded, bronzed, and designed leathers for making ladies' fancy shoes.

THE EGYPTIAN MARKET.

Speaking at a livery dinner of the Glovers' Company at Clothmakers' Hall, on October 5, Lord Lloyd said the relations between Egypt and this country had every prospect of becoming more and more friendly. It would be a great help to those whose work lay in Egypt, he added, if merchants and manufacturers in this country would be a little more alive to the growing power of Egypt as a market.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 29:—

Sultanas.

The estimated sales to date total 17,550 tons, against 20,600 for the corresponding period of the previous year.

Closing prices Smyrna, per cwt., c.i.f. London, for types 12 to 18 and 1, 3, and 5 are:—30s. 6d.; 32s. 6d.; 34s. 6d.; 37s. 6d.; 42s.; 49s. 6d.; 57s.; 65s.; 35s. 6d.; 33s. 6d.

Market Conditions.—Prices continued losing ground throughout the week, closing at 2s. to 3s. (Fl. 2 to 3) decline on last Saturday's level. The present level of values is creating some speculative interest, and although shippers generally discount a further decline and quote forward positions at below current rates, there exists amongst the native dealers an element that is disposed to purchase in the interior and stock in the hope of better prices later in the year. There are some reports current of the Government's intention to intervene in an active manner in support of the farmers, but it is difficult to say how much truth exists in these reports or whether the same must be attributed to the presence here of the Minister of Finance. It is possible that prices may further slide, but our personal view is that the consumer with requirements to fill would be acting wisely in covering them at round about the present level of prices. The finest grade is becoming daily scarcer, and may, before long, run out altogether.

Figs.

The estimated arrivals in the Smyrna market since the opening of the season are 17,884 tons, against 17,815 tons for the corresponding period of the previous year; the estimated sales to date are put at 17,453 tons, against 17,289 tons.

Market Conditions.—Prices throughout the week have been firmly maintained at the higher level established last week. Although end of September engagements have been now practically all covered in, the undertone of the market remains strong and indications point to continued firmness over the near future. The demand from the main markets such as the States and the U.K. shows no increase on preceding seasons, to judge by the extent of shipments, but there is a noticeable increase in exports to other European centres where the Smyrna fig appears to be annually gaining in favour.

CONTINUED INCREASE IN CYPRUS IMPORTS.

The Cyprus trade report for August states that the value of imports is again above the average, the total £157,268 being £4,500 more than for August, 1927, and £28,800 more than the quinquennial average. The most noticeable increases are in flour, machinery, motor cars and oils (edible and non-edible).

The total value of exports for the month is £109,801, which is £22,700 more than the quinquennial average, though below the total for August, 1927. The decrease in exports is due to the holding up of barley, normally shipped at this time, in anticipation of a rise in prices in the foreign markets.

The Northumberland Shipbuilding Company has received an order to build, on behalf of Greek owners, a shelter deck type steamer, of about 7,300 tons dead-weight. She will be constructed on the Isherwood combination system.

A new express train, known as the Ovid Express, accomplishes the journey from Bucharest to Contanza, on the Black Sea, in 4 hours 16 minutes. As it connects with the Orient Express at Bucharest, it shortens the journey from Paris to Constantinople via Bucharest and Constantza by twelve hours.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

YUGOSLAVIA'S NEW PROBLEMS.

Dr. Milorad Nedeljkovich, writing in the *Belgrade Economic Review* on the new problems of Yugoslavia, points out that conditions in that country have undergone a sudden change. He says:—

In the first half of the year things could not have gone better. State finances were put in order and balanced up, both formally and materially. The currency, actually stabilised long ago, was to be legally settled on a permanent basis. We were on the eve of the conclusion of a large foreign loan for the construction of railways and other useful and productive capital investment, as well as for the stabilisation of the dinar. This capital expenditure was to give work both to trade and to home industries, and to employ home labour, of which in these last bad years there has been a good deal unemployed even among the agricultural population. In the political world it was considered that in the course of the last few years all the fundamental problems of State organisation had been settled, that the State was consolidated beyond every possibility of doubt, and that political struggles could concern only the concrete application of the established principles of the constitution.

But instead of this, in a moment, as if by the blow of a magic wand, the whole outlook has changed. After long rains in May and June, there occurred suddenly a long, unbroken, scorching drought, which was not able indeed to touch the harvest of wheat, barley, rye, and oats, but which in many places seriously affected the maize, fruit, vineyards, and pastures. These (maize, fruit, and grapes) are all important branches of our agriculture, especially from the point of view of export, both directly and indirectly, through the production of fodder for cattle in the pastures, the fattening of stock for export, and the supply of milk products, which are exported in considerable quantities in normal years. This is also the third bad year for agriculture: 1926 had too much rain and flood; 1927 had a serious drought, like this year. For an agricultural country, where 85 per cent. of the people live on the cultivation of the soil, and where there are no large estates but only medium and small holdings, particularly the latter, three consecutive bad years must be felt in the balance of the national well-being, and in the yield of State finances. Therefore this year's drought, which came so unexpectedly after the most smiling prospects for an excellent harvest, have brought about a feeling of depression in many classes.

Together with the drought there came the postponement of the foreign loan for capital expenditure, whose conclusion was practically imminent in London. It is not worth while to inquire whether it was conditions on the international money market, international European relations, or our own political events which were decisive in bringing about this postponement. To the public as a whole the reasons are not known and only guess-work is possible. The fact remains, however, that the loan is put off, and that this occurred just as unexpectedly and in the face of every probability as this year's drought. Its effect also has been just the same as that of the drought. Many transactions and enterprises, based on the expectation of more brisk economic life as the result of an inflow of foreign capital, withered up before they could show flower or fruit. Many hopes proved unfounded, many calculations were upset. If nothing had been said of the loan, and if its realisation had not been proclaimed as indisputably imminent, there would have been no disillusionment. But after the raising of hopes and dreams, the return to concrete reality could not take place without causing some depression. In the first place, naturally, the building of the railways and other public works with their beneficial effect on economic life had to be foregone, likewise also the legal stabilisation of the dinar, which technically must be carried out in close connexion with the realisation of the foreign loan.

Dealing with the new position, he draws satisfactory conclusions from the character of the country's resources. He continues:—

With many kinds of resources our losses on one side are compensated by a better harvest of greater productivity on another, so that in the final balance of national economy an average standard of life is maintained. We may, therefore, be at peace as regards the prospects for our national revenue and well-being in the coming year until the next harvest. Possibly the revenue will not be very great, and will not therefore give a great impetus to industry, trade, or art, but it will make life possible, if with stricter limitation of expenditure.

From the same point of view also we may consider the postponement of the foreign loans. Had they been realised, the activity in economic life would undoubtedly have been more intense, and this would have been very welcome this year. But even if this capital expenditure is delayed for a time, it is no "catastrophe." No deficit has occurred in economic life, but the desired prosperity and progress has been put off until with either our own or borrowed means, we are able to make that advance. In the meantime it may bring us to greater clear-headedness and a critical attitude in estimating our economic initiative.

For the present we are thrown on our own resources, and greater attention is being concentrated on the advancement of the chief branch of national activity, namely, agriculture. The peasant must be given greater profit from his work, so that he can live better, without falling into debt, and be able to pay the State and local taxes which the present social, political, and cultural order demand of him.

Efforts in this direction are mainly tending to make agricultural production, at least in so far as it is intended for export, turn to those crops which have good prices and good prospects for sale on foreign markets. Special thought is being given to more intensive stockraising, the preparation of milk products poultry raising and the cultivation of industrial plants, vegetables and fruit. Simultaneously with a partial abandonment of extensive methods of agriculture and the change in the above direction, efforts are being made towards the standardisation of production, especially in fruit culture. (This is especially necessary for apples and walnuts, of which we have now numerous kinds, so that it is difficult to collect large consignments of the same varieties). Besides standardisation of production there is felt a great need of systematic organisation of sale through agricultural co-operatives, and by changing the present primitive method of bringing small quantities to market, which means that goods pass through many hands of the small and large dealers before they come to the export warehouses and foreign markets. To reduce this unnecessary scattering of the value of products on transport and middlemen's costs, will mean to retain for the peasant greater gain from his crops. Very much has to be done in this direction so as to increase by the shortest and quickest way the net gain of the peasant smallholders who predominate in this country.

The traffic receipts of the South Indian Railway Company for the week ended September 8 amounted to Rs.12,26,769, making the total from April 1 Rs.2,70,23,112. The figures for the corresponding periods of the previous year were Rs.12,07,950 and Rs.2,68,30,959.

The imports of ready-made shirts into Palestine have been decreasing during the last few years (says an American Consular report). Several small shirt factories, run by American-trained labour, have been established in the towns of Tel-Aviv and Jaffa. Among imported shirts, the open-front shirt with detachable collar is the most popular. The pull-over styles on the market are British-made. The favourite materials for shirts are silk, rayon, and lighter weights of white twills and chambrays, and percales. In this climate, which makes frequent changes of clothing so necessary, soft and semi-soft collars are not only more comfortable but are more economical. Linen and so-called linen collars and cuffs are used principally for evening wear. Local merchants believe that durable work shirts made from dark materials would sell in this market.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 3:—

Egyptian Futures.—Sakel Contract.—We have experienced a series of steady markets during the past week, and with what might be termed only normal fluctuations occurring from day to day, little alteration in the price level has to be recorded from the date of our last report. The operations that have taken place show a fairly evenly balanced state of opinion and also reveal a tendency on the part of both speculative and trade interests to adopt a decidedly cautious attitude; the result is that the outstanding market account is small and trading light for this period of the season. In the ordinary course of events the publication on the 1st inst. of the first Government crop estimate, indicating a yield of only 2,357,686 kantars, might conceivably have formed the basis of a strong forward movement; however, under present trade conditions and with an undercurrent of feeling that at its ruling difference with other varieties Sakel cotton is not an economic proposition, the above-mentioned report evinced no response from the market.

Trade reports continue to show a moderate increase in activities; the improvement in this quarter, however, appears only just sufficient to stabilise values; the sentimental effect of the relative firmness in the American market may, however, help the initial weight of the crop to be absorbed into trade channels without causing appreciable effect on the ruling level. One factor that those who have distinct leanings to the "short" side have to bear in mind is the ability of holders in Egypt to wait for their market; ample evidence of this has been furnished in previous seasons, and with a Government scheme of advances to growers now in operation the movement of the present crop should proceed on a very gradual scale. The Alexandria market has fluctuated round the 34 dollars mark for the greater part of the week; periodical easing at the other side has been taken advantage of to undo old straddle commitments and the larger part of the holding accumulated during the summer months, i.e., purchases here at round 40 points discount with the overseas contract, has been reversed at parity. We still consider that prices will fluctuate in the neighbourhood of 17d., with down-scale purchases advisable should any developments materialise causing an appreciable set-back below this figure.

Upper Contract.—Some heavy trading has again been witnessed in this option, a liberal supply of contracts furnished by spot houses against imports, being well absorbed by straddlers. Fluctuations throughout the week have been confined within narrow limits, and prices show little change since our last report. Owing to the easiness of the basis in Egypt our contract at one period narrowed-in to 200 points over the American option (January/January positions); at this difference heavy support was encountered, and this, coupled with a since firmer tendency at the other side, has caused a widening to 220 points. Considerable trade activity has been in evidence throughout the week, and a good business has been transacted on the "spot," also more particularly for shipment cotton. The weight of the crop movement will probably exercise a restraining influence on values for some little time; however, for those prepared to take a long view we consider that purchases round present levels may later show reasonable profits.

Egyptian Spot.—The series of steady markets recently experienced have given a certain amount of confidence to spinners, and some good buying has taken place from time to time. The actual spot sales of Egyptian cotton have fallen below last week's total, but this has been more than compensated for by an improvement in the offtake for Sudan growth. The demand has broadened out in a very satisfactory manner, and it has probably been due, in some measure, to the difficulty experienced in meeting the somewhat varied requirements of the trade that the sales have not been larger than they are. We are, of course, at the "back end" of the season, and the selection in certain qualities, for example F.G.F. to Good Sakel, is a poor one. The offtake for Sakel cotton has continued to show some slight improvement, but we still maintain our view that before the trade can be really tempted back again to this growth a further contraction of the basis which Sakel holds over other growths of cotton will have to be seen. High-priced cottons of any growth are very much out of favour at the moment.

Uppers have continued to occupy a great deal of attention in most quarters, and we are of the opinion that a large business has been done this week in Upper and Zagora cotton for shipment. There has been no change to record in the quality of the demand, which has continued to be almost entirely for cotton within 90 points either side of the futures contract. Merchant buying has been in evidence and, provided the present parity is maintained (i.e., in the neighbourhood of 200 points over American) will probably increase owing to the participation of merchants who usually confine their attention to American cotton. Low cotton at from 11d. to 15d. has been in good request, and Pillion continues to attract fresh business. Unfortunately, the actual stock of Pillion available here is a very poor one. Specialities, such as Nahda, Maarad, White, etc., have been comparatively neglected this week.

The tone of recent Manchester reports has been much better and there is no doubt that a good c.i.f. business has been taking place. Prior to next Monday's Bureau Report we are inclined to look for the customary slackening off, but provided no unpleasant surprise is sprung on the trade we shall expect an early return to the present

hopeful conditions. Forwardings last week were returned as 4,955 bales Egyptian and 718 bales Sudan. Estimated spot sales for the week, 2,300 bales Egyptian and 1,900 bales Sudan. Quotations of Sakel show an advance of 15 points on the week; those of Upper have been raised 5 to 35 points. Pillion exceptionally has been reduced 20 points on the week, thus bringing the official quotations more in line with actual business. F.G.F. Sakel to-day, 17.70d. F.G.F. Upper to-day, 12.10d. F.G.F. Pillion to-day, 13.00d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 27, state:—

Since our last report the market has been fairly active; prices have been irregular but closed well up on the week. The week's summary of price movements is as follows:—Sakellaridis: November, 34.35 dollars, 0.72 dollars up; January, 34.78 dollars, 0.78 dollars up; March, 35.28 dollars, 0.88 dollars up. Ashmouni: October, 21.33 dollars, 0.93 dollars up; December, 21.98 dollars, 1.01 dollars up; February, 22.53 dollars, 1.08 dollars up; April, 23.07 dollars, 1.27 dollars up.

Sakel.—The market during the early session of the week was poor, but the continued rise of American prices has since been reflected here. The commercial houses have been buying and there has been considerable speculative short covering. The feeling in the market is not bullish; prices are not by any means stable and the advance may easily be lost in the event of any reaction in American. The real cause of the absence of enthusiasm is the unsatisfactory position in the industrial centres and the poor prospects for Sakel consumption this season. Very little is doing in the yarn market and there are no indications of an improvement in the near future; the public will not pay present prices of Sakel yarns, considering them much too high in comparison with yarns spun from other cottons. The Sakel/Ashmouni straddle stands at 1,302 points against 1,323 points last week and 943 points a year ago.

Uppers.—This market has been very active and prices are advanced, corresponding more or less to the rise in New York. Considerable sales to spinners have been concluded recently, and but for the fact of the hedge-selling against the heavy arrivals, prices would probably have shown a much bigger advance. The October discount has widened out to 65 points over December, due to the transferring

Notes of the Week.

M. Venizelos in Belgrade.

If M. Venizelos has occasion to sum up his visit to Yugoslavia for the benefit of his friend, Signor Mussolini, he cannot do better than telegraph "*Veni, vidi, vici.*" His two days in Belgrade sufficed to bring the Yugoslav Government wholly round to the Greek point of view that Yugoslavia was entitled to negotiate on the basis of the 1923 Agreement, under which a free zone at Salonika was leased to her, with a view to technical modifications or the conditions then laid down, but that she could not make any use of the 1926 Agreement with General Pangalos's Government, which had encroached upon the sovereign rights of Greece and for that reason had been rejected by the Greek Chamber. Yugoslavia, accordingly, has undertaken to abandon the attempt, in the event of her being engaged in war, to impose a lien on the Free Zone and the Greek railway to Ghevgeli so as to assure the free import of munitions to Serbia. M. Venizelos and M. Shumenkovitch, Yugoslavia's Acting Minister for Foreign Affairs, are understood to have agreed upon the general lines on which a new Free Zone Agreement will be drawn up by experts, to be followed by a formal Pact of Friendship and Arbitration between the two Governments. Unless, therefore, unforeseen difficulties assert themselves in the course of the technical negotiations, Greco-Yugoslav relations, which have contained elements of trouble more or less continually since the War, should before long be restored to a basis of good will and friendship.

Macedonia.

The blood-feud between the two rival sections of the Macedonian Revolutionary Organization has claimed some more victims, and once again in a Sofia street. As before, the assassins, who are supposed to belong to the Mikhailoff section, now in the ascendant, made good their escape. Ivan Mikhailoff would seem to have established such a reign of terror in the Petritch district that the inhabitants have felt constrained to appeal to the Bul-

garian Government for protection. Now that a definite request for action against the Macedonian Organization has come from within Bulgaria the Government may consider itself better able to deal with the situation. It must not be forgotten, however, that the problem before the Government is wider and more complicated than the mere tackling of a terrorist stronghold. The great majority of the Bulgarian people may remain indifferent to the feuds of the Macedonian Organization; for them the Macedonian question is a sacred cause, and it would be political, if not physical, suicide for any Cabinet in Sofia to run the risk of appearing to be an enemy of the "cause," while hunting down those of its leaders who have placed themselves outside the pale of the law. To have the country behind it in any action against Mikhailoff, the Bulgarian Government must be able to show that simultaneously it has secured an amelioration of the conditions under which Macedonians are now living. That amelioration can be provided only by Yugoslavia, and until the Yugoslav Government faces this fact, the Macedonian question will remain. Just as the Bulgarian Government hesitates to mobilize troops against Mikhailoff, after having proclaimed the inadequacy of the present volunteer army to cope with the trouble, so the Yugoslav Government is trying to improve conditions in South Serbia by stealth, for fear of being convicted out of its own mouth in regard to its repeated assurances that there was no Macedonian question and that all was well in South Serbia. It would be better for Yugoslavia, for Bulgaria and for the Balkan Peninsula, if the Governments of Belgrade and Sofia could rise above all petty-mindedness and take counsel together for the settlement of the Macedonian problem. If M. Liaptcheff's Cabinet could announce that the Macedonians of South Serbia were to obtain all that they were entitled to under the Minorities Conventions, it would be a matter of days or weeks before Mikhailoff had ceased to trouble the Balkans.

Serbs and Croats.

The "bloodstained" Skupshtina is in session once more, with the Peasant-Democrat Group absent. Neither Serbs nor Croats have taken any practical steps towards bringing about a reconciliation, although the Central Committee of the Serbian Radical Club has passed a resolution regretting the murders in the Skupshtina and recording that it is the Club's duty to consider ways and means for improving the difficult position, in order that, "while offering the hand of friendship to our Croat brothers, with whom as with our Slovene brothers, we must bear joy or sorrow in this our common State, we may carry out with united strength the great work of creating good and consolidated conditions in our lands for the greatest happiness of our people." The Croats, however, are still looking for deeds rather than long-winded resolutions, and their first stipulation is that the Parliament associated with the murder of their deputies should be dissolved. The Government has decided that certain necessary business must be performed by the present Skupshtina, but would seem to have accepted the view that, after the Finance Bill has been passed, there must be a dissolution, with a view to new elections in the spring. In the meantime King Alexander has arranged to pay a long visit to Zagreb in December, and it is hoped that this action of the Sovereign will contribute towards the placating of the Croats. In this domestic quarrel obstinacy is not confined to one side, and it would not be in the interests of the Kingdom that the Serbs should cling to the belief that they have only to hold their ground in order to break up the Peasant-Democrat coalition in Croatia.

Albania and Her Neighbours.

To a representative of the *Daily Telegraph* the new King of the Albanians has spoken very candidly about the position of his country in the Balkans. When he declared that the Albanians would never allow themselves to be ruled by Italy, that they would never submit to Italian domination, King Zogu was speaking, without doubt, in all sincerity, and his statement is confirmed by those who are in close touch with the trend of events in the country. Probably the worst that can happen is that, given the backwardness of Albania, to which the King referred, and the tendency of an active and enlightened ruler to force the pace of reform, expenditure will outstrip the resources of a not very productive land, with a small population, and bankruptcy result. Even so, and if Italy should step in to establish financial stability and to take over the work of reform, the Italian hold on the country would still be far from enabling Albania to be used as a base for military operations against Yugoslavia, unless, indeed, the latter converts the Albanians into permanent enemies. King Zogu makes it clear that he considers that Albania's interests are linked up with the Balkans. He had perforce to approach Italy, because no other Power—not even Yugoslavia—would help him; but he envisages a day when Albania will gradually be able to conduct her own administration without outside help. For the peace of the Balkans it is to be hoped that this day will not be too long in coming. In the meantime it will be the fault of Albania's neighbours, if she is forced to act as though her future were not linked up entirely with that of the Balkan Peninsula.

The Wafd in England.

The General Secretary of the Egyptian Wafd, who is on a visit to England, has unburdened himself to the official organ of the Labour Party on the present situation in Egypt. It is not clear at first sight why the representative of the Wafd, which made the non-interference of Great Britain in Egyptian affairs the first and only plank in its political programme, should invite British interference in the political affairs of Egypt. Great Britain's attitude towards Egypt since 1922 has been that she is anxious to divest herself of all occasion for intervention in Egyptian affairs, and that this stage will be reached

as soon as four matters of external significance have been settled between the two countries. Now the Wafd has consistently blocked any such settlement by maintaining that Great Britain has not the right to decide whether or not her interests are involved in any matter pertaining to Egypt. For the General Secretary of the Wafd, therefore, to consider it necessary to involve the British public in a purely domestic matter not only exposes the hollowness of the contention that the Wafd has put forward with such vociferous insistency all these years, but also reveals the inexperience and woeful lack of judgment by which the Wafd is handicapped. No self-respecting organization in any country ever thinks of airing its domestic troubles abroad, and the Wafd does not enhance its reputation in England by asking English people to take sides in Egyptian politics.

The Improprieties of Propaganda.

"People in England," says the General Secretary of the Wafd, "do not seem to recognize the gravity of the situation in Egypt." If that situation does not immediately affect British imperial communications, the position or security of foreigners in Egypt, or lastly the Sudan, there is no special reason why they should. Attempts, he adds, are being made to cover up the violation of the Constitution by representing "the present illegal Government" as devoting itself to a big programme of social reforms. As the Constitution in question owes its existence to the British Declaration of Egyptian Independence—which Declaration the Wafd has refused to accept or recognize—it would seem illogical to ask the British public to wax indignant over the alleged violation of the Constitution. It is interesting to learn that "Egypt has never known a more flourishing period, both materially and morally, than under its parliamentary government," but not so satisfactory, if the implication is intended that there is no need for any further improvement or programme of social reforms—an unwise attitude for any country or party to adopt. It was the parliamentary régime, we are told, which carried out big irrigation works. The General Secretary of the Wafd did not indicate what big irrigation works have been carried out during the last four years, but possibly he counted on the ignorance of this interlocutor to help him through this and other similar statements. When, however, he adds the information that "for all this (i.e., crimes against constitutional liberty) the Egyptian people believe that a large share of the responsibility lies with Great Britain," and indicates his own solicitude for the honour of this country by explaining that "the destruction of Egypt's constitutional régime would be highly detrimental to Britain's reputation in the East," it is evident that such a staunch friend of Great Britain should be at this particular moment in Egypt convincing the Egyptian people that Great Britain maintains a scrupulously correct neutrality in the domestic affairs of Egypt. She cannot divest herself of interest in those affairs, and anyone who studies closely the course of events in Egypt will be able to form his own opinion whether the success which Egypt has made of her parliamentary régime precludes all possibility of improving upon the record of the last four years, with three general elections and six Prime Ministers. Fortunately for Egypt the General Secretary of the Wafd was able to close on a brighter note. "The present policy in Egypt is doomed to utter failure." So, after all, "the gravity of the situation in Egypt" would seem to have passed while Professor Makram Obeid was talking, and people in England have no occasion to be drawn into Egyptian party politics.

The Sultan of Muscat.

One is so accustomed nowadays to the sight of Eastern potentates doing their utmost to ape the West that it was unusually refreshing to find the Sultan of Muscat and Oman, the distinguished ruler who has just concluded his stay as guest of the nation, returning to his native

land with a conviction that Western civilization is not the last word in the conduct of life, and that, although it may be suitable enough for some countries, there are parts of the East, at any rate, where its partial adoption only can fitly be attempted. There is no question of the Sultan's not enjoying his stay in Great Britain or of his admiration for the people and the achievements of this country, but no impartial observer of the Islamic East will doubt the wisdom of his belief that it should take from the West only that which is good for it, and not follow blindly the alluring path of mechanical progress, of physical comfort, and, one is bound to add, too often of religious indifference. In this respect the Sultan's attitude is similar to that of King Ibn Saoud, whose régime is certainly suited to the tribes whom he governs. That Sultan Taimur bin Faisal will have learned much from his sojourn in England is true, but the lines of his future governance of Muscat and Oman will, one imagines, be rather those of adaptation than of adoption of Western methods. Finally, we are glad to know that the health of His Highness has been completely restored in this country, and may be permitted to echo his own expressed wish—long life in his country, so that he may bring about the reforms that are near to the heart of himself and of his very able British Wazir.

The Curse of Newspapers.

Happy is the country that has no newspapers, although it be we ourselves who say it; and of Arabia in particular is that part to be called *felix* which has resisted the tendency of our modern age of progress to make of journalists kings. The more "advanced" sections of Arabia are, of course, full of news-sheets, often enough scurrilous sheets; and even the Hijaz and the Yaman now have their official organs, *Umm al Qora* and the *Iman*. Perhaps Muscat and Oman, whose Sultan has just concluded his visit to this country, alone of all the independent States in Arabia, still lacks a newspaper. In any case, it is unquestionably the activities of unbalanced journalists which are responsible for many of the troubles agitating the historic lands of the Arabic-speaking peoples. Take, for instance, the recent delicate situation existing between Iraq and the Najd. For every absurd Roland set about by Basrah and Baghdad, Mecca seemed to produce an Oliver; and so we had tales of numberless hordes of *Akhwan* ready to die, if necessary, in violating Iraq, or of a railway to be built in British Imperial interests from Aqaba to Basrah! Nor should stones be thrown too hard at newspapers in Arabic, for in Great Britain itself, where journalism is supposed, apparently with decreasing justification, to be a responsible duty, echoes of these particular absurdities were avidly seized and then "re-laid." The truth is that the liberty of the Press, an essentially Western, if not British conception, can rightly be invoked only by those who can distinguish between liberty and licence, or between information and rumour. The folly of general permission to publish has at last been perceived in Egypt, and one would hardly be surprised if the example of Mahmoud Pasha were increasingly followed in countries farther East.

A Row in Damascus.

These particular reflexions are prompted by a consideration of the recent trouble in Damascus. On October 1, a somewhat serious situation arose in the capital of the Syrian State. Towards the end of the previous month a new paper, *Al Nizam*, appeared, whose policy is stated to have been one of supporting the French Mandatory Power and of attacking the Nationalists. Now the Nationalists have recently been growing suspicious of Shaikh Taj al Din al Hassani, Prime Minister of the Provisional Syrian Government, and they at once jumped to the conclusion that Shaikh Taj al Din was subsidising *Al Nizam*. It is reported that the tone of this new paper was very low, attacks being alleged to have been made on opponents of the Administration and all sorts of intimate domestic

details have been raked up. Incensed by this defamatory method of dealing with the Nationalists, certain young men fell on the Editor, Fauzi Amin, and beat him. He soon obtained revenge by assaulting Fakhry Beg Baroudi, leader of the young Damascenes. This provocation apparently put the populace in an uproar. Many collisions with the police are said to have taken place, and at one time a general riot was feared. The police, however, finally secured order. The Nationalist leaders thereupon protested to the High Commissioner against the attack on Fakhry Beg, and stated that Shaikh Taj al Din's Administration had lost all respect and was a menace to the prospect of collaboration between the Nationalists and the Mandatory Power. Led by Hashim Bey al Atassi, President of the Constituent Assembly, a Nationalist delegation called on M. Veber, Assistant of the High Commissioner in Damascus; with the result that *Al Nizam*, like the Constituent Assembly itself, was suspended—but only for one month. Of course, this incident is not important itself, but it does illustrate the necessity of inducing a sense of responsibility and a regard for the decencies into the journals of the East. Cannot these ardent scribblers see that continuance of permission to them to dredge the gutter can only make more justified the frequent cry that the countries to which they belong are not ripe for self-government? It is not that the East lacks models in Arabic; there are a few newspapers in the Arabic-speaking world which can justly be looked upon with pride. And until approach is made, by less significant sheets, to their tone and standards, suspensions and suppressions must be expected to continue.

Trouble in the Hijaz.

Cases of disorder in the Hijaz have become so much less frequent since the conquest of the country by the Wahhabis that it is particularly interesting to note any instance of unwillingness to obey the commands of King Ibn Saoud's Administration. One thing about the régime in the Hijaz must, moreover, always be remembered; that if any trouble does occur, it will be magnified and distorted a hundred fold outside the Holy Land of Islam, where opponents of the Wahhabi conqueror still abound. And already misleading impressions of this last trouble with the Harb tribe have been set about. What actually happened appears to be this. About the beginning of September, certain visitors with one of the Shaikhs of the Bani Malik, a sub-section of the Harb, were murdered while staying at a place some 200 miles south of Taif, the "dream city" of the Hijaz. Such an act was, of course,

a flagrant violation of all tribal custom, and as soon as news of it reached Mecca, a punitive expedition was dispatched. This force actually set out on September 10, and the guilty Shaikh immediately asked for pardon. But pardon to the guilty one, with whatever blandishments the guilty one may ask it, is not contained in King Ibn Saoud's book of conduct; and the expedition went on to capture the murderers. The Shaikh of the Bani Malik, however, is said himself to have escaped; and according to Shaikh Hafidh Wahba, King Ibn Saoud's representative in Cairo, relatives of the cowardly Shaikh, disgusted with his conduct, will bring him to book. Obviously, therefore, it is wise to examine very closely such stories as from time to time emanate from the Hijaz, or are manufactured outside it, of insurrection against Wahhabi rule; for the plain truth is that the Holy Land is administered with such efficiency—and it may well be that efficiency in the Hijaz, as almost everywhere else in the world, is not always the most popular goal—as it has not enjoyed for centuries. Wahhabi rule may or may not be permanent therein, but false rumour will certainly not undermine it.

INDIAN NOTES.

The Commission's Return.

Consistency has never been a virtue beloved of the politicians in any country, and India is certainly no exception to the rule. However much therefore we may deplore the circumstances in which it is exercised, we cannot but admire the pertinacity with which the leaders of the dwindling body of boycotters stick to their guns. With a candour worthy of a better cause Sir Purshotamdas Thakurdas, addressing a meeting at Bombay on the eve of the Commission's return, is reported to have said that it was one of the tragedies of India that they must listen to communal cries and could not sink their paltry differences when they saw at the door the common enemy. Those who were co-operating with the Commission, he declared, would without doubt before many days live to regret their action. Meanwhile the Commission has arrived and proceeded without untoward incident to Poona, where the first joint session, attended by all the members of the Committees of the Central and Bombay Legislatures, took place on Saturday. Whether the glorious uncertainty which always surrounds the precise time of arrival of the incoming mail steamer proved too much for the organisers of the local boycott movement, or the police precautions

were too complete, the fact remains that the widely advertised threat of a big demonstration at the Ballard Pier failed to materialise. In Poona apparently their efforts were even more unsuccessful. Representatives of all classes from different parts of India took part in the welcome extended at the railway station to Sir John Simon and his colleagues, and the scene, according to one observer, was comparable only to the *tamasha* which marks the occasion of the first visit from a new Viceroy. As was to be expected, the address of welcome stressed the importance of local administration in any system of representative self-government. And in his reply Sir John Simon struck the right note when he said that the Commission had come "with the single desire to contribute what we can, as friends helping India and her peoples along a difficult path." We are glad that, after the preliminary meeting, it was decided to admit accredited representatives of the Press and the public to the formal sittings which began this week with the oral evidence of the Bombay Government.

Indian States and the Crown.

On Monday the Indian States Inquiry Committee resumed its formal sittings with Sir Harcourt Butler presiding. Since the adjournment at the end of July there have been important developments in the plans of the Princes, whose joint case is being presented by Sir Leslie Scott. Ultimately, we understand, it was decided at a final Conference held in London in Sunday, not to submit to the Committee a detailed scheme for the adjustment of relationships between the States and the Paramount Power. As THE NEAR EAST AND INDIA has already indicated, considerable misunderstanding has arisen both in India and in this country regarding the Indian States' constructive proposals on account of the premature and entirely unauthorised publication of a document which was no more than a draft outline of certain tentative suggestions which were forwarded to the rulers of various States for discussion, criticism and comment with a view to discover "an agreed groundwork upon which a practical scheme might be worked out" by the members of the Special Organisation in England, in consultation with their legal advisers and Ministers of certain States. The decision not to proceed further in that particular direction is, we think, a wise one, for more than one reason. Counsel's opinion on the legal and constitutional aspects of the problem, communicated to the Committee by Sir Leslie Scott in July, leads to the conclusion that removal of existing difficulties by means of new machinery must be a matter of direct negotiation between the parties concerned—the Paramount Power and the States. The latter's Counsel, therefore, seeks now merely to show, that the existing arrangements are unsatisfactory and lead to considerable interference with, if not actual infractions of, treaty and other sovereign rights, and proposes to cite some 250 individual instances of such infringements. Sir Leslie Scott will, in particular, challenge the equity and efficacy of the existing arrangements on two main grounds (1) that they give the States no share in the determination of policy affecting either their relations with the Paramount Power or in matters of mutual concern to them and to British India and, secondly, the absence of any impartial method of arriving at decisions which affect the interests of the State or conflict with their interpretation of treaties or differences arising between them and the British Government.

H. M. Representative at Sofia reports that the Bulgarian Government has imposed quarantine restrictions on arrivals from the Piræus.

Marshal Franchet d'Esperey, who was at the head of the French delegation which attended the celebrations in connexion with the tenth anniversary of the breaking up of the Salonika front at Belgrade, arrived at Salonika at the end of last week.

An order has been issued by the Muslim religious authorities of the Haram ash Sharif, or Temple Area, in Jerusalem prohibiting the entry of Muslim women who are unveiled or show their arms or legs, and of Muslim men who wear European headgear.

THURSDAY, OCTOBER 18, 1928.

YUGOSLAVIA AND GREECE.

The agreement reached by M. Venizelos with the Yugoslav Government during his short stay in Belgrade is eminently creditable to both parties. Outstanding questions between the two countries are to be settled on the basis of the Agreement of May 10, 1923, by which Greece ceded to Yugoslavia for a period of fifty years an area in the port of Salonika to be placed under the Yugoslav Customs Administration. The zone was to remain an integral part of Greek territory and under Greek sovereignty, but was to be administered by Yugoslav Customs authorities, the chief Yugoslav executive officer remaining under the control of the Greek captain of the port of Salonika. Yugoslav expectations of the Free Zone were not immediately realised, and claims were put forward for an increase of the area, as well as for more complete control within the Zone. In particular Yugoslavia was anxious to obtain either full possession of the railway from Salonika to Ghevgeli on the Greco-Yugoslav frontier or partial control of its management and administration. A subsequent agreement between the two countries was signed on August 17, 1926, by the Pangalist Government, a few days before the fall of the Greek Dictator, which went a long way towards giving Yugoslavia all that she wanted. This agreement was not ratified by Greece, and this year ratification was formally rejected by the Greek Chamber. The attitude of successive Greek Governments since the elimination of General Pangalos has naturally been a disappointment to Yugoslavia; but with the advent to power of M. Venizelos, and faced by the Italo-Greek Pact of Friendship, the Belgrade Government has wisely decided that it is no longer politic to allow the Free Zone at Salonika to remain an obstacle to the resumption of better relations with Greece. From a strictly commercial point of view, it may be doubted whether a separate Yugoslav Free Zone at Salonika is worth the trouble and expense entailed, now that a Greek Free Zone has been established and Greek management both at the port and on the Salonika-Ghevgeli railway has been materially improved. The Yugoslav Government, however, has had in view the contingency of war, and has hoped to be able in that event to use both the Zone and the railway for the import of munitions, on the strength of Greece's benevolent neutrality.

By her treaty with Italy Greece has prevented the possibility of any such arrangement with Yugoslavia. The latter country, therefore, is thrown back on the necessity of making the best terms that it can for the commercial exploitation of its Free Zone, and of neutralising, as far as possible, by a treaty of friendship with Greece any ill effects that it may have feared from the Italo-Greek Pact. It is to be hoped that the agreement signed on October 11 by the Yugoslav Acting Minister for Foreign Affairs with

M. Venizelos is prompted by something better than Yugoslavia's unwilling acquiescence in *force majeure* as implied in the Greek Prime Minister's diplomatic successes. Inspired at first by real anxiety for the furtherance of Yugoslavia's economic interests, the Free Zone at Salonika has been used, since the establishment of a Greek Free Zone at the same port, as a factor in the mistaken foreign policy that Yugoslav Governments have felt constrained to adopt. More recently there have been signs that it has at last been realised in Belgrade that Yugoslav claims on the hegemony of the Balkans led only to the isolation of Yugoslavia and her consequent exposure to complications outside the Peninsula. It would have been better if full appreciation of the real interest of the country had come before M. Venizelos found himself obliged to make a bid for Italian support in bringing Yugoslavia to a sense of her Balkan responsibilities. A pact of friendship and arbitration between Yugoslavia and Greece will have the appearance of consolidating peace in the Balkans. In reality, however, there is no danger of that peace's being disturbed in the near future, and what is required much more than paper pacts promising good behaviour is the practical co-operation of the different States in an attempt to translate their geographical unity and identity of interests into terms of material progress by the pooling of those interests and their joint resources.

At the present time no one is more clearly indicated as the artificer of a Balkan federation than M. Venizelos; and it may be that the separate pacts which he has set himself to conclude, with Yugoslavia and with Bulgaria, are a useful preliminary to such a federation. M. Venizelos, however, has shown that he finds himself cramped within the Balkan Peninsula and that he regards Europe as a whole as a fitter stage for his special abilities. One result of this attitude is that his commitments outside the Balkans may prevent the co-operation within that should be the goal of every Balkan statesman. Just as the Italo-Greek Pact—whether by design or not—must restrict any agreement between Greece and Yugoslavia, so there is a danger of a "regional pact" within the Balkans proving an obstacle to full co-operation between all the States of the Peninsula. Thus Greece, having been compelled to grant a Free Zone at Salonika to Yugoslavia, has to announce that she cannot do the same for Bulgaria, and discrimination, unimportant, perhaps, in itself, has already been introduced in the relations of States which should ultimately come together in co-operation on equal terms. Federation, to serve the practical purpose of advancing the interests, political, economic and social, of all the component States, will entail careful elaboration of details, and it would be unfortunate if M. Venizelos, finding this aspect of the task uncongenial, were to decide to postpone it beyond his time. The peace of the Balkans rests far more securely on the general attitude towards war to-day and on the existence of the League of Nations than on a pact between any two of the States. It is, therefore, a comparatively easy matter to draw up a pact of friendship and arbitration which it would be invidious on the part of a Government to refuse to sign. The statesman who will really deserve well of his country and of Europe is the one who can lead the Balkan States to that measure of practical co-operation which will enable them, conscious of their combined strength and, in consequence, indifferent to passing phases of European politics, to devote their attention to the material advancement of the Peninsula, which is in so many ways a century or more behind the rest of Europe.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, October 10.

Bahatism in Turkey.

The existence of a secret society, called the *Behayie*, has been discovered within the last day or two by the police at Smyrna and, as a result of official investigations, five Turkish inhabitants of that town have been placed under arrest. As an outcome of this inquiry, it appeared that the Smyrna organisation is merely an off-shoot of a Central Committee established in Constantinople, the members of which consist of six Turkish Beys and an Armenian medical practitioner of some standing. The latter alone, curiously enough, has so far been interrogated by the Constantinople police, and the newspapers foreshadow the probability of further arrests. The Muslim members of the Society in Constantinople alone are reported to exceed one hundred.

From the tone of the Press, one is led to the conclusion

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

that, so far, at all events, the Turkish authorities, have looked upon the *Behayie* as a secret political organisation deserving of the severest disciplinary measures. To-day, however, a prominent Turkish lawyer has declared to a Press reporter that "Bahatism" has nothing whatever to do with political creeds or programmes, but the "Bahai" sect, although of Persian origin, has many adherents in European countries, mainly in England and also in America, and that the aims of this society are principally philanthropic, like those of the freemasons, its primary objects, according to the Turkish lawyer, being to inculcate among the lower classes a love for education, the emancipation of women, and the placing of the latter on a footing of equality with men. As the principal objects of the Society happen to coincide with certain aims which the Turkish Government themselves have very much at heart at the present moment, it would look as if the Turkish police, whose efficiency no one disputes, have on this occasion been placed in a very awkward quandary.

An official *communiqué* issued by the Chief of the Constantinople police to-day states that no arrests will be effected in the ex-capital until the inquiry in Smyrna has been completed. This probably means that no more will be heard of the matter, as it must be as patent to Turkish official circles as it has been for many months past to foreign observers that many Turkish recruits have flocked to the banner set up by Ahmed Bahai, who formerly belonged to either the Mevlevi or Bektashi divisions of the Dervish confraternities which were disbanded and disestablished by order of the Angora Government and to whom anything approaching mysticism, even in its most attenuated form, is as alluring to-day as it ever has been.

The Ionian Bank.

It is regrettable that the only British financial institution which had considered it worth while to keep its doors open in Turkey should have at last deemed it expedient, after struggling against innumerable local adversities, to wind up its affairs in this country.

That the Ionian Bank has been encountering every possible hindrance to legitimate banking business, not only through bad faith on the part of certain of its local native customers, but also through official idiosyncracies and unfair competition following upon Government measures restricting the bulk of Treasury and currency business exclusively to recently created Turkish financial establishments, had been known for some time past to financial circles in this city. But that the situation had become serious enough to warrant so drastic a measure as the definite withdrawal from the Turkish money market of the latest British financial institution established in this country, must be recorded as constituting a very regrettable incident.

Cairo, October 6.

Sarwat Pasha's Funeral.

The funeral of Sarwat Pasha was an imposing affair, in every respect a fitting tribute to the statesman to whose patriotism and ability the country owes so much. One would, however, have liked to have seen more British residents in attendance; particularly in Alexandria was the absence of the British element noticeable.

The acting High Commissioner was prevented by doctor's orders from attending, having been confined to his bed for the three previous days. But he was represented by the senior member of his staff now in Egypt, Mr. Patrick Scrivener, Acting First Secretary, and by Mr. Graffety Smith, the Acting Oriental Secretary. Contrary to custom the King's representative, Tewfik Nessim Pasha, followed the coffin right up to the graveside, a gratifying mark of distinction of which the public was not slow to take note.

By contrast with what happened on the occasion of the funeral of Saad Zaghloul Pasha a little over a year ago no disorderly scenes marked the passage of the cortege through the streets of the Citadel. In fact the general public who thronged the route maintained wonderful order. This was probably partly due to the fact that the present powers that be, not regarding the intervention of the mob as an essential concomitant of public occasions, no longer distribute largesse to the leaders of these demonstrations. On the other hand, no effort was made to ensure any order of precedence in regard to those who followed the gun-carriage. Beyond the family, the King's representative and the Premier, who managed to retain their places immediately behind the bier there was no standing on the order of going and the official representatives of some of the more important Powers found themselves once again mixed up with the very much lesser fry in a manner which, even though they bore it good humouredly and showed no resentment, should not be allowed to become a feature of these official ceremonies.

Persians in Egypt.

The return of Hassan Pasha Nashaat to Egypt preparatory to taking up his new duties as Minister in Berlin has been delayed owing to the Treaty of Amity with Afghanistan, which has been negotiated as the result of the recent visit of King Amanullah. It is proposed that Nashaat Pasha shall proceed to Kabul to present the treaty to the King for signature and then return via Bombay. It had been hoped that before the time came for him to leave Teheran a conclusion would have been reached in the discussion that has been going on with Persia in regard to the position of Persians in this country. Hitherto under an agreement made with Turkey many years ago Persians in Egypt were amenable to the native jurisdiction in criminal matters, it being necessary, however, that a representative of the Persian Government should always be present when any of its nationals came before the native courts. In civil and commercial matters Persians, being foreigners, came before the Mixed Tribunals, while in matters of personal status their Consulates alone have been competent. The abrogation of the Capitulations in Persia and the imminent promulgation of a new Nationality Law in Egypt caused the question of the position of Persians in this country to be raised, and the difficulty has so far been that the Egyptian Government has wanted to make Persians amenable like other non-Capitulatory foreigners to the native Courts in civil and criminal matters and to the Mahkhameh Sharia in matters of personal status. The Persian Government, on the other hand, has insisted that special consideration be given to its nationals, and to this Egypt has not unnaturally and quite rightly objected. It is possible that the question will be settled very shortly, but not in time for Nashaat Pasha to sign the agreement before he leaves for Kabul and Egypt.

Meanwhile the new Egyptian Nationality Law is about to be promulgated. It has just been finally examined by the *Contentieux de l'Etat* and amended in regard to certain provisions which Parliament very stupidly inserted. The most important of these was the proviso that anyone who is allowed to assume Egyptian nationality must wait ten years before he or she can enjoy any of the political rights attaching thereto. The Government quite reasonably regards this as too exacting and quite illogical, for, if anyone is considered good enough to be allowed to become an Egyptian national, it follows that he must be good enough to exercise the political rights attaching to that nationality. Except for that alteration the law will be promulgated in the form already explained in this correspondence and its signature by the King will not be long delayed now, for the Government wants to get this important question regulated as soon as possible.

The "Egyptian Gazette."

all classes of Insurance Business
in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

Editor in Chief and Manager. A keen and able journalist with an attractive personality and pleasing style, Mr. Parker has for many years acted with conspicuous success as the paper's representative in Cairo, deputising on occasion for the Editor in Alexandria during his absence from Egypt. He has made a large circle of friends, who rejoice at his well-merited preferment and will one and all be ready to render him all the assistance they can in making the *Egyptian Gazette* what it has never been but should be, an organ doing credit to the great community which it represents. Already its pages have manifested changes for the better—which serves as an earnest of what it is hoped and confidently expected Mr. Parker will achieve in the near future.

The New State Audit.

The question of the *Cour des Comptes*, State Audit, is once again to the front, and the name of Ismail Sidky Pasha is freely mentioned as the only serious candidate for this post. The *Cour des Comptes* was proposed during the lifetime of the last Parliament and a Bill creating it was passed by the Chamber. The duties of the new Department will be to audit the expenditure and receipts of the Government. It is true that there already exists a State Audit, but its functions are very different. For one thing it is dependent from the Ministry of Finance, whereas the new Department, while it will be in close touch with that Ministry, will be entirely independent, and its head, having himself the rank of Minister, will have power to call the attention of individual Ministers to what he considers irregularities and insist on immediate rectification of the irregularity. The original Bill made the head of the *Cour des Comptes* responsible only to Parliament, but since the latter has been suspended for three years the measure has had to be referred to the *Contentieux* for the necessary amendment making the Department answerable only to the Premier. It is expected that before long the amended measure will come before the Council of Ministers and receive its approval.

No better candidate for the post could be found than Ismail Sidky Pasha. He has had wide experience, not only of the general administration of the country but also of its financial and economic activities, and he is recognised by all parties as possibly one of the ablest administrators and certainly the greatest financial and economic expert Egypt possesses to-day. He enjoys universal respect in this connexion amongst the European communities, and his appointment to the Supreme Audit would certainly be a further guarantee that the finances of the country would be conducted on sound lines. The difficulty in regard to his appointment seems to be the directorships which he at present holds. It would, of course, be wholly incompatible with the responsibility and the right of access to any document in the possession of the Government which he would enjoy, for him at the same time to be on the boards of public companies, any of which might at any moment have important questions having a financial or economic bearing to discuss with the Government. But it should not be impossible to arrange that the emoluments and allowances attaching to the Directorship of the *Cour des Comptes* should compensate him for what he may lose by abandoning his present

financial and commercial interests. If, as every one agrees, Sidky Pasha is the one man for this important post, then the question of regulations in the matter of pay and allowances should not be allowed to stand in the way of the country's securing his services. Already once before Egypt suffered very severely owing to shortsightedness in a similar respect, and it is to be hoped that the Government will show that it has profited by that costly experience.

ROUMANIA.

Bucharest, October 10.

The Political and Economic Situation.

The Press and the business public are still mainly pre-occupied with the loan question. All appear to be agreed as to the importance of a speedy conclusion of the negotiations, and all are convinced that a foreign loan is the only possible means of relieving the present economic situation, which is daily becoming more critical. Many large business houses and important industries are finding themselves in financial difficulties, and no money is to be had anywhere. The failure of the maize crop has not only created poverty and want among the peasants in a number of provinces, but has also deprived the country of important revenues in export taxes. The general poverty which follows upon a poor harvest in this country immediately reacts upon trade generally, by reducing the purchasing power of the community. Some of the industries have consequently been obliged to reduce their output by 30 per cent., with the result that less labour is employed and many industrial workmen are left without a means of livelihood; nor can they, as in a year of abundance, turn to the land to find work, for there the situation is no better and hundreds of peasants are seeking casual work in the towns. The long drought has so hardened the ground in many districts (in the southern part of Oltenia it has not rained for five months) that it is impossible to proceed normally with the autumn sowings; fortunately, however, conditions are not equally bad all over the country and sufficient rain has fallen recently in Transylvania and in northern Moldavia.

The principal commercial paper of Roumania, *Argus*, in pointing out how indispensable a foreign loan is, states that the Budget deficit up to date amounts to nearly 8 milliard lei (including the Railway deficit), and adds that State Departments, especially the Railways, are having the greatest difficulty in meeting ordinary payments and all have reduced their orders for materials this year in comparison with previous years.

In fact, *Argus* paints a very black picture of the situation, as it will be, unless the loan is secured before economic conditions have become so unstable as to render the legal stabilisation of the leu imprudent. It is, however, no use going to meet trouble. The Government appears at present to be doing all in its power to obtain the loan, and, if it succeeds, the serious crisis may yet be evaded. If it fails, then perhaps the Opposition will have a long-looked-for opportunity of proving the superiority of its policy and administration. As regards administration, there is plenty of room for improvement.

Roumano-German Negotiations.

The latest news appears to indicate that the negotiations with Germany for the settlement of claims arising out of the War are drawing to a successful conclusion. Roumania is reported to have agreed to resume the service of pre-War loans issued in Germany, and in return Germany has agreed to pay a certain compensation for the issue of lei notes made by the Banca Generala during the German occupation of Roumania. The anxiety of the Roumanian authorities to conciliate Germany in every possible way is made evident by their change of attitude towards German trade and German subjects generally. Since the War all German property has been regarded as

fair spoil, and it was most difficult for Germans in this country to establish any rights or to obtain redress for any wrongs, while a large section of the public refused to speak German and boycotted all Roumanians who remained in Bucharest during the German occupation. Every effort was made by the authorities to favour French and British trade and to place German imports at a disadvantage. Now, however, the tide has turned, thanks largely to German astuteness and perseverance and to the careful way in which they have played their cards, making judicious sacrifices to gain an ultimate advantage. Now the Roumanian authorities openly state in the Press that the principal trade of Roumania in the future will be with Germany, as the Germans understand their market and know how to cater for it; all claims of German subjects are expeditiously dealt with and the sequesters on "ex-enemy property" raised, while German goods are pouring into this market and several factories have recently been established in Roumania with German capital.

Union of Austria with Germany.

As regards the proposed *Anschluss*, however, the Roumanian Press still maintains a suspicious attitude and is inclined to cry out for adherence to the Peace Treaties, as the ultimate result of the union is held to entail the placing of Roumania as a small wedge between Germany and the Russian Empire.

Marshal Pilsudsky in Roumania.

Marshal Pilsudsky has been having a "rest cure" in Roumania for the last six weeks or so. He has been visiting a friend, Dr. Skupieviski, at his summer villa in Targovishte, but about ten days ago he came to Bucharest and has been fêted on all sides. Marshal Pilsudsky has been in touch with the leaders of all the principal parties in this country with a view to sounding public opinion generally on its attitude towards a friendly alliance with Poland. He has everywhere been received with assurances of friendship and with warm enthusiasm. A reception was held in his honour at the Polish Legation in Bucharest, which was attended by Roumanian officials and the Diplomatic Corps.

Aeroplane Trials.

The Roumanian Ministry of War is considering the purchase of several aeroplanes, and several machines have been sent over from France, Great Britain, Czechoslovakia and Sweden, which are now daily being put through their trials. A Vickers aeroplane with a Napier-Lyon engine, for bombing and general service, was brought out by Captain Scholefield, who left Croydon aeroplane one morning at 5.35 a.m. and arrived in Bucharest at 7 p.m. the same day, thus making the most rapid direct flight from London to Bucharest yet on record. An Avro-Napier single-seater fighter is also being demonstrated, and a small two-seater piloted by Lt. Summers. Among the competitive machines are a Swedish "Junker," a Dutch "Fokker," a French "Bourdon" and others.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

CYPRUS PROBLEMS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Colony of Cyprus has made great progress during the last year. This progress has been to a large extent the result of the Governor's enterprise and his keen desire to push every effort for the Island's benefit. Though much has been achieved, something remains to be done.

Under Turkish law all land belongs to Government. A man who holds property and who has no children must leave all to Government—if he has a nephew or a niece, he cannot leave it to them.

Mulk property can be obtained from Government, but it is only for a small property, a house and garden: this, of course, is freehold and can under certain conditions be left by will. The Colony of Cyprus wishes to go ahead. Land can be leased only for nine years. What inducement is there for a man to invest thousands in an estate which, unless he has a family, is bound to go to Government? What is wanted is a law cancelling the Turkish Law and making the land absolutely free from all obstruction.

The Head of the Forest Department has written a book on goats. He advocates bringing the goats down from the hills and introducing them in greatly reduced numbers to the plains. Goats, however, supply a portion of the meat consumed in the Island, and any diminution of this must be made up in some way. Sheep must enter in. And sheep can be got in Asia Minor, as in the old days 40 years ago. They could be brought in free or be placed in quarantine. These are two of the main points to be considered, and, if any settlement were made, it would bring peace and joy to the Island.—I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus, September 20.

M. Venizelos lunched with King Alexander on October 11 and left Belgrade for Athens the same day.

Sir Philip Sassoon, Under-Secretary for Air, who returned to Cairo from Khartoum on October 9, flew to Baghdad the following day on his way to India. He left Basrah for Karachi on October 13.

Mr. Bouwer, the young South African who, with his wife, tried to complete the journey by car from Cairo to Capetown in 40 days, arrived there at 1.30 p.m. on October 10, having completed the journey from Cairo in 40 days and 30 minutes.

The King of Afghanistan recently announced that, although he hoped to introduce the Cabinet system, he would have, for the present, to be his own Prime Minister, as Sher Ahmed Khan, whom he had invited to form a Cabinet, had been unable to do so. His Majesty also announced that he had appointed Ghulam Sadiq Khan as his Minister for Foreign Affairs, and Mohamed Wali Khan as permanent Regent in the case of his absence from his capital.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 27.

The Statutory Commission.

The Committee of the Central Legislature has been formed. It consists of three persons elected by the Council of State; namely, Sir C. Sankaran Nair, Sir Arthur Froom, and Raja Nawab Ali Khan, and four others invited by the Viceroy to serve—Sardar Shivadev Singh Uberoi, Nawab Zulfikar Ali Khan, Sir Hari Singh Gour, Dr. A. Suhrawardy, Mr. Kikabhai Premchand, and Rai Bahadur M. C. Rajah. The very dissimilarity of those six Indian names to such names as John Simon and the English names of Sir John's colleagues is eloquent of the depth of the difference between the Indian constitutional question and those constitutional questions that during the centuries since Magna Carta have perplexed England and her statesmen. The task of the Statutory Commission will be none the easier for the lack of interest in India that prevails in Great Britain.

My private mail from England often brings me word of the deadening effect of the lack of interest—I may consult well-informed writers in England as to the chances of some book on India, only to be told, with varying degrees of emphasis, that no book about India has any chance whatever in England; that if of the forty-odd millions three or four hundred persons buy each a copy, it is as much as the author of the most illuminating book has a right to expect. Unfortunately, that is true. And two days ago a young Indian, just returned to India after four years spent in studying engineering in the south of England, called on me, seeking my aid in an attempt to infuse some knowledge of, and interest in, India into the English masses. I replied, with a sad smile, that hardly would a man of great genius succeed in that, and the young man went sorrowfully away.

The Bengal Provincial Committee of the European Association has presented its own memorandum to the Simon Commission. While the local Committee endorses the principles and general policy of the General Council of the Association, it has its own proposals to make. These, as summarised in the *Statesman*, are:—

The abolition of the Executive Council.

That there should be a Ministry responsible to the Legislature.

That there should be a Second Chamber.

The abolition of the practice of nominating officials to the Council.

The maintenance of a strong cadre of Europeans in the Civil Service and the Police.

Vocational education.

The Legislative Assembly.

The Simla Session of the Assembly is over. It is believed to be the first session to begin and end without the passing of a single Bill of importance. The Public Safety (Removal from India) Bill, described by the *Statesman* as "the whale to catch a sprat" (you will remember, perhaps, what one has reported of the apostolic activities of a young man whose name the phrase "catch a sprat" brings to mind), was lost by the casting vote of the President. The Trade Disputes Bill only got so far as to be circulated. The Press Bill never got beyond the introduction stage. The Coastal Trade Bill got no farther than a Select Committee, and so on. The fact is, apart from the Public Safety Bill, and the discussion of it, the session was taken up by questions such as the separation of the Assembly Secretariat from the Legislative Department and the insinuations in certain quarters impugning the conduct of the Chair. Those are questions of burning interest in Simla itself, but of much less heat in Calcutta,

and how cold they may be expected to leave London. So I do not propose to trouble you further with them. If the Assembly has not passed much legislation, the members have done what the logic of the times made more important work for them; they have cleared their minds about the Nehru Report and such like things. Those have a far deeper importance than the immediate question of whales and sprats or coastal trade or the age of consent.

Bengal Irrigation.

The question of irrigation in Bengal presents itself to me as infinitely more important than any constitutional question. I have once or oftener called attention to the work that Sir William Willcocks did in Bengal last cold weather. The last time I drew attention to a speech of the Member in Charge, pooh-poohing his arguments. They deserved something better. Sir William has taken them more seriously, in a letter to *Indian Engineering*. He writes: "Engineers, like me, who have spent the best part of their lives, not contemplating, but working on rivers, do not need to sit on the bank of a river for 365 days to know all about it. Give me the river Ganges for many years [*sic*]; give me an ideally complete map of the behaviour of the river on a length of 35 miles for a score of years; give me velocity and section observations for a dozen years; all of which the Hardinge Bridge engineers kindly gave me; give me as companions a Superintending Engineer and an Executive Engineer with local knowledge and keen on the job; give me a good launch with permission to stop where we liked and as long as we liked, as those in authority kindly gave me; and I back myself to know that river in flood or out of it very much better than if I had built myself a cabin on its bank and had stared at it for a twelve-month." In another passage: "When I saw the abandoned canals of Babylonia I thought I had seen the last stage of abandonment; but Central Bengal can show an abandonment more complete and absolute."

Dr. Friedrich Freiherr von Villani, Hungarian Minister at Bucharest, is to be transferred to Paris, where he will shortly take up his duties.

Raja Bahadur of Nashipur has been appointed Minister in the Bengal Government in place of Sir Provas Mitter, who is now an Executive Councillor.

Raja Kushalpal Singh, an important Agra Zemindar, has been appointed to the Ministership of the United Provinces, which was rendered vacant by the resignation of Raja Jagannath Baksh Singh, following the Legislative Council's motion of no confidence.

The *London Gazette* announces that the King has ordered the appointment of Sir Geoffrey Fitzhervey de Montmorency, K.C.I.E., K.C.V.O., C.B.E., Governor of the Punjab, as a Knight Commander of the Most Exalted Order of the Star of India.

According to a Bombay message Mr. Eric Dunstan, general manager of the Indian Broadcasting Company, and a number of other European members of the staff have resigned owing to disagreement with the board of directors on questions of policy.

As all its members have accepted the invitation to serve, the Egyptian Government last week confirmed the composition of the International Commission to report on the heightening of the Assouan Dam, as follows:—Mr. Binnie, nominated by the president of the Institution of Civil Engineers; Mr. Cooper, an American, who before the War investigated the possibilities of obtaining hydro-electric power from the dam; and Herr Grüner, a Swiss (the last two are nominated by their respective Governments). The Commission will elect its own chairman and start work in Egypt on November 8.

An Alexandria message states that the British Air Survey has sent two aeroplanes to Port Said to make an experimental air survey in Egypt similar to that which the British Aircraft Company successfully undertook in September. These experiments are being made, according to *The Times*, in view of the probability that the Egyptian Government will call for tenders in connexion with the general survey of Egypt, which will be necessary as the Government intends to enforce the system of land registration which has hitherto not been generally adopted. A credit of £3,000,000 was recently opened to cover the cost of a survey and of the introduction of the registration system.

THE MASSES OF INDIA.*

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

(Concluded.)

But the economic aspect is only one aspect of the problem. Man cannot live by bread alone, is as true of the masses as of the classes. Their mental development must also be looked after. A system of primary and vocational education suited to their needs must be established on a compulsory basis and they must be brought increasingly under its operation, so that within the next decade illiteracy will be banished, the intellectual moral and civic awakening that comes in the wake of education will take place and they will attain, in due course, a standard of existence, not only material but also moral and civic, not inferior to that attained by the masses in the advanced nations of the West. The educational problem in its relation to the masses is sadly neglected. Compulsory Education Acts have been placed on the Statute Book, but little progress has been made in the actual introduction and spread of compulsory education. The state of things in this respect is highly scandalous. The supreme duty of every Provincial Government, if they are really earnest in their desire to elevate the masses, is to lay down a programme of compulsory primary education and to adopt every measure, financial or otherwise, for carrying it out completely within a decade. The responsibility for introducing compulsory education must be taken away from local bodies and assumed by Government themselves. The financial measures that may be necessary for the purpose must be adopted without fear.

There is one important aspect of the problem of improving the general level of life of the masses which is apt to be forgotten and therefore deserves to be stressed. An important feature of the Montagu-Chelmsford Reforms, with all their defects and limitations, is that they have recognised this aspect. In a striking passage, the report on the Reforms says:—

"We believe profoundly that the time has now come when the sheltered existence which we have given India cannot be prolonged without damage to her national life, that we have a richer gift for her people than any we have yet bestowed on them, that nationhood within the Empire represents something better than anything India has hitherto attained, that the placid pathetic contentment of the masses is not the soil on which such Indian nationhood will grow, and that in deliberately disturbing it we are working for her highest good."

There can be no doubt that the masses have been disturbed, and that they are no longer leading a life of placid, pathetic contentment. It is also true that Indian nationhood cannot grow on such contentment. It is a thoroughly sound policy to awaken and disturb the masses, even though the first fruits of such disturbance and awakening may not be quite satisfactory. If India is to have democratic self-government and if that democratic self-government is to be a reality, the placid life of the masses must be deeply stirred and they must be educated in the rights, duties and responsibilities of self-government. They will make mistakes while the process of training goes on, but such mistakes ought not to deter us from the chosen path, and do not constitute a justification whatever for going back. Certain unhappy features of our present political life, such as the abuse of the franchise in some cases, the stress on communalism which marks the policy of some parties have made some people doubtful about the wisdom of establishing

a system of direct election or placing the franchise on the fairly broad and liberal basis which exists at the present moment. And suggestions are being made that we should revert to the system of indirect election or raise the franchise instead of lowering it still further or even maintaining it as it is. Such suggestions are short-sighted, they are born of impatience and make no allowance for the slow growth among the masses of a right democratic spirit and principles. The use of liberty in its first or early stages is bound to be marked by mistakes or failures but that is no reason for withholding or curtailing it. Our faith in the masses, which is, in fact, the basis of democratic self-government must not be shaken or weakened by any mistakes or failures on the part of the people. Those mistakes and failures afford no ground for denying or restricting liberty, they simply mean that leaders, instead of distrusting the masses, ought to do their best to educate the masses. The right policy is not to resort to indirect election or to withdraw the franchise from any of those who enjoy it, but to spare no efforts to educate the masses in the duties and responsibilities of citizenship.

It is not possible within the limits of an article like this to attempt an exhaustive treatment of the subject. But I have indicated some of the basic considerations which must enter into a real and permanent solution of the problem. There is one more consideration to which I shall refer before I conclude. The elevation of masses will be greatly promoted by frequent free and sympathetic contact between them and the intelligentsia. Village life must be enriched by the wholesome influence of wealthy educated men. The wealthy intelligentsia of Bombay should purchase lands in villages, take interest in agriculture and agriculturists, spend at least some of their holidays there, instead of always going to hill stations and aim at exercising a wholesome and progressive influence upon village life. Our Hindu and Muhammadan friends particularly should freely mix with the village folk of their communities, take a personal interest in their concerns and pursuits, initiate and encourage self-improving activities among them and above all impress upon them the great necessity of cultivating friendly relationship, no matter what be the religions they follow, and thus become fountains of life and light, elevating and enriching village life in all its aspects, and thereby contribute to the general progress and welfare of the Motherland. The great Italian statesman, Cavour, whenever he was out of office and free from parliamentary work, used to go to his villa in the village of Leri and take an active and sympathetic interest in all the concerns of the villagers. While his stay and work in the village restored his own freshness and vigour of mind, it also infused new life into the village people and raised and enriched their general tone and spirit. Our wealthy educated men must in the same way make it a point to stay in the villages at least during the holidays and identify themselves with the interests, the welfare and the progress of the village people. There can be no doubt that in this way the general condition of the masses cannot but show steady improvement, and the movement for rural reconstruction and elevation receive great accession of strength. The yawning gulf that at present divides the life of the city and that of the village will be bridged and the levels of both will gradually approximate to each other as much as possible, making allowance, of course, for inevitable differences and limitations. The potential qualities and virtues of the Indian masses are of such a high order that when their economic condition is sensibly improved, when the barrier of illiteracy that at present stands in the way of their intellectual development is removed and education spreads among them to the same extent as in Great Britain, France, America or Japan, and when they attain a fair measure of training in the duties and responsibilities of self-government, they will not fail to play their proper part in the national life of India and become powerful instruments for promoting the ends of national and human progress.

* The first part of Sir Phiroze Sethna's article appeared in the issue of THE NEAR EAST AND INDIA of October 11.

Book Reviews

THE EAST A GENERATION AGO.

"A DIPLOMATIST IN THE EAST." By Sir Arthur Hardinge (London: Jonathan Cape. 16s.)

This book in the nature of things must be one consisting mainly of anecdotes. But an anecdote well told and in a good setting becomes history, and without any question there is in these very readable memoirs of Sir Arthur Hardinge abundant and very welcome material for the historian of certain places in the East at about the turn of the century. The style of the book may fall a little short of distinction, but the matter is good, emphatically good.

Sir Arthur Hardinge left Russia in 1889 for Constantinople, where he was under Sir William White, who was that not unique type—a man possessed of brilliant gifts in certain directions, notably Slav, but unfamiliar with Islam. Much of the work of the Embassy in Constantinople was concerned with the Capitulations, which had, in Sir Arthur's words, "protected, ever since the sixteenth century—but have now, to the discredit of the Great Powers of Europe, ceased to do so—the rights of foreign subjects against oppression at the hands of the Ottoman authorities and tribunals." But Sir Arthur also had time to travel and live among the Turks; he learned the language, and altogether gained an insight into and sympathy with Islam which he preserved to the end of his diplomatic career.

Of Egypt and Palestine Sir Arthur has many tales, to tell, some of them quite new to us. There were certainly giants in those days—the last years of Tewfik Pasha's reign. It is interesting to note the good words which the *Chargé d'Affaires* at this time here sets down in favour of Arabi and of Al Azhar.

But it is his years in Zanzibar and in Persia which really form the core of Sir Arthur Hardinge's book. The pages on Zanzibar, however, intensely interesting although they are, fall rather outside the scope of *THE NEAR EAST AND INDIA*. Suffice it to say, therefore, that Sir Arthur's time in Zanzibar (which was once, of course, ruled jointly with Muscat, whose Sultan the British people has just been entertaining) was spent largely in tackling the problem of suppressing the slave trade. As Political Agent and Consul General in Zanzibar (to which he was appointed in 1894) Sir Arthur took up what appears to have been a very sensible line between the sentimental and the practical points of view. He saw clearly that predial slavery was doomed, and rightly doomed; but that its abolition must for economic reasons be slow. His charge at Zanzibar brought him, of course, into touch with such personalities as Sayyid Hamid bin Thwain, Sir John Kirk, and, perhaps above all, Sir Lloyd Matthews, the Sultan's Prime Minister, all of whose characters he sketches with delightful cleverness and skill. These chapters on Africa are, indeed, first-class historical material for a period which is too often neglected—too often, because many of the problems then to be found still remain in other parts of the world than East Africa.

To be appointed British Minister to Persia was, one imagines, almost the crowning joy of Sir Arthur Hardinge's life. He was genuinely in love with Islam, in the first place; and in the second place few countries could have so afforded him the opportunity for the exercise of his patriotic instincts. At this time—he went to Persia in 1900—Russian influence in Persia was strong and very persistently anti-British. But before describing that Sir Arthur sketches briefly the history of Persia and of British relations with this land of the Shah. We like particularly his recalling of the fact that Nasreddin Shah visited London in 1873: he remembered it well, for—"I was, at that time, an Eton boy, and my form master and tutor, Mr. Marindin, made us write a Latin poem on the subject, telling us that we might call the Shah Achæmenides, a delightful suggestion, as 'Clarus' or 'Magnus'

Achæmenides made up the whole half of a pentameter."! Two other stories of Nasreddin Shah (told to the author by his father) we cannot forbear to quote:—

On visiting Trentham, he noted the numbers and the size, efficiency and arms of the local Yeomanry and Volunteers, who paraded before him and before the Prince of Wales under the command of the then Duke of Sutherland. "Are you not afraid," the Shah was said to have asked the Prince, "to permit one of your own future subjects to command so large and so well-equipped an army? You know your own business, of course, a good deal better than I can; but, speaking personally, if I were you"—and here he stopped, pointed to the Duke with his right hand, whilst significantly passing his left across his own throat and then said, in an audible whisper—"that, I think, might perhaps prove to be, in the long run, your wisest and safest course."

Nasreddin Shah was a good deal interested in our methods of capital punishment and was, it was said, very desirous of seeing a criminal hanged. It was alleged, in fact, that on learning, when at Newgate, that no victim was available for the purpose, he turned to a member of his staff and uttered a few words in Persian. No sooner had he spoken than two of his courtiers were seen dragging forward a pale and protesting third, whom the Shah wished handed over to the hangman in order that he might himself obtain an opportunity of judging of the precise effect of the drop, and it was only with great difficulty that he could be persuaded to release the man.

From which it will be seen that Sir Arthur lacks little of the skill of the Persian in embroidering a fanciful tale.

The Diplomatic Corps at Teheran, from the Turkish Ambassador and the Russian Minister downwards are described in most interesting detail. Of the Russians' extraordinary reticence and of their attempts to belittle Great Britain, and of the British endeavours to enlarge the prestige of the Empire and to support the activities of Britons connected with Persia, this chapter provides an admirably frank record. Particularly is it interesting to read how the Russians were worsted in the granting of the d'Arcy concession for oil. One more quotation we will allow ourselves, for it gives a key to Sir Arthur Hardinge's opinion on the Persia of to-day. He has been speaking of the secret joy of the Persians at the defeat of Russia by Japan, and continues:—

The destruction of the Russian fleet by an Asiatic Power was one of the main indirect causes of that national, if ill-managed, revolutionary attempt to overthrow the ancient polity of Persia, which broke out in the following year, and the ultimate effects of which, in our own day, it is still far from easy to predict. The methods and ideals of the revolutionary leaders were foolish and, in the long run, more disastrous than the old corrupt despotism itself; their ultimate effects are still difficult to gauge, nor is there any hopeful sign of a new leader who can bring back a really stable order and such securities for internal peace as were provided by the earlier Kajar Kings. But Persian patriots may, perhaps, derive some consolation from the fact that their great Russian neighbour is even now in a more melancholy condition than their own, and that, as old commonplace has it, the darkest hour still precedes the dawn.

The author of this book has his prejudices, as, indeed, any man who had spent so considerable a part of his life in the East must have, but, whether justifiable or not, they certainly add spice to a book which, as we have indicated, should be read not only for the sake of the tales which it contains, but also, in a more serious sense, for the real light which it throws upon the events and personalities of a generation ago which are not sufficiently dusty to have been uncovered and yet are, so to speak, already on the shelf.

CURZON IN INDIA.

"THE LIFE OF LORD CURZON." Vol. II. By the Earl of Ronaldshay (Ernest Benn Ltd. 21s. net.)

It was Lord Curzon's desire that the story of his Indian Viceroyalty should be treated fully and by itself, and Lord Ronaldshay, in this "authorised biography," has fully carried out this wish. But the very nature of the task undertaken by him has imposed on him the duty of giving a picture of Lord Curzon as Viceroy, which is a very different thing from writing a history of Lord Curzon's

Viceroyalty. We have to look on everything through Lord Curzon's eyes. Now, there were and are many other possible points of view and all are necessary if we are to see things historically. No doubt there are, just at present, too many inhibitions which cannot decently be disregarded and it will be necessary to wait some years before the period can be calmly worked on and presented in proper perspective, but it is right to point out that this defect exists and not to conceal that the value of the book necessarily suffers from it. With this limitation we have nothing but praise for the way in which Lord Ronaldshay has carried out the immense task he took on himself in loyal service to his friend. As we expected, we find throughout intimate understanding of and sympathy with India. And, as we also expected from so accomplished an author, we find a book well written and well arranged. We cannot sufficiently admire the ease with which he, with his very different temperament, has succeeded in, as it were, putting himself inside the skin of his subject.

Artistically, the method of keeping Lord Curzon throughout in the lime-light has the effect of making this volume take on to us the guise of Greek tragedy. The Gods gave the hero many great gifts. He was a man of bluest blood and highest ideals. He had carried all before him in his own land and was felt by all to be a leader of men. He was gifted with an immense power of industry and an iron will; he was a lover of righteousness and a hater of all mean things; he had long and carefully prepared himself for the task which he yearned for; he had not only conceived great ideas but had given them reality, largely through his own personal work; he was at all times ready and willing to give all that was in him to the service of the country whose ruler he was and with which he had at least one quality in common, in his reverence for the past and his love for beauty. He came to India full of enthusiasm and hope, cheered by the feeling that his friends at home shared these feelings while the inhabitants of India welcomed him as an ideal governor.

But these were unfortunately not his only gifts bestowed on him by the Gods. He had always been a sick man and was never without pain, and this fact, which was perhaps not sufficiently realised while he was alive, necessarily intensified his intellectual defects. For he was abnormally self-centred and self-sufficient. He was seldom able to use his colleagues as such and his temperament made it difficult for him to see the good points in others or in their ideas. He was never able to put himself in imagination in another man's place and too often wounded and trampled on men whom he could have used. He was ever impatient of control and even of criticism.

And the whole story is that of the inevitable victory of the dark against the shining qualities. It is a fine, splendid, proud story of great deeds greatly carried through by a great man, but it is an intensely tragic one.

The fact is that, while Curzon was in most ways an ideal man for his post and while he fully justified the King's choice by his magnificent achievements, the very isolation of an Indian Viceroy and the opportunities (so tempting to him) of exaggerating that isolation by the possibilities offered by Oriental conceptions of state fed his intellectual defects, while his constant, ungrudging and self-forgetting devotion to the enormous tasks imposed by him on himself seriously intensified his bodily sufferings and so brought to the surface qualities which, had he been blessed with a robust constitution, he might well have been able to keep under subjection.

As it was, it is hard to imagine a more tragic ending to a Viceroyalty begun with such abundant promise and carried out with such brilliance than his departure from the scene of his triumphs. The British Government had preferred to accept his resignation rather than confirm his decision (which was clearly right) on a matter of administration on which he differed from his Commander-in-Chief. He felt that Lord Kitchener had not fought fairly and that he had been deserted by his friends at home and misunderstood. He was sore at heart, ill

and weary himself and his wife, his tender love for whom was the most winning of his qualities, was already suffering seriously from the physical effects of devotion to her husband and to India which were soon to cost him her life. Nor was the irony of Greek tragedy wanting. For this typical English Tory aristocrat, ruling India with benevolent but almost absolute autocracy, did more than any man of his time, or before or after it, to bring about the great revolutionary changes which we are now looking on at and which, whatever they may finally result in, have at least made anything like a repetition of Lord Curzon's wonderful six years in India an impossibility.

Admiral of the Fleet Sir John Michael de Robeck, G.C.B., of Southwick Crescent, Hyde Park, W., who commanded the Allied Naval Forces in the Dardanelles and at Gallipoli, left £32,765.

Thirteen Counsellors of the Egyptian Court of Appeal, including its President, Talaat Pasha, were retired on October 12 and King Fuad signed the Decree appointing their successors, including Abdel Aziz Pasha Fahmy, a former Minister of Justice, as President of the Court. All kissed hands and took the oath on appointment and took their seats in the Court the following day.

Among recent acquisitions by the Library Department of the British Museum may be mentioned a beautifully written Arabic MS. volume, dated A.D. 1270, containing, among other philosophical works, a translation from the Greek of the allegory of Salaman and Absal. The Department of Egyptian and Assyrian Antiquities has been enriched, according to *The Times*, by a collection of Early Bronze Age objects from Persia (c. 3000-2000 B.C.); also by a bronze cat with original gold earrings of about 600 B.C. The Greek and Roman antiquities have been added to by the acquisition of a marble sarcophagus of the 3rd century A.D. sculptured with a spirited composition (not quite entire) of cupids racing in chariots in the circus, one horse in the act of falling. The Government of India present to the trustees a number of objects discovered during Sir Aurel Stein's last expedition to Chinese Turkestan, in recognition of the assistance afforded by them to Sir Aurel's work in England. These antiquities have been in the Museum since they were brought to this country. The National Art-Collections Fund has given a Persian pottery vase of Rakka ware (13th century A.D.), and other acquisitions for the Department of Ceramics and Ethnography include a painted plaster figure of a new type from Bahrain, four Chinese gourd cricket-cages, with carved ivory and jade covers, and a Böttger (Dresden) ware teapot of about 1712, with enamelled decorations, a ware so uncommon that only one other specimen of it is in an English public collection. It is announced that the exhibitions of the Ur collection will be closed on October 27, and those portions of it which are due to be returned to the Department of Antiquities at Baghdad and those to be sent to the University at Philadelphia will be represented at the British Museum by electrotypes.

School of Oriental Studies, London Institution (University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

THE WEEK AT HOME

London, Tuesday Morning.

The Problem of the Liberals.

All the three political parties have now had their annual Conferences, and the mists are gradually clearing away to uncover the probable course of the General Election next year, on which, alone, of course—deny it how they will—the majority of politicians are casting their eyes. Idealists do exist who will not bend their theories to what they imagine will be popular approval, but each party has laid out its programme in the hope, intention, and belief that it may gain a major portion of the votes of the unintelligent populace.

For the last few days everybody has been discussing the problematical position of the Liberal Party, which is so rich in the possession of moneys and of brains, and so poor in men and personality. To judge by the reports, not even the galvanising superficiality of Mr. Lloyd George could get the Yarmouth Conference really going. The Congress, for all the world like Nero fiddling, preferred to squabble about trivial details.

It was, therefore, in the nature of a timely commentary upon this futility that the result of the Tavistock by-election was announced contemporaneously with the Conference. The Liberal candidate, it is true, was but narrowly defeated, but to the Party in its present state of puzzlement, a miss is something much more than a mile. Of what use is it to point out that the victorious Conservative member was elected on a minority vote? For no one is a more genuine or bitter critic of the Liberals than the strict Socialist.

One cannot see, then, that Mr. Lloyd George will find much response in the country to his declaration that there is a vast territory of fertile ground on which men of Progressive minds might unite. In denying the possibility of giving unconditional support to a Labour Government, he was, of course, tactically correct, in that he did help to explode the favourite Conservative thesis that the only alternative to Conservatism is Socialism. But sticklers for conviction will recall to mind that he who sups with the Devil must have a long spoon, and some will even be found to assert that, if the Liberals ever again consent to accompany the tiger, they will meritedly suffer the fate of the young lady of Riga.

Really the Liberals are in melancholy plight. If they could not win at Tavistock, it is difficult to talk of their

advertised "revival." They remind one of Carlyle's dead leaves, which must be alive—"else how could they rot?" Or of "As You Like it"—"hour by hour we rot and rot, and thereby hangs a tale." And that tale is largely one of internecine strife. To say that Mr. Lloyd George is now trusted by all men who still call themselves Liberals would be, like the report of Mark Twain's death, a gross exaggeration. One half of the Party profoundly mistrusts him. And so it is perhaps better for us, who admire the history and the services of a famous Party, to let the dead bury their dead.

Politicians and the Church.

The world has just been enriched by the spectacle of Lord Birkenhead and Sir William Joynson-Hicks taking diametrically opposed views upon the Bishops' recently expressed attitude towards the rejection by Parliament of the Revised Prayer Book. The Home Secretary has long, of course, been known as an uncompromising Evangelical, but the spiritual side of Lord Birkenhead's nature may possibly have been forgotten except by those who remember Chesterton's immortal verse: "But the souls of Christian people—chuck it, Smith!" Most unfortunately, Sir William has discovered reasons of country and party for not continuing this highly edifying discussion on the iniquity or correctness of the Bishops. Without a renewed lead from either of these experts, what shall the poor layman do?

Even worse, however, has befallen us, for according to the *Sunday Times*, which certainly ought to know, Lord Birkenhead is to relinquish the position which he has so long adorned, and for which it will be so difficult to find an adequate substitute (etc., etc., etc.), of servant of the State. The appeal of business has broken down even Lord Birkenhead's eminent attachment to the public demonstration of inflexible Tory principles; and he is now to go to an East that is nearer than the one which he was popularly supposed to have cherished, and to which only the highest command that his services should be retained in this great heart of the Empire inhibited his going.

If Sir William Joynson-Hicks knew of Lord Birkenhead's imminent departure from Whitehall, it is a thousand pities that the nice little quarrel should ever have been started. Politicians obviously cannot realise how we hang on their every word, especially when it pertains to matters of the spirit.

Troubles at Cambridge.

I have before mentioned the formation of the Cambridge Preservation Society, an excellent institution which followed the admirable lead of Oxford in saving the historic University town from the hand of the vandal. As it happens, the new Society at Cambridge is undergoing much travail of spirit because the Town Council is playing dangerously with the idea of pulling down the arches and bridges at the top of the Backs by Coe Fen (the King's Mill and the Bishop's Mill), of substituting a concrete bridge over a stepped cascade and of placing a tea garden on Crusoe's Island!

This would sound funny, were it not so near to reality. The only way to defeat the Philistine is by active opposition. Mere belief in the indestructibility of mediæval structure that has been sanctified by generations of scholars is of no avail whatever. For the utilitarian is not only ever with us, but is also, in this mechanical, money-grabbing age, increasingly so.

Within their own limits, of course, the Colleges of Cambridge are able to take action against the barbarians. It so happens that in another instance the barbarians are undergraduates themselves. Certain Colleges have just declared that it is unlawful to play any music that is not suitable to the piano or violin. This, of course, means the prohibition of the monstrous tribe of "jazz" instruments, which are wholly incompatible with either the dignity or the serenity of Cambridge.

In the better, olden days, gramophones and pianolas

were a curse, but they could always be stopped by human intervention—either by request or by protest. College laws were unnecessary in that far-off time before the War.

The Countryside.

Everyone knows how England is being disfigured by the mass of hoardings, petrol pumps, jerry-built houses, and so on, which are erected with such distressing speed, but it is hardly realised, one thinks, that unless this vile process is controlled, England in, say, two generations, will virtually have disappeared. It is to make general such a realisation that the Conference on the Preservation of the Countryside met last week-end at Leicester.

So far the efforts of lovers of our countryside have been for the most part confined to the "saving" of this or that spot; a hill-side is, after much endeavour, preserved by the National Trust, or a private individual snatches from the avaricious jaws of America a row of Tudor cottages. But a collection of beauty spots is really no compensation at all for what was once the English countryside of our poets, our yeomen, our architects.

To see what may happen, unless the commercial spirit is checked, one need turn back only to the time just before industrialism invaded our fair land. A hundred and fifty years ago Staffordshire and Yorkshire and Lancashire were all over as beautiful as certain sections of these counties still are to-day. It is for the present generation to see that motor cars and motor roads do not produce such eyesores as the slums and smoke of the Black Country and of the industrial North. The movement of preservation must begin with local patriotism; there need be in it no reactionary attitude towards mechanical progress, but simply a determination to see that because a company produces very good cars or very good oil or very good concrete, the advertising of that fact does not offend all sense of taste and decency.

ALTER EGO.

NEWS IN BRIEF.

The Skupshtina re-assembled in Belgrade on October 12 after the summer recess, which has lasted two months instead of the usual one.

The Bulgarian Government is understood to have sent the text of the Turco-Bulgarian Treaty of Arbitration to Angora, and hopes that it will be signed at an early date.

The 10th Hussars, from Hounslow, under the command of Lieutenant-Colonel Greenwood, sailed from Southampton on October 9 for Egypt to relieve the 15/19th Hussars, who are going on to India.

The King-Regent of Abyssinia has presented gold medals in honour of the occasion of his coronation to the members of the Diplomatic Corps and the Colonial Governors. Over 40,000 troops and 200,000 people took part in the celebrations.

An earthquake which was felt in Angora on October 4 completely destroyed two villages in the region of Kaledjik, ruined seventy per cent. of the villages of Koulbit, Halat, Sassapez, and Inkati, and did much damage in thirteen others. No loss of life is reported.

The excavations on Mount Ophel, which Mr. J. W. Crowfoot, director of the British School of Archaeology, is conducting on behalf of the Palestine Exploration Fund, have resulted in the unearthing of the great Necropolis, which is probably the site of the tombs of the ancient Kings of Israel.

It is reported from Suaïda that the French Governor of the Jabal Druze has given commissions to Shaikh Hamza al Darwish, the Qaimaqam of Salkahd, formerly a prominent leader of insurgents, and two other local officials, and instructed them to raise troops of Druze horse.

Peter Traikoff, an adherent of the late General Protogueroff in the Macedonian Revolutionary Organisation, and two of his companions, were attacked on October 12 in the centre of Sofia by partisans of Ivan Mihailoff, the new leader of the M.R.O. When attacked, Traikoff fired several shots at his assailants, and in the affray five persons were badly wounded. The Turkish Military Attaché, Yahya Kerim Bey, who happened to be passing at the time, also received a slight wound. Traikoff was very seriously wounded; his two companions are dead.

PUBLIC WORKS IN EGYPT.

Not the least important part of the programme mapped out by the Egyptian Prime Minister on the occasion of his declaration of the new Government's policy was the decision to press on with big public works designed to extend the area of cultivable land in Egypt. Mohamed Mahmoud Pasha referred in particular to four projects: the further heightening of the Aswan Dam, the construction of the Gebel Aulia Dam, the piercing of a canal in the Sudd region and the construction of a reservoir at Lake Albert, and he added that all these projects had long been the subject of investigation and required only to be carried out. A start was to be made with the first two schemes.

The first step in connexion with a further increase in the height of the Aswan Dam has been the appointment of an International Commission of three experts—an Englishman, an American and a Swiss—who are to report on the project. As the Ministry of Public Works has already satisfied itself that the re-heightening of the Dam is a feasible engineering proposition, it is taken for granted that the Commission will confirm this view and will select the one which appears to it to be the best of the three or four detailed plans that have been prepared for carrying out the work. The Dam, it will be recalled, was begun in 1898 and finished in 1902. Its height then attained an average of 25 metres. In 1907 the work of adding a further five metres was begun and completed in 1910. The object now in view is to double the present capacity of the reservoir, which is about 2,400 million cubic metres, by adding seven metres to the height of the Dam. The estimated cost is £E3,500,000.

The Dam at Gebel Aulia on the White Nile above Khartoum has been the subject of no little controversy. The ability of the land that will be submerged to retain the water owing to the permeable nature of the soil has been challenged, and it has been feared that the compensation to be paid to the natives whose land will be flooded will render the cost of the undertaking prohibitive. It may be taken for granted that the character of the ground above Gebel Aulia will be duly tested before the scheme is carried out. With regard to the compensation to be paid to the inhabitants, the question is now being investigated whether it will be possible, after water has been stored, to open the sluices of the Dam at such a period as will allow for the growing of an annual crop over a wide area before it is covered again. If this is found to be the case, it will not be necessary to transfer so many inhabitants elsewhere, and less compensation will have to be paid.

Several schemes have been suggested for dealing with the Sudd area, but it is not yet known which is the most likely to be adopted. The problem is to provide the Nile waters as they enter the Sudan with a free course, so as to prevent their being held up in the Sudd area and being distributed over a wide region, where they not only suffer from evaporation, but also lose in volume from the amount absorbed by the papyrus and other Sudd growths.

If Egypt is to place under cultivation the maximum area that the configuration of the land will permit to be irrigated, she needs to have at her disposal twelve thousand million cubic metres of water. The heightened Aswan Dam and Gebel Aulia will provide up to the half of this amount; for the rest it is considered that the country must rely on training and drainage works in the Sudd area, together with the formation of a reservoir at Lake Albert.

THE SULTAN OF MUSCAT AND OMAN.

His Highness Sir Saiyid Taimur bin Faisal bin Turki, who during his last week in London paid visits, among other places, to the Guildhall, where he was received by the Lord Mayor, the Port of London, Cambridge, the National Gallery, the Royal Courts of Justice, and Kempton Park Race Course, had the misfortune on October 11, at the Royal Air Force Display at Hendon, to witness the tragic accident to the two airmen. This sad event deeply affected the Sultan, and he chose after it not to appear in public at places of entertainment, although previously he had been visiting theatres, cinemas, and so on every evening.

The Sultan referred directly to the Air Force fatality at Hendon at the banquet given in his honour by the British Government at Claridge's Hotel on the same evening, October 11. Over this function Sir Robert Holland presided, and among those present at the dinner, in addition to Saiyid Theeyab, His Highness's A.D.C., Mr. Bertram Thomas, his Wazir, and Mr. E. E. Beare, of the Government Hospitality Committee, were:—

Major-General Sir Percy Cox, Field-Marshal Sir Claud Jacob, Brigadier-General Sir Gilbert Clayton, General Sir Havelock Hudson, Sir John Shuckburgh, Lord Monteleale, Sir Muhammad Rafique, Air Vice-Marshal Sir Sefton Brancker, Captain G. H. Lang, Lieutenant-Colonel A. P. Trevor, Sir Malcolm Seton, Group-Captain R. P. Ross, Lieutenant-Colonel S. B. A. Patterson, Mr. H. W. W. McAnally, Mr. D. T. Monteath, Captain R. St. P. Parry, R.N., M. L. D. Wakely, Mr. L. Oliphant, and Mr. J. G. Laithwaite.

In proposing the health of His Highness the Sultan, Sir Robert Holland said:—

"We are here this evening to welcome a guest whom His Majesty's Government delights to honour, the Sultan of Muscat and Oman. I should like to say at the outset that I know it is a matter of keen regret to the Secretary of State that he is unable to be present here in person this evening to welcome our distinguished guest. You are aware of the melancholy reason to which his absence is due. This gathering is the culmination of an entertainment which has extended over the past month, and which to any who glance at His Highness's itinerary since his arrival on September 15 appears to have been remarkably arduous and even at times adventurous. It is in itself a testimony to His Highness's physical energy, freshness of mind and receptivity. His Highness's experiences have also included, though by no means at the instigation, or even with the connivance of His Majesty's Government, an operation for appendicitis. We may regret the necessity for this, but now that the anxious moment is safely past, we may congratulate His Highness on his wise choice of a guide through the valley of danger and on the happy result, seeing that he is with us to-night in full health and vigour after his exacting tour.

"His Highness, by the time he returns to his remote capital, will have seen a good deal more of our country, and perhaps of the Empire, than we who live here are usually privileged to see in the course of our lives, and we hope that he will carry away with him a favourable impression and many pleasant memories.

"Those of us here this evening who have visited Oman know that it is a far cry from Claridge's to Muscat, and that His Highness's country and capital are of no mean importance in the East. I may mention, for the information of those who have not been there, that His Highness is an independent potentate who has commercial treaties with the Governments of France and of the United States, as well as with His Majesty's Government. He has 1,100 miles of coast line in the South East of Arabia, as well as the ancient and interesting town of Gwadar on the Persian side of the Gulf. Zanzibar, now a British Protectorate, was once attached to the Sultan of Oman, and a considerable subsidy is still paid under the Canning Award of 1861 to Oman in regard to Zanzibar.

"Muscat itself is a place which no one who has been there can recall without a throb of the blood. Were I to attempt to tell you its history, it would take hours; but this evening, in the few moments available, I may recall only the belief or legend that Muscat was the traditional home of the Phœnicians, and that its seas were, therefore, the cradle of the world's navigation, that it was the stronghold of the Portuguese when they tried to dominate the East, that it had witnessed and withstood many a wild attack and many a long-drawn siege, that Napoleon sought to establish relations with the great Sayid Sa'id who ruled Oman in the first half of the nineteenth century, and who presented a fine frigate to our Navy and received in exchange another, the 'Prince Regent,' that Muscat has been the safe and hospitable anchorage for our ships in many stormy and critical times, last and not least in the Great War, that it has been and is an entrepôt for our trade with the Gulf, and that it was from Muscat as a base that, with the help of His Highness's distinguished father and of His Highness himself, the arduous and successful operations were begun for the suppression of the arms traffic to the opposite coast which had created such a grave peril for the frontiers of India. Lastly, the name of Muscat must always be honourably connected with measures for putting down the slave trade. In their

long campaign against this evil, the British Government has always been able to rely on the Sultan's ready and whole-hearted support.

"England has therefore good cause to be grateful to Muscat, and the events of the past two centuries have welded our interests and sentiments in a bond of enduring friendship.

"I am sure that those present here to-night who have visited Muscat or served there would wish me, in welcoming His Highness amongst us as an old friend, to offer a tribute also to the memory of his father, the genial Saiyid Faisal Bin Turki. As a young and inexperienced political officer I owed personally much to his wisdom and consideration and sense of humour and his kindly hospitality, and I often recall his fine presence, his unfailing joviality, and his courage in the face of constant troubles which would have broken the spirit of a lesser man, and lastly his staunch friendship for the British. We who knew him intimately grieved at his going, and to his son Saiyid Taimur we say, 'upon him be the peace of Allah.'

"Saiyid Taimur has ruled his country since 1913, a period which has been full of eventful happenings for the State, and which has seen the introduction of many improvements and reforms in the administration under his Highness's guidance. The Customs Department, which provides so large a share of the revenues of the State, has been reorganised, roads have been improved, schools established, an extensive public works programme has been initiated, and the finances of the State have been placed on a sound footing with the assistance of a British Wazir, Mr. Thomas.

"His Highness, in his efforts to improve the condition of his State and his subjects, has unfortunately been handicapped in the past by ill-health, and in the Muscat climate health is a matter which has to be considered very carefully. The climate for the greater part of the year is probably more trying than anywhere else in the world. A Persian poet described it in the words, 'and here the panting sinner receives a foretaste of his future destiny.'

"Anyone whose fortune it has been to experience the deadly hot wind which blows sometimes for seven days at a time in Oman will know that this couplet is by no means an exaggeration. We may hope that His Highness will return to Muscat refreshed and reinvigorated by his voyage and by the medical treatment which he has received, and we wish him all success in dealing with his heavy responsibilities and the difficult problems which confront him.

"His Highness has invariably taken great interest in aviation developments, and recently took a flight over London from the Croydon Aerodrome. He afforded ready assistance recently to British officers both in Oman and Gwadar when investigations were being made by the Government of India with reference to the feasibility of an air route along the Arabian side of the Gulf. We trust that His Highness will long be spared to rule over Oman and to bring to fruition the schemes which he has inaugurated for the benefit of his people and the developments of the State."

His Highness said in reply:—

"It is a great privilege and a great honour for me to be here to-night to respond to the toast which you have given so cordially; and I am profoundly touched by the kind personal references made by my old and trusted friend, Sir Robert Holland, not only to me but also to my revered father. It is gratifying to know that old Muscat associations are remembered with kindly feelings, and I on my part rejoice to see another distinguished and loyal friend of my father's and of mine and of Muscat at this banquet to-night, namely, Sir Percy Cox.

"I welcome the opportunity that this occasion affords to pay a tribute to the qualities of this great nation. I had quite naturally, before setting out from my country, formed ideas of the wonders I would see. These were based on what I had read, and more chiefly on what I was told. But the realisation has far exceeded anything that I had imagined, and I feel I was not told the half. I have toured over 3,000 miles through the length and breadth of the land, and I am lost in admiration for its great civilisation and also for the charm of your lovely countryside. There are other experiences, too, which have filled me with admiration. The graciousness of the King Emperor when he received me, the delightful hospitality of your Government, and the warm welcome I have everywhere received at the hands of the people will always remain with me as cherished memories.

"Sir Robert Holland's references to my co-operation in the suppression of the arms and slave traffic are very kind; the policy is one that I inherited from my father.

"My port at Muscat, as Sir Robert has said, is often visited by British ships of war, and I am glad to think that it is popular with them. My country's friendship with the British Navy has always been a traditional policy, and I am delighted to see that the Royal Navy is represented here to-night by my friend and recent shipmate, Captain Parry, late Senior Naval Officer of the Persian Gulf.

"I thank Sir Robert for his appreciation of my support of the party of British officers who last year investigated the possibilities of an air route along the Arabian side of the Persian Gulf. My Wazir, Bertram Thomas, conducted this party across northern Oman. My interest in air developments I feel to have been quickened by the flight Sir Sefton Brancker took me for, and by the wonderful Royal Air Force manoeuvres I have witnessed to-day. But these, alas! were marred by a fatal accident which has filled me with grief, which I cannot find words to express. I was deeply impressed by the heroic manner in which the proceedings under Air Vice-Marshal Scarlett were carried on, and which I understand is in keeping with the tradition of your great Royal Air Force. It was indeed a wonderful spectacle of courage, and this mitigated the sadness in my heart for the gallant airmen.

"There is only one word to add. I must again say how much I have enjoyed my visit to this great and friendly country. I pray God that he will send my own country peace and prosperity, and that my health may improve so that I may have the strength to shoulder the duties to my country."

The Sultan, with his aide-de-camp, Saiyid Theeyab, left London for France on October 14, Mr. Bertram Thomas and Mr. E. E. Beare accompanying His Highness as far as Calais. The Sultan intends to remain in France, Switzerland, and possibly Italy for about three weeks, and will then go to Egypt to meet his second son. From Egypt he will leave for Oman by sea.

THE PRESS IN THE NEAR EAST.

Echoes of the Great War.

While her neighbours are celebrating the tenth anniversary of their victories on the Salonika Front, Bulgaria has had her memories of that occasion revived in a different manner. The heirs of the late General Lukoff brought an action against the ex-Minister, M. Dobri Petkoff, for having libelled the General's memory in a pamphlet entitled "The Guilty in Bulgaria's Catastrophe," and in the course of the trial both the present Bulgarian Prime Minister, M. Liaptcheff, and a former Prime Minister, M. Malinoff, were called as witnesses. The latter testified to the fact that he had stated at the time in a secret session of the Sobranie that he considered the break in the Bulgarian line at Dobro-Polye to have been brought about by an act of treachery. He had been led to this belief by what General Franchet d'Esperey had said to M. Liaptcheff at Salonika and by the fact that subversive influences had been at work along the front. The most interesting part of M. Malinoff's evidence was to the effect that M. Liaptcheff, who negotiated Bulgaria's surrender, had been offered a draft treaty much more advantageous to Bulgaria than that which was subsequently signed. "But a few hours later," he continued, "M. Venizelos arrived, and it was then that the project which was signed was submitted to him." M. Malinoff held that the Bulgarian troops had no desire to act treacherously or to revolt, but that "their psychological condition had been adversely exploited by Stamboulisky's people."

M. Liaptcheff, who headed the Bulgarian mission to the Allies' headquarters, his colleagues being General Lukoff and M. Simeon Radeff, confirmed M. Malinoff's statement. The mission insisted that it had come to Salonika to undertake negotiations in the spirit of President Wilson's Fourteen Points. "M. Liaptcheff not only refused to talk with M. Venizelos, but was also unwilling to meet him." The first armistice proposal, the outcome of negotiations between the Bulgarian mission and Generals Franchet d'Esperey and Charpy, "contained conditions relatively more favourable to us. After the arrival of M. Venizelos at Salonika, the situation underwent a change. The Bulgarian mission was confronted with the Armistice treaty that we know and was forced to sign it." M. Liaptcheff also testified in favour of General Lukoff, and said that, when General Franchet d'Esperey referred in conversation to his having "people of his own" in Sofia, he (M. Liaptcheff) never imagined that he referred to General Lukoff, but supposed that Stamboulisky and his prison entourage were indicated.

It was left to General Guekoff to bring the subject back to stern military facts. The break-through on the Bulgarian front, he declared, was a result of the operations in the Western theatre of the War. Moreover, the Allies had 550 guns and 5 well-equipped Divisions against Bulgaria's 150 guns and 2 Divisions.

The Court found M. Petkoff guilty of libel and sentenced him to one year and two weeks' imprisonment.

The Greek Offer to Bulgaria.

Although discussions for a Greco-Bulgarian pact have not yet been officially inaugurated, M. Venizelos has made it clear in various utterances that he hopes to negotiate a treaty of friendship and arbitration with Bulgaria on

the lines of the Greco-Yugoslav treaty-to-be. To this end Greece is prepared to grant Bulgaria every facility for her trade through the port of Salonika, short of giving her a separate free zone, and M. Venizelos has stated that he thinks that Bulgaria will find this arrangement of more value than a corridor leading to Dedeagatch, "which would involve much expenditure and would serve only the regions already served by the port of Bourgas." The Greek side of the question is put more clearly by a Salonika newspaper, *L'Indépendant*. Under the heading "Dedeagatch or Salonika," this paper writes:—

"As between Salonika and Dedeagatch there ought not to be any hesitation from any point of view. If Dedeagatch were decided upon, it would be necessary to start *de novo* there, to create a suitable port and a free zone. That would entail extremely heavy charges for the State Budget, already overweighted. Salonika, on the other hand, possesses an admirable port and a free zone, which has only to be enlarged and improved. But there is another consideration of much greater importance which ought to exert the greatest possible weight on the Government's decisions. Dedeagatch is a small town which suffices for itself. Its erection into an outlet for Bulgarian commerce would create needs and must attract from outside the forces and energy necessary to supply those needs. In other words, the creation of a free zone in this locality and the orientation by this route of Bulgarian traffic do not constitute for Dedeagatch a vital need.

"For us, for the town of Salonika, on the other hand, this constitutes an indispensable necessity. In the space of a few years our population has grown very considerably. The number of our merchants has increased to an alarming extent. We have much stoppage of industry, many hands without work. Our Free Zone needs to be enlarged and to assume numerous activities in order to help as much as it possibly can the campaign against malaria, which is rife in Salonika. The Government consequently ought to do all that is humanly possible to extricate our trade and our economic activity from the stagnation in which they are struggling. An opportunity presents itself. The Treaty of Neuilly provided for the grant of facilities to Bulgarian trade in regard to the Aegean. Greece is ready to execute this clause. Ought not advantage to be taken of it to ensure for Salonika, on whom the problem of her economic future sits like a nightmare, a new factor, if not of prosperity, at least of work? In connexion with the directing of Bulgarian trade through our town a special point must be made of the linking up of the Greek and Bulgarian railway systems. Fortunately, those who are responsible for guiding the destinies of the country do not dispute the utility of a junction of the railways of the two States. And that, not only from the point of view of Bulgarian traffic through our port, but also from the point of view of our supply of certain foodstuffs. Bulgaria has an abundance of poultry, cereals and milk products. These goods we are obliged to-day to obtain through Serbia, with the result that they are sold for much more than they would cost if they could be supplied direct (from Bulgaria). There would thus be a double advantage from the attraction of Bulgarian trade through Salonika."

In the face of this naïve admission on the part of the Salonika newspaper, M. Venizelos will not be able to lay stress on the friendliness towards Bulgaria that prompts his Salonika offer. The wonder is that Greece has not long ago pressed upon Bulgaria the need for the joint construction of the short stretch of railway line required to join the Bulgarian and Greek systems between Petritch and the Salonika-Seres-Dedeagatch Railway.

On the invitation of M. Peshitch, Yugoslav Minister in Sofia, the British and French Ministers in the Bulgarian capital started on a shooting tour in Southern Macedonia on October 12, when they left Sofia for Skoplye.

According to the latest reports from Yugoslavia, the Patriarch Dimitrije, whose condition recently gave rise to considerable anxiety, has made a complete recovery.

L'Indépendance Roumaine, the semi-official organ of the Roumanian Government, announces the return to Bucharest on October 6 of Prince Nicholas "from England, where he took part in the manoeuvres of the English Fleet."

Sir Arthur Salter arrived in Sofia on October 10 in connexion with the ratification of the Greco-Bulgarian agreement, which relates to payment for the property of Greek and Bulgarian refugees which was liquidated by the Mixed Commission. Sir Arthur left Sofia on October 11 via Salonika for Athens, in order to discuss the agreement with M. Venizelos.

Colonel Harry Cooper, C.M.G., whose death occurred suddenly in his 82nd year on October 8, took part in the Ashanti War, the Burmese Expedition, and the Dongola expedition. Among the various posts he held may be mentioned those of Vice-Consul in Bosnia and Asia Minor, A.D.C. to the Viceroy of India, and Chief Staff Officer of the army of occupation in Egypt.

A PECULIAR PEOPLE IN IRAQ—I.

BY E. S. STEVENS.

Since scholars have had in their hands the once secret books of that notable and curious remnant of a race known as the Mandaean, or Sabaeans, much has been revealed of their faith, which has little in common with either Islam or Christianity, but is a hybrid Gnosticism in which traces of Babylonian cosmogony and ancient Aryan faiths are found. But few, even among scholars, have come into actual contact with the Mandaean themselves and gathered their traditions from their own lips.

For centuries this curious people have lived their life according to their religious tenets among their Muslim neighbours in Iraq, keeping their blood unmixed and their traditions unviolated. Their language, reserved now almost entirely for religious exercises, is not that of their neighbours, although to-day all speak Arabic; their religious writings are written in a peculiar script of their own. They work principally at two trades, silver-working and boat-building, and their silverwork, decorated by figures and scenes inlaid in antimony, is distinctive and artistic. Few people have passed through Iraq without having seen these handsome, bearded craftsmen at work in their little shops, often labelled "Christian of St. John Baptist," and many have bought souvenirs upon which are engraved, often with genuine talent, scenes of river or desert life, the arch at Ctesiphon, or the tomb of Ezra. There is a melancholy beauty about these white-skinned, dark-haired men, with their remote eyes and fine physique, which arouses the curiosity, and when they are old there is hardly one of them that could not earn his living in an artist's studio as model.

I do not intend to enter into their religion in this article except as it touches the astrology by which they regulate the most important acts of their lives. I have lived eight years in Iraq, and, knowing personally the two *ganzowros* or "bishops" who are respectively the heads of the community in the Amara and Nasiriyah districts, have been inquisitive enough, from time to time, to inform myself concerning the traditions and practices of this interesting people as they exist to-day. I have been to see the tiny *mandi* (church) of reeds which, as far as I know, is the only existing place of worship they possess. This is at Suq-ash-Shuyukh, the headquarters of the boat-building section of the Mandaean. I have assisted at a two hours' baptism in the river at Amara, with its preliminary purification. I have inspected the dress of purity worn during religious ceremonies, and the utensils used at them, seen the sacred *paytho* (sacramental bread) baked, and the sacrament administered.

Much of my information was given me by Shaikh Dukhayl, the Nasiriyah bishop, although Shaikh Joda, the bishop of Amara, also contributed valuable items, particularly on the faith. Both are fine-looking patriarchs with large families, and Shaikh Dukhayl, like Abraham, has two wives. It is a rule of the Subba (Mandaean) community that no physical defect or blemish must be found on the person of a priest, and as the priesthood usually passes from father to son, the priests are, as a rule, fine figures of men. Although Shaikh Joda's little son is already a deacon, Shaikh Dukhayl intends to depart from tradition and to put his sons into other trades and professions. It is no longer possible, he thinks, to make a decent living as a priest. To begin with, the race is dying out and grows smaller every year, and secondly, under a settled Government, the powers and fees of the priests tend to lessen. The Civil Courts have taken over many of the functions which the *ganzowro* once exercised, and although all marriages must be performed by him, and questions settling domestic difficulties referred to him, his emoluments are not what they were. Nor is the demand for copies of the sacred books what it was formerly. Copying the sacred writings is the monopoly of the priesthood, also the casting of horoscopes and making of amulets. Shaikh Dukhayl once sent me a

brass amulet inscribed with Mandaean characters and talismanic signs, and most Subba children have similar charms hung round their necks by their mothers, or scraps of Holy Writ sewn into leather covers.

To all priests alcohol, sugar, tea, coffee and tobacco are forbidden; neither may they eat the bread which their wives bake for the family. They must make and bake their own bread, and there are occasions when their wives must not come into any contact with them.

I have said that a marriage may only be solemnized by a *ganzowro*, or "bishop." In the case of a widow's re-marrying—a thing frowned upon by Mandaean purists—the *ganzowro* is not allowed to perform the ceremony, a temporary *ganzowro*, known as the *ganzowro thaniana*, being called in to take his place. His office expires with the ceremony and he can perform no other priestly duty. To the *ganzowro thaniana*, too, it falls to marry a bride who has not lived chastely before a husband has been found for her.

In no shape are second marriages approved, although they take place. "The Mandaean idea of marriage," said a priest to me, "is two spirits in one body, and the proper course for a widow would be to follow her husband into the other world. Since she cannot do that, the least she can do is to live in godly singleness."

Divorce, properly speaking, does not exist with the Mandaean. If a woman lives with another man, her husband can separate from her with consent of the bishop, but the re-marriage of the guilty parties is against Mandaean tradition. Hence Mandaean women whose husbands have "parted" from them sometimes become Muhammadan in order to re-marry. It is hardly necessary for men to adopt this course, as a Mandaean may take four wives—on the whole a liberal allowance. If a widow re-marries, her children by the second marriage may not enter the priesthood for three generations.

The institution of marriage is much praised. "If a man has no wife, there will be no Paradise for him hereafter and no Paradise on earth." "If woman had not been created, there would be no sun and no moon, and no light would shine on the earth; there would be no water of life from heaven, no cultivation, no fire. Husband and wife are like heaven and earth. Children make a man's name great in the next world, and when he is dead they carry his body to the grave and read the *masakhto* (prayers for the dead) for him."

Marriage is the greatest event in a Mandaean girl's life. The marriage is arranged by the parents of the young people, but as the girl is unveiled, and has had the opportunity of seeing the young man often in their narrow community, it is not unnatural to suppose that she has a certain say in the matter. As soon as the match is agreed up, the dowry is fixed. Before the War this was commonly a sum of a thousand dinars or more, together with a maund of saffron, but to-day is usually from three hundred to five hundred rupees and a pea's weight of saffron.

On the day appointed for the religious ceremony, the young pair both don the *rasta* (white garments, consisting of several pieces, ceremonially pure, put on for religious rites), and, going down to the river, undergo baptism by immersion. The bride is then conducted to the bridegroom's house, in which the bishop, two priests, and a *wakil* to represent the bride in the subsequent proceedings, are already assembled. In one of the rooms a kind of reed hut, over which a mosquito net has been thrown, has been erected, and into this, as soon as she has crossed the threshold, the still dripping young bride is led. Before matter proceed further, two matrons skilled in such matters are sent to examine the girl and see whether she is a virgin. They bring their report to the *ganzowro*, who, if satisfied, may proceed with the ceremony. If the girl has not passed the test, the bridegroom has the right to repudiate her if he wishes. If he still desires to marry her, the ceremony must be carried out by the *ganzowro thaniana*, or secondary bishop.

Apropos of this, Shaikh Dukhayl told me of a difficult

case that had occurred in his own experience. A bride having been reported to him to be intact, he proceeded to marry her, but it was subsequently discovered that at the time of marriage she had been three months pregnant. He had, therefore, performed the rite against the laws of his Church. There was much theological discussion, and he consulted with his fellow bishops what was to be done. It was agreed that as the women had acted in good faith, they could not be penalised, but the bishop was readmitted to his office only after being baptized seven times a day by five priests and two deacons, until he had been baptized three hundred and sixty times.

(To be continued.)

PERSONAL AND GENERAL

TODAY

October 18, 1928 (New Style).

October 5, 1928 (Old Style).

Jomadar I, 3, 1347 A.H. of the Muslim Calendar.

Marcheshwan 4, 5689, of the Jewish Calendar.

The Hon. Mrs. Heyworth has left England to join Major Heyworth in Cairo.

Mr. Rushbrook Williams spoke to the Central Asian Society yesterday (October 17) on "The Indian States and the New Constitution."

General Sir Philip Chetwode, Bt. (upon his appointment as Chief of the General Staff, India), had the honour of being received by the King at Buckingham Palace on October 11.

Rear-Admiral H. T. Walwyn had the honour of being received by the King at Buckingham Palace on October 13, upon his appointment as Flag Officer Commanding, Royal Indian Marine.

Sir George Schuster, Finance Member-designate of the Government of India, and the Hon. Lady Schuster leave London this afternoon to embark in the Ranchi at Marseilles for Bombay.

Lieut.-Colonel Sir John Chancellor (who kissed hands upon his appointment as High Commissioner and Commander-in-Chief, Palestine) had an audience of the King at Buckingham Palace on October 11.

An exhibition of water colours of France and Yugoslavia by Miss Lily Waring is being held at the Beaux Arts Gallery, Brunton Place, Bond Street, W. This exhibition will close on October 23.

Sir John Chancellor, Governor-Designate of Palestine and High Commissioner for the Trans-Jordan, has accepted an invitation to a luncheon from the president and council of the British Cotton Growing Association, which will take place on November 6, in Manchester.

Major-General Sir Reginald and Lady Ford, Sir Thomas and Lady Smith, and Lady Godfrey and Sir Frederick Johnston left London on October 11 for Bombay by special train to embark in the P. and O. liner Razmak at Marseilles.

The King of Italy has bestowed the following decorations of the Order of the Crown of Italy upon the Governor-General and other officials of the Sudan Government:—Sir John L. Maffey, Grande Cordone Corona; R. E. More (Sudan Agent), Grande 'Ufficialato Corona; A. C. Parker (General Manager, Sudan Government Railways and Steamers), Grand 'Ufficialato Corona; R. E. H. Bailey (Governor Kassala Province), Commende Corona; H. C. Jackson (Governor, Halfa Province), Commende Corona; Ewen Campbell, 'Ufficialato Corona; and I. B. Bayley, 'Ufficialato Corona.

Miss Edith Harvey is holding an exhibition of her paintings of Egypt and the Sudan, Greece, Syria, South and East Africa and other countries, at the Arlington Gallery, 22, Old Bond Street, W.1. The exhibition closes on October 26.

Abdul Rahman Fikry Bey, who was recently appointed Technical Secretary to the Egyptian Ministry of Finance, has returned to London from Cairo to resume his duties as First Secretary at the Egyptian Legation pending the appointment of a Minister in succession to Aziz Izzet Pasha.

Mr. Charles Wilson, American Minister to Bulgaria since 1921, left Sofia on October to take up his new post as American Minister in Bucharest. Mr. Wilson, whose residence in the Bulgarian capital extended over ten years, as he had been Chargé d'Affaires from 1918 to 1921, was latterly Doyen of the Diplomatic Corps in Sofia.

General Sir Philip W. Chetwode left Victoria on October 11 to take up his appointment as Chief of the General Staff in India, accompanied by Lady Chetwode, Sir Herbert Creedy, Permanent Under-Secretary of State for War, Field-Marshal Sir Claude Jacob, and General Sir Walter Braithwaite, Adjutant-General to the Forces, were at the station. Sir Philip and Lady Chetwode joined the Razmak at Marseilles for Bombay.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Interesting Development at the Piræus.

Everyone who has visited a Near Eastern port is familiar with the annoyance caused by the swarms of boatmen who surround a vessel as soon as it anchors and clamour for custom. As a matter of fact there are very few Near Eastern ports—Constantza is one notable example—where the shipping can be berthed alongside the quay, thus giving the boatmen no opportunity. Coming visitors to Greece will learn with satisfaction that facilities for berthing the ships are now to be provided, though at first only on a small scale, at the Piræus—where the Troumba jetty is to be used for foreign ships which arrive and depart the same day. This is only the first step in a programme of development which will ultimately provide similar facilities for all shipping at the port. This means that the boatmen of the Piræus will be put out of business, which is not likely to cause any lamentations on the part of the travellers, and there is certainly no need that it should as the boatmen are to receive substantial compensation.

Markets for Cyprus Products.

Markets and production are two interdependent factors, and it is a natural corollary to the work that the Cyprus Government is undertaking in promoting the full development of the resources of the Island that attention should also be directed to the important question of obtaining larger markets for Cyprus products. The situation of Cyprus is greatly in its favour as regards the question of outlets for it has near to it a series of important markets, and the Government decided some time ago to investigate the conditions in each of them from the point of view of the development of Cyprus trade. It was decided to begin with Egypt, the most important market that Cyprus possesses, and the last issue of an Agricultural Supplement to the "Cyprus Gazette" gives details of preliminary inquiries regarding marketing conditions at Port Said, Alexandria, and Cairo made by Mr. P. Antoniadis, Viticulturist and Wine Expert of the Cyprus Department of Agriculture. Among the matters on which information was sought was the nature and extent of imports from Cyprus, the conditions in Egypt for the marketing of Cyprus products, the facilities for their distribution, and the possibility of improving the presentation of Cyprus products particularly as regards the grading and packing of fruit. Mr. Antoniadis in his report gives details of Egypt's imports from Cyprus, the value of which were in 1926 £E286,977 and covered a wide range of commodities. He finds that the import trade is almost entirely in the hands of Cypriots living in Egypt and some Greeks, and as regards the question of distribution he advocates the establishment of organised receiving and distributing centres, while he also stresses the need for improvement in the presentation, grading and packing

of fruit. In regard to the latter point he mentions that Cyprus oranges enjoy a high reputation in Egypt but that their sales could be increased tenfold.

The Motor Show.

We have heard enough in recent years about the depressed industries of this country, but there are others, as we know, which are doing very well indeed, and I think that no one who has visited the Motor Show at Olympia this week will be of any other opinion than that the motor industry is in an exceedingly prosperous condition. The new developments, the novelties, the improvements that are in evidence throughout are proofs of progress which would not be encountered if the industry was not holding its own. I was impressed also by the considerable crowds that Olympia is drawing this year. It is said, I see, that Olympia is no longer large enough to house all the motor exhibits; it is certainly not extensive enough to contain in comfort all those who wish to see the latest developments of the art of the motor manufacturers. Two stands attracted particular attention, and it was indeed difficult to get an uninterrupted view of the exhibits on them. One significant development of the year seems to be the arrangements for luggage. On stand after stand one could see examples of cars with the back carried out to form a trunk shaped receptacle. From the artistic standpoint the arrangement doubtless leaves something to be desired, but what is lost in this direction is certainly gained in efficiency and safety. I noticed a novelty on an Italian car in the shape of a trunk on the running board. It looked out of place but not more so in my opinion than the arrangement at the back. One other feature of the Show calls for reference and that is the predominance of the Dunlop tyre. Out of curiosity I glanced from time to time at the tyres as I strolled round, and it really seemed as if it was a Dunlop exhibition.

Sudan Trade Development.

Ample support is forthcoming for the view that conditions in the Sudan may now be expected to improve steadily from the trade returns for the first seven months of this year. Only one of the main headings shows a decrease compared with the same period of the previous

Branches throughout the World.

C.F.H. 300

year—this being Government imports which are £E116,991 lower at £E1,084,759. All the rest show more or less substantial increases, while the total volume of trade at £E8,616,655 shows a rise of £E651,705. The largest increase is in respect of exports which at £E4,876,557 are £E465,596 up. The principal contributors to this increase are cotton which realised much higher prices than in 1927, thus more than compensating for a smaller crop, gum to which the same remarks apply, and hides which figure in the list for £E131,939 as against £E27,129. An interesting feature of the export list is the inclusion of dura for a value of £E17,619. The fact that it is now possible to permit the export of this grain on a considerable scale speaks volumes as to the improvement of the situation in the Sudan. The value of the public imports rose from £E2,120,899 to £E2,349,002, some of the most notable increases being in respect of cotton piece-goods, tobacco, metals and metalware, machinery, motor cars, cycles and accessories, and tea. The larger imports of cotton piece-goods and of sugar, which is included in the Government imports, bear testimony to the increasing purchasing power of the population as a whole.

Lake Copais Company.

At the annual meeting of the Lake Copais Company (a report of which will be found elsewhere in this issue), Mr. W. Sandford Poole, the Chairman, was able to give a satisfactory account of the company's progress during the past year. As I have already pointed out in these notes, the company's profits for 1927 were much larger than in the previous year, this being due to the fact that the crop yields and prices were higher, as owing to a shortage of water it was not found possible to irrigate as large an area as was desirable. During 1927 2,556 acres of land in the Copais were broken in, making the total area brought into cultivation since 1924 11,086 acres. As regards the current year's prospects Mr. Sandford Poole would not go further than saying that he hoped the late crops and satisfactory prices would enable the submission of a statement next year showing results not much less satisfactory than those recorded for 1927. Work such as the company is undertaking means a long period of preparation, and in describing the invaluable results for Greece of the company's development work which has extended over nearly half a century, Mr. Sandford Poole pointed out that the shareholders have received no return on their investment while the Debenture shareholders have again and again forgone their interest. He thinks that better times may now be anticipated, a view which is obviously justified in view of the improved results which are now forthcoming.

COMMENTATOR.

Professor A. P. Newton, D.Litt., Rhodes Professor of History at London University, who was the chief examiner under the Allied Newspapers' recent Empire Free Travel and Scholarship Scheme, has been invited by the University of the Punjab, Lahore, to visit India in connexion with the organisation of advanced studies on the Arts side in the University and its associated colleges. Professor Newton, who will be in India for some three or four months, sailed from Liverpool on October 17.

BULGARIAN TOBACCO.

According to a statement issued by the Bulgarian Ministry of Finance the area under tobacco this year in Bulgaria amounts to 21,300 hectares. The peak year was reached in 1923 when 52,618 hectares were devoted to the tobacco plant; the area fell to 49,331 hectares the next year, and was 52,670 hectares in 1925. Since then there has been a drastic reduction in tobacco growing, owing to the difficulty experienced in disposing of the country's tobacco stocks. The crop this year is estimated to amount to between 16,000,000 and 18,000,000 kilograms. There is likely to be a considerable reduction this year also in the Turkish tobacco crop, which is expected not to exceed 34,000,000 kilograms as compared with 54,000,000 in 1927. The Greek crop should be in the neighbourhood of 40,000,000 kilograms as compared with 45,000,000 last year.

THE OPIUM HARVEST IN SOUTH SERBIA.

According to the Yugoslav Press the opium harvest this year in South Serbia promises to be a record one, amounting to from 150,000 to 180,000 kilograms, or nearly three times the amount of last year's harvest. The attempt made recently to break the virtual monopoly of the Shalom Company has not relieved other traders of the competition of the big Salonika house. It had been arranged that the National Bank of Serbia should finance the opium harvest to the extent of 30,000,000 dinars, but it is stated that not more than 4,000,000 dinars have been advanced. Most of the opium is said to be purchased for Switzerland.

NEWS FROM ALL SOURCES.

The Corporation of the Royal Exchange Assurance announces an interim dividend of 10 per cent., less tax, on account of the year 1928.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for September amounted to 40,797 barrels.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 20 amounted to £E8,536, making the total from April 1 £E123,406.

The directors of the London and Lancashire Insurance Company announce that, in accordance with previous intimation, they have decided to pay on November 1 an interim dividend of 9s. per share, less tax, to shareholders registered on October 20.

The directors of the Ionian Bank announce that they have decided to discontinue the office in Constantinople owing to the fact that the increasing difficulties placed in the way of carrying on banking business there have made it undesirable, in their opinion, for the Bank to continue its operations in Turkey.

The Empire Marketing Board reports that although the first direct shipments of oranges from Palestine are not expected until the beginning of November, the season for oranges forwarded for transshipment is beginning much sooner than had been anticipated. The crop is reported to be very early, and large quantities were forwarded about September 25 to Port Said for transshipment.

NEAR EAST MARKET REPORTS.

The October issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

During the month under review, the Egyptian cotton market has been in a nervous and unsettled condition. Traders apparently adopted a waiting attitude and the fluctuations which occurred were due to speculative movements caused by weather and crop news. Towards the end of August and the beginning of September, reports of damage to the crop by night fogs and boll worm caused a bullish movement, resulting in a rise of about 2 dollars, but most of this advance was lost as a result of liquidations prior to the issue of the American Bureau Report; a further rapid decline followed the publication of this report. The spot market has been dull and daily sales have not averaged much more than 1,000 bales, probably owing to the scarcity of desirable cotton and to the tendency of the trade to defer purchases, pending new crop arrivals. Reports received indicate that the crop in Upper Egypt will be abundant in quantity, but of average grade and staple. Arrivals at present, however, are slow, probably on account of the decision of the Egyptian Government to make advances to the growers on favourable terms. The Sakel crop has also suffered, to some extent, during the past month from night fogs and boll worm, but the extent of the damage is believed to be somewhat exaggerated and well-informed circles estimate the yield at from 2,250,000 to 2,500,000 kantars.

The cotton seed market has been dull and very little business has been transacted. The stock figure of Ardebs 538,459 is still given with reserve, pending further adjustment.

The market for cotton goods has been on the quiet side and dealers continue to pursue a waiting policy, but prices are steady. Owing to heavy arrivals, the sugar market has been somewhat depressed, and the tone remains dull, but it is hoped that the present quotations will stimulate business and prices are improving. The spot demand for flour has been moderate and, although there has been a satisfactory export to the Greek Islands and Syria, prices have ruled irregular, the market having been weak, in sympathy with Australian and American markets. The rice market continues to favour the Egyptian product. Business in Rangoon rice throughout the month has been exceedingly quiet and prices have shown a declining tendency. Owing to reduced stocks, transactions in cabots have been scarce and holders are very firm in their attitude, while under the influence of the Kobe market, a good advance in prices has resulted. There is little to report with regard to gunnies. No business of any importance has transpired in grain and cereal sacks, and quotations have fluctuated in sympathy with Calcutta.

The Sudan.

During the period under review business in the Sudan has been slack, but the general situation is improving and the rains, which, except in the Northern part of the Blue Nile Province, have been good, have induced optimism in the country. As yet, however, it is too early to give estimates of the forthcoming crops. The demand for gum and sesame continues steady, but arrivals are small and poor prices are being obtained.

Palestine.

Conditions in the cereal trade have not shown much variation from those of the preceding months, and local millers continue to order their stocks of wheat for milling from Egypt. The failure of cereal crops this year has brought about an increase in quotations, which are now higher than the world level. With a view to preventing the continual increase in prices, the Chamber of Commerce has forwarded an application to the local authorities for the prohibition of cereal exports this year.

Owing to the extremely poor olive crop this season, prices of olive

oil have risen by 50 per cent. and a still further rise is expected in the winter. Failing unforeseen circumstances, the prospects of this year's orange crop and season are good, particularly in view of the existence of the Fruit Export Commission, which will supervise all exports and inspect the fruit before shipment. Latest reports indicate that the Spanish crop is not very good, and should this prove to be the case, it should have a favourable effect on the Jaffa orange market.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Power Unit for Stone Crushing Plant.—The Egyptian Ministry of Public Works invites tenders for the supply of one semi-Diesel type I.C. engine as power unit for stone crushing plant. November 10. (D.O.T.)

I.C. Engines.—The Egyptian Ministry of the Interior invites tenders for the supply of two internal combustion engines of 35 h.p. November 5. (D.O.T.)

INDIA.

Motor Generator and Switchgear.—The Indian Stores Department invites tenders for the supply and delivery of a motor generator set and switchgear for Delhi Fort. October 24. (D.O.T.)

Motor Alternator Set and Testing Transformer.—The Indian Stores Department, New Delhi, invite tenders for the supply and delivery of a motor alternator set and testing transformer, with induction regulator controller, for the Government Test House, Calcutta. November 15. (D.O.T.)

TURKEY.

Motor Lorries, Buses, Etc.—The Ministry of National Defence is in the market for motor lorries, buses, and motor tank wagons. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Birkenhead, October 23); s.s. Elysia for Bombay (Birkenhead, November 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, October 30); s.s. Magdapur for Calcutta (Birkenhead, November 8).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 24).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, October 20); s.s. Domala for Bombay and Karachi (London, October 20); s.s. Manela for Colombo, Madras, and Calcutta (London, November 3); s.s. Mundra for Bombay and Karachi (London, November 10).

Cunard Line.—S.s. Brescia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz if inducement (Liverpool October 20, and Swansea October 23); s.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, November 10).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 3). (This steamer will be the last sailing of the season to the Danube ports.)

P. and O. Line.—S.s. Ranpura for Bombay (London, October 26); s.s. Nankin for Calcutta (London, October 27); s.s. Perim for Calcutta (London, November 10).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 3); s.s. Egyptian Prince for Tunis, Malta, Alexandria, and Cyprus (Manchester, November 3).

Ellerman and Papayanni Lines.—S.s. Andalusian for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, October 20); s.s. Assyrian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa* (Liverpool, October 27); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool November 3, Swansea November 8); s.s. Mardinian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 17); s.s. Roumelian for Algiers, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 27, Swansea October 27).

*Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 16.

The Stock Exchange has had a busy week, in which the two leading features were that the negotiations of a heavy settlement coincided with a rising tide of new business, and that, while the strength of recent favourites was fully maintained, the basis of activity broadened and a fairly wide range of industrials came in for vigorous and price-raising support. The boom in gramophone shares was given a new fillip by the H.M.V. dividend declaration, and the cautious are asking when the inevitable slump is coming. The widening support for more established industrials is doubtless in fact justified by the improved tone of reports from the great trade centres, and little notice was taken of a slightly disturbing feature shown by the September returns of overseas trade. These returns revealed a drop in imports of some leading raw materials of industry. This may be fortuitous—it is never wise to deduce too much from the figures of a single month—but if it is repeated it may mean that prophecies of autumn trade revival will have to be revised. Meanwhile American prosperity, in spite of the continued warnings to the contrary, continues unabated, and there is much talk of an early intensification of the boom conditions in Wall Street.

League of Nations Loans: A Coming Issue.

The League of Nations reconstruction loans are extremely popular—and with good reason—among British investors. We have frequently recommended them in this column as well-secured foreign investments. An American investigator has just published figures which confirm the wisdom of those who first took up these loans. It is shown that the aggregate par value of all loans issued under the auspices of the League was 494,605,227 dollars; that at the price of issue their value was 447,514,187 dollars; and that the value of the bonds on the basis of recent quotations was 508,517,410 dollars. It is thus clear that the original holders of these loans, in addition to receiving a liberal current return—the average yield at the price of issue was 7.79 per cent.—have had the advantage of a 12.3 per cent. rise in capital value. The financial activities of the League have therefore conferred a twofold blessing—upon the investing public and upon the countries

that were in urgent need of funds. The investor will shortly have the opportunity of subscribing for another League of Nations loan, for it is expected that the Bulgarian stabilisation loan, to be issued under League auspices, will be offered for subscription in the near future. It is understood that preparations are now well advanced, and it is hoped to float the loan, which will amount to £5,000,000, some time this month.

Company Profits.

In its quarterly analysis of the earnings of joint stock industrial undertakings the *Economist* shows that the profits published during the past quarter were substantially higher than those recorded a year ago. The effects of the coal stoppage, however, were reflected in company accounts being published at this time last year, and this, of course, discounts to a considerable extent the actual increase now shown, which amounts to 9.7 per cent. in the aggregate net profits, after payment of debenture interest, of 237 companies, whose profit and loss accounts have been published during the past three months. The aggregate increase was unevenly spread as between different groups of industry, rubber, hotel, gas, and telegraph companies showing substantial decreases, while a large expansion was recorded by the textile, tea, and land mortgage groups. Of the aggregate net profits 56.8 per cent. was paid in ordinary dividends and 16.9 per cent. in preference dividends. The average rate of dividend on ordinary capital paid in the past quarter works out at 10.7 per cent., against 10 per cent. in the preceding quarter and 10.2 per cent. at this time last year. Larger ordinary dividends were paid by brewery and telegraph companies, but decreases were registered by the rubber, tea, hotel, and trust company groups.

The Electrical Industry.

Many millions of investors' savings have been placed in the electrical industry. The prospects of the industry are therefore of widespread interest. The latest report of the British Electrical and Allied Manufacturers' Association throws much valuable light upon the position. Taking the long view of the future of the industry, the report remarks that it is generally assumed that the electrical industry, both on the supply and the manufacturing sides, has a future of great expansion. Taking the short view, however, it would seem that progress will not consistently satisfy the highest expectations. This is true of the present year. The normal rate of expansion lies annually between 10 and 11 per cent., but this year it has been less than 7 per cent. The lower rate is attributed to "intensified trade depression." During the year electrical manufacturing has shown no increase. For almost a year the curve of export orders has declined steadily, but the movement has now come to an end and there are definite indications of improvement. The report concludes that on the whole, therefore, the electrical industry, both on the supply and manufacturing sides, is not at present in a position markedly different from that of the other basic industries of the country. This is, perhaps, rather more gloomy a conclusion than might be expected, but in any case the prospect suggested by the longer view is a more cheerful one.

Motors and Motoring.

By G. B. B.

The Motor Show.

As the first Motor Show I attended was at the Crystal Palace, and as I have not missed one since, it will be acknowledged that my experience goes back a few years, and during the whole of that time I have never seen anything like the crowd that has visited the Show this year. At one time one knew that a big proportion of the visitors had not come to choose cars, that cars were as far beyond their reach as the Woolsack or an Order of Merit; but now that we have the baby cars with us in such quantities and in such varieties, one realised that everyone in the crowd that surged on to the stands and thronged the gangways was a probably buyer.

There were more cars parked outside the Show this year than I have ever seen before; there were more women visitors; there were more young men who seemed to be graduating from the motor cycle stage; there were more exhibits. For years I have urged that Olympia is not large enough for the Show, even with the extensions, and that the Show authorities should get back to the Crystal Palace. After the crush this year I think most people will be disposed to agree with me.

There is no doubt that this year's Show has opened up an entirely new market for British manufacturers. People with incomes of under £500 are realising that, with the exercise of due economy in other directions, they can afford to run a small car. There are also numbers of people who felt last year that they could run a cheap car of low horse-power, and who now, in view of the developments made, are certain that they can do so and have placed, or are about to place, their orders. There are also many who already have a car, but who have made up their minds now to buy a second and smaller car, so that all the members of the family can indulge in more or less careful driving. Women whose husbands already have a car for business and week-end purposes are buying a baby car for shopping and visiting. Altogether, this Show must have given road engineers furiously to think. If road congestion is bad now, what, they ask, will it be like by the end of next year? It is hopeless to suppose that by that time the drivers of small, light cars will have learned to keep well into the side of the road; they will still struggle along in the dead centre of the highway, and apparently the only thing to be done is to make more roads and plenty of them.

Bentley Cars.

Space entirely forbids even an attempt at dealing with the various models on view, and it would certainly be difficult to single out any particular make of car for approval. As an engineer, I was certainly struck by the Bentley productions, and of these I fancy the speed model saloon, which is on a 6½ litre, six-cylinder engined chassis, will prove popular amongst the large section who desire comfort combined with speed. The springing and upholstery are all that can be desired, whilst the fact that there is no difficulty in getting 70 m.p.h. is certain to appeal to a large section of road users. Then there is the 3-litre Sunbeam, as comfortable and as fast a car as most people could wish to have. It is a thoroughly sound engineering proposition, magnificently designed and turned out of the finest materials by one of the best equipped factories in the world.

A New Renault.

I should like to say something also about the new straight-eight Renault, the first 8-cylinder car built by that famous firm, which has played so worthy a part in the history of the motor industry. This has a bore and stroke of 90x140 m.m. and has a most imposing appearance. The same may be said regarding the new Mercedes-Benz cars, one of which has a 36-220 h.p. supercharged 6-cylinder

engine and another of which, and one which probably will prove the best-seller, has a 32-90 h.p. engine, of the straight-eight type and which is one of the most admired cars in the Show. Then there is the Lea-Francis car with an 11.9 h.p. engine and a speed that should satisfy even the most confirmed of those speed-worshippers who wrote recently to a daily paper to say that their chief enjoyment in life was speed and jazz music. There is no music like the hum of a perfectly timed engine and, as for speed, let them see what they could get out of a Lea-Francis Hyper-Sports model. The speed model Lagonda is another car that merits a word of approval even in so limited a space as is at my disposal. It is on similar lines to the Lagondas that did so well in the Tourist Trophy race, and one would like to say something also about the Hispano-Suiza and the Voisin, which possesses a method by which you can drive it, on either a high or a low back-axle ratio, so as to allow you, in effect, to have six or eight, instead of three or four speeds. As for the "baby" cars, I should want six or eight pages of THE NEAR EAST AND INDIA to say all I should like to say in their favour.

Accessories.

As for accessories, all one can say of them is that everything exhibited seemed to be just the thing one has been in want of for so long. There is, for instance, the Desmo Dual Safety Gauge, which is a dashboard instrument showing water temperature and oil pressure through two windows side by side on the dial of the instrument, the figures being drawn on rotating drums. Another useful accessory, of a different kind, is the Boyce Luggage Braces, for strapping down luggage on the carrier. There is also the Boyce universal connector for pumps which

FOR CYCLING WITHOUT EFFORT RIDE AN ARIEL

The Good Cycle

1929
ALL-WEATHER
GENT'S

You will experience a new sensation astride an "ARIEL" Cycle. Its lightness, combined with free and easy motion, makes the miles fly by without effort, and you will be envied your freshness at the end of a long journey. Invest in an "ARIEL" NOW, it will be a boon to you.

The British Company which produces this high-grade Cycle, also produces at competitive prices the wonder "ARIEL" Motor Cycle.

will fit any size of valve from that of the pedal cycle to that of the giant pneumatics. The price of this is so low that I cannot imagine any road user not having one. The Prima Company are showing a well-designed, light and powerful lifting jack, the "Screwdraulic," specially designed on a new principle for use with the Austin Seven, and here again the price is extremely low.

Company Meeting.

LAKE COPAIS COMPANY.

Current Year's Outlook.

The ordinary general meeting of Lake Copais Company, Ltd., was held on October 10 at Winchester House, Old Broad Street, E.C. Mr. W. Sandford Poole (chairman of the company) presided.

The Secretary (Mr. R. D. Prichard) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—More normal weather conditions prevailed at our estate during 1927, and, consequently, the results were better than in the previous year. Nevertheless, too much rain in the autumn of 1926 delayed, and in some cases prevented, the cultivation of certain areas, and we were not able, owing to lack of rain in the spring, and consequent shortage of water in our canals, to irrigate as large an area as was desirable.

As a result the area from which the crops were harvested was not so large as it might have been under more favourable conditions, being, in fact, practically the same as that harvested in the year 1926. Fortunately the yields and prices were higher, enabling us to present an improved profit and loss account.

The development of the Copais continues and, during the year 1927, 2,556 acres of land were broken in, making a total net area brought back to cultivation since the present land development programme was initiated in the year 1924 of 11,086 acres. You may be interested to hear that one of our new caterpillar tractors ploughs an acre an hour, and has been working at times 20 hours a day, headlamps being used at night. The development of this land has cost, in round figures, 21s. an acre, and has been paid for out of revenue. This should undoubtedly have a progressively beneficial effect on the revenue of the estate.

One of the crops which were the cause of some disappointment was the lucerne, the yield of which was reduced owing to lack of irrigation water in the summer; while the area of cotton harvested was also lower than in the year 1926, owing to the limitation of the water supply. As mentioned in our report, prices in general were higher, except those of wheat and lucerne.

You will have noted that our revenue was substantially reduced by the charging of expenditure on repairs to the Karditza Tunnel, where, as reported to you last year, we had a serious fall of some 1,000 cubic metres of rock and earth on June 24, 1927.

I am glad to say that our general manager, Mr. Bailey, who is present with us to-day, reports that the repairs have been completed, and the roof and sides strengthened by cement grouting, and, in his opinion, the tunnel is now in much better condition than ever before. But for this special expenditure on the tunnel our profits would have been £7,319 larger.

In regard to the accounts, I have little to remark. You will see that, in accordance with authority given by our trust deed, we have carried to capital reserve account £5,000. The balance of profit, after so doing, enables us to pay the full interest of 5 per cent. on the "A" Debenture stock and 4½ per cent. on the "B" Debenture stock. This interest, less income-tax, is again being distributed in the form of Scrip Certificates of "A" Debenture stock in accordance with the scheme approved by stockholders on July 28, 1922. After making this distribution, there will remain only £12,700 of "A" Debenture stock unissued and available for meeting Debenture stock interest in accordance with the scheme already referred to. Therefore, assuming our profits for the current year to be not less than those of the year under review, the "A" Debenture stockholders may next year again be entitled to receive payment of their interest in cash.

As regards the current year, the yields of the early crops have proved to be no less than those of 1927, but it is hoped that the late crops and higher prices will enable the directors to submit a statement twelve months hence showing results not much less satisfactory than those before you to-day.

The Greek Government's Option.

Before sitting down I desire to say just a few words as to the arbitration award of July 25, 1925. Under that award, the Greek Government were entitled to purchase certain lands provided they exercised their option last July. Just before that time arrived the Greek Government requested that the time for exercising their option might be extended to the end of the present year in order that they might further consider the matter and come to a decision. We acceded to the request of the State, and, as you may have learned from the newspapers, the Greek Government have decided to send an expert to act as adviser to the Greek Minister in London when

he discusses the matter with the directors, as we understand he has been requested to do.

We have not been made acquainted with the Government's intentions, and I can, therefore, give you no further information to-day. I would, however, like to assure you that the estate is now, after years of patient and careful development, and with the great improvement in the drainage system, a very valuable proposition, both to the company and to the Greek nation.

At one time a fever-stricken marsh, it is now healthy and provides a livelihood for about 2,600 cultivators and their families, and produces large quantities of foodstuffs and cotton for the Greek nation, which but for the enterprise of the company would have to be purchased abroad and paid for out of the resources of the country.

During this long period of development, extending over nearly half a century, the Debenture stockholders have again and again forgone their interest, while the shareholders have so far received no return whatever on their investment. We think you may now look for better times.

It is my pleasure and duty again to bear testimony to the excellent services rendered by Mr. Bailey, our general manager, and his staff on the estate; and we are also indebted to Mr. Whitmee, Mr. Prichard, and the London office staff for the care with which they have watched over your interests on this side. (Cheers.)

The report was unanimously adopted.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 6:—

Sultanas.

The estimated sales to date total 21,600 tons against 23,700 tons for the corresponding period of the previous year.

Closing prices Smyrna, per cwt., c.i.f. London, for types 12 to 18 and 1, 3, and 5 are:—24s. 6d.; 36s. 6d.; 38s. 6d.; 42s.; 45s. 6d.; 50s.; 59s.; 69s.; 38s. 6d.; 36s. 6d.

Market Conditions.—In our last report we referred briefly to rumours circulating of the possibility of Government action on the market. The Minister of Finance showed a lively interest in existing conditions, and, although no official statement was given out, reports spread to the effect that the Government was considering the advisability of devoting about £100,000 for the purchase of sultanas with a view to giving support to the market, the fruit taken up under this credit to be quite independent of the Alcohol Monopoly's purchases. Colour was given to these reports by one or two large Government operations in the early part of the week coinciding with the tenor of the rumours in circulation. After the prolonged and uninterrupted decline in prices since the beginning of the season, the market was tuned for reaction, and speculative purchases, followed by short sellers getting nervous and showing anxiety to cover in a portion of their commitments, brought about a material enhancement in values, resulting on balance in a 3s. to 4s. advance being consolidated. The market closed strong with purchases exceeding 4,000 tons, being the heaviest weekly total recorded since the start of the season.

Figs.

The estimated arrivals on the Smyrna market since the opening of the season total 20,016 tons against 19,710 tons for the same period of last year; the sales to date are put at 19,231 tons against 18,685 tons.

Market Conditions.—The market continues strong with an upward tendency in prices. Inferior fruit, however, is not moving readily, and only finds a home for consumption in the local distilleries. Good quality is in strong demand for export.

First shipments of new figs to the States per s.s. Sinalia have been released from Customs. It is reported that some parcels ex the Blair (second steamer) have been detained. The s.s. Giulia, third steamer, has only just arrived in New York.

Judging by the heavy increase in shipments to the States as compared with last year, shippers generally appear to be of an optimistic mind as regards the chances of getting their figs through the Customs inspection this season. End September shipments have been on a heavy scale and now bring up the totals to date to above last year's figures.

The directors of the Burmah Oil Company have declared an interim dividend of 10 per cent. (2s. per share) on the ordinary shares, payable on November 6 to holders registered on October 11.

J. Henry Schroder and Co. announce in connexion with the Roumanian Government 4½ per Cent. Loan of 1913 that with reference to the schedules to the agreement of July 4, 1928, between the Roumanian Government and themselves, they are authorised by the Roumanian Government to state that arrears of capital and interest on 1,349 Bonds of Part 2 of the Second Schedule, the numbers of which are announced, will be payable in full, instead of at 20 per cent. only, by the delivery to the holders of the Bonds of the Roumanian Government 4 per Cent. Consolidated Loan of 1922, which, taken at the market price ruling on the day of presentation, will be equal in value to the sum due.

British Consular Reports

VIII.—GREECE.

The following extracts are taken from the report on the economic conditions in Greece down to May last of Mr. R. M. A. Turner, O.B.E., British Commercial Secretary at Athens :—

The outstanding feature of the year 1927 was the large measure of success that attended the efforts of the Government to re-establish the financial position of the country.

It is evident that this success was not obtained without recourse to stringent measures of retrenchment and an increase in the taxation burden, and the effects of the application of such a policy are so divergent, and in some cases so contradictory, that it is difficult to form a lucid opinion as to the actual economic state of the country. On the other hand the increase in the import duties in 1926 would, one was confidently assured, tend to reduce imports, some traders going so far as to assert that the duties were in many cases so high that they would, in the end, defeat their own fiscal object by rendering importation of certain articles impossible. On the other hand, the practical stabilisation of the national currency, or at least the restriction of its exchange fluctuations to a minimum (the drachma was quoted at 380 to the £ in January, and 367.50 to the £ in December), together with the absence of political upheavals, gave a much-needed sense of security to importers and the general public, and thereby tended to increase foreign trade. Again, the efforts towards economy, which resulted in a reduction of the budgets of the various Ministries, combined with a more systematic collection of direct taxes, inevitably diminished the buying power of a very considerable section of the population, while the manifest intention of the Government rigorously to enforce these economies, and the apparent patience with which they and the taxation burdens were borne, undoubtedly contributed to enhance the prestige of Greece abroad, encouraging foreign traders generally to regard Greece with more favourable eyes.

When, in the early part of the year, the Greek War Debt to Great Britain was funded on terms undoubtedly favourable to Greece, and this settlement was accompanied by a promise of British support to any well-considered plan for Greek economic reconstruction, it was felt that the first corner had been turned, and, although the negotiations which concluded in December for the issue of a "Reconstruction Loan" of £9,000,000 under the auspices of the League of Nations were not always easy, yet the fact that they were being steadily pursued was regarded as international recognition of the strengthened position of the country. As in all such cases, the result is due partly to material, but also in no small measure to psychological, causes, the one arising from the other, and operating often with cumulative effect. Of the inter-reaction of material and psychological causes, it may be sufficient to mention that the practical stabilisation of the drachma, which coincided with the declared intention of the Government to place the State finances on a sound footing, produced a sense of security which not only gave an impetus to commerce and industry, but also encouraged the placing of foreign capital in Greece, and some return

to Greece of capital which had been sent out of the country for fear of further depreciation or of renewed Governmental attacks on capital. This return of capital and a readiness on the part of foreign financial groups to advance capital for Greek undertakings, again of itself strengthened the position of the country. Other instances might doubtless be cited where the return of confidence in the economic future operated with cumulative effect. Money was consequently easier, the official discount rate of the National Bank being reduced from 11 to 10 per cent. in June. Private money, however, remained dear, interest varying from 12 to 25 per cent., the rates charged for commercial money being generally higher than for industrial and building enterprises. That nevertheless imports were so considerably higher than in the previous year may be ascribed, on the one hand, to the restricted imports during 1926 and resulting depletion of stocks, and on the other to an increased readiness on the part of foreign shippers to give credit, together with the general return of confidence mentioned above.

Contrary to the expectations of many, the Greek imports and exports during 1927 were considerably higher than during the previous year :—

	1926	1927
Imports	£ 25,865,000	£ 34,200,000
Exports	£ 14,040,000	£ 16,400,000
Import surplus	£ 11,825,000	£ 17,800,000

One encouraging feature of the figures for the foreign trade of Greece during 1927 is a definite increase in the value of exports. The increase appears to have been general for most of the Greek articles of export, but would seem to have been greatest in the case of tobacco, which has now become the most important export article of the country.

It would, perhaps, in this place, be well to endeavour to arrive at some explanation of the manner in which the very considerable adverse trade balance—which is a yearly recurring feature—is liquidated. Apart from such obvious sources of invisible income as shipping—and it must be remembered that Greece owns a considerable mercantile marine—and the money brought into the country by tourists, there have in the past years been various foreign loans for refugees and other purposes which have gone to swell the amounts of foreign exchange available. Among other factors which contribute materially to improve the Greek foreign payment balance, factors which perhaps do not play so large a rôle in the commercial exchange of other countries, probably the most important is the remittance home of considerable sums, amounting, it is

estimated, to several million pounds sterling annually, by Greek emigrants abroad. Further, there is no doubt that the majority of wealthier Greeks have practically all their capital invested abroad, much of the interest on which probably finds its way back to Greece.

Again, it would appear practically certain that a not unimportant part of the Greek foreign trade is financed by wealthy Greek firms resident abroad, the actual Greek importer acting as a kind of selling agent for his non-resident compatriots. When one recollects the wealthy Greek colonies in Egypt, the United Kingdom, France and the United States, such a contention seems not unreasonable.

While some authorities hold that the proceeds of the more evident sources of invisible income, e.g., shipping, only suffice to meet the calls upon the country for its gold payments in respect of the interest and amortisation of its foreign loans, it is possible that there still remains some small balance to be added to the amounts obtained from the other sources above referred to. This is the more creditable, inasmuch as no small proportion of the bonds of many of these loans is in Greek hands. Furthermore, particularly during 1927, considerable sums of money were invested in Greece from abroad, the rich Greek community in Egypt having, it is stated, been large buyers of Greek bonds and house and similar property. It is manifestly impossible to form a definite estimate of the total amounts of the supplementary foreign exchange available to liquidate the adverse trade balance, but these and other factors are, in some quarters at least, considered to be sufficiently productive to leave only a comparatively small amount to be carried forward from year to year as an uncovered deficit.

Another factor to be taken into consideration in examining the Greek trade balance is the general increase that has taken place in the practice of giving credit. Undoubtedly no inconsiderable part of the imports during the past year were made on more or less generous credit terms, particularly easy terms being in many cases given by German, Italian, Czechoslovak, American and other exporters. Thus it will be seen that while the Greek banks maintained, on the whole, their conservative attitude in regard to commercial credits (total advances against shipping documents amounted on December 31, 1927, to Drs. 789,367,345—French Francs 143,509,939—and £1,652,371, as compared with Drs. 753,992,726—French Francs 108,269,800—and £1,318,879 in 1926, and the total discounts on the same dates to Drs. 1,693,689,470—French Francs 32,083,616—and £1,108,867; and Drs. 1,208,743,965—French Francs 27,202,501—and £794,578) foreign exporters had been ready to grant often long term credits to Greek importers. The Greek banks justify their attitude by asserting that the number of merchants and small industrialists has, during recent years, increased considerably in excess of the requirements of the market, and that it therefore becomes an economic duty to restrict credit to only the most healthy and solvent of their customers. If this attitude is

correct, and there is but little doubt that it is, then the question of the granting of credit by foreign shippers is one that merits serious consideration. It must be remembered that in order to balance the budget and obtain a permanently healthy condition of the State Finances, the Government have seen themselves obliged to increase the fiscal burden of the population very materially. While during the earlier part of 1927 the full weight of this new burden had not become fully appreciated, its effect became more apparent with the turn of the year. It is now contended by many Greeks that the buying power of very large sections, particularly of the urban population, has been very materially reduced; the result is that the retailer, himself finding difficulties in getting paid, is demanding longer and longer credits from the wholesaler, while the latter, even if he has obtained credit from his foreign shipper, is often hard put to it to find the wherewithal either to meet his acceptances, or even to clear fresh consignments through the Customs. British firms dealing with Greece should therefore continue to act with circumspection, and in granting credits exercise careful examination.

Thanks to some of the factors above alluded to, there was, however, during 1927, somewhat more capital available in the banks, and the National Bank was able to reduce its rate of discount on the 5th of June to 10 per cent. Despite this alleviation, the banks were, as mentioned above, reluctant to grant commercial credits, and although some Greek capital from abroad and some foreign capital was available for industrial undertakings, both they, and particularly also commercial enterprises, suffered from want of working capital. This lack of capital, together with the increased confidence felt in the economic situation of the country, would appear to have rendered Greece a popular field for consideration by foreign capitalists. While up to the end of the year, so far as is known, no actual foreign loans of any importance have been given to Greek undertakings, various loans are now under consideration, and may possibly be issued during the current year.

These loan schemes, if realised, will, together with the new Greek loan issued under the auspices of the League of Nations, add very considerably to the Greek foreign debt. While there is no doubt that many of them will materially add to the prosperity of the country, and enable a better exploitation of its undoubted natural resources, some misgiving is expressed, not only as to the wisdom of the policy, at this juncture, of further burdening the coming generations, but also lest this influx of foreign capital, even though graduated, may not lead to a "boom," the inevitable resultant reaction from which may have the gravest results. It is to be believed that those directing the economic policy of the country are alive to this later danger, and will see that the loans are only taken up gradually and as the works for which they are intended progress.

The progress made in agricultural development is evidenced by the increased harvest returns during the past year, which augur well for the eventual success of the policy of rendering Greece less dependent on foreign breadstuffs, which at present constitute the heaviest item of expenditure. The successful settlement of the refugees is one of the brightest features in the development of modern Greece, redounding to the credit of the refugees themselves, the Greek administration and the Refugee Settlement Commission. The execution of the various schemes of drainage and reclamation, together with that for the construction and maintenance of an adequate system of roads, will go very far, when supported by the industry of the agricultural refugees, towards improving the general economic conditions of the country. As regards the urban refugees, there is little doubt that their industry in the case of the working classes, and their great energy and more up-to-date methods in the case of the commercial classes, are raising the general level of efficiency in Greek business life, the most marked feature of which was a return of confidence in the economic future of the country.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Friday, the 26th October, 1928, at 11.30 a.m., for the purpose of receiving the Directors' Report and Statements of Accounts for the Year ended 31st March, 1928, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Monday, the 17th, to Monday, the 31st day of December, 1928, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants payable on and after the 1st January, 1929, will be forwarded to the Proprietors on the 31st December, 1928.

By order,

A. MUIRHEAD,
Managing Director.

Company's Offices:—

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 10:—

Egyptian Futures.—Sakel Contract.—We have had rather a featureless week in this market, and values continue to fluctuate round the 17d. level. Just after the American Bureau Report some short covering and stop-loss orders ran prices up somewhat, but lack of outside interest and a reactionary tendency in New York have since caused a weakening, to-night's close showing only minor alterations since our last report.

Trading continues on a very light scale for this period of the year, and outside interest in this contract is, and has been for some little time, very restricted, with the result that the open account appears evenly balanced. Trade reports still indicate a more optimistic tone prevailing, but fine cottons are not meeting their customary demand for this period of the season. It thus appears as if any "bullish" features in other markets under ruling conditions would only have a stabilising effect on this contract, whilst any depressing outside influences might easily force values down to a more attractive difference with other varieties.

We notice in reports from Alexandria that, whilst active spot markets have been experienced, Sakels only form a very minor part of the business transacted. This may, in part, be attributed to the lateness of the crop and consequent light receipts to date, but it also serves as a confirmation that consumers, not only in Lancashire, but in other parts of the world, have switched on to other and more profitable spinnings. The official crop report for September only indicates normal damage and may be construed as slightly "bearish," inasmuch as prospects for a good second picking are favourable. Movements in the Alexandria market have corresponded fairly closely to fluctuations at this side; stocks of tenderable cotton here are limited, and as imports for the next month or so will, unless a radical change in the outlook occurs, be restricted, we are quite prepared to see our contract re-established at a moderate premium. For the immediate future values will probably be held round the present level, the market, however, will later feel the pressure of the crop unless more support develops.

Upper Contract.—A fair amount of activity has again been witnessed in this market during the past week; the undertone on the whole has been quite steady, and a firming up in the basis of the other side has resulted in a reduction of hedge selling by importing houses. Straddle purchases against sales of American have again been favoured, especially by firms acting for Continental interests. Whilst Upper cotton at its present premium appears reasonable, we cannot anticipate any material widening until a large percentage of the crop has passed into trade channels. The offtake for both spot and forward cotton continues to expand, and as clearer ideas of the size and value of the American crop are beginning to be formulated spinners will probably from now onwards show more enterprise by covering their requirements a little way ahead.

The Alexandria General Produce Association monthly report for October states that the yield per feddan is appreciably higher than last year; prospects for the second picking are good and ginning yields three per cent. higher than 1927. For the time being, it rather appears as if prices will fluctuate in the neighbourhood of 11.75d. to 12d. per lb.; should any factors crop up depressing values well below this figure, we should recommend conservative purchases.

Egyptian Spot.—Steadiness has again characterised all markets, and the disturbance caused by last Monday's Bureau report was slight in nature and of short duration. As usual, the demand slackened off during the two or three days preceding the report, but spinners have kept in close touch with the market, and we expect to see the lost ground soon made good again. Doubtless, between now and the end of the year, sheer weight of cotton may depress prices to somewhat lower levels than those at present ruling, but, should this occur, there is little doubt that spinners will make good use of the occasion. When prices fluctuate freely buyers grumble freely and we are invariably told that "what the trade wants is steady prices." For weeks past now prices have remained extraordinarily steady, and, though at the moment spinners are reported to have no confidence in current rates, their purchases have been increasing steadily. Spot sales are notoriously unreliable as an indication of the state of trade, but when day after day trading in cotton for forward delivery is reported as "good" then we think that the facts speak for themselves.

There is little fresh to report as to the quality of the demand which has run on the usual stereotyped lines. Sakel still appears to be making some headway, and an improved business has undoubtedly taken place in the Good Fair to Fully Good grades. Low cotton at from 10.50d. to 14.50d. has been in steady request. Uppers have again maintained their position as "best sellers," and the type of cotton in popular request has been of a bright attractive appearance, without anything very much in the staple to recommend it. There are some cheap sellers about and the market is irregular. On the spot, there has been a brisk demand for cotton at from 25 off to 25 on November contracts. Cotton over "Good" in grade, either in Sakel or Upper, has been difficult to move, although there does appear to be a little more doing in the finer qualities of Sakel. Pilion has been in moderate demand, but Nahda, Maarad, Fuadi, etc., have been neglected. New crop cotton of any growth is eagerly awaited. The Sudan market has been very quiet.

Forwardings to spinners for the week ending the 5th inst. were returned as 4,583 bales Egyptian and 1,552 bales Sudan. Estimated spot sales, 2,100 bales Egyptian and 200 bales Sudan. Quotations of Sakel show a small decline on the week of 15 points. Uppers and Pilion are unchanged for Extra Fine, with other grades advanced 5 points. F.G.F. Sakel to-day, 17.55d. F.G.F. Upper to-day, 12.15d. F.G.F. Pilion to-day, 13.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 4, state:—

The market since our last report has been active; the tone has been rather firm. The week's summary of price movements is as follows:—Sakellaridis: November, 34.38 dollars, 0.03 dollars up; January, 34.88 dollars, 0.10 dollars up; March, 35.27 dollars, 0.01 dollars down. Ashmouni: October, 21.77 dollars, 0.44 dollars up; December, 22.32 dollars, 0.34 dollars up; February, 22.85 dollars, 0.32 dollars up; April, 23.38 dollars, 0.31 dollars up.

Sakel.—The rise of last week has been maintained in spite of the continued poorness of the demand from abroad and the commencement of regular arrivals of new cotton. The relative firmness of the market is remarkable, but may be explained by the apathy of local speculators and the absence, for the time being, of hedge selling by growers and up-country merchants. As the season advances and the crop movement becomes more intense, we shall, of course, see more and more sales against arrivals and the effect on the market of these sales will depend on the demand from spinners. Our advices from Khartoum predict a slight increase in the acreage of Sudan Sakel this year and a crop, under normal conditions, of at least half a million kantars. The Sakel/Ashmouni straddle stands at 1,261 points against 1,302 points last week and 913 points at this date last year.

Uppers.—This market has been very firm during the week and the difference with Sakel is slightly narrower. The improvement in the tone may be attributed to the closing out of the straddles which were in favour during the summer, viz., sales of Ashmouni against purchases of Sakel; this week has also seen some straddling of Uppers against sales of American in New York. The demand from spinners has been again quite good and some important orders have been booked.

At the first October tender only 250 kantars dockets were issued; the market had expected a large tender and, as a result, the difference

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

October/December has narrowed from 70 to 45 points. The Ashmouni American straddle is 327 points (December/December) against 312 points (December/December) last week and 731 points (December, December) a year ago.

Present prices of Ashmouni seem reasonable, and are attracting the attention of spinners generally using American; on the other hand, however, the production is so big that this extra consumption will take some time to make itself felt, and we think that, for the time being, Ashmouni prices will follow American fluctuations fairly closely. The American Bureau Report will be published on Monday, the 8th inst., and is awaited with some anxiety.

Spot.—The past week has witnessed a further expansion of activity at Minet el Bassal and a large business has been done. Sales amount to about 33,000 bales, of which we estimate 6,625 bales Sakellaridis, 24,300 bales Ashmouni and Zagora, 1,900 bales Pilon, and 175 bales other varieties. As last week, Upper Egypt has attracted by far the greater proportion of the total business transacted, and Sakel is still rather neglected.

Sakellaridis: A somewhat larger turnover has been effected but demand is still very mediocre, though business has been done in all grades. Spot differences show very little actual change from last week but are inclined to ease.

Ashmouni and Zagora: Continue to attract a very large business, chiefly for the medium styles, though all grades have changed hands. Spot differences are generally dearer than last week.

Pilon: Continues in good favour with buyers and a very good business has been done, mainly in the better grades.

Other Varieties: A small business has been done in White, and such lots of Nahda as have been offered have been readily disposed of at good prices, especially the higher grades.

Crop, 1928.—Weather conditions have been favourable during the week and very helpful to the green bolls still on the plants.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at August 31, 1928, published in conformity with Article 6 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Notes of the Week.

A Royal Progress in Egypt.

King Fuad's visit to the Siwa Oasis has a wider interest than would attach to a royal tour in a more accessible part of Egypt. During the War the Egyptians were reminded of their continental position by having the Turks hammering at their eastern door, and the Senussi for a brief period on the west. Since then the rectification of the western frontier, which gave Jarabub to Italy, has drawn further attention to Egypt's proximity to the play of European forces. The very remoteness of the Siwa Oasis is a reminder of responsibilities that may not always be present to town dwellers on the Nile, and King Fuad has done well to emphasize a national unity which has to rise superior to geographical distances. Not the least value of this royal visit is the impetus that it has given to the lessening of those distances. Siwa will now be connected with the coast by a motor road instead of by merely a desert track. The railway, which before the War went as far as Ras el Daba, but sacrificed a hundred kilometres of its length to provide rails for Sinai in the advance against the Turks, will now be extended and may one day reach even Siwa. If that should come to pass, other uses are likely to be found for the distant oasis than that of a convenient centre for the scientific exploration of the surrounding region. By then, something more will have been heard, perhaps, of the bold project for letting the Mediterranean into the Qattara depression. Egypt has handled the torch of civilization in many ages, and it may be that she has yet to be the means of throwing its light over one of those portions of the earth before which civilised man is inclined to admit his limitations by labelling them Desert.

Egypt's Codlin and Short.

One of the grievances of the Egyptian Opposition against the Government of Mahomed Pasha Mahmoud is that the latter is taking to itself credit for reforms that had been prepared or voted by the Parliament which has been suspended. In these days, with the experience of so many countries to serve as a guide, few Governments

are likely to waste time in claiming originality for ideas, and least of all a Ministry that has shown that its *raison d'être* lies in action, not in words. If the reforms of which the present Government has made a beginning, within a few months of taking office, were already on the Egyptian Statute Book, the failure of previous Governments to carry them into practice becomes the more notable, and an explanation has to be sought in that fatal paralysis of the administration for which the domination of Parliament by Wafd extremists was responsible. No one supposes that the need for the numerous reforms which Mahmoud Pasha's Ministry has already started was not recognized by a large number of Egyptians long ago, and it would have been strange indeed, if the reforms had not been mooted in Parliament. If any credit, however, is attached to them, it belongs to those who carry them into effect rather than to those who claim merely to have discovered Egypt's need of the reforms. The outside world, if appeal is made to its judgment, is more likely to be impressed by what the new Government accomplishes for the benefit of Egypt than by denunciation of its action in suspending Parliament. The step was admittedly a drastic one, and more often than not connotes hostility to parliamentary government in the abstract. So far Mahmoud Pasha's Cabinet has done nothing to suggest such hostility, and the dispassionate onlooker is not prepared to regard the future of parliamentary government as identified with the perpetuation of Egypt's peculiar adaptation of it.

Students and Politics

What may yet prove to be by no means the least striking or the least beneficial of the new Government's innovations was indicated by Mohamed Pasha Mahmoud's action in refusing to allow a student to present him with an address of welcome, on the ground that Egyptian students must henceforth abandon their obsession for politics and stick to their studies. No seriously-minded politician in Egypt can fail to ignore the harm that has been done to the country by the roping in of students as

a factor in the country's politics. The temptation to which the Wafd yielded in so doing may have been great, but it is impossible to justify its action in the light of the effect on the students' careers. Inevitably and demonstrably the standard of Egyptian scholarship has suffered; and the suspension of Parliament will have been justified, if for no other reason, if it serves to free the student class from the distractions of politics for a few years, until the fatal practice of the last decade has had time to lose its hold as a tradition on the student mind. It is, therefore, a matter for regret to those who have the interests of Egypt at heart and are not involved in Egyptian party politics to note that the propagandists whom the Wafd have sent to England are trying to perpetuate what amounts to a crime against the student class of Egypt by instilling their doctrines into those who are supposed to be prosecuting their studies in this country. The time to make politicians of them will be when they have finished their studies. That a Wafdist ex-Minister should find it necessary to come all this way to win students to his way of thinking suggests that not only the fortunes, but also the confidence and self-respect of the Party have fallen very low.

Foreign Residents in Roumania.

A Roumanian Decree that came into force on October 8, which appeared to guarantee to certain classes of foreigners permission to continue residence in Roumania for periods of three years, two years and one year, and enumerated other classes whose permits to reside in the country would not be extended, has not unnaturally caused uneasiness among foreign business men and workers. An official statement issued by the Roumanian Government disclaims any measures of expulsion for political ends, and describes the Decree as in the nature of a "revision which takes place every year in order to determine whether permits to reside in the country granted to foreigners should be renewed for a further period." It is to be hoped that this explanation will prove as reassuring in practice as it is intended to be. A most unfortunate impression would be conveyed abroad, if, for instance, the Roumanian Government, having modified its intention to compel foreign companies to employ only Roumanians, were now to aim at enforcing its former decision by ordering the expulsion of foreign employees. The fullest sympathy will be felt with any Government faced with the problem of unemployment; but the peculiar circumstances of many industries in Roumania must not be overlooked. Where foreign capital was deliberately invited to perform in Roumania what the Roumanians could not do themselves, the greatest possible care should be exercised to avoid such a charge as that an attempt is now being made to impair the security of the capital so invested. Any steps that tend to weaken the efficiency of a company or an enterprise by interfering with its personnel must impair the security of its capital. It is difficult to believe that the country or its business efficiency benefits by the appointment of Roumanians to positions in which they are not qualified to do the work entailed, merely to carry out the provisions of a Law which requires a certain percentage of a directorate or staff to be Roumanian. Individual Roumanians may benefit, but a business edifice built up on such artificial foundations cannot be inherently sound.

Serbs and Croats.

The activities of M. Milosh Savtchitch, who, either of his own initiative, or, as seems more likely, at the prompting of King Alexander, is exploring the ground for a reconciliation between the Croats and the Serbs, have already had the effect of creating a better atmosphere in Yugoslavia. M. Savtchitch was favourably placed for his task. A Banker by calling, he has played his part in the political life of the country, but since the split in the Democratic ranks has held aloof from party politics, while retaining the personal friendship of both M. Pribitchevitch

and Dr. Davidovitch. He has shrewdly laid stress on the economic crisis through which Yugoslavia is passing, and his contention that the situation cannot improve, until the political deadlock has been removed, and that it stands to grow worse with delay, makes a strong appeal to business circles throughout the country. Accordingly a considerable section of the Serbs as well as of the Croats seems to have acquired the will of reconciliation, and the politicians cannot well hold back much longer. The election of M. Vukitchevitch as President of the Radical Club may be resented in Zagreb, but the Croats will do well not to expect the "enemy" to make too hurried a retreat all along the line. Any compromise inevitably entails concessions on each side, and so far it is the Serbs rather than the Croats who seem disposed to abandon their former intransigent attitude.

An Amnesty in Greece.

M. Venizelos has, logically and wisely, followed up the liberation of General Pangalos from prison—one of his first measures on returning to power—by granting an amnesty for all political offences committed since 1925. The Greek Government places on record its disapproval of the Pangalist dictatorship, but considers that during the present period of intensive internal organization Greece should be freed from the strife which would inevitably be caused by any judicial raking up of the past. Even if he were to achieve nothing else, M. Venizelos would have justified his resumption of office by this one step alone. A grave reproach rested on the Greek politicians who formed the Governments between September 1926 and September 1928 for deliberately keeping a political sore open by the retention of General Pangalos in prison, while they lacked the moral courage to release him or to bring him to trial. The step now taken should mark a further stage in the restoration of normal relations between monarchists and republicans. General Pangalos and his dictatorship are claimed by neither, but action against him kept alive ill-feeling on both sides. Their ordinary leaders failed Greece when the opportunity was theirs, so both parties have reason to be thankful that they can fall back on a Greek who is now getting things done.

The Riddle of the Dodecanese.

The Dodecanesans, it is to be feared, share with other inhabitants of the wide East the habit of telling the inquirer what they imagine that he would like to hear. To those interested in the subject the letter that we publish on another page may be commended for careful study. The writer has recently paid a visit to the Islands, and he sums up his impressions in a letter of considerable interest. He found "exceedingly friendly intercourse between Greeks and Italians in society and between the Carabinieri and the people in the outlying villages. The relations between the latter were, in fact, particularly striking and, in some cases, touching." He adds: "The Italians may well be proud of their work and not least for their success in creating a genuine spirit of collaboration between themselves and the people over whose destiny they preside." In June of this year was published a book, entitled "Italy's Ægean Possessions," by Mr. and Mrs. C. D. Booth. These authors present a different picture; they record the grievances of the islanders, but without taking it upon themselves to pronounce judgment on the validity of those grievances. Thus they write: "The details of the complaints made by the inhabitants are so numerous that they cannot be set forth in a work of this kind, nor could they be examined except by an impartial body receiving and sifting evidence over a period of many months. But the substance of them is, that, since Italy came to the Dodecanese, the ancient privileges have been suppressed, land has been unfairly expropriated, taxes have been inordinately increased, religious and educational institutions have been interfered with, and last, but not least, the people have been harshly and brutally treated by carabinieri and other minor officials."

The Turco-Syrian Border.

The report of trouble on the frontier between Turkey and Syria, a report which there is as yet no means of verifying, inevitably reminds one that the vexed problem of the frontier between the Turkish State and Syria in the neighbourhood of Nisibin is still, in spite of the fact that a decision has been made by a neutral arbitrator, General Ernst, unsettled. The Turks have steadfastly refused to accept the award to which they had previously bound themselves. In the meantime, it is perhaps natural that there should be signs of unrest on either side of the border—for this corner of north-east Syria is in any case a region where the reign of order and of law has not been very seriously enforced. The report from Constantinople of brigandage and pillage being the order of the day is probably propaganda, but the Turks have always complained, and with apparent justification, that there is an extensive trade in contraband. The French would possibly be the first to admit that their control of north-east Syria is of a loose sort, but two blacks do not make a white; and the Turks would place themselves in a much stronger position were they at once to accept the findings of the neutral arbitration on the exact line of the frontier.

Rumours about Iraq.

As the year 1928, by the end of which, unless the matter is to go to arbitration, the problem of the future of the Iraq Railways has to be solved, draws to a close, it is perhaps inevitable that the still unratified Anglo-Iraqi Treaty should be the subject of constant rumour. The native Iraqi Press appears to be full of such reports, but it seems a pity that echoes of these unconfirmed reports should find their way into responsible British papers. During the last week, however, it has been confidently reported from Basrah (as if matters principally affecting London should be reported from Manchester!) that the future ownership and administration of the Iraq Railways had been decided, and that, as a consequence of this, the recommendations of the Hammond Report, which was summarised in THE NEAR EAST AND INDIA at the time of its publication, would in the very near future be put into effect. It was even stated that a loan to enable these recommendations to be so put into effect would be issued without delay, owing to the fact that there was a very strong move on the part of financial interests to connect Nisibin with Mosul, and so rob Iraq of the traffic from Southern Kurdistan. There is in all this rumour, however, no word of truth at present. The fact is that nothing at all has been decided, and observers of the

development of Iraq would be wise to examine very carefully all reports upon this matter that emanate from Basrah, which, it may be remembered, already has an unenviable reputation for inaccuracy through the wild stories that it spread at the time of the tension along the Iraqi-Najdi frontier. Another report from Iraq which is inaccurate concerns the appointment of Sir John Campbell to be Adviser to the Ministry of Finance. The post which formerly was held by Mr. R. V. Vernon remains vacant.

INDIAN NOTES.

Ave Atque Vale.

After many "alarums and excursions off" the resignation of Lord Birkenhead is at last an accomplished fact, and already his successor is installed at the India Office. The Prime Minister's choice, as was anticipated, has fallen upon Lord Peel who filled the same post from the date of the formation of Mr. Bonar Law's Government in 1922 until the Labour Party took office for the first time two years later, and has since officiated with distinction as First Commissioner of Works. Lord Peel's selection has met with general approval, for there are few men with a better record in public administration, and it is, moreover, of distinct advantage that the new Secretary of State, at so critical a time in the history of India, should be thoroughly familiar with the administrative side of his duties in order that he may have more time in which to familiarise himself with the many and varied aspects of the thousand and one special problems that the Simon Commission is endeavouring to resolve. If Lord Birkenhead's decision was irrevocable, he has certainly consulted the public interest in determining to retire at the present juncture rather than wait until after the General Election. For, as he points out in his letter to the Prime Minister, the Commissioners' report will impose exceptional responsibilities upon the Secretary of State for India during the next few years. Lord Peel's record during his earlier incumbency and the broadminded and well-informed character of his subsequent references to Indian and other questions of the day encourage the belief that he will not be found wanting when the testing time arrives. While regret at Lord Birkenhead's retirement from politics will be widespread, and by no means confined to those who think with him politically, it is idle to pretend that during the latter years, particularly, of his tenure of the India Office, he has incurred not altogether unjustifiable criticism. The possessor of one of the finest intellects in the service of the State, he has been responsible in other fields for some of the best constructive statesmanship of our generation, but he also suffers from the defects of those qualities. "It is too early yet," observes Mr. Baldwin, in acknowledging his colleague's resignation, "to estimate the value of your work at the India Office, but I am confident that the history of our time will do it justice." To the outgoing Secretary of State more than of his distinguished predecessors, perhaps, Lord Morley's words apply most closely: "The outcome, the final outcome, of British rule in India may be a profitable study for the musings of meditative minds. But we are not here to muse. We have the duty of to-day to perform. We have the tasks of to-morrow spread out before us."

Father Douglas.

Precisely forty years ago a well-known authority on India said that: "the Oxford Brotherhood in Calcutta discloses the strange spectacle of men of birth and scholarship living in common a life of apostolic simplicity and self-sacrifice." Father Douglas, to whom Lord Lytton paid a well-merited tribute the other day at a meeting of the London Missionary Society, is a devoted member of this Brotherhood—the Oxford University

PALESTINE AND THE JEWS.

At this particular moment, considerable tension exists between Jewry and the Government of Palestine, in the one case, and the Jews in Palestine and the Arab population in the other. It is, in fact, both a grave and a sad period in the history of Palestine under the British Mandate. Not since 1922 and 1925, when the Wailing Wall came into prominence, has such cleavage between Arab and Jewish communities in Palestine been manifest. From the point of view of peace and quiet in Palestine—and it should particularly be remembered that matters affecting Jew and Arab had been proceeding very smoothly in the last year or two—it is a matter of profound regret that such bitter feelings should have been engendered through the unfortunate incident, already recorded in our "Notes of the Week," that took place on the Day of Atonement at the Wailing Wall. From all aspects, indeed, the event is to be deplored. But to any impartial observer it is perfectly obvious that, however petty may appear to be the attitude of the Muslims, the Jews were absolutely and entirely in the wrong in the first place. Since the matter is manifestly to be given considerable publicity in the future, it may be well to recall the origins of the dispute. A screen was put up by the Jews in a public thoroughfare. The attention of the Palestine Police was called to the matter. They ordered the responsible Jews to remove the obstruction, and a promise to do so was obtained. But on the Day of Atonement it was discovered that this promise had not been fulfilled; nor was it possible, on this Holy Day, to obtain a fulfilment of this promise. Realising, therefore, that such an infringement of the *status quo* could not be permitted, and realising, moreover, what should never be forgotten, that bloodshed was more than likely if the obstruction were not removed, as the result of Muslim resentment of Jewish pretensions, the Police forcibly removed the offending structure. It may be—we cannot tell—that there was a display of unnecessary violence on the part of the authorities; admittedly we have read somewhere that one American lady had her foot trodden upon. But to revile the Police, as the Jews almost all over the world appear to be doing, is simply to display ignorance of local conditions and local feeling in Jerusalem. No one who is aware of the fanaticism of claimants to local rights in Jerusalem will fail to believe that the shedding of blood on this occasion was a distinct possibility so long as the offending screen remained on a site, where, for all the Muslims knew, a claim might be made by Jews for a structure always to be in place. With the praying Jews and Jewesses at the Wall we have very considerable sympathy: it was no fault of theirs that their immemorial practices should thus be rudely interfered with. To interrupt anyone's religious exercise at any time is unseemly; to interrupt it at the holiest of all times is particularly regrettable. That fact, however, should not blind one to the identity of the original culprits, who laid on the Palestine Police a duty the fulfilment of which no self-respecting force could postpone. If the cause of peace

and amity in Palestine is to receive a set-back as the result of all this Jewish protest and of all this counter Muslim claim, it is an obligation to remember upon whom the chief responsibility lies.

The plain fact is that, were an impartial authority like Great Britain not in charge in the City of Jerusalem, the various claims of the different religious communities would be made in much more violent fashion than is now possible. It is all very well for excited Jews to exclaim, as they exclaimed when the present Governor of Cyprus was Governor of Jerusalem, that never had they received such treatment since the days of Hadrian as they received at the hands of Sir Ronald Storrs, or to announce that the present British authorities in Palestine are denying them rights which were scrupulously respected even in Turkish times. For the Jews in the Holy Land must know that, since the Balfour Declaration, the Arabs regard them and any claims which they care to set up with anxious eyes; they must know that, if they infringe existing rights in Palestine (by means such as the erection of the partition) the very basis of the Mandate which Great Britain is in the Holy Land to fulfil is menaced. The indignation of those Jews who, seeing only the "outrage" done to worshippers by the Western Wall, and ignoring both the causes of the Police's interference and the fact that, in the worshippers' own interest, postponement of interference was ill-advised, is quite comprehensible, but it is not intelligent. The obvious duty which is incumbent upon the Jewish authorities in Palestine is now so to co-operate with the Government that a recurrence of such an event by the Wall is impossible. A way out of this most regrettable *impasse* must be found, and we have no doubt that with good will and moderation—virtues which the Jews certainly possess is as great a degree as other peoples—means will be devised for the satisfaction of Jewish religious needs at the Wailing Wall, without any trampling upon a very sensitive Muslim public opinion.

For, despite such happenings as this affair at the Wall, general wisdom is descending upon Jews in Palestine. Idealists there must always be, but there is now a visible tendency—even at Tel-Aviv—to make sure that foundations are laid in fact, not in impossible fancy. Gradually, reluctantly, but courageously Jews both in and outside the Holy Land are learning the truth about the possibilities of Palestine as a place of settlement for members of their race. If nothing else could demonstrate the utter impracticability of political Zionism, or of the policy of a Jewish National State, two facts alone could do so; the fact that ever since the middle of 1926 more Jews have had to leave Palestine than could immigrate into the Holy Land, and the fact that, but a few days ago, Dr. Weizmann arrived in America for the absolutely essential purpose of arranging matters so that non-Zionists could contribute to the sadly dwindling funds in support of a "Jewish National Home" in Palestine. It is, indeed, slowly dawning on everyone concerned in this problem of the settlement of Jews in Palestine, Jewish as well as non-Jewish, that the Holy Land, so far from ever containing a majority of Jews, can never be more than a place of spiritual regeneration for the race, a country in which the religious, the cultural, the historic feelings of the Jews may be deepened and refreshed. Dreams of Jewish governance, of Jewish overlordship, are now gone into the limbo of unpractical, if not yet forgotten, things. For there is a limit to Palestine, there is a limit to Jewish immigration. Nothing, on the other hand, can stay the Arabs' natural increase of population. To pretend that the contrary is true is merely to walk in a world of fancy, fancy which may do harm both to Jew and to Arab. But what is possible in Palestine is, even from the Jews' point of view, sufficient for the aspirations of their race. A Power like Great Britain, at any rate, cannot ignore the fact that conditions in Palestine can never be again what they were two thousand years ago, whether those conditions be viewed from the religious or the social or the political or the economic aspect.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, October 18.

M. Milosh Savtchitch, one of the leading members of the Peasant-Democrat Coalition, is continuing his attempts to find some formula on which Belgrade and Zagreb can both agree for the renewal of relations. "By chance," it is announced, he met his old friend, M. Davidovitch, with whom he conversed for over two hours; and "by chance" again Dr. Koroshetz, Dr. Spaho, and M. Yovan Yovanovitch as well. Presumably it will be "by chance" that he will meet M. Aca Stanoyevitch and perhaps M. Vukitchevitch too, within the next few days. If only his luck holds and he can "by chance" meet M. Pribitchevitch, M. Machek and M. Predavatz, M. Savtchitch should be in a good position to judge of the possibility of agreement.

M. Savtchitch's action is favoured by Belgrade, and he has been well received by all the party leaders whom he has met. Dr. Davidovitch held that an agreement is essential at all costs. The Democrats would like to know, however, exactly what are the desires of the Peasant-Democrat bloc, and especially what changes they would like to make in the Constitution. They are quite prepared for elections. It is said that Dr. Koroshetz assured M. Savtchitch of his sympathetic desire for agreement with the Croats, which is all the greater since the Slovenian People's Party experienced for themselves, until quite recently, all the inconveniences of a strongly centralistic organisation of the State. In this respect it should be borne in mind that, until the last elections, Dr. Koroshetz and his party were most doggedly against the present Constitution and energetically sought its alteration in the direction of federation. The Bosnian Muslims, who are not on too good terms with some of the Radicals, also want an agreement to be reached as soon as possible, but they do not think that the time is ripe for elections yet. If elections are held, however, they think that they should be carried through by a normal parliamentary Government in accordance with ordinary usage. With the Serbian Peasant Party M. Savtchitch found himself in perfect accord, for they have been persistently in opposition since long before June 20 and demand an immediate agreement without condition or reserve, free elections, and a revision of the Constitution which would result in complete equality of the citizens of all parts of the country. This, of course, the present Constitution should give, but, rightly or wrongly, the people from the new provinces believe that they have not the same chance of reaching the higher ranks of the Diplomatic and Civil Services or of the Army as have those born in Belgrade and district. This may merely result from the fact that the Serbian parties have been in office almost all the time since the unification and the Civil Service is openly a political one.

With M. Aca Stanoyevitch M. Savtchitch should have no difficulty, for the National Executive group of Radicals have even gone so far in their desire to prove their sympathy with the Croats as to abstain, unofficially, from all collaboration in the work of the present Skupshtina, and

it is well known that they are eager for an agreement with Zagreb, elections; and a reconsideration of certain clauses of the Constitution. Whether he goes to see M. Vukitchevitch as well will depend largely on the events of the next two days.

On October 20 the Skupshtina will hold the first meeting of a new session. This means the re-election of officers, and it is not sure who will be elected by the Radicals as their candidate for the Presidency of the Skupshtina. If M. Ninko Peritch is re-elected, this will be considered as a direct challenge by the Zagreb parties; but if a member of the National Executive group is chosen a great step forward will have been made. Similarly the President of the Radical Club must be elected anew. If M. Vukitchevitch, who seems to have a majority in the Club, which is composed of the Radical M.P.s, is elected, M. Savtchitch will be obliged to consult him too. The National Executive seems to command a majority among the Radical masses in the country and may be able to exert sufficient influence in the Club to secure the election of someone less politically compromised than M. Vukitchevitch.

In Zagreb M. Savtchitch's activities have met with a cool reception. It is stated that M. Pribitchevitch has asked him, through friends, to refrain from further conversations with these people, since they are all involved in the social boycott which the Peasant-Democrat Coalition is still trying to enforce against all who help the present Government in any way. But it is said that the disciplinary measures laid down for those who break the boycott will not be enforced against M. Savtchitch, since it is recognised that, as a Serbian, he is in a difficult position and he has always insisted throughout that he is acting on his own initiative and not as a representative of his party.

A start has at least been made. The difficulties still in the way of an agreement between Belgrade and Zagreb are enormous, but the outlook is much brighter than it has been for many months. Perhaps the most important aspect of the present negotiations between M. Savtchitch and the party leaders is that they are being conducted more from the point of view of economics than political necessity. M. Savtchitch's view is that if, as it seems, the various parties are agreed that they intend to keep a united country, and only to modify the present Constitution and to improve the administration, it is absurd to waste time at a moment when the country is in grave economic difficulties, which are far more important than mere matters of political polemics. On this basis a working agreement might be reached.

Mr. Ramsay MacDonald's Visit to Prague.

M. Machek and M. Predavatz, the leaders of the Croatian Peasant Party, are in Prague attending a conference of Peasant Parties, at which they are reported to have met Mr. Ramsay MacDonald. The Croats are inclined to attribute great importance to this meeting, for they recall M. Raditch's meeting with Mr. MacDonald in London when he was Prime Minister, after which the important decision to give up the policy of abstaining and to go to Belgrade was reached. The Zagreb papers suggest that the British elections of next spring will surely result in the return of the Labour Party to office and have great hopes that the great influence

Mr. MacDonald would then have will be exerted in their favour.

General Sir Charles J. Briggs in Belgrade.

As Field-Marshal Sir George Milne, who commanded the British troops on the Salonika front, was unable to attend the celebration of the Tenth Anniversary of the Salonika Victory, Lieut.-General Sir Charles Briggs was sent to represent the British Army. Sir Charles was very favourably impressed by his reception at the station and wherever he went in Belgrade. He was particularly pleased to be invited to ride with the King to inspect the troops on the day of the great review, and to remain with him during the march past. He expressed himself as very favourably impressed by the troops and especially by their smart bearing and good marching at the review point. He recalled how, on the Salonika front, they had won the admiration of the British Army by the speed with which they recovered from the suffering and privations of the retreat through Albania and reformed themselves into a magnificent fighting force, the only European troops which could possibly have gone so far daily with so scanty rations, as they did when they broke through the enemy's lines and pursued them all the way to Belgrade.

At the gala performance given at the National Theatre the many distinguished visitors from other lands were surprised and delighted at the beauty of form, colour and movement shown in acts taken from a Serbian historical play, a national musical play and a Croatian ballet. The décor and production were excellent and the dancing delightful.

Macedonia.

Recently many foreign visitors have passed through all parts of Macedonia, and all on their return tell the same story—admiration for the excellent roads, the rapidly growing railway system, the economic development of Skoplye and other centres, and the general air of advancement shown in this district despite two bad years.

From Bulgaria come censored reports of innumerable political murders, even in the streets of Sofia itself, of pitched battles between the followers of the late Protogeroff and Vantcha Mihailoff, of the terrorisation of the peasants of Bulgarian Macedonia by *komitajis*, the raising of special additional taxes for their own purpose, the murder and torture of all who oppose them. It is a grave misfortune for Bulgaria, but it leads one to reflect that it ill behoves those who have had so little success with their own Macedonian problem to offer advice to their neighbours through the Association of League of Nations Union as to how they should deal with theirs.

M. Venizelos' Visit.

M. Venizelos has continued his triumphant journey, and all who hope for Balkan peace must welcome the success that he had here in Belgrade. It must not, however, be thought that all difficulties between Greece and Yugoslavia are settled. The great problem of the transport of arms and men through Salonika in case of war (which was only

solved in the last war by a virtual breach of Greece's neutrality by the Allies) has yet to be solved, and the terms of good will and friendship at the end of the protocols exchanged by M. Venizelos and M. Shumenkovitch have yet to be turned into deeds before real friendship is established, and another great step is completed towards assuring that security so essential to this turbulent peninsula.

Cairo, October 13.

King's Accession Anniversary.

The eleventh anniversary of the King's accession, which fell on October 9, was celebrated with unwonted enthusiasm, particularly in Alexandria, where, as the seat of Government at the present moment, the principal celebrations took place. In the morning there was a full-dress reception at Ras-El-Tin Palace, which was the largest ever held there—with the exception of the welcome given to His Majesty when he returned from his European tour last autumn. On this occasion it was noticeable that there was an abnormally large element from the provinces. In regard to the official celebration an important and very wise departure from precedent was inaugurated. Hitherto, apart from the Municipality reception of the King, a dinner has been given in the evening by the Governor and a tea party in the afternoon by the Prime Minister. This division of programme between the Government and the Municipality has always been regarded as inconsistent, particularly as the tea party was given in one of the public gardens belonging to the Municipality, who should by rights have been the hosts in their own domain. Mohamed Mahmoud Pasha very rightly has caused the rôles to be reversed this year. The Municipality gave the garden party in the Antoniadis Garden, at which Prince Omar Tussun represented the King. This party was followed by a reception at the Municipality House at which the King received addresses of congratulation in Arabic and French, and in the evening a banquet of two hundred and sixty covers was given by the Prime Minister at San Stefano Casino, the management of which quite surpassed itself in the manner in which it laid out the area used as a banqueting hall and provided and served the menu. At night the whole of the centre of the city was illuminated on a scale which produced a most pleasing effect.

18, OLD BROAD ST., LONDON, E.C.2

The Royal Visit to the Western Desert.

King Fuad left to-day on his trip to the Western Desert, including the Oasis of Siwa. This is the first time the King has visited this part of his country, and great preparations have been made at all the points where he will stay. It was, indeed, an excellent idea for the King to make this visit, for the tribes of this vast outlying portion of Egyptian territory have never had any real contact with the sovereign to whom they owe fealty. Before the War this area was to all intents and purposes No Man's Land, and only when the Italians occupied Tripoli was there any attempt at defining the frontier and controlling the tribes. During the War, of course, the control was very much more drastic, and since the Armistice there has been a considerable tightening up of the administration and a bringing into line of the various tribes. The fact that the King will have been in their midst should make the tribes more ready to acquiesce in the form of government to which they are now subjected.

Incidentally the King's visit should call attention to a portion of Egypt which is little known to the tourist, but is well worth a visit. Siwa teems with interest, and there are many points on the way from Alexandria which are worthy of inspection. Things that have probably prevented any tourist exploitation of this area have been the bad communications and the absence of any of the amenities which are necessary to attract visitors. But the King's visit will result in improving very materially the means of communications between Siwa and Sollum and Hammam, the terminus of the Mariut Railway, while with a little encouragement from the authorities there is little doubt that the amenities will follow and new ground will be opened for the distraction not only of the tourist but also of the residents of Alexandria.

The New Alexandria British Schools.

On Wednesday last the first of the new British schools—the Boys Primary Intermediate—was opened. It may be recollected that last spring the Consul General at Alexandria, Mr. Heathcote Smith, issued under the patronage of Lord Lloyd an appeal for £150,000 for the creation and endowment of British schools in Alexandria, where there has for some time existed a great demand for education on British lines, and the British community of which has been compelled by the lack of such education to send their children to schools run by the French and Italian communities. The response to the appeal was very good, and up to date the sum of £68,000 has been subscribed. This sum would have been almost sufficient to enable the committee to purchase the land for, and start building, one at least of the proposed schools. Unfortunately the scheme of subscription, which permitted subscribers to spread their contribution over five years, has meant that only about £20,000 is available in actual cash, of which £10,000 has had to be passed on to Victoria College under the agreement whereby the appeal was made to the public.

The committee considered, however, that in view of the great demand for British education, especially for boys, they ought not to delay any longer in starting at least the Boys Primary Intermediate school, and so, pending the reception of the amount necessary for buying the land and erecting a building, temporary premises have been taken in the Rue des Pharaons, where the interior has been most satisfactorily adapted to meet the needs of a school. The scheme provided for the reception of a maximum of 100 boys in the first year, and the estimates of those in touch with the community, particularly the

Maltese community, placed at 70 the number of applications which could be expected. The actual number admitted on the first day, by Mr. H. R. Thompson, formerly assistant master at the John Ruskin Central school for boys near Croydon, who has been selected as Headmaster, was 82, which shows that the committee has not been unduly optimistic either in its estimates of the numbers awaiting education or in its view of the need for these schools.

In view of the success of this initial venture it is to be hoped that those in touch with British interests in Egypt and particularly those interested in the spread of British education will do their utmost to assist this scheme to the success to which its object entitles it and send their subscriptions to Barclays Bank (Dominions Colonial and Overseas) Ltd., at Alexandria, who are kindly acting as Honorary Treasurers.

The Queen Elizabeth.

H.M.S. Queen Elizabeth, the flagship of the Mediterranean Command, has just completed another visit to Alexandria, this time with Admiral Sir J. Field, the new Commander-in-Chief, on board. As usual great efforts were made to entertain the officers and the crew both here and in Alexandria, and they seem thoroughly to have enjoyed themselves. Other units of the fleet, the Valiant and the Royal Oak, will come to Port Said some time next week.

Mr. Van Den Bosche.

Everyone has learned with much regret of the intention of Mr. Firmin Van Den Bosche to retire next spring from the Procureur Generalship of the Mixed Courts, and the hope is general that in the interval sufficient arguments will have been found to persuade this popular and able Belgian to reconsider his decision. What makes it appear as improbable that he will do so, is the fact that one of the main reasons for his action is his health, which has suffered considerably as the result of his accident to his leg last year which makes it difficult for him to stand this tropical climate. If he adheres to his intention, Mr. Van Den Bosche's retirement will be a real loss to the community in general. Not only has he been a most courageous and efficient holder of a post which has been filled by many eminent jurists, but he also played a notable part in the affairs both of Alexandria, of which he is one of the Vice-Presidents of the Municipality, and of those of Egypt in general. His advice has repeatedly been sought by all parties at critical moments, and it has been given unstintedly and always proved sound and practical. It is understood that he will retire to Belgium, where he will occupy himself with politics and journalism, incidentally completing his memoirs, which should prove most interesting and entertaining reading. His departure will leave a void which it will be difficult to fill.

CYPRUS.

Nicosia, October 9.

End of Summer Season.

Summer in the hills has passed. The hotels have done very well at Platres and some other hill villages. Heat in the plains has been prolonged and the early part of October, as sometimes happens, has seemed as trying as that of midsummer. The number of visitors from Egypt has been so great that extra steamers have been sent by the Khedivial Company to cope with the demand for passages.

The Mediterranean Squadron.

The visit of a week to the roadstead of Limassol by H.M.S. Royal Oak, Valiant, and Assistance, and the store ship Perthshire, has been very welcome, and has been the occasion of much excitement and gaiety. Some of the vessels went to Larnaca, and others to Famagusta.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
 Further particulars may be obtained of
E. H. Keeling,
 Hon. Sec.
 74, Grosvenor Street W.1.

where there were many exchanges of hospitality and amusements. An intended visit of these vessels to Athens had to be cancelled on account of the prevalence of dengue fever. Other vessels of the Squadron are expected on the 18th of this month. In honour of this visit, horse races will be held at Nicosia on October 21.

Cyprus Wines.

It would appear that once again efforts are to be made to determine whether island vintages can be made to compete with at least some other wines of the Empire. Experts who have recently arrived are dealing with the situation and the outlook of this backward industry. It is said that the capital of the "Cyprus Wine Company"—a Greco-Cypriot Association—is to be largely increased. This Company owns what was some years ago the factory and establishment of Messrs. Chaplin, of London. These are situate a few miles below the summer resorts of Platres and the Troodos Camp. The Company has recently built another factory at Malli, a village consisting chiefly of Turkish residents. The question of Cyprus wines is far too large to discuss in a letter: but it will be very interesting to see what will be the outcome of the present movement, as in that relating to tobacco cultivation.

Water Trouble at Nicosia.

At the capital, scarcity of water has been felt and has caused considerable hardship to many of the poorer classes. This is bound to happen periodically, as in the past, until means can be devised to provide a full and adequate supply of pure drinking water for the whole city. The distribution is at present in the hands of a mixed Water Board, to which it was transferred some years ago from the Municipal Council. There is now much anxiety lest impure water be used in the manufacture of mineral drinks and by bakers, and so increase the danger of dengue fever, of which fresh cases have been reported. Fortunately, all cases of this fever have been, so far, of a mild character.

The Turkish Community.

The changes brought about already, as seen in the widely discarded use of the fez by men and of the veil by women, are being followed by others. In conformity with the edicts ordained in Turkey by the Ghazi Mustapha Kemal, boys in the Ottoman schools of Nicosia are now studying the alphabet in Latin characters and primers. New books will be introduced as soon as they can be obtained. The change will no doubt be adopted in due course in the schools of other districts.

General News.

Talal, son of the Amir Abdullah, of Trans-Jordan, has recently paid a visit to his grandfather, ex-King Husain, at Nicosia, before returning, after a holiday in Trans-Jordan, to England, where he takes up studies at Sandhurst.

Sir Ronald Storrs, with Lady Storrs, and his A.D.C., is expected to arrive at Famagusta on board H.M.S. Bryony, on October 18.

The Legislative Council will meet at Nicosia soon after the Governor's arrival.

ABYSSINIA.

Addis-Ababa, September 29.

The Regent as King.

At the moment of writing, Abyssinia has just passed through an internal crisis. It is always extremely difficult in this country to ascertain the exact truth in domestic matters; hence it is only possible to indicate briefly what has happened, and is happening.

As is well known, the country is governed by Her Majesty the Empress Zauditu, His Highness Tafari Makonnen being Heir to the Throne, and Regent. One may say, therefore, that the country has in fact been split into two camps: that of the Empress, which may be

described as the reactionary, or old-fashioned school, and that of the Regent, who favours progress on modern lines. From time to time the latent rivalry between the two parties comes to the surface.

On the 5th of this month certain chiefs, opposed to the Regent, formed a plot to arrest him. What exactly they intended to do then is not known. His Highness, however, received information of the plot and was able to turn the tables on his would-be captors. The whole matter took place extremely quietly, and few people outside Abyssinian circles knew of what was taking place. The trouble was confined to the Palace of the Empress, which was surrounded by the troops of the Regent. There was no disturbance in the town—in fact, the only sign that anything was happening was the strengthening of the usual police patrols.

For some days *pourparlers* took place between the Regent, the Empress and various important chiefs. It was finally decided, with the consent of the Empress, that His Highness should receive the title of King. It is thought that he will have the title of King of Shoa, but up to the present no definite decision has been announced on this point. In addition it has been decided that his hands as Regent shall be greatly strengthened, and a proclamation has been issued to this effect. The exact extent of his new powers is not known at the moment, but it is thought that although he will only receive the title of King of Shoa, and not of Abyssinia, he will in fact have full powers to govern the whole country. If so, it is hoped that the position here will be greatly ameliorated, as up to the present it has been extremely difficult to find one person with full power to take a decision on any matter.

The change is viewed with great favour by the foreign community, irrespective of nationality.

NEWS IN BRIEF.

Telephonic communication between Roumania and Bulgaria was opened on October 18.

The Turkish newspapers have been officially requested to adopt the new Latin alphabet in place of the Arabic hitherto employed, as from the beginning of November.

An earthquake of moderate intensity was recorded at Kew Observatory on October 15. The epicentre was 3,800 miles away, probably off the north of the Persian Gulf.

The Bishop of Gibraltar last week left England *en route* for the Balkans, Constantinople, Smyrna, and Athens. He hopes to be at Malta for four weeks from December 18, and in Italy, Sicily, and the Riviera until the end of March.

Behij Bey, Turkish Minister of Public Works, has resigned. His successor, Rejeb Bey, was Minister of the Interior in 1924 in General Ismet Pasha's second Cabinet and also in the second Chamber of Fethi Bey, and Minister of War in Ismet Pasha's third Cabinet from March, 1925, to November, 1927.

The Greek Chamber assembled in Athens on October 17, when all the Deputies, including the members of the Popular Party, took the oath of allegiance to the Republican régime without reservations. M. Jean Tsirimakos has been elected President of the Greek Parliament. He is a former Cabinet Minister and has already served as Speaker.

British School of Archaeology in Jerusalem.

THE ANNUAL GENERAL MEETING OF SUBSCRIBERS will be held on FRIDAY, OCTOBER 26th, 1928, at the ROOMS OF THE SOCIETY OF ANTIQUARIES, BURLINGTON HOUSE, PICCADILLY, W.1. The Chair will be taken by FIELD-MARSHAL THE RIGHT HONOURABLE LORD PLUMER OF MESSINES, G.C.B., G.C.M.G., G.C.V.O., G.B.E., late High Commissioner in Palestine.

AGENDA.

4.30 p.m. LORD PLUMER will move the adoption of the Annual Report and Election of Officers.

5.0 p.m. The School's Excavation at Jerash (Gorasa) will be described (in the absence of the Director) by PROFESSOR J. L. MYRES, M.A., F.B.A., F.S.A.

Subscribers are invited to bring friends who are interested.

2, Hinde Street, Manchester Square, W.1.

C. E. MOTT, Hon. Secretary.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 4.

The Statutory Commission.

There are signs enough, besides the various memoranda to the Commission that are proof of it, in evidence that the interest of the European community in India in the Commission and its task is very deep. I had some talk with two mercantile men on Saturday, in the lounge of one of the hotels. We agreed that whoever wants to follow the situation must keep his eyes on the Indian Princes and their advisers, for that is the vital point, and for the rest two things; (1) that India must not be given a Constitution too costly for her to run; (2) that much as one may sympathise with the Indian's desire that he should govern his country himself, as the country must keep "a straight bat" to the world, there must be the same leavening of the governing mass with English and Scottish as there is such a leavening in mercantile affairs. Sir Abdur Rahim said in the Bengal Legislative Council on the last day of July: "As regards British interests what we say is this: we want to make our own country worth living in. We want them to remember that this is our own home and our ambition is to make it worth living in. We do not want to injure their interests in any way. In fact, the condition of the country is such that to improve our condition we shall be only too glad to avail ourselves of their knowledge of science, technical skill and power of organisation. *But what we want is that whatever intellect we have in this country should have the fullest scope.*"

That is all right; let it have the fullest scope; but let it be recognised that, great talent as India has in many directions, in others she is almost destitute of talent. I can think of several fields of activity, and of a Board of Appointment composed of Indians that would take the view, notwithstanding that the members were all Indians, that the work in question was work for an Englishman. The danger to India will come from the men, with too much power being given to them, who would blindly insist on an Indian every time. An influential Swarajist said to me yesterday evening: "It is not a change of men that we want, but a change in the machinery of government. If the same machinery is to continue, then what profit would it be to us if Sir Stanley Jackson packed his trunks and went home, and a Swarajist took his place. He would have to do the same things that Sir Stanley Jackson would have done, but probably not as well. To me it is all one whether it is an Englishman or an Indian, as long as he is a good man." — (he named a well-known Calcutta citizen) came to me yesterday, urging me to use my influence to see that a particular appointment was given the next time to an Indian. I said: "He must be a good enough man: if we can't find a good enough man amongst ourselves, the appointment must go again to an Englishman." That is the sensible view, but there are considerably fewer Indians of the way of thinking of Sir Abdur Rahim and my Swarajist friend than there are Indians of the opposite way of thinking. The danger will lie in giving the latter too much power.

Independence of India League.

Now that there is an All-Bengal Branch of the Independence of India League, might not a jester say, let there be an all-Calcutta Branch of the All-Bengal Branch? But, not to jest, the *Englishman* sees in the movement "nothing more nor less than the deliberate challenge of the rising generation of Congressmen to the present leaders." It is a bad thing in India that no Party can be formed that will not soon grow a new party in its tail. Political ambition as a disturbing element in Party life is, of course, not unknown in England, but there things are done with a certain regard for public interest. The rank and file of a Party insists on that. If Mr. Lloyd

George had tried to oust Lord Oxford and Asquith from the Prime Ministership ten years before 1916, the rank and file of the Party would have trodden him under foot.

In India—and at a time when the question of the amount of power proper to give men and Parties is under consideration, it is legitimate to look closely into such a thing—the rising Lloyd George, it may be Mr. Subhas Bose, may begin almost at once to try to turn out the Prime Minister, and he will be sure of detaching a portion of the Prime Minister's following. The poison of personal intrigue is stronger in the blood of Indians than in that of any other race I know. You may see it breaking out among schoolboys over the election of the office-bearers of their cricket or football club. The little rascals will sit up the whole of a night, intriguing in this boy's favour or that. The first time the phenomenon came under my observation, I was so little prepared for it, that I could not for a time see the plain signs of it.

Irrigation in Bengal.

Sir William Willcocks has concluded his indictment of the official engineers in Bengal and their irrigation policy. It is all a question of rivers and their treatment, in other words, it is about as technical a matter as an obscure piece of surgery. What the public is concerned with is one question. Could a whole staff of experts be radically wrong in their reading of a difficult problem, while a man of genius had only to come and look round to see that they were wrong? It is perhaps a lot to believe, and of course the engineers, the men at the top, say it is too much. The men below them are not allowed to say anything. The men outside the Department seem most of them to think that, much as it may look a lot to believe, it ought this time to be believed. It is surely time that the Executive should say what they are going to do. To my mind there are only two things worth doing; the first being to send for Sir William to come at once; the second being to lift the ban that forbids the younger men to speak. It need not be lifted publicly. Lifted it must be. The alternative to lifting it is to dismiss the whole *personnel* of the Department, and to get men whose judgments would not be biased by the fact that what was under judgment was their own work.

Physical Culture.

There is a chance for any wealthy man, a lover of India. According to Professor Ramamurthi, a deep student of the subject, Indian youths fall so short in physique, as to make India a C3 nation. The average longevity (that word seems the wrong one to use) in India is less than 25 years, as against over 50 years in Canada, England, Norway, etc. Professor Ramamurthi proposes that there should be a Central Physical culture and Training Institute, and he wants twenty lakhs for it. It is a reform urgently calling for attention.

LORD GOSCHEN'S EXTENSION.

An India Office *communiqué* states that, with His Majesty's approval, the Secretary of State for India has invited Viscount Goschen, G.C.I.E., C.B.E., who will complete five years' tenure of the Governorship of Madras on April 13 next, to continue to serve in India until the autumn of 1929. Lord Goschen has consented to do so.

The announcement, it is widely believed, foreshadows the possibility of arrangements being made for the Viceroy, Lord Irwin, provided circumstances at the time permit, to pay a short visit to this country next summer. Under an Act passed during the Viceroyalty of Lord Reading, who himself availed himself of its provisions, Viceroys and Governors may take four months' leave of absence out of India during their five years' tenure of office. In accordance with precedent the senior of the three Presidency Governors—who next year will be Lord Goschen—acts during the Viceroy's absence.

SMALLER STATES AND THE BUTLER COMMITTEE.

(Contributed.)

The following article deals with one aspect of India's constitutional problem. The appearance of the article in our columns does not necessarily imply endorsement of the views expressed by the writer.

The appointment of the Indian States Inquiry Committee has aroused much public interest both in England and in India about the affairs of the Indian States. But there appears to be a wrong impression about the working of the Committee. It is generally believed that the Committee is examining the relations of all the Indian States with the Paramount Power. But that is not the case. The Committee's inquiry is confined only to 235 States out of about 700 States, large and small. The Committee has issued its questionnaire only to those Princes who are members of the Princes' Chamber or who are represented on that body, thus excluding from the inquiry a very large number of other States in India.

For the sake of convenience the Indian States may be divided into three classes, namely, those that have representation on the Chamber of Princes, secondly, those States which have no such representation, but which are directly subordinate to the British Government; and lastly, the States holding guarantees from the British Government, but primarily subordinate to some other State, which in respect of its subordinate is called the parent or suzerain State. States like Gwalior, Kashmir, Indore and also comparatively small States like Rewa and Ratlam belong to the first class. The last named is only a feudatory of Gwalior, but owing to its size and importance has been admitted to the Princes' Chamber. Under the second class fall the States of Rajputana, Central India and Simla Hills, and lastly come the Princes like the Nawab of Mangrol, Raja of Punja and feudatory chiefs under Kolhapur. In the first class are included Princes who enjoy full internal sovereignty and others who exercise it subject to the control of the British Government. The States of the second and third class enjoy limited civil and criminal powers and are subject to a greater measure of control of the British Government. The right of determining succession and granting permission to adopt rests with the British Government, though in some cases the superior State is also consulted, but the final authority always rests with the British Government.

One of the demands of the suzerain States before the Butler Committee is that right of approaching the British Government possessed by the Feudatories is inconsistent with their subordination and Government ought not to interfere on their behalf as they have been doing. Some of the feudatory States have submitted statements to the Committee about this matter, but it is reported that the Committee is unable to consider their representations. In view of the Terms of Reference of the Committee, the request of the guaranteed States for a hearing before the Committee appears to be not unreasonable, though of course, the Committee is the best judge of its limitations. Under the first part of its Terms of Reference, the Committee is asked to report upon the relationship between the States and the Paramount Power, with special reference to the rights and obligations arising from treaties, engagements and Sanads, etc. The guarantees given to the feudatories constitute obligations both upon the British Government and the suzerain States, and these guarantees have the same sanctity and are as binding as treaties and engagements, etc. So it will appear that the relations of the feudatory States with their suzerains, so far at least as their guarantees are concerned, form part of the present inquiry by the Committee. Even under the ordinary civil and criminal law, third parties who are interested in the subject matter of a suit or action are allowed to join as

parties or to watch the proceedings on their behalf. It would seem unfair, therefore, if the guaranteed feudatories were altogether excluded from the deliberations of the Committee. If the treaty rights of the Princes ought to be preserved, the guarantees of the feudatories ought also to be maintained, and they are anxious that their rights should not be prejudiced by any readjustment of relations between the Paramount Power and suzerain States. In fact their rights stand or fall with such guarantees, and if any modification of the guarantees be contemplated, as the feudatories have reason to fear, it is but fair that they should be given an opportunity to represent their views before the Committee.

Recently there has been a change in the policy of Government towards the bigger Princes. Government seem to be anxious to preserve, maintain and enhance the rights, dignity and honour of these Princes, and non-intervention in their internal affairs is the guiding principle of the Political Department. It would, however, be unjust, if Government did not show the same solicitude and consideration towards the humbler order of mediatised States, which more than any other require protection from the Paramount Power. The fact that Government had to interfere on their behalf many times in the past has given rise to fears that the interests of feudatories are not quite safe in the hands of the parent States. In fact it is to the protecting arm of the British Government that the mediatised States owe their present existence as separate entities; otherwise their estates might have long ago been absorbed by their suzerains.

What makes the feudatories apprehensive is that there is actually a demand by the bigger States before the Butler Committee for complete and unfettered jurisdiction over the former. If that is granted behind the back of the feudatories, their fate is sealed. Just as the suzerain States are anxious to have their rights preserved so also the mediatised feudatories earnestly wish that their rights which they have been enjoying long since, and for the preservation of which the solemn word of the British Government is pledged, should be maintained intact in the proposed readjustment of relations between the Princes and the Paramount Power. Just as the Princes feel that the intervention of the British Government in their internal affairs is galling to them, so also the mediatised feudatories, in their own limited sphere, think that their suzerain States ought not to interfere continuously or minutely, as is unfortunately the tendency, in their internal administration. Just as the suzerain States are jealous of any encroachment upon their rights by the Paramount Power, so also, the minor States feel that their rights should not be violated by their suzerains. If the Chamber of Princes complain that the existing system of settling disputes between the Paramount Power and the States is unsatisfactory, the feudatories also think that it is unjust that the suzerains should decide disputes between themselves and their feudatories. Just as the Princes think that some new machinery must be devised for adjustment of their disputes with the Paramount Power, so also the feudatories desire that matters of difference between them and the suzerain should be settled by an independent tribunal.

It is clear that the feudatories have a real grievance, and their case deserves sympathetic consideration at the hands of the Committee. If, however, the Committee thinks that it is not justified by its terms of reference to grant them a hearing, it is hoped that the Government of India will consider their case when the Committee's recommendations are sent up to them. When in 1918 Government were considering the proposal for the establishment of the Chamber of Princes, they had invited the views of the feudatories on the subject. Obviously the present inquiry affects more the rights and interests of the feudatories, than the institution of the Chamber of Princes, and it is hoped that their interests will not be altogether ignored in any new arrangement between the Paramount Power and the States.

THE INDIAN STATES AND THE CROWN.

Professor L. F. Rushbrook Williams gave an address on "The Indian States and the New Constitution" before the Central Asian Society at Burlington House on October 17. Sir Michael O'Dwyer presided over a large attendance in the Royal Society's Hall.

After introductory remarks by the Chairman, the lecturer prefaced his address by stating that a brief historical survey was necessary to show the importance of the States in the early growth of British rule in India. The Moghul Empire had insisted upon its paramountcy, but provided that that was recognised and its demands for tribute met, it left the States to themselves without any attempt to interfere with their internal organization. It was the attempt of Aurangzeb to meddle with the dynastic affairs of the States that helped in the downfall of the Moghul Empire. The argument had been advanced that the Sanads issued by Lord Canning introduced a new status for the States, but the lecturer pointed out that the nature of the Sanads by no means supported that contention. During the long régime of the East India Company there was little opportunity to distinguish between the two sides of its activities—namely, the administration of its own territories and its diplomatic negotiations with the Indian Rulers. After the Mutiny, when the new machinery was introduced for the direct administration of the Crown, it was assumed by the responsible authorities that it would be easy and convenient to continue the indefinite system of the Company days. Great stress, however, was laid on the advantage of centralization, contrary to the previous tendency of Indian history for the building up of relatively small self-governing units. The development of modern means of communication throughout British India since the Mutiny had enabled the Government to promote large and far-reaching schemes for the commercial and economic development of the country. The result—not unnatural—was that Government became far more interested in the development of British India than in the discharge of its primary obligations to the States. As time went on, there arose some incompatibility between the two functions of government, because the authority discharging the task of maintaining diplomatic relations with the States was the authority directly interested in the financial prosperity of British India. The result was that restrictions laid down in treaties appeared to administrative departments of the Government to be obstacles to progress to be overcome.

The divergence between the two sides of government activity became more pronounced when British Indians were made members of the Government, and the system was continued by which the same machinery which dealt with British India looked after the political relations with the States. The experience of the Princes had shown that under the existing machinery their rights were liable to infringement, and they asked for adjustments under which they would have a voice in the settlement of important issues affecting their interests as well as those of British India.

Mr. Rushbrook Williams then showed a number of lantern slides illustrating some of the chief towns in the States and conditions in them. The discussion which followed was opened by Sir Louis Dane, who found himself in general agreement with the lecturer, but thought that he had overlooked the part played by the British in saving the Indian States from the Marathas, whose policy it was to exterminate them. The Crown became the sole supreme power in India, and the Sanads were issued as evidence of that fact.

Sir Stuart Fraser pointed out that the position of the Indian States was materially helped by the fact that the Viceroy was also Minister for Foreign Affairs. Sir Prabashankar Pattani also spoke. In replying to the points raised by the various speakers Mr. Rushbrook Williams said that, with regard to the assumption of paramountcy by the Crown, it was a unilateral declaration

which in international law was valid only on its acceptance by the other party or parties concerned. He also challenged the reading of history that attributed to the Marathas the intention of wiping out the States.

A brief speech by Sir Michael O'Dwyer brought the proceedings to a close.

INDIAN NOTES.

(Continued from page 475.)

Mission to Calcutta. His has indeed been a life of apostolic simplicity and self-sacrifice; for it has been spent in the service of the mission station which he established many years ago at Behala, a village near Calcutta. The object of the mission is the promotion of the spiritual welfare of the young waifs and strays of various races who are for ever drifting about in the neighbourhood. It is indeed a wonderful work which Father Douglas has undertaken, and in which he has been astonishingly successful. Years of patient and courageous labour have been at length rewarded, and the mission is now firmly established with a church, a school, houses—of a very humble type—for Father Douglas and his helpers, and with various other facilities. But the organisation and the management are on the simplest lines; there is no striving after effect, and nothing in the nature of display. It is just a humble little mission station among the fields, and not far from the jungle; and those who are responsible for it live the simplest of lives. As Lord Lytton said, it is largely unknown to the general public, for Father Douglas is no seeker after publicity. It is well, therefore, that an ex-Governor of Bengal, with his first-hand knowledge of Calcutta and its needs, should have expressed his sense of the value of the work of the Mission and of the nobility of character of its founder. Missionary effort in India is often adversely criticised, but we question whether even the severest critic could find anything but good to say of the Behala Mission Station or of Father Douglas.

The Joint Free Conferences.

Preliminary details with regard to procedure having been satisfactorily settled and the real nature of the Commission's task, namely, "to give a true description of the working of constitutional machinery in India, as a preliminary to the proposed changes in the Constitution itself," having been clearly explained once again by the Chairman, the joint free conferences between the Simon Commission and the Committees of the Central and Provincial Legislatures are proceeding according to plan. Before the examination of witnesses began Sir John Simon, who has early demonstrated his masterly grasp of the past history and essential features of the many and complex issues which the Conference is being called upon to review, made an interesting announcement regarding the methods which the Commission proposes to adopt in that regard. Oral evidence on educational problems, for instance, will not be heard until Sir Philip Hartog's Auxiliary Committee has reported. Similarly, in order to facilitate the inquiry and avoid repetition, the Commission will hear the main case in particular centres. For example, the representation of the Associated Chambers of Commerce and of the European Association will be considered in Calcutta, leaving the Bombay Chamber to concentrate on criticism of the Meston Settlement. In the same way the leading witnesses on behalf of the Depressed Class will be heard in Madras, and the discussion of the Communal question confined chiefly to the Punjab and Bengal.

An Air Force bomber from Basrah on October 18 carried a nursing sister to the chaplain for Basrah and the Persian Gulf, the Rev. C. J. G. Andrews, who was lying seriously ill at Bushire. Mr. Andrews died in the evening after her arrival.

THE PORT OF BOMBAY.

(From a Correspondent.)

The report of the Bombay Port Trust for the past year shows satisfactory indications of recovery from the depression under which the seaborne trade of the port has laboured for the last few years. The receipts increased by 17 lakhs, while the rigid economy exercised in the administration of the Port led to a further reduction of $1\frac{1}{2}$ lakhs in the expenditure, the deficit of 11 lakhs in the previous year being thus changed into a surplus of $7\frac{1}{2}$ lakhs. This improvement was not due to any increase in the Port charges: the keen competition of Karachi and the Kathiawar Ports makes any such enhancement impossible. The Port Trustees, in fact, continued to reduce these charges in various ways, and have in this way made a difficult but very necessary sacrifice of revenue amounting to $8\frac{1}{2}$ lakhs in the last three years.

The cargo handled at the docks and jetties was as much as 20 per cent. above that of the previous year: and, though the total trade of the Port yielded a smaller increase and was, on the whole, somewhat featureless, it showed a healthy expansion from 245 to 251 crores. This increase occurred in despite of a heavy decline in cotton, Bombay's staple export, and it is perhaps disquieting to find that Indian cotton cannot, in a year of world wide bumper crops, hold its own in the world market against American cotton, nor even prevent a largely increased import of the latter into India. The year was, however, an exceptional one, both as regards the abundance of American cotton and the financial and other troubles of China and Japan. Any continuation of the decline in the cotton exports, combined with the parlous condition of the Bombay cotton mills, must greatly reduce the value of Bombay as a cotton market, and thus lessen its power to meet the competition of other ports.

If, however, the condition of the cotton trade must cause anxiety, it is satisfactory to observe that other industries are increasing and finding space on the land of the Trustees, since it is obvious that, if Bombay is to hold its place, it must rely on a general expansion of industry and not wholly on its previous support, the cotton export and mill industry. The Trustees must indeed look to their landed estate to supply them with the much-needed augmentation of their revenues. If the expansion of Bombay takes place, this expectation will doubtless be fulfilled: but it may be slow of coming, as the past year showed an actual decrease in the revenue needed from the landed estates of the Trust. An especially satisfactory feature of the year has been the improvement in the working of the Port Trust Railway. This somewhat late-born, but none the less essential, component of the Port Administration suffered at the outset from an unduly expensive establishment, and from the refusal of the two great railways which serve Bombay to pay adequate terminal charges on the goods carried by them. The expenses of the Trust Railway establishment have been reduced by 38 per cent. in the last six years, and the Railway Board has finally agreed to the railways paying a larger, though hardly from the Port point of view yet adequate, rate of terminal charges.

Although the improved financial condition of the Port is due to most careful administration, for which its officers deserve all credit, it is obvious that the non-spending policy cannot be continued indefinitely. The capital expenditure in the past year was the lowest for the past twenty-five years, though the cost of labour and material has increased greatly in that period: and there has been no fresh expenditure whatever from borrowed funds for three years. A port which fails to keep pace with the requirements of trade is perilously near retrogression. It is to be hoped, therefore, that when the Bombay Port has to face further expenditure, it may receive from the Government the help it will assuredly require. The most obvious method of such help would be to give it the major portion of the revenue now obtained from the levy of duty on all cotton coming into Bombay.

INDIA'S NEW FINANCE MEMBER.

Sir George Schuster, the Finance Member-designate of the Governor-General's Executive Council, left London on October 18 to take up his new duties. It will be recalled that the office of Finance Member was relinquished by Sir Basil Blackett, after an extended term, in March last. When, however, the selection of Sir George Schuster was announced at the end of last year it was stated that he would not be able to assume charge until the autumn, owing to his appointment as a member of the East African Commission. The further postponement of his departure has been occasioned by the delay in the completion of the Commission's report, which, it is understood, was not ready for signature until last week. During the interval the duties of the office have been discharged, as on two previous occasions, with conspicuous ability by Sir B. N. Mitra, one of the best known and most highly respected Indians in the service of the Crown, whose career is a remarkable example of the opportunities for advancement which the present system, with all its imperfections, undoubtedly offers to those with the capacity to avail themselves of them.

The task of finding a suitable permanent successor to Sir Basil Blackett presented many difficulties, but Sir George Schuster, although he has never been in the country before, is peculiarly fitted in many respects for his responsible post. Probably best known by reason of his services as Financial Secretary to the Sudan Government, the new Finance Member has behind him a record of administrative experience—financial, economic, and political—which is probably unrivalled, certainly in so young a man, for Sir George is only in his 48th year.

The Indian Broadcasting Company announce that broadcasting in India will be continued, and that every effort will be made to make broadcasting a success.

Sir Denys Bray, Foreign Secretary to the Government of India, who recently made a tour of the Persian Gulf, left Simla on October 18 on a brief visit to London.

Reuter reports that Abdur Rahman of Baghtut, late chief Qazi at Kabul, and three other Mullahs have been condemned on a charge of sedition and executed at Kabul.

Lieutenant-Colonel Henry St. Patrick Maxwell, C.S.I. (78), of Oakley Avenue, Acton, W., son of the late Major-General William Maxwell, R.A. (net personality £1,128), left £1,378.

Sir Philip Sassoon, British Under-Secretary of State for Air, who is making a tour of Royal Air Force station in the Middle East, Iraq, and India, arrived at Simla on October 18. He is staying at the Viceregal Lodge.

The Bhavnagar medal has been awarded to W. H. J. Christie, B.A., of King's College, Cambridge, who is placed third among the Indian Civil Service probationers in the final list arranged from the combined results of the open competition of 1927 and the final examination of 1928.

Lieutenant-Colonel John F. Turner, D.S.O., R.E., who has been appointed a Chief Engineer for Air Force duties in India, has been employed in Mesopotamia, the Zakka Khel country, and the Gold Coast, where he was with the Anglo-German Boundary Commission. On promotion to Captain he was transferred to Malakand and Gilgit. His post-War service has been in India, where he has been attached to the Royal Air Force.

The intervening difficulties having been surmounted, Imperial Airways will open the air service between Basrah and Karachi next January. When the London to Cairo service begins in April, the whole journey from Great Britain to India should occupy four days. The aeroplanes will stay a night at Genoa, fuel at Alexandria, stay a night at Cairo and a night at Basrah and refuel at Bushire. The cost of the passage will be £112.

At a meeting of the council of the East India Association on October 15, Sir M. M. Bhownaggee was elected Vice-chairman in succession to the late Mr. Ameer Ali, and Sir Muhammed Rafique was co-opted to the council. The new members elected included Sir Malcolm Hailey, Governor of the United Provinces; Sir Geoffrey de Montmorency, Governor of the Punjab; Sir George Schuster, Finance Member-designate of the Government of India; Mr. C. B. Chartres, President of the European Association in India; and Mrs. Ameer Ali.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ITALY AND THE DODECANESE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I have lately returned from a very delightful holiday spent in the Dodecanese; and in view of the publicity given to certain statements by M. Venizelos with reference to these islands and to Greco-Italian friendship, it may prove of some interest to your readers to hear my impressions.

I may confess at the outset that I am known to be a staunch friend of Italy's. I have a great admiration for Italy and faith in her future. I love the Italians, whom I have known intimately since babyhood. But I love also Greece. I count among Greeks some of the dearest of my friends; and I warmly sympathise with Greek nationalist sentiment. I went, accordingly, to the Dodecanese, sympathising with Greek aspirations; but otherwise with a perfectly open mind.

I had countless opportunities of conversing with Greeks in every branch of society. They all, unanimously, expressed the hope that the day would come when their islands would be united to Greece. But they, likewise, all agreed on the following points:—That Italy during the past six years had done a tremendous lot for them; that the future programme of development was quite admirable; that, unlike the case of the Greeks in Cyprus, where the British, after fifty years' administration, had accomplished comparatively little for the development of that island, unity between the Dodecanese and Greece would definitely entail sacrifices; that socially and individually they like the Italians very much indeed, found them very much akin and considered themselves well treated by the Italians; that, unlike the Cypriots, they did not feel themselves considered as inferiors by the dominant race; that they had nothing to fear from any forcible italianisation; that their language, religion and social customs were perfectly respected and safeguarded. These expressions of opinion were not only unanimous, but were confirmed by observation of the exceedingly friendly intercourse between Greeks and Italians in society and between the Carabinieri and the people in the outlying villages. The relations between the latter were, in fact, particularly striking and in some cases touching.

The Italian attitude is a perfectly loyal one. The public expression of irredentist opinion, still more any form of irredentist agitation or propaganda, is immediately stamped upon. Greek propagandists from Greece are not allowed to land; Dodecanesan propagandists are promptly deported. But during the past six years only twelve persons have been deported and ten of these have been allowed to return on *parole*. The election of the local "demogerontia" is free; but should any of these bodies indulge in irredentist agitation or obstruction, they are liable to be dissolved. So far, one assembly only has been dissolved. The election of local mayors has to be confirmed by the Central Government. So far, on only four occasions have local mayors failed to be confirmed. All this proves that the task of the Italian Government has not proved a difficult one. For all these widely flung islands, the Italian garrison consists of only one regiment of infantry and 250 Carabinieri. The appeal of the Italians, in fact, to the Greeks to accept the facts of the situation, whatever their private aspirations may be, and to collaborate with the Italians in promoting the material and moral prosperity of the islands, has been singularly successful.

The Italians argue (and, I think, with good reason) that formal respect for the sovereign power and the complete prohibition of outward manifestations of irredentism are essential for good government. Otherwise, time, money and breath are wasted in sterile agitation, people are distracted from productive work, sores are kept running,

bad blood created and maintained, the masses kept in an unhealthy fever of hopes, followed invariably by disappointment and moral depression.

The only complaints I came across were those from individuals with a personal grievance. Good government and progressive reforms invariably entail injury to vested interests. For instance, the custom of burning down an area of shrub, sowing it extensively and then abandoning it for several years has been put an end to. Peasants must cultivate land regularly and intensively, or allow shrub to grow into forest. Similarly, the pasturing of goats at large and the indiscriminate cutting of wood are prohibited. These measures have produced many an individual "grouse," but nobody denies their economic utility. Moreover, the losses occasioned to peasants by such measures are altogether outweighed by the help accorded them in other direction (agricultural credit facilities, travelling agricultural chairs, distribution at cost price of selected seeds and young olive trees and vines, improved communications, better markets, etc.).

Again, waste land has been expropriated by the Government at a low price and has since been developed by Italian enterprise. In such cases it is human, though none the less unjustifiable, for the former owners to be sorry that they were forced to part with land since become valuable. Similarly, owners of valuable works of art, for which they have been offered high prices from foreigners, are angry that the law prohibits their export, when the local market cannot compete with foreign prices. These, however, are the only kind of complaints that one hears, except that of the Greek ecclesiastical authorities in respect to the loss of their former right of completely controlling the schools. But for this there is a great deal to be said; and the stories set about by propagandist committees abroad to the effect that the islanders are an oppressed race are utterly absurd. It is well that M. Venizelos has discountenanced them. There is, indeed, much to be said for the hope that the Italian possession of the Dodecanese may become the means of mutual understanding between the two peoples, whose interests and psychology are very similar, rather than a bone of contention and a means of separation. The Italians have approached their task in a true Roman spirit, the spirit of constructors who look to their work as something which will stand the test of time. They have already accomplished a prodigious lot—splendid roads; improved water supplies and hygiene; ports, sea communications and markets; town planning and extensions; schools; advanced plans for the establishment of a university; hospitals; first-rate hotels and the development of the tourist traffic; afforestation, experimental agricultural farms; the founding of new industries; progressive social legislation; the restoration of ancient monuments, etc. It is difficult, indeed, to exaggerate the extent of the progress made in so brief a period since Signor Mario Lago assumed the post of Governor, less than six years ago. The Italians may well be proud of their work and not least for their success in creating a genuine spirit of collaboration between themselves and the people over whose destiny they preside.—I am, etc.

J. S. BARNES.

9, Avenue Eglantine, Lausanne.

October 15.

DOG RACING IN THE EAST.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The harm done to English prestige and to the capitulations by dog racing in Shanghai affects Englishmen in other countries. The Chinese object to it so strongly that they are making it a serious international question between their own country and England.

Dog racing syndicates want persons of position as "owners" of dogs in order to make their show fashionable. The syndicates are practically their own handicappers. As the keep of a dog is cheap, no doubt such "owners" find it very profitable.

Betting on dog races is forbidden in Norway, Sweden, Denmark, Holland, Poland, France, Germany, Austria, Switzerland, Spain, Portugal, Greece, India, Ceylon, Burma, Japan, Canada, Australia, New Zealand, Cape Colony, and the Transvaal. Most of these countries regard it as a public casino and, as such, object to it in cities.—I am, etc.,

C. A. KNAPP, Captain.

Athens, October 12.

THE FIRST AFRICAN GAMES.

Next year Africa is to have its own Olympic Games. They are to be known as the African Games, and the first Meeting is to take place at Alexandria from April 5 to April 19. The Games will be held in the new Stadium that is being built in that town. Its area is roughly forty thousand square metres, and there will be seating accommodation for twenty-four thousand spectators. The track will have a total length of 500 metres, enclosing a games arena of 135 metres in length and 70 metres wide. The total cost of the Stadium will be about £110,000, towards which King Fuad, to whose suggestion the scheme is due, contributed £5,000.

The programme of the African Games comprises the following items :—

Athletic Sports and Cycling.

Gymnastics : Weight Lifting, and Gymnastic Display.

Defensive Sports : Fencing, Greco-Roman Wrestling,

English Boxing.

Aquatic Sport : Rowing, Swimming.

Games : Lawn Tennis, Association Football.

Only athletes, who must be amateurs, representing Nations, States, Protectorates, or Territories of Africa will be entitled to compete in the African Games. For the first meeting, athletes will be considered as being qualified to compete by the simple evidence of their having been born in Africa, and they will represent the country in which they were born, should they have no legal African nationality.

Women are allowed to compete in the Tennis tournament only. There is no age limit for competitors.

The details of the Programme are as follows :—

Athletic Sports.—The track events comprise flat races for 100, 200, 400, 800, 1,500, 5,000 and 10,000 metres, a 110-metre hurdle race and a Marathon Race of 42 kilo-metres 195 metres.

The Field events will be : High jump, Long jump, Pole jump, Throwing the javelin, Throwing the discus, Putting the 16 lb. shot.

There will also be a Relay Race of 400 metres for teams of four each.

Cycling.—The cycling event is confined to a single road race of 130 kilometres from the Stadium to Rosetta and back.

Gymnastics.—In the gymnastic display groups of at least sixteen gymnasts will compete against one another.

The Weight Lifting competition will be divided into five classes : (1) Feather Weights, up to 60 kgs. (2) Light Weights, up to 67 kgs. (3) Middle Weights, up to 75 kgs. (4) Light-Heavy Weights, up to 82.5 kgs. (5) Heavy Weights, over 82.5 kgs.

Fencing will comprise Foil, Sword and Sabre contests.

In **Boxing** and **Greco-Roman Wrestling** competitors will be divided into the recognised eight and six categories respectively, according to weight.

The **Boat races** will comprise a canoe race of 1,500 metres, a Two-oared, with cox, of 1,500 metres, a Four-oared, of 2,000 metres, and an Eight-oared, of 2,000 metres.

The **Swimming** contests will comprise races of 100 metres free style, 100 metres back stroke, 200 metres breast stroke, 400 metres free style, and 1,500 metres free style. There will also be a Team relay-race of 800 metres, four members to a team, and a Water-Polo tournament.

The **Lawn Tennis** events will consist of Men's Singles, Ladies' Singles, Men's Doubles, Ladies' Doubles, and Mixed Doubles.

Next year's Games will include two Exhibitions of National Sports staged by Egypt, consisting of Nabout (or stick) Display and a Fantasia on horseback.

Egypt has recognised the Albanian Monarchy. It will be remembered, says *The Times*, that fifteen years ago the present King of Egypt, who then had no prospects of inheriting the Egyptian Crown, was, as a member of a Dynasty of Albanian origin, himself a candidate for the Throne of Albania.

NEWS IN BRIEF.

The Greek Government has decided to grant an amnesty for all political offences committed since 1925.

Earthquake shocks were last week reported from Plovdiv (Philippopolis) and Chirpan, in Bulgaria.

Sir Ronald Storrs, Governor of Cyprus, arrived on board H.M.S. Bryony, the yacht of the Commander-in-Chief, Mediterranean, from Salonika and reached Nicosia last Thursday.

The Greek Naval Council on October 20 agreed to the request of France that she should establish an air station on the Franco-Syrian line at Eleusis, though this will be near the Greek naval base.

The Turkish Minister at Tirana, Loutfi Bey, has been recalled, the Turkish Government having decided not to recognise the proclamation of King Zogu until outstanding questions with Albania have been settled.

The Egyptian Government has decided to grant to an Italian aviation company authority to land at Aboukir the aeroplane which it proposes to fly experimentally from Genoa *via* Benghazi, with a view to ascertaining the possibility of carrying mails over that route.

The Greek Minister to Turkey, M. Pappas, arrived in Athens on October 19 from Angora with M. Diamandopoulos, Greek delegate on the Mixed Commission for the Exchange of Populations in Constantinople, in order to inform the Government on the position with regard to pending questions with Turkey.

The Golden Horn Shipping Company has complained to the Constantinople Prefecture of the rapid silting up of the Golden Horn. It declares that unless the necessary dredging is undertaken before winter sets in, the Company's boats will not be able to operate. The Company has sixteen vessels with a joint tonnage of 1,400 tons.

As the Egyptian Government has not received replies, except from Norway, to its circular letter of last December to the Powers on the subject of reforms in the Mixed Tribunals, it has been decided to send them a reminder suggesting that the proposed conference on that subject should meet in Cairo this winter.

At the opening of the autumn sessions of the Skupshtina in Belgrade on October 20 the Radicals re-elected M. Vukitchevitch, the late Prime Minister, to be President of the Radical Club for the coming year, and the House chose as its new speaker M. Mihailovitch, a Radical of the same group, to take the place of the former Speaker, who had resigned.

Mrs. Catherine Gregory Zlatano, of Rue Kephissia, Athens, who died on June 3, 1927, left property in this country of the gross value of £12,500. She left £50 to St. Mary's Hospital for Women and Children, Manchester; £50 to the Greek Church at Manchester; £500 to the Greek Orthodox Patriarchate, Jerusalem; her Byzantine collection of pictures to the National Museum of Pictures at Athens on condition that the collection shall not be dispersed, but shall be kept together in one room and known as the "Catherine Gregory Zlatano Collection of Byzantine Pictures"; £500 to Fakhri Naschasib of Jerusalem, "who twice saved my life in Palestine." Any balance remaining unpaid of 25,000 drachmæ she had promised to St. Panteleimon Church, on the Ilissos, near Athens, is to be paid out of her estate, and she directed the trustees to purchase a plot of land either in the hills at Gouthi, Athens, or in the vicinity of Phaleron near the sea and to erect thereon at a cost not exceeding (with the cost of the land) 70,000 drachmæ a church in the Byzantine architecture style, with two altars therein, one dedicated to St. Gregory and the other to St. Catherine, for the interment of the remains of "my late husband, and I direct that on my death I shall be buried by his side," and the trustees are to set aside £60 per annum and see to it that masses shall be made on St. Gregory's Day and St. Catherine's Day in the said church, the amount to be expended on such masses not to exceed a sum of £10 for each mass, and any balance shall be applied either in money or garments for the benefit of the very poor of Athens; and she left 10,000 drachmæ upon trust to apply the income for the benefit of poor prisoners condemned to hard labour and confined in the Prison Synagros, Athens, on every Christmas Eve.

A PECULIAR PEOPLE IN IRAQ—II.

By E. S. STEVENS.

To return to the marriage ceremony. As soon as the girl is declared virgin, the bishop sends a priest to her with two rings, one set with a red stone and the other with a green (for instance, a ruby and emerald, or a garnet and turquoise). When the priest has inspected the girl's *rasta* to see that the dress is complete in all its details, he puts the rings, the red one on a finger of her right hand, and the green on a finger of her left, recalling to the Western mind the use of red and green lights on the port and starboard of a ship. This done, the *tamiyd* (priest) rejoins the assembly, consisting of the bridegroom, girl's deputy, witnesses and bishop, and informs them that the *rasta* was complete and that the rings have been placed on the girl's fingers. The bishop then reads prayers, following upon which a deacon takes a *tungo* or clay pot and breaks it by throwing it to the ground. The bridegroom, seated on the left of the bishop, is solemnly exhorted by the bishop to forsake his sins. The address begins, "Oh So-and-So (the man's name), son of So-and-So, son of So-and-So." The girl's deputy, on the bishop's right, is next addressed by the bishop, who asks him, as if he were the girl, "Oh So-and-So, daughter of So-and-So, do you accept So-and-So, son of So-and-So, etc." He repeats this question three times, and *wakil* answers three times in the affirmative. The same question reversed is asked of the bridegroom, but only twice, and he too replies. The girl's representative and the bridegroom now stand and join hands. They are asked separately and together whether they agree to this solemn act, and the bishop exhorts the bridegroom not to break his marriage vows, to keep himself pure, to observe religious ceremonies, to protect his wife and not leave her in want, and more in the same strain.

Next, the dowry is declared in the presence of the assembly and before the appointed witnesses, two or three in number. The bishop then sprinkles the saffron on the *klila* (or wreath of myrtle) worn by each, and on the forehead of both bride and bridegroom. Finally, there are readings from the sacred books and many prayers, and the marriage, as far as the ceremony goes, is complete.

The bridegroom may not approach his wife, however, until a time astrologically propitious. The *ganzowro* makes these calculations from the horoscope of both, and by their two names, religious and lay. Should the hour prove to be an inconvenient one, fresh calculations are made for the following six hours.

This brings me to the question of names. Every Mandaean has two names, one a "spiritual" name and the other a "lay" name. Names are chosen according to their numerical value, for although letters have not a numerical value, the names themselves have. These names may either be drawn from the holy books, or belong to one of the three hundred and sixty Melki. Here I must diverge into Mandaean cosmogony and theology. Like Christians, Muslims and Jews, the Mandaeans believe in a Supreme Being, called in their tongue Alaha. But Alaha, they say, has deputed the powers of governance of the material world (the world of non-reality), and even its creation, to regents, spirits of power and purity who sprang into existence as their names were pronounced by

the Almighty. Of these beings, three hundred and sixty in number, the most important is Moro-Eddarbutho, but the divine being who is most directly in touch with this world at present is Hiwel-Ziwa (whose story reminds one of the Adonis myths). His victorious return from the material regions with a celestial woman called Ruhaya—an Oriental Psyche—is celebrated yearly at the feast known as *Dehvo Hnino*. Ruhaya, brought by Hiwel Ziwa from the seventh material world, was in a state of pregnancy, and was placed in the abode of darkness. There, when her time was come, Ruhaya brought forth a son, named Ur, upon whose back the physical worlds were built. I will continue the narrative in the words of the bishop. "When born, Ur said to his mother, 'Why are we two alone in this world?' She replied that his father was a *malka* named Ashdun, and that he had many relatives amongst the sons of light. Ur was of colossal size. He shouted until the realm of light shook. He desired to see his people, so Ruhaya gave him certain binoculars with which he might be able to see his people of the world of light. But Hiwel Ziwa was wearing a talismanic face, and so was invisible, and under cover of his invisibility he was able to snatch the glasses from Ur, capture him and imprison him beneath the earth in Avad Nahasha, the Land of Bronze, and the seven worlds were over him. His mother followed him below and became his wife, and bore him seven sons, each son being placed by Hiwel Ziwa in a planet. The planets are the creatures of God, and each has a spirit in it. They are Shamash (the Sun), Sera (the Moon), Neragh (Mars), Enbu (Mercury), Bel (Jupiter), Liwat or Zahara (Venus), and Kiwan (Saturn)."

It will be seen that the names of the planets are mostly ancient Babylonian, and most of them fulfil the duties assigned them by Babylonian astrologers. Shamash governs the day and Sera the night. Bel is clearly unchanged. Enbu, lord of science and wisdom, is the Babylonian Nebo, Kywan is the lord of thunder, and Liwat informs the minds of those who manufacture inventions, such as aeroplanes or wireless telegraphy. The simile used by the bishop when speaking of the planets interested an Assyriologist, whom I had brought with me on one occasion, on account of its resemblance to a simile used in Sumerian inscriptions. Shaikh Dukhayl said, "The planets are ships (*marakib*, vehicles in which one rides) in which the melki ride for great distances or small. In the ship of Shamash is a *sanjak* (banner), and from this streams the Light of God. The sun is a reflection of the Light of God, and the standard reflects the light of the sun."

After the seven planets, Ruhaya and Ur had twelve more children, the signs of the Zodiac. The age of the material universe, said the bishop, is divided from the time of Adam to the end of the world, into twelve parts, each governed by a sign of the Zodiac. To Umbara (the Lamb or Ram) a period of twelve thousand years was assigned, to Taura (the Bull), eleven thousand, to Selmi (the Scales), ten thousand, and so on. When the world arrives at the Nuna (Fish or Whale) period, it will come to an end, Ur will perish, and Ruhaya return to the realms of light.

The signs of the Zodiac and their numerical values are as follows:—

Umbara (New Year)	...	Lamb or Ram	...	1
Taura	...	Bull	...	2
Selmi	...	Scales	...	3
Saratana	...	Crab	...	4
Arya	...	Lion	...	5
Shumbul	...	Ear of Corn	...	6
Qeyna	...	Reed	...	7
Arqa	...	Scorpion	...	8
Hatya	...	Mare	...	9
Gadia	...	Kid	...	10
Dowla	...	Camel	...	11
Nuna	...	(Whale) Fish	...	12

Each year has a *burj*, or Zodiacal house, so has each month, each day and each hour—the day being divided into two parts of twelve, twelve for the day and twelve for the night.

To name an infant, they take the month sign, count from it round the Zodiacal circle and calculate from it the sign of the hour (the day is not taken into consideration), and from the numerical value which results they subtract the value of the mother's name.

For instance, a child is born at 11 a.m. in February. His mother's name is Shara (numerical value 2). The sign for February is Arya. Hence, starting at Arya, but not counting it in, eleven hours gives us Saratana (numerical value 4). Two, for the mother's name, deducted from four, leaves two. The name selected is Zahrun, one of the names the numerical value of which is two, so that the infant's name in full, Zahrun bar Shahra, equals four, which is the number of the Zodiacal sign Saratana.

It is interesting to know that the Mandaean believe that humanity has been destroyed, with the exception of only one couple or a few survivors, three times; first by war, next by fire, and then by water (the survivors that time being Noah and his family). The fourth destruction of the human race has not yet taken place, but the prophecy is that it will be by *hawa* which may be interpreted either by "air" or by "spirit." Some Madaeans look at the aeroplanes which fly from time to time over their heads and ask themselves whether the destruction of civilised man will come about that way.

Children are looked upon as great blessings, not only while their parents are alive, but after their death, for they can help the liberated soul through Purgatory (Matharotha) by their prayers and almsgiving, and so hasten the moment when the purified soul, weighed in the abode of the pole-star, Awather, in the scales with the soul of Shitel (Seth, purest of all human souls) in the opposite balance, is not found wanting. Thereafter, it may wing its way to "the place of light, the place of the redeemed and pure. In that place the sun will never set, and the lights are forever burning and unquenched. In that place all is truth and perfection and no increasing or decreasing."

A father is responsible for his son from the child's birth to his twentieth year. He must educate, discipline and nourish him and see that he carries out his religious duties and purifications. There are a number of ritual ablutions which the boy must learn, for instance, he must pray three times a day before each meal, and be careful, before eating, to wash his hands and his arms as far as the elbow. He must never touch meat which has not been properly killed, or food forbidden by the faith, for Hiwel Ziwa made a distinction between clean and unclean animals when Mithail created animals and fowls of the air. When a man kills a bird or beast for food, he repeats the verse which speaks of animal creation and of the distinction between clean and unclean animals, and ends, "whoso eateth of it (this clean food) shall be blessed." At his subsequent baptism (for the shedding of blood renders his purification necessary) he says as he goes into the river. "I, So-an-so, son of So-and-so, have slaughtered this fowl (or lamb or what it may be), and God will forgive me. Eat!" Sheep are permitted for food, as are fowls, ducks, geese, turkeys and fish. The ox and buffalo are forbidden in all forms, for Hiwel Ziwa created these animals for the production of milk, for draught and for ploughing, and not for food. Birds which have a certain pouch in their anatomy (I could not discover what this was) are unclean. The black crow is unlawful food, while the raven may be eaten without blame.

After all deeds or states which pollute or defile, baptism by immersion is obligatory. A woman who has had a child must be baptised the fourth Sunday after her confinement, and as the river is bitterly cold at some seasons of the year, this is a trying ordeal for delicate women, as the baptized person must remain in her wet *rasta* for some time after the actual immersion.* Baptism should take place often, in fact, a good Mandaean should be baptized

every Sunday. "Baptism, alms, and good deeds make the perfect Mandaean," they told me.

There are four great feasts annually: (1) The *Dehwa Rabba* (The Great Feast), the Feast of the Creation; during which the created worlds visit the Creator in Paradise and congratulate him on his work. (2) *Dehwa Hanina* (The Little Feast), which commemorates the creation of this world's living creatures. (3) *Dehwa ed Daiman*, which celebrates the baptism of Adam. On this feast all newly born children must be baptized. (4) *Paronaia*, the Feast of Five, in honour of five Melki. There is a baptism on this day of all spirits in the various worlds, and amongst Madaeans on earth a general baptism for five days. If anyone dies during *Paronaia*, much of his sin will be forgiven him. "The doors of pardon are open."

At the Big and Little Feasts it is customary to give the priest money or a gift. He goes from house to house, giving his blessing and receiving what each family in turn offers him.

Mandaean women are, in spite of the practice of polygamy, as free as their Christian sisters. They may own property, and not only can become priests, but are also sometimes made bishops. As a bishop, a woman may baptize and carry out the other functions of a bishop, but may not perform more than two marriage ceremonies. "What are the duties of a bishop besides ritual ones?" I asked Shaikh Dukayl. He replied with a smile, "He is a *mu'abbr ud din!*" (a ferryman of the faith). "He helps people across their spiritual difficulties."

The women, like the men, are often good-looking, which in the past has been a source of trouble, since Muslims have fallen in love with handsome Subba girls, and, marrying them, have forced them into the fold of Islam. A steadily dwindling nation cannot afford such incidents. The women have superstitions at which the men, better educated, profess to smile. They are experts in ways of keeping off the Shiviahi, or evil spirits, and use all manner of exorcisms and amulets against sickness, scorpion and snake bites, and the evil eye. The mad, supposed by them to be possessed, are taken to the exorcist rather than to the alienist, and a scrap of holy writ is valued above a doctor's prescription. As one said to me, "Writings (i.e. exorcisms and sacred texts) are our hospitals and our prescriptions."

When a Subba dies, if his life has been a good one, his family must show a cheerful countenance, and not weep. Every tear shed by a mourner, says Subba Legend, forms a wide river, over which a newly-released soul passes with difficulty. The dead man must be washed, dressed in his *rasta*, and laid in the tomb facing the North Star, the seat of judgment, while the *masakhto* is said to help his soul on its way. The most that can happen to a bad Subba is a prolonged sojourn in Purgatory. But for the man who renounces his faith, there is a heavier punishment. Till the end of the material world he must endure the torture of Ur's burning out-breath, and the icy inrush of air as he draws it into his Titanic lungs. The worst inferno is "to be eaten by Ur," but even then, there is the distant hope of an ultimate release.

It is a cheerful faith, and a smiling face is supposed by Madaeans to indicate a conscience at ease and the knowledge of duty performed. Personally, I do not remember ever to have seen a Subba who looked miserable or of poor physique. This may be due to their belief that cleanliness is, not next to godliness, but its counterpart; and that cleanliness of body is symbolical of cleanliness of mind and purity of soul. For that is the main tenet of this race of Baptists.

(Concluded.)

As a meeting of the Greek Cabinet held on October 20 it was agreed to accept in principle the request of the British Government for the establishment of aeroplane stations at Corfu, Argostoli, Navarino, and Suda Bay, in order to facilitate communications by air between England and India. The request was submitted to the competent department of the Ministry of Marine for examination.

* At such a baptism all the cooking pots and utensils she has touched during the confinement are taken into the river and purified by the bishop.

THE WEEK AT HOME

London, Tuesday Morning.

A Politician's Exit.

The correspondence of farewell between Lord Birkenhead and the Prime Minister had a curious ring, for Lord Birkenhead, ever a bold man, actually took it upon himself (as if in challenge to *The Times*, which had spoken of his loose seat at the India Office) to defend his régime as Secretary of State for India. But Mr. Baldwin, ever a cautious man, sagaciously left the issue for future generations to determine.

The fact is that politics in Great Britain do not pay, by which one means that they do not pay as in more corrupt countries. No man who is set upon "earning" large sums of money is advised to enter English politics. Probably our politics are all the better for this fact, although it must occasionally happen that we lose—for a time—the services of such eminent men as the retiring Secretary of State for India.

Without him the Conservative Party will do its best: the optimistic might even be tempted to say that that best will inevitably be better than any past efforts. Lord Birkenhead was never a great asset to the party as an election orator, fine speaker though he was.

Political Speculation.

The statisticians are busy speculating upon the possible combinations and permutations of parties in the next Parliament. Recent indications of probable lines of conduct have been given by Mr. Lloyd George and by Mr. Philip Snowden, who, while having many a "dig" at the rival "progressive" party (for that is the correct party game) are credited with a sincere intention and desire to work in collaboration, in the event of the combined Labour and Liberal vote exceeding that of the Conservatives.

It is true that Sir Herbert Samuel talks in grandiloquent way of the Liberals' gaining, not a balance of power, but dominance in the next, or next but one, House of Commons, but such idle words are not to be taken very seriously except by the loyal, and, therefore, to a certain extent, blind, Party worker.

A Literary Censorship.

Sir William Joynson-Hicks is a man of parts. Having told the Church how it ought to behave, he now talks of taking on his comprehensive shoulders the burden of distinguishing good books from bad. Manifestly the recent

publicity given to what I am told is a rather dreary but more or less readable novel has affected him deeply, and he is now in the mood for a crusade against all novels which by any sort of mind could be regarded as salacious. He actually said the other day that in the near future he might have to deal with immoral and disgusting books.

Now one should be perfectly clear in one's mind what are the issues at stake in this question of a literary censorship. With Sir William's sentiments there can be no decent person who will not agree. But with his proposal it is another matter. The freedom of the Press is something for which our forefathers fought hard, and it should not be placed in jeopardy by one who, for all the correctness of his morals, is hardly a judge of literature. The existing laws relating to libel, sedition, blasphemy, and indecency are still quite sufficient for the purpose of our generation: and public morals are the affair of the public, not of the Home Secretary, or of a Puritan Committee which he might appoint.

Public opinion in itself will kill a rotten book, which stands only to gain in circulation by such methods as those who are advocating a moral censorship would use.

One-way Traffic.

It is rather fun to observe that the Traffic Advisory Board, which introduced the one-way system of traffic in London some six months ago, has now condemned it. The system has never been popular, either among tradespeople, ordinary pedestrians, or the motorists, who found that the blockages were certainly not less numerous than before. To the man in the street, indeed, the congestion of wheeled traffic has seemed even worse in the last few months.

In some places, of course, the one-way system has obvious advantages, and presumably it will be retained in large circuses or squares, or where narrow parallel streets can contain traffic going in opposite directions. But the folly of having one-way traffic in a wide street, such as the Haymarket, is now fully demonstrated, and it is to be hoped that we shall soon have seen the last of this nonsense. The pedestrian will never come into his own again in London (not until we all are flying, that is), but it is certainly something to have his existence recognised officially once more.

Influenza.

After probably the finest summer on record, and in the midst of a magnificent autumn, there has descended upon us the scourge of influenza. It is all terribly disappointing, not so much because it has puzzled the doctors, who were quite sure that after we had absorbed all those sun-rays during the summer, they would be penniless during the autumn and winter, but because we really did imagine that good weather implied good health.

All we know is that the precise connexion between the two is unascertainable. The theory now is that all this catarrh, these sore throats, these shivering fits and hot flushes, are due to the fact that during the summer we were so unwise as to swallow an unusual amount of dust, and that the germ of influenza flourishes in the dust. But this explanation is possibly as wide of the mark as are most generalisations.

Yet there certainly is an unusual number of people suffering with more or less serious colds. I wonder whether the early autumn is a dangerous time in countries in the East which have dusty summers?

The Health of the Nation.

One of the few Governmental Annual Reports to the publication of which one looks forward is Sir George Newman's examination of the state of the public health. His Report for 1927, which has just been published, is full of stimulating matter—stimulating some to gloom, others to cheerfulness.

He points out that the birth rate in 1927 was the lowest on record—only 16.6 per 1,000 persons or half what it was between say 1881 and 1890. But infant mortality has been cut down by half since 1910. This

fact in itself, however, creates a problem, for the salvation of the weaker children is "casting a burden on preventive medicine." But if the weaklings can be saved, who is to say that they shall not be? This evidently is a serious problem for the State.

Another problem, which gives the impression that the old war-dodge of "swinging the lead" has not been forgotten in times of peace, is set by the fact that in 1927 the country lost, through sickness among the insured population alone, the equivalent of twelve months' work of almost 500,000 persons. The expenditure per person has risen from 2s. 2½d. in 1921 to 3s. 2½d. in 1928, and this increase is not to be accounted for in the records of illness or epidemics. As a matter of fact, the Approved Societies themselves are inclined to put it all down to a greater tendency on the part of their members to "go sick," and to worry over slight indispositions which in former years they would hardly have noticed.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

October 25, 1928 (New Style).

October 12, 1928 (Old Style).

Jumada 1, 10, 1347 A.H., of the Muslim Calendar.

Marcheshvan 11, 5689, of the Jewish Calendar.

Lord and Lady Lloyd left London on October 22 en route for Egypt.

Earl Winterton arrived last week at the Grand Pump Room Hotel, Bath.

The Aga Khan arrived last week at the Ritz Hotel from Paris.

Major-General Sir Edmund Ironside is sailing in the P. and O. ss. Ranpura, which leaves Tilbury to-morrow (Friday) for Bombay.

Lieutenant-General Sir George MacMunn has returned to Upton Park, Slough, from his tour in Canada on behalf of Empire Settlement.

Lord and Lady Airedale will leave 3, Cadogan Square on October 27 for India, sailing from Tilbury in the P. and O. ss. Nankin.

The Maharaja of Burdwan attended a reception given by Mr. H. Daly Stanford at 27, Knightsbridge, on October 20.

Field-Marshal Lord Plumer will be the guest of honour at the Canadian Expeditionary Force Re-Union Dinner on November 9 at the Hotel Cecil.

Sir John Chancellor, High Commissioner elect for Palestine, was one of the principal guests at a luncheon of African Society held at Hotel Victoria on October 23.

Sir John Maffey, Governor-General of the Sudan, has left London for Khartoum. Lady Maffey expects to go out early in December.

Mr. C. J. Gadd, of the Department of Egyptian and Assyrian Antiquities of the British Museum, delivered the first of the series of lectures arranged by the Egypt Exploration Society yesterday, in the meeting-room of the Royal Society, Burlington House. The lecture was entitled "Babylon Seers and their Art."

The Earl of Birkenhead (Secretary of State for India) had an Audience of the King at Sandringham on October 22, and delivered up his Seals of Office and took leave upon relinquishing his appointment. His Majesty invested the Earl of Birkenhead with the Insignia of a Knight Grand Commander of the Most Excellent Order of the Star of India.

SKETCHES OF YUGOSLAVIA.

The exhibition of water-colours of France and Yugoslavia which Miss Lily Waring has just concluded at the Beaux Arts Gallery, Bruton Place, Bond Street, W., was a very gay show. Particularly in her sketches of Yugoslavia were there manifest a jolly spontaneity and delight in fresh (not always faithful) colour. Miss Waring's attempt was obviously to recreate rather than to represent the various scenes, and certainly she succeeded in conveying the spirit of places, that is, their inner rather than their outer charm.

In one or two sketches of Sarajevo, for instance, and of Dubrovnik, she has achieved a happy general effect. It is obvious that, whether she was drawing at Mostar, or Zagreb, or Lapad it was the colour, primarily, of Croatia and Dalmatia that appealed to her: she did not, for example, endeavour to make old stones speak nor new places prophesy. Yet it is something to have the old and the new as they are mingled in Yugoslavia set down, as they were here set down, with neither fuss nor prejudice but simply with an infectious enthusiasm.

IN ASIA AND AFRICA.

Miss Edith Harvey, for her exhibition at the Arlington Gallery, Old Bond Street (which closes to-morrow, October 26), has travelled somewhat extensively in Asia and Africa. She has a pleasing reticence in the use of colour, although her harmonising is not always just. But she undoubtedly can draw, and has a gift in characterisation. One would draw special attention to "Persian Khan, Constantinople," "Old Khan, Damascus," and "Sir Samuel Baker's Stone, Rejaf," as showing the versatility of her brush. Other works that may excite interest are of Delphi, the Lebanon, Aswan, Khartoum, Athens, and Thebes.

R.A.S.C. AND THE E.E.F.

Major-General G. F. Davies presided at the Tenth Annual Dinner of the Royal Army Service Corps Egyptian Expeditionary Force at the Trocadero Restaurant on October 12. Other officers present included Captain G. Aitchison, Lieutenant-Colonel G. E. Badcock, Major E. S. Baring-Gould, Major K. M. Beaumont, Captain D. W. Boileau, Major C. H. Burke, Captain F. Harman Brown, Captain F. S. Butler, Captain M. J. Cahill, Major J. P. T. Clarke, Captain G. K. Congreve, Major L. M. Cox, Captain C. E. Davies, Captain A. D. Dogson, Major-General E. Evans, Major H. A. Fox, Lieutenant-Colonel A. Gillibrand, Captain P. G. Grinling, Captain W. E. Green, Major R. C. Haddon, Major J. M. Harby, Mr. J. W. Joyce, Captain D. Kennedy, Captain A. W. Marton, Colonel Matthew, Captain E. H. Mahon, Captain P. T. Marshall, Captain Mann, Major E. A. Medley, Mr. R. Mighall, Captain G. R. Morris, Captain C. E. Mott, Lieutenant-Colonel J. H. Morris, Mr. D. W. Musselwhite, Captain B. W. Nicholson, Captain A. E. Nugent, Captain E. H. Potter, Mr. H. Price, Captain R. R. Ripon, Captain L. Rowell, Major P. M. Sanders, Major J. Sewell, Mr. J. J. Sewell, Mr. A. Stansbury, Captain J. South, Captain J. P. Stratton, Sir Samuel Shead, Captain J. A. Tafft, Captain A. R. Tanner, Captain E. Upton, Captain Eric Unwin, V.C., Mr. G. Wagstaff, Captain A. H. Wale, Major F. R. Way, Mr. F. S. Wilkins, Mr. F. S. Wilks, Major C. White, and Captain B. R. Witt.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Bulgarian Loan.

While it was expected that the Bulgarian Loan would make its appearance before the end of this month I understand that this is not likely now to be the case. Loan negotiations in the most favourable circumstances are a delicate matter and often last longer than was originally anticipated, and at the time of writing the precise details of the issue have not been arranged. It must not be understood from what I have said that it is believed there be any long delay in negotiating the loan; it is quite possible that it will be issued some time next month. The amount of the loan, as I have already recorded, is £5,000,000, and it is amply secured by a first charge on the Customs dues.

Roumanian Loan Negotiations.

A Roumanian loan also is on the tapis, but in this case nothing definite has so far been arranged. The amount of the loan now desired is £16,000,000, but this is only a relatively small part of the amount which will ultimately be required to place Roumania in a position to carry out the requisite reconstruction scheme. Negotiations have been carried on in London, New York, and Paris by a Roumanian Commission, and while the conversations of the Commission are understood to have been satisfactory I understand that the present position with regard to the loan may best be summed up in the statement that negotiations are still in progress.

Loan Essential for Roumania.

There are two points with regard to this loan which require to be emphasised. In the first place there is a certain amount of opposition to it not only in certain circles in this country but on the part of the oil companies in Roumania who desire first a modification of the Mining Laws. The second point is that developments in Roumania during the summer have made a loan an imperative necessity. Some of the crops throughout the country have been indifferent, while in Bessarabia the maize crop has been a complete failure, and in that region, as a result, something approximating to famine conditions prevails and has called for remedial measures on the part of the Government.

The Anglo-Persian Dividend.

The dividend announcement of the Anglo-Persian Oil Company was forthcoming last week. It is proposed to pay a dividend of $7\frac{1}{2}$ per cent. on the ordinary shares as against $12\frac{1}{2}$ per cent. for the previous year and $17\frac{1}{2}$ per cent. for 1925-26, with which period, however, it cannot be compared, as the shareholders then received a capital bonus of 50 per cent. The present dividend is in no way a surprise, for it was generally expected that there would be some reduction in the distribution in view of the difficult period through which the oil companies have been passing.

This time it is proposed to place £800,000 to the reserves, as against £1,300,000, while the allocation for extra depreciation is £453,000, as against £450,293, and the carry forward will be £2,224,266, subject to excess profits duty, as compared with £2,246,880. Shareholders will no doubt find ample consolation for the smaller dividend this year in the fact that the oil position has materially changed for the better in recent months.

Progress of Cyprus.

Elsewhere in this issue will be found a review of the annual Administration Report of Cyprus for 1927. The progress made by the Island recently has brought it into prominence, and the report in question gives a most encouraging story of progress in agriculture and in the mining industry during the year. Developments in the current year have been on the whole favourable, and it is now abundantly evident that under capable administration the Island is well on the path which should lead to a most prosperous future. Incidentally, one promising industry of the Island, which is, so to speak, still in the making, is that of catering for the tourist. Special efforts are now being made to provide adequate facilities for travellers, and as the Island has special attractions of its own, not least among them the prospect of a really peaceful holiday, it may be anticipated that in the future there will be no lack of visitors.

An Interesting Development.

Particulars were announced during the week of another important development in the oil world, this being the formation of a new company by the Anglo-Persian Oil Company and the Asiatic Petroleum Company to acquire the distributing organisations of these companies in South and East Africa, Egypt, the Sudan, Palestine, Syria, the Red Sea, and Ceylon. The new concern, which will be known as the Consolidated Petroleum Company, Ltd., and in which the two companies associated in it will be equally represented, will take over the various installations of the companies in the areas in question and will distribute the products. The result of this arrangement will naturally

be that economies of a very substantial nature will be effected to the advantage of both the participating companies.

Southern Punjab Railway.

The announcement was forthcoming last week that the Government of India proposes to purchase the undertaking of the Southern Punjab Railway at the end of 1929 on the terms prescribed in the contract. Notice of this intention had to be given twelve months beforehand, so the intimation has been received well in advance of the necessary date, for which consideration those interested in the company will be grateful. The terms on which the railway can be acquired are 25 years' purchase of the company's share of the average net earnings of each section for the five years preceding the purchase, any payments by way of rebate being excluded. It is provided that the price must not be less than the capital expenditure, and must not be more than 20 per cent. over it. As there is a considerable period still to be allowed for on which the price will be estimated, it is obviously impossible to attempt an estimate of the amount for which the concern will pass to the Government, but it may be noted that the latest figures show an appreciable improvement on the corresponding results of last year.

Suez Canal Traffic.

The traffic of the Suez Canal continues to increase, and gives cause for hope that trade may be improving to a greater extent than would appear to be the case from indications in the United Kingdom. For the first eight months of this year the number of transits through the Canal was 4,078, which compares with 3,692 for the corresponding period of 1927 and 3,312 for 1926, while the total net tonnage was 21,142,718 as against 19,239,441 for 1927 and 17,192,366 for 1926. For August, which is the last month for which figures are available the number of transits was 487, the net tonnage being 2,421,000, an increase of 126,000 tons on the figures for August of last year. This increase was due entirely to the growth of the outward traffic, as the homeward traffic showed a decline of 73,000 tons.

South Indian Railway.

For a long time the traffic returns of the South Indian Railway have shown a tendency to improve, and the report for the year ended March 31 last shows an increase of Rs.33,84,045 in the gross earnings, the figures being Rs.5,59,96,133. Against this increase there has to be set, however, a considerable rise in the working expenses, which, at Rs.3,38,23,519, show an increase of Rs.55,25,729, with the result that the net earnings at Rs.2,21,72,614 show a decrease on the previous year of Rs.21,41,648. The explanation of the increase in the expenditure is that the company is still engaged in the work of modernising its equipment while during the year 156 miles were added to the length of the lines. This outlay will, no doubt, be reflected in increasingly favourable returns in the next few years.

COMMENTATOR.

The directors of Imperial Airways, Ltd., have nominated Viscount Chetwynd to be Vice-chairman of the board.

The traffic receipts of the South Indian Railway Company for the week ended September 22 amounted to Rs.11,50,745, making the total from April 1 Rs.2,93,93,070.

Stewart and Lloyds, Glasgow, have received a contract from the Anglo-Persian Oil Company for 7 miles of 12 in. oil piping, to be delivered over a period of six months. There will be 9,200 tons of piping.

New extensions of the Dunlop cotton mills at Rochdale now make the largest in the world under one roof. They have 35 acres of floor space; 286,400 spinning spindles; 100,000 doubling spindles; 3,000 workers (at the least); 14,500 h.p. of electricity. Every week 1,100 bales of cotton are turned into half-a-million lb. of yarn which is doubled and made into cord for Dunlop products, chiefly tyres.

CYPRUS IN 1927.

In a period when some Near Eastern countries with considerable resources have found it a difficult matter to make substantial progress in reconstruction the success so far achieved by the authorities in Cyprus in furthering the development of the Island stands out with particular prominence. While it may be said that the date of the inception of the British Empire Exhibition roughly determines the time, when a definite advance was made in the task of utilising to the utmost the Island's resources and finding larger markets for the various products, it is only in the last year or so that really appreciable progress has been achieved. In recent months evidence has been forthcoming in a variety of ways that the Government is sparing no pains to do everything possible to improve the economic position of the Island. Thus, as was recorded in these columns last week, an investigation is now proceeding with regard to the conditions in the various neighbouring markets with a view to finding larger outlets for Cyprus products. This is one example of the useful work being carried on by the Government, whose example might well be followed by certain Near Eastern administrations.

The Administration Report for 1927, which has now been issued, shows that last year was one of considerable progress, not least as regards the financial position of the Island. In the previous year, while the revenue had declined the expenditure had increased with the result that there was a fairly large adverse balance. In 1927 the revenue showed an increase of £26,731 at £655,997, and with the Grant-in-aid the total was £705,907 which compared with a total expenditure of £707,829, the deficit being the small one of £1,832 as against one of £68,761. The increased revenue was mainly due to higher Customs receipts arising from larger duties imposed in February, 1927. At the end of the year the Island had a balance of assets over liabilities exclusive of the Reserve Fund and the depreciation account on investments of that Fund and the Savings Bank of £45,050 as compared with £45,990. Under the new arrangement which came into force this year H. M. Government takes over the whole of the Island's share of the Turkish Debt Charge while the Island will henceforth contribute £10,000 per annum towards Imperial Defence. This means an improvement in the Island's financial position to the extent of £32,800 per annum which places Cyprus in a favourable position with regard to the raising of the loan which is in contemplation.

Naturally special interest attaches to the section of the report dealing with agriculture, since this is the principal source of the Island's wealth. The crops were generally good in 1927 with the exception of the carob crop, the quality of which was poor, and cotton, of which less was sown owing to the insufficient rainfall. One of the features of the year was the extension of the area devoted to orange cultivation, and this development is likely to continue owing to the splendid quality of Cyprus oranges, which are meeting with increasing appreciation in the markets. Experiments in flax cultivation were continued with satisfactory results, and it is interesting to note that good prices were obtained for the flax shipped to the United Kingdom. Then there was a large extension of the area under tobacco and a considerable increase in production. The problem in regard to this important crop is the improvement of the quality, and endeavours are being made to attain this end. A serious difficulty in furthering the improvement of agriculture has been the reluctance of the farmers to adopt modern and scientific methods. For years the Agricultural Department has been demonstrating their necessity, and it is very satisfactory to learn from the report that these efforts "are now beginning to have a noticeable effect" and that "it may be affirmed that the area of agricultural stagnation in Cyprus is approaching its end." Signs of this are the rapid increase in the use of chemical fertilisers and up-to-

date machinery and the growing demand for expert advice on the cultivation of crops. The improvement of agriculture will naturally have the effect of increasing the wealth of the peasant class who form the bulk of the population, and that will, of course, mean an increased purchasing power, signs of which are already apparent in the improving trade returns.

Sericulture is one of the Island's important industries, and as a matter of fact, Cyprus ranks second among the silk-producing countries of the Empire. The Cyprus Silk Filature, which was established at Yeroskipos in 1925, has 80 reeling basins which can deal during a year with about 370,000 lb. of fresh cocoons. Reference must also be made to the important mining industry of the Island. In 1927 the Cyprus Mines Corporation mined approximately 200,176 tons of cupriferous iron pyrites and 208,122 tons were shipped for export. Then the Cyprus Asbestos Company greatly increased its output during the year, the amount of asbestos rock mined being nearly 1½ million tons, which represents an advance of more than ¾ million tons on the 1926 figures, while the production of finished asbestos was 11,200 tons, or 5,000 more than in the previous year. Thus the mining industry is keeping pace with the developments in agriculture and promises to play an important part in making the Island one of the prosperous regions of the Mediterranean.

NEWS FROM ALL SOURCES.

The Rt. Hon. Lord Meston, K.C.S.I., has joined the Board of the Rohilkund and Kumaon Railway Company, in place of Sir John S. Campbell, K.C.S.I., C.I.E., deceased.

Charles Roberts and Co., Horbury Junction, near Wakefield, have received a contract for two kerosene tank waggon for the Sudan Government Railways.

Roumanian exports of cereals during the first seven months of the year (in tons) were:—Wheat, 10,242; rye, 10,460; maize, 452,556; barley, 94,277; oats, 3,564; millet, 1,099; wheaten flour, 10,815; bran and other cereals, 20,700.

The directors of the Burma Railways Company have decided to make a final payment of 7½ per cent., less tax, on account of surplus profits for the year ended March 31, 1928. This will be distributed on December 31 with the guaranteed interest of 1½ per cent. in respect of the six months ended December 31, 1928, and makes a total return of 14 per cent. for 1927-28, as against 11 per cent. for the year preceding.

A sample of prunes has been prepared by the Cyprus Department of Agriculture and sent to the Cyprus Trade Commissioner in London for a report on their value on the London market. This is believed to be the first sample of prunes prepared in Cyprus. The fruit was grown at Prodromos, in the Marathasa district, and it would seem that there are good prospects of developing an important industry in the cultivation of this fruit for export.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Canning Machinery.—The British Commercial Secretary at Cairo has forwarded to the Department of Overseas Trade a report by H.M. Vice-Consul at Suez regarding possible requirements of a local concern for their fish canning factory, which include: Canning machinery of all kinds; oil extraction plant, machinery for salting and smoking fish; steam trawlers and equipment and accessories for steam and sailing trawlers (canvas, ropes, anchors, chains, etc.); fishing hooks, trawl nets, barrels. (D.O.T.)

Syphons.—The Director of Projects and Resident Engineer, Naga Hamadi Barrage, Naga Hamadi, invites tenders for the construction of three syphons under the Foadia Canal. November 30.

Scientific Instruments, Etc.—The Director-General, Physical Department, Sharia El Insha, Dawawin Post Office, invites tenders for the supply of scientific instruments and clocks. December 3.

Copper Wire, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for copper line wire; mild steel; transformers and cables, etc.; armoured underground cables; watertight fuse board and unipolar fuses; lubricating pads; sale of second-hand drums.

TURKEY.

Saw Milling Plant.—A Constantinople concern is anxious to acquire the following plant as soon as possible:—(1) steam power driving plant for driving saws, etc., for an annual output of 50,000 cubic metres which it is proposed to increase later to 100,000 cubic metres. Only wood will be consumed as fuel in the factory; (2) two horizontal log saws; (3) one vertical log frame saw; (4) two circular swing saws, for logs. (D.O.T.)

Motor Lorries, Buses, Etc.—The Ministry of National Defence is in the market for motor lorries, buses, and motor tank wagons. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, November 3). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, October 30); s.s. Magdapur for Calcutta (Birkenhead, November 8).

Biby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 31).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, November 3); s.s. Mundra for Bombay and Karachi (London, November 10); s.s. Merkara for Colombo, Madras, and Calcutta (London, November 17); s.s. Hatimura for Bombay and Karachi (London, December 1).

Cunard Line.—S.s. Bothnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, November 10); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz if inducement (Liverpool November 12, and Swansea November 27).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 3). (This steamer will be the last sailing of the season to the Danube ports.)

P. and O. Line.—S.s. Ranpura for Bombay (London, October 26); s.s. Nankin for Calcutta (London, October 27); s.s. Kaiser-i-Hind for Bombay (London, November 9); s.s. Perim for Calcutta (London, November 10).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 3); s.s. Egyptian Prince for Tunis, Malta, Alexandria, and Cyprus (Manchester, November 3).

Ellerman and Papayanni Lines.—S.s. Roumelian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa* (Liverpool, October 27); s.s. Manchurian for Algiers, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 27, Swansea October 27); s.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool November 7, Swansea November 10); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 8); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 8); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 10); s.s. Mardinian for Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 27, Swansea October 27).

*Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*†ELYSIA	... Nov 9	*MASSILIA	... Dec. 11
*†CASTALIA	... Nov. 27	*†BRITANNIA	... Oct. 31

*First class passengers only. Specially low fares. †Calls Port Sudan.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 23.

Another week of pronounced activity in the more speculative sections of the Stock Exchange ends on a strong note, New York coming in as a buyer of several of its favourites, and in spite of the approach of the settlement and the arrangements in connexion therewith business continues on a large scale. Concurrently with the activity in the industrial section there has been a continued firmness in the gilt edged group, on which the heavy flow of company prospectuses of all classes appears to have had no effect. The public's appetite for new issues shows no signs of abatement and many have been heavily oversubscribed, a notable success being scored by the Birmingham Corporation Loan. Two or three foreign loans are known to be in the offing, including a loan for Peru, which is to be issued partly in New York and partly in Europe, London being expected to get about £2 millions. The loan is expected to be on a basis to yield about 6½ per cent. and to run for thirty years.

Protecting the Investor.

In these days, when there is a vast body of inexperienced investors, it is more than ever necessary to take every step to make investing as safe as possible. We therefore welcome the most recent action of the Stock Exchange Committee, which has revised certain rules in order to afford the investing public greater protection. These rules relate to the circumstances in which permission is given to deal in a share. It sometimes happens that a company's position is such that it is not anxious to stand in the light shed by a prospectus. In this case it might at first arrange for capital to be subscribed privately and then introduce the securities on the Stock Exchange and so pass them on to the general investor. Before the shares can be introduced on the Stock Exchange, however, it is necessary to publish a statement in lieu of a prospectus. This is something like a prospectus, but generally less informative than the average prospectus. The result is that the investor sometimes takes up a security under the impression that the company's position is different from what it actually is. The latest revision of rules undertaken by the Stock Exchange Com-

mittee will lessen this danger, for the information to be given in a statement in lieu of a prospectus will make it little inferior to a prospectus. For instance, the dividend, if any, paid on each class of shares during each of the last three financial years is to be disclosed and if no dividend has been paid this is to be stated. The Stock Exchange Committee's action is a step in the right direction.

The Tea and Rubber Outlook.

The activities of Harrisons and Crosfield bring the company into intimate contact with a substantial section of the tea and rubber industries. The views of the chairman, Mr. Eric Miller, are therefore regarded as noteworthy. Speaking at this week's meeting of the company he made his customary survey of the tea and rubber industries and on the whole was reassuring. The producers of poor common teas, he said, will be faced with prices which do not cover the cost of production, but attractive good medium and fine to finest teas are in strong demand at remunerative prices and provided care is exercised there is a certain prospect of satisfactory prices. There will be few who question this diagnosis, but possibly some observers may consider his views on the rubber outlook as somewhat erring on the side of optimism. Discussing the outlook for next year, he said that "the quantities to be taken by manufacturers during 1929 will about equal the unrestricted production both being estimated in the neighbourhood of 700,000 tons." At any rate, he was in no doubt regarding the ultimate future. All industries swing like a pendulum, he said "and as we are now on the up swing we may look to the future in confident assurance that the producers of this wonderful material so essential to modern life are to receive an adequate return for their enterprise."

Further Oil Industry Developments.

We recently discussed important developments in the oil industry, alluding in particular to the purchase by the Burmah Company (which holds a large number of Anglo-Persian Oil Company's shares) of a substantial block of the "Shell" Company's shares. We stated that any further development would be awaited with interest; and further noteworthy developments have now been announced. There is to be formed a new company by the Anglo-Persian Oil Company and the Asiatic Petroleum Company (which belongs to the "Shell" group), which will take over the whole of the distributing organisation of both companies in South and East Africa, Egypt, Sudan, Palestine and Syria, the Red Sea, and Ceylon. This new company will acquire all the installations and other distributing facilities which are owned by these companies in these areas, and it will distribute their products for their joint account. The new company will have the title of Consolidated Petroleum Company, and the Anglo-Persian Company and the Asiatic Company will hold an equal number of shares in it, and have equal representation on the board. There is no doubt that this association of interests will result in substantial economies which should benefit both shareholders and consumers. Clearly co-operation is making considerable headway in the oil industry and in so far as it is in keeping with the principles of round "rationalisation" its advantages cannot be in question. In view of these and other possible developments, we repeat that the holder of good shares should retain his securities.

Yugoslavia's receipts from direct taxes for the financial year 1927-28 amounted to 1,717 million dinars, or 11 millions more than the estimates. Indirect taxes, amounting to 3,292 millions, show a deficit of 213.5 millions from the amount estimated. Receipts from monopolies reach 2,372 million dinars, instead of 2,296 millions, as estimated. The railways brought in 1,873 millions instead of 2,700 millions. The total receipts were 10,504, against an estimate of 11,477 million dinars, leaving a shortage of 973 millions. Expenditure was 10,767, against an estimate of 12,282 millions. The deficit, therefore, amounts to 263 millions, as against an estimate of 906 million dinars.

GROWTH OF HEAVY INDUSTRIES FAIR.

An Outside Section at Birmingham.

The Birmingham Chamber of Commerce (Inc.), who control the Heavy Section of the British Industries Fair held in that city each spring, have been much exercised in deciding how to deal with the numerous applications for space, next February, which have been received since the recent announcement that the whole of the new 11-acre exhibition building was booked up six months in advance. It was clearly recognised, at the meetings which have taken place on the subject, that no further structural extensions, beyond those now in hand, could be completed in time for the 1929 display, even if the Chamber were prepared to accept the additional strain on their resources.

As the only alternative to the continued refusal of space, it has now been decided to create an Outside Section, which will accordingly be held, immediately adjoining the Fair Building, for the first time next February. This adds an area of no less than 50,000 sq. feet to the Heavy Section of the Fair. The ground, which is now being specially prepared for the purpose, is bounded by the L.M. and S. Railway siding and by the passenger approach to the Fair from Castle Bromwich railway station.

An official circular to this effect, issued within the last week, has met with instant response on the part of prospective exhibitors, who in many cases intimate that the new section in the open will, in practice, be more suitable for the demonstration of their products than space within the Exhibition if it were available.

Space is already being allowed to manufacturers of concrete-mixing machines, which will be shown in operation, with other apparatus in relation to road-making and building construction. Horticultural and agricultural buildings; enclosures of ground by different systems of cattle and vermin-proof partitioning; temporary structures on contract jobs, cattle shelters, and the like are other products for which outside display is appropriate.

Other applications have been received from firms who wish to give working demonstrations of mobile traction in tractors, gantries, telpherage, and escalator ladders.

Hard tennis court, drainage systems, and preservative and weather-proof materials are particularly suitable for outside stands, while railway apparatus will probably be demonstrated on some miles of private sidings between the Fair Building and the L.M. and S. main line.

The 1929 Outside Section at Birmingham is likely to prove one of the most active and interesting portions of the Fair, rivalling the clamour and whirl of machinery of the engineering section within. Having its origin, in the main, as a means of meeting an emergency, this new development is receiving such strong support that it may be accepted as a permanent feature of the Birmingham Section of the Fair.

The necessity of providing ever increasing accommodation, which has led to the introduction of the Outside Section, brings more acutely before the Birmingham Chamber the urgency of planning further extensions for the future. It appears inevitable that for 1930 all land available to the northern boundary of the Exhibition area of 25 acres, secured for a period of fifteen years, must be occupied by permanent buildings. This will mean further outward diversion of the new circular road which, in readiness for next February, has lately been extended to the utmost limit of territory for half its length.

Carrying the stands to the northern boundary for the whole length, thus earmarked as part of the development for 1930, will bring the total display space to the enormous area of 540,000 sq. feet. Beyond this enlargement, the only other method of expansion that is possible under the present lease is to continue the Fair Building over the East Car Park of 6 acres, making other arrangements for cars now using this park.

The first step here will be the continuation of the Fair Building east for a further 120 ft. by three spans of 110 ft. each, making a width of 330 ft. This extension of 39,600 sq. feet, in addition to the 62,000 sq. feet expansion to the north, is already contemplated as being necessary for 1930, giving extra space for that year of 101,600 sq. feet.

CYPRUS CROPS.

The Trade Commissioner for Cyprus has issued the following crop report for September:—

Threshing of wheat is now completed throughout the Island. As foreshadowed in previous reports, the crop is much below the average. Prices are firm at 7s. to 8s. per bushel. There is a great demand in Asia Minor for Cyprus wheat for seed purposes. Barley is a fair crop. Prices are steady at 3s. 4d. per bushel. The demand is good, but sellers are holding back in anticipation of higher prices. The price of oats is steady at 3s. per bushel, but although there is a fair demand, offers are few. The new crop of carobs is gathered. Prices are 93s. to 111s. per ton. Overseas prices are low.

The planting of the new crop of potatoes is completed. Lita solanella is still causing damage to stored tubers and to plants in the fields. This insect caused heavy losses to the seed tubers in certain localities, and the farmers were obliged to replant a second and in some cases a third time. Prices are £7 10s. per ton. The demand is good but offers are poor. Stocks are nearly depleted. Onions are a good crop. Prices are £5 10s. per ton, falling. Offers are good but the demand is poor. Cotton picking is now in full swing. Production is less than last year. The price is 3s. 4d. per stone, and the market is unsettled. The new crop of tobacco is stored. Much improvement is reported in the quality over that of last year. The market is unsteady and prices are not firm.

The crop of oranges will be much below the average. Lack of water supply and a heat wave at the flowering season are the two chief causes. Prices will be higher than in previous years. The export of grapes is continuing. The raisin crop is below the average owing to the increased demand for grapes. The price is 1s. 6d. per stone. The crop of pomegranates is slightly over last year's production. Prices are £4 per ton, falling. There is a poor demand. The gathering of the olive crop commenced in August. The production is slow. The new crop of sesame is now on the threshing floors. The production is low. The price is rather high, at £30 per ton. The demand is good, but offers are poor. This year's wine is a good vintage; there is a good demand from France. There is a good offer of cumin and a corresponding demand. The price is comparatively low, at £45 per ton. The stock of aniseed is exhausted. The demand is still firm. The production of lemons is below the average. There is a good demand; offers are poor, and prices are 15s. to 20s. per 1,000. The production of almonds is poor. There is a good demand; the price is £26 per ton.

An Athens message states that the convention between the Greek Government and the American firms of Ulen and Monks for irrigation works in the Struma Valley was signed on October 21 and will be submitted to Parliament at an early date.

It is reported that the rose crop in Bulgaria has been an unusually poor one, and the production of attar of roses is estimated to amount to not more than 900 kilograms as compared with 1,150 kilograms last year.

The Anglo-Danubian Transport Company has been registered as a private company with a nominal capital of £30,000 in £1 shares, to carry on the business of shipowners, etc. The directors are: Mr. L. Hamilton, Mr. D. Finnie, MM. Nachmias and G. Bischoff.

Engineering Topics.

By G. B. B.

Specifications.

The subject of specifications has just been raised by a journal representing the interests of contractors, the claims being made that specifications as issued to-day are sometimes far from clear, and that they actually contain pitfalls into which the unwary may slip, and so incur pains and penalties. The view taken is rather that there has grown up a tendency to use inflated rather than simple language; to include many clauses that are not needed and, that, in short, modern specifications should not be more or less copies of other and older specifications but should be freshly made, like the advertised cups of tea for each customer.

Engineers should remember that a specification should be terse. The average engineer or architect is neither a lawyer nor an essayist and he should not try to imitate either the subtleties and legal phraseology of the one nor the rhetorical fireworks of the other. If he does some point or other will surely be lost in the sea of words. A specification should be clear and it should say only what is relevant and intended. If it contains any references to standard specifications these should be clear and unmistakable. Works to be done by one sub-contractor should be kept together and not dotted about the specification, and, further, different classes of work should be segregated in sections under section headings. Enough definitions should be given in the sections of "general conditions" so that there can be no question as to the meaning of the terms used.

Also a specification should be complete. It should be checked with the plans so that there will be no need of specifying that the contractors should supply omissions not called for on the plans or in the specifications. It would seem high time that every professional institution or society should draw up standard specifications. Some of them have already done so and they have been of great help and value but much more might be done in that direction.

A New Association.

An association is to be formed of manufacturers of road surfacing emulsions, and I understand one of the first things intended to be done is to draw up standards and do all that can be done towards securing uniformity in this matter. No intimation as to the formation of this association has hitherto been allowed to leak out and it may be somewhat in the nature of a surprise to the firms concerned when they see their intentions made public in *THE NEAR EAST AND INDIA*. But I would say to this association that no good purpose whatever can be served

by keeping their light under a bushel. They must get into the light of day for the association they are forming is one of the most wanted to-day. They will be received with open arms by all connected with road and transport work.

Gas Transmission.

The world Fuel Conference in London has been productive of a good deal of useful information collected by the bodies represented and made public. Lt.-Col. Bristow, who has had a great deal to do with low temperature combustion and who is an authority on the subject, said that in his view the proposed gas-grid scheme for the long distance transmission of gas, if properly worked out from a technical point of view, would undoubtedly be of great value to the low temperature carbonisation industry, as it would afford a ready and profitable means of utilising large quantities of low temperature carbonisation gas, but he felt that in any such development, the interests of all parties should be properly considered. It had come, he said, to his notice that a certain housing estate, consisting of about 2,000 houses, erected by a certain London Borough Council, was excluded by a recent Act of Parliament, from the area served by a large London gas undertaking. The facts were that tenants, by an agreement which they had to accept, were forbidden to use gas for lighting purposes, notwithstanding the offer of the gas company to lay mains, connect up the houses, fix and supply gas fittings and cooking and heating equipment, free of cost to the borough and to concede to the tenant freedom to use either gas or electricity as he preferred.

Later, it appears that the tenants presented a extensively signed petition asking for equal rights with other ratepayers in the choice of gas or electricity, and the Ministry of Health gave notice to the Council that the cost of electric wiring must not be included in the amount chargeable against the housing scheme. Presumably, the cost of wiring had to be paid by some one and the only "someone" available appears to be the unhappy ratepayer. Incidentally, it is a curious fact that in spite of the installation of electricity already provided in each house on the estate, the majority of tenants are using oil cookers and the estate is now one of the best centres in London for the sale of oil for lighting and cooking purposes.

A Concrete Competition.

It is seldom that architects have an opportunity of winning £500 for a design for a house. That amount, however, is now being offered in prizes, for designs for a concrete house by the directors of Portland Cement

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

18, LYCOURGOU STREET, ATHENS, GREECE.

Telegraphic Address: "Pimacricia," Athens.

::

Branch at Piræus: 48, Notara Street

GENERAL MERCHANTS & COMMISSION AGENTS

General Agents for the Shell Company (Hellas) Ltd.

Over 100 Agencies throughout Greece.

Special Branch for Commission Business.

Contractors to the Greek Government for the construction of a Complete System of Roads throughout the Country.

Selling and Distributing Co., Ltd. The competition is being held in co-operation with the Ideal Home Exhibition at Olympia next year. The suitability of concrete for domestic architecture, for reasons of durability, rapidity of construction, cost and beauty is being much more widely recognised to-day than was formerly the case. There is, however, still a wide field for further educational work in that direction, and it is believed that the competition now inaugurated will mark a great advance.

Company Meeting.

H.E.H. THE NIZAM'S GUARANTEED STATE RAILWAYS.

Increased Passenger Traffic.

The seventy-fifth general meeting of H.E.H. the Nizam's Guaranteed State Railways Company, Limited, was held on October 23, at Winchester House, Old Broad Street, E.C. In the absence, through indisposition, of the Chairman (Lieutenant-Colonel George Huddleston, C.I.E., V.D.), Sir Robert S. Highet (Managing Director) presided, and read the Chairman's speech, of which the following is a summary:—The figures in paragraphs 3 and 7 of the report show that, compared with the previous year, our net earnings in sterling were down on the broad gauge by nearly £15,000, and up on the metre gauge by nearly £20,000. What we lost on the swings was gained on the roundabouts. On the broad gauge the earnings are compared with the best year we have ever had. On the metre gauge they are the best we have ever had. The passenger traffic improved on both systems. As for the merchandise, there were variations under several heads, but none ascribable to causes other than what I may call seasonal.

Instead of drawing comparisons between the two years, I would prefer to invite attention to paragraphs 5 and 9 of the report. There the earnings and expenses are set out for the past ten years, and I think you will agree they are a striking testimony of progress, but I will supplement them by a few facts. In the first of the ten years the then customary annual distribution of a 5 per cent. dividend was supplemented by a bonus of 1 per cent. We paid for the first time in our history as much as 6 per cent. In the last of this decennial period your Board propose, with the assistance of the surcharge refund, to distribute 18 per cent.

At the beginning of the ten years your surplus earnings fund—the largest of our reserves—was valued at £230,000; at their close it stands at more than a million. But that is not all: the market value of the reserve fund, No. 5 on page 8 of the report, has in the same period risen in value from £266,000 to £642,000. I ascribe these magnificent results to your confidence in the Board's policy; to the generous support I invariably receive from my colleagues; and last, but not least, to the responsible staff in India, whose good work, often performed in trying conditions, has, under the leadership of Mr. Lloyd Jones, our agent, been such that I cannot speak too highly of it.

Your Board have always done everything in their power to assist the Government of the Nizam in developing His Exalted Highness's Dominions. From time to time I have told you of various railway extensions sanctioned. It is gratifying to notice that, owing to the enterprising policy of His Exalted Highness's Government, a programme of fresh construction was designed some years ago on what I think may be called a very generous scale, and some highly significant additions to His Exalted Highness's railway system are the outcome.

If you will look once more at the map in the report, you will see that two new through routes have come into being. The first of these, and I believe it will prove the more important of the two, is the broad gauge railway from Kazipet to Belharshah. This line is nearly 150 miles long and forms a new link between certain parts of Southern India and a large portion of Northern India, far shorter than any previously existing railway route.

The other railway I refer to is a metre gauge line, part of which has been open for several years. It runs from Secunderabad to Kurnool, a distance of 153 miles. This line now forms a new and more direct route between the heart of His Exalted Highness's Dominions and numerous places in Southern India.

The Board have long felt the necessity for keeping pace with modern requirements. The locomotive and carriage shops are under conversion from steam to electric drive and much of the older machinery, which had become out of date and uneconomical to run, is being replaced. We are going ahead with the improvement of our rolling stock, especially the lighting of passenger vehicles, which is being changed from gas to electricity; the use of the vacuum brake is being extended on goods vehicles. On the broad gauge most of the stock has already been fitted with the vacuum brake; on the metre gauge it remains to be done. We are also progressing in other directions. Briefly put, your Board desire to see His Exalted Highness's Railways equipped in a manner second to none in India.

Sir Robert Highet said:—You have heard the Chairman's interesting account of the working of the railway during the year ended March 31 last. You will, no doubt, have noticed that, while giving credit to others for the good results obtained, he carefully avoids anything in the nature of self-praise. I can, however, assure you that much of the excellent results achieved, not only during the period referred to, but also during the last ten years, are due to Colonel Huddleston's keen foresight and indefatigable energy in the direction of the company's affairs. We, on this side of the table, sincerely hope that he will long be able to continue the useful work which he has already done, and I feel sure in saying so I am expressing the wish of everyone who has an interest in the undertaking.

I spent five weeks last cold weather going over the different lines which comprise our railway system and was well satisfied with the condition of things. The lines are being maintained in a high state of efficiency and the train services were being well run and meeting all necessary requirements.

Work in connexion with the additions and alterations in our locomotive workshops had made good progress, and this, with the introduction of modern plant and machinery, in supersession of obsolete types, coupled with the substitution of electric for steam drive, will greatly facilitate work and should result in considerable economy.

Progress in industrial development is not very rapid in H.E.H.'s Dominions, but during recent years a few cotton spinning and weaving mills have come into being. It is rather surprising that there should not be greater enterprise in this direction, seeing that good long staple cotton is available on the spot and labour is cheap. I had an opportunity of going through a new up-to-date mill at Nanded and was much interested in watching the whole process of manufacture—the cotton having been grown within a short distance of the factory, and the finished materials which were being turned out appeared to be of excellent quality.

The report and accounts were unanimously adopted.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 13:—

Sultanas.

The estimated sales to date are 26,400 tons, against 30,600 tons for the corresponding period of the previous year.

Closing prices Smyrna, per cwt. c.i.f. London, for types 12 to 18 and 1, 3, and 5 are: 32s. 6d.; 34s. 6d.; 36s. 6d.; 40s.; 44s.; 48s. 6d.; 58s.; 68s.; 36s. 6d.; 35s.

Market Conditions.—The market is strong for the low grades and steady for the better qualities. Business has been active throughout the week and the volume of sales again constitutes a record figure for any one week's turnover this season. The demand is running mainly on inferior sorts.

Forward sellers have been covering their engagements for later shipment, which has contributed largely towards a semblance of greater activity than is really the case if the situation be judged solely on the volume of new business coming in.

The Alcohol Monopoly continues a regular and serious buyer of the lowest grades. A feature on the market this week has been an improved demand from the United Kingdom.

Figs.

The estimated arrivals on the Smyrna market since the opening of the season total 22,100 tons, against 21,080 tons for the corresponding period of the previous year; estimated sales to date total 19,710 tons, against 18,685 tons.

Market Conditions.—The market continues active and very strong. Notwithstanding that the majority of packing houses have now closed down all arrivals are being absorbed as they come forward, and the demand seems in excess of available supplies. It is likely that the balance of the crop will be marketed at the highest prices for the season.

The issue of £4,000,000 Five-and-a-Half per Cent. Secured Debiture stock by the Burmah Oil Company was over-subscribed.

The value of Yugoslavia's imports in August was 645 million dinars, making the total imports for the first eight months of the year 5,087 million dinars. The value of the exports for this period was 3,875 millions, so that there is an adverse balance of trade of 1,212 million dinars. For the same period last year the value of the imports was 4,543 million dinars and that of the exports 4,021 million dinars, the adverse balance being 522 million dinars.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

British Consular Reports

VIII.—GREECE.

(Continued from page 470).

To summarise the situation, one may say that money was slightly less tight during 1927; imports were larger and exports considerably increased; while there was some improvement in the cereal crops, and only a comparatively small decrease in the other crops, for the majority of which, however, there were rising prices on the export markets. Moreover, prospects for the coming harvest are said to be good. The settlement of the refugees continues satisfactorily, and the efforts of the Government towards the re-establishment of Greek finances have resulted in the legal stabilisation of the drachma, and a marked improvement in the estimation in which Greece is held abroad. On the other hand, there was a steady and noticeable rise in the cost of living, with resultant dissatisfaction and reduced power of consumption among a large section of the populace. Stocks in hand are said to be large, and during the current year shortage of money has again become acute, while the high import duties are felt by the commercial community as a hindrance to trade. Moreover, despite the various signs of an improvement in the general situation and the anticipation of the issue of various important foreign loans during the current year, the stabilisation of the drachma and a reorganisation of the banking system, there is, probably as an inheritance from the disturbed conditions of the preceding decade and a half, an intangible and covertly expressed anxiety which, with the other factors above alluded to, is doubtless influencing the dispositions of the more far-sighted Greek business men.

As was the case last year, the main desideratum for Greece is continued political stability. Much, indeed, very much, has been achieved during the past eighteen months, and although at the present moment (May, 1928) the shortage of money, reduced buying capacity, and possibly, to some extent, overstocking, have produced a situation that in some quarters is described as amounting to a crisis, yet in well-informed circles it is firmly believed that Greece, if left undisturbed, will successfully overcome the difficulties and hardships she is now facing. When one considers the resources of the country and the courage, intelligence, and industry of the people, one can but admit that those prophets have more than a little reason who foretell for her a period of economic prosperity—not too far distant—if only the ever-present nervousness of political disturbance could be definitely banished.

Refugee Settlement.

In considering the re-organisation of the economic life of the country, it is necessary to regard, if only cursorily, the factor that, perhaps more than anything else, has rendered the position of Greece unique among the other suffering countries of Europe.

While during the period 1919-1924 some 430 Turks and Bulgars resident in Greece returned to their country of origin, not less than 1,400,000 Greek refugees, the majority entirely destitute, returned to the mother country from Turkey, Russia and Bulgaria. Of these, it is estimated that 650,000 are agriculturists and 750,000 town dwellers.

The task of settling these unfortunate people has been a great one, and the progress made redounds to the credit of the Greek Government and people, the Refugee Settle-

ment Commission, and the refugees themselves. Details of the work accomplished can be ascertained from the publications of the League of Nations. Suffice it to say here that the rural settlement has necessitated a complete change in the Greek agrarian system from large properties to small holdings: few farms to-day are larger than 100 hectares, and the average is 10 hectares. Further, large areas, hitherto untilled, have been taken into cultivation, particularly in Macedonia and Epirus. Not only has the area under cultivation been increased, but the refugees have introduced new methods; notably the cultivation of tobacco has made very great strides since their advent.

The urban refugees have presented an even more difficult problem, and the congestion in some towns is still very serious. Thus, compared with 1920, before the arrival of the refugees, it is computed that the population of Athens and Piræus has increased by 77 per cent., of Volo by 116 per cent., of Salonika by 186 per cent., and of Kavalla by 205 per cent. It is hoped that the drainage and reclamation schemes will yield very considerable new areas of agricultural land to which rural refugees now in towns can be transferred. These efforts being made in support of industry by the Greek authorities may also be regarded as being to some extent for the assistance of the refugees, many of whom are skilled workers, as is shown by the rapid growth of the Greek carpet industry, and the growing ceramic industry. In the already existing industries, as in trade and various handicrafts, refugees are finding employment and are proving cheap and efficient workers.

Thus the augmentation of the population, while hitherto a burden, should in the end, by the intelligence and industry of the refugees, prove an asset to the country.

Trade and Industry.

The statistics for 1927 show that there was considerably increased activity both in foreign trade of Greece and in the home industrial production.

According to the statistics published by the Greek Statistical Department, the imports during the year amounted to 2,275,213 tons, valued at Drs.12,601,948,000, and the exports to 632,461 tons, valued at Drs.6,037,411,000. The comparative figures for 1926 were:—Imports 1,870,230 tons, valued at Drs.10,004,939,000; exports 534,035 tons, valued at Drs.5,429,751,000. It will thus be seen that the Greek adverse trade balance increased from Drs.4,575,188,000 in 1926 to Drs.6,564,537,000 in 1927.

The most noticeable feature of these figures is perhaps the increase in the value of the Greek exports. While this was in great measure due to the increase in the value of the exports of tobacco, of which Germany and the United States are the largest customers, some importance must undoubtedly be attached to the value of the Greek industrial exports, among which attention may be drawn to artificial manures and cements.

During 1927 the extension noticeable during the two or three preceding years in Greek industries was maintained. No less than 340 Greek industrial enterprises improved or developed their installations or motive power, as compared with 160 in 1926. Moreover, during the year 214 new industrial undertakings were started, with a total motive power of 6,105 h.p. Both among those enterprises that improved their existing installations, as among those that were newly created, textile factories were the most important. Of the former there were 36, while, of the new enterprises, may be mentioned ten cotton weaving yarns and materials, one cotton weaving mill of 160 h.p., and two silk factories of 32 h.p. Further, six factories of 126 h.p. were started during the year for making "tricotage" (knitted goods), and four of 88 h.p. for cotton ginning.

While the majority of other factories that improved their installations during the year were devoted to the production of articles of consumption, such as flour mills, oil mills, etc., mention may be made of a new factory of 25 h.p. for rubber articles, one of 175 h.p. for cellulose goods, and three nail factories of 207 h.p.

Throughout the country of recent years there has been no increase in the erection of plant for the production of electric current, and it is stated that during the last two years the number of new plants so installed amounts to about 50. While in 1926 the number of kilowatt hours produced was estimated at 40 million, the estimate for 1927 places the figure at 48 million. To some extent recently water power has been harnessed with this object, and certain other schemes are under consideration, some of which are in connexion with the drainage and reclamation plans. The requisite power is, however, in the majority of cases developed either by steam or by internal combustion engines.

The Mercantile Marine.

At the end of the year the Greek mercantile marine consisted of 504 steamships of 1,111,000 tons. These figures show an increase during the year of 32 steamships of 181,430 tons, and a decrease in the case of sailing vessels. Besides the steamers above-mentioned, seven cargo vessels of 25,000 tons had only obtained provisional registration. The actual number of steamers was therefore 511, of a total of 1,136,000 tons. This figure is to be compared with the 205 vessels of 290,773 tons which remained of the Greek merchant fleet at the end of 1918.

Of the 504 vessels registered at the end of the year, 107 were between 100 and 500 tons, 64 between 500 and 1,000 tons, 67 between 1,000 and 2,000 tons, 50 between 2,000 and 3,000 tons, 113 between 3,000 and 4,000 tons, 62 between 4,000 and 5,000 tons, and 22 between 5,000 and 6,000 tons. In the next three classes there is only one vessel in each.

A notable feature of the Greek mercantile marine is the large proportion of old vessels. There has of late been a tendency to acquire more modern vessels, but nevertheless, there are only five Greek freight steamers that are less than five years old, while only 13 per cent. are under ten years. Of the remainder, 30 per cent. are between ten and twenty years, 44 per cent. between twenty and thirty years, while 13 per cent. are over thirty years old. There are, further, 13, mainly small freighters, that are more than fifty years old. In the case of passenger vessels, the ages are even more remarkable. Of a total of 119 steamers with a total tonnage of 74,349 tons, 83 per cent. are more than thirty years old, 13 per cent. from fifteen to thirty years old, while only 5 per cent. are from six to ten years old. It may be added that among these 119 passenger vessels, no fewer than 24 are over fifty years of age.

The fleet of sailing vessels continues to decrease. While in 1922 there were 1,089 Greek sailing vessels of a total of 132,600 tons, the figures at the end of 1927 were 726 vessels of 58,684 tons.

During the first nine months of 1927, 43 cargo vessels of 70,528 tons were laid up, either from lack of freights or for repairs. Passenger vessels to the number of 11 were laid up, of which six were for repairs.

Despite the general depression in shipping, Greek owners appear optimistic regarding the future, as is shown by the number of purchases made during the year. A tendency was observed during the year to bring back to Greek registration some of the vessels which have hitherto been registered under the British flag.

The net profits of Greek shipping in 1927 are estimated at £500,000, to which must be added salaries and wages to a total of £855,000, a large part of which presumably returns to be spent in the country.

As regards the coastal traffic, it may be noted that of the 122 Greek passenger steamers at the beginning of 1927 of 72,000 tons, only some 82 of 50,000 tons were in commission, owing to the shipping crisis. The great majority

of these were employed in the coastal traffic, serving 118 lines, mainly starting from Piræus, and calling at 153 places on the mainland and islands. The combined length of these lines is estimated at about 3,000 kilometres.

During the first six months of the year, these vessels carried (to the principal ports) about 320,000 tons of merchandise and 198,000 persons.

Conditions in the Piræus.

Circumstances in Greece have not allowed of the conditions of the Port of Piræus being improved proportionately to meet this expanding trade, and consequently complaints of damage to, and pilferage of, goods arriving at Piræus are frequent.

With the exception of vessels carrying wheat, all vessels moor end on at Piræus and discharge goods into lighters; many of these lighters are in bad condition, and owing to the lack of mechanical means for the landing of goods ex lighters, the discharge process is a very slow one since under the present conditions only two lighters containing general cargo can be dealt with at the Piræus Custom House at a time, and the others have to wait their turn. In case of heavy simultaneous arrivals of steamers the numbers of lighters containing general cargo accumulates, and during the period of waiting the goods are exposed to the risk of damage by sea water in case of leaky lighters, and by rain water in case of heavy rains, and always to the risk of theft and pilferage.

In the past few years the cases of theft and pilferage have been very numerous, but during the last few months there has been some improvement, due to the efforts of the steamship agents in Piræus, who, owing to repeated complaints, have been obliged to see that their stevedores take better care of the goods, and also to the efforts of the present Harbour Master of Piræus, who has been making every possible effort with the means at his disposal to put a stop to pilferage off lighters.

The conditions, however, in Piræus, are such that there can be no real improvement until the harbour improvement work, which is being carried out by a French Company under contract with the Piræus Harbour Committee, is completed. This work consists of the deepening of the harbour on the north side of the port and the construction of some 1,500 metres of quays. When this work is completed warehouses are to be constructed on that side of the harbour at the terminus of the Piræus-Larissa railway line, and the Customs House is to be removed there, and vessels will go alongside the quay and discharge goods direct into Customs House warehouses, or, in the case of goods from Athens and the interior, direct into railway trucks. A new and modern Customs House has already been constructed in Athens near the Railway Station, where goods for Athens will be cleared through customs house formalities instead of at Piræus, as at present. This will much relieve the congestion at the Piræus Customs House, and merchants will obtain possession of their goods with much less delay and in better condition than at present, as there will be no lighter risks, and the risk of pilferage will be very much reduced.

It is expected that the work of the French company will be completed in 1930, but parts of the new quay will be delivered to the Harbour Commission as and when completed. Some 450 metres of completed quay were delivered to the Harbour Commission in August last, and it is intended to deliver a further portion before the end of the current year. Whether these portions of quay space will be used before completion of the whole will depend on the erection on them of the necessary warehouses and cranes, some of which have already been ordered. The construction of Customs House Warehouses on the first portion of the quay has also been started, and it is expected that these will be ready in six months' time.

The cost of the work it is said will be about 200 million drachmæ, and when completed and in use, a very marked improvement in the general conditions of the Port of Piræus should be immediately apparent.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 17:—

Egyptian Futures.—Sakel Contract.—Encouraged principally by increasing "bullish" sentiment in the American markets, a fair amount of speculative buying has been in progress in this contract during the past week, with the result that values have appreciated 76 to 80 points for near and 66 to 74 points for more distant months since we last wrote.

Throughout the week, trade support has only been of a lukewarm character, and, whilst other sections of the industry are enjoying a spell of activity, producers of fine counts still find conditions against them and have to contend, generally speaking, with undercutting competition and subsequently poor margins. As far as the local trade is concerned, there are abundant evidences that even those mills that have rigidly adhered to Sakel throughout past seasons, regardless of its difference in values with other cotton, are finding their policy too extravagant to follow further, and are now turning their attention to other qualities, which, whilst not producing such a high-class article, appear to meet satisfactorily a demand tied to price. Spinners' takings of Egypt's fine cotton decreased by some 40,000 to 50,000 bales last year, and, unless there is a sharp closing down in our premium with other varieties, a much greater reduction than this will be recorded at the end of the current statistical period. In addition, available stocks of Sudan are larger than twelve months ago, and if the increased acreage planted in that country is favoured with normal growing conditions, quite an appreciable gain in the visible supply will ensue.

The near positions in our market have been in demand throughout the week, with the result that November has closed up to 5 points under January. At one period our premium over the American contract (January/January positions) widened to nearly 775 points; since this it has closed in somewhat, and unless there is a radical change in trade conditions, we look for a further narrowing. Alexandria has shown a firm tendency throughout the week. Ginnings to the end of September are returned at 148,539 kantars, against 234,680 at the same date last season. In part, the falling off is due to the crop being late; the figures also show that the market will not have to face the full weight of the movement for some little time. On its own merits and under present trade conditions, our market appears overvalued. Fluctuations for the immediate future, however, will probably be influenced by the action of the American departments where, as mentioned previously, prevailing sentiment leans to the "long" side.

Upper Contract.—The advancing tendency recently in evidence in the American markets has been reflected by a moderate appreciation in values in this contract. Straddle buying against sales of American continues to be a feature, and the open interest under this heading is computed to be upwards of 50,000 bales. Contracts to fill the above operation have been supplied by spot houses against imports; thus large stocks will accumulate here during the next few months unless a heavy trade demand is experienced. It is reputed that the staple of the top grades is not as satisfactory as last season, and should this later prove to be the case, heavier tenders than usual may be experienced during the spring months. The upward tendency of the American markets may hold values for the time being, but we would hesitate to advise purchases till more of the crop has been placed.

Egyptian Spot.—On the whole, business has been rather disappointing this week; prices have fluctuated within narrow limits, but, contrary to general expectations, the trade demand showed an inclination to fall off after the publication of the latest Bureau figures. This state of affairs continued up to yesterday, the 16th inst., when strong American markets developed. As a result, we have to-day witnessed a very marked revival in the demand for Egyptian growths, and, on balance, prices now show a distinct advance on the week. Evidently an advance was the last thing expected (or wanted) by the trade. The market is difficult to read at the moment, but probably cotton bought at to-day's level will later average out at a reasonable level, even though a decline should occur during the next two months. There is little fresh to report in the inquiry; generally speaking, the finer grades have continued to be entirely neglected. In Sakel, there has been a fair business doing in cotton at from 50 to 200 on, and the customary offtake for 12d. to 16d. has continued.

Uppers have been in steady request at from 25 off to 50 on, and on one day the sales were reported at 1,000 bales, owing to a line of Uppers changing hands. Somewhat conflicting reports have been received lately regarding the character of the new season's Upper, and there appears to be a possibility that staple lots amongst the better qualities may be hard to find. Pillion has been in fair request at from 100 to 150 on, and this cotton looks like becoming popular this season, provided the price does not rise to prohibitive levels. White, Nahda, Maarad, etc., have met with minor interest only. In Sudan growths, a moderate business has taken place at steady rates. Low cotton of all descriptions, at from 4d. to 9d., has been in daily demand, but results have not been commensurate. The inquiry for forward cotton has continued on an encouraging scale, but actual business has proved more difficult to effect.

Forwardings to spinners last week were returned as 7,276 bales Egyptian and 538 bales Sudan. Estimated spot sales for the week, 2,400 bales Egyptian and 600 bales Sudan. Quotations of Sakel

show an advance of 65 points on the week, those of Uppers 40 points and Pillion 25 points. F.G.F. Sakel to-day, 18.20d. F.G.F. Upper to-day, 12.55d. F.G.F. Pillion to-day, 13.30d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 11, state:—

The futures market since our last report has been fairly active, but fluctuations have been small. The week's summary of price movements is as follows:—Sakellaridis: November, 34.15 dollars, 0.23 dollars down; January, 34.72 dollars, 0.16 dollars down; March, 35.10 dollars, 0.17 dollars down. Ashmouni: October, 21.95 dollars, 0.18 dollars up; December, 22.23 dollars, 0.01 dollars up; February, 22.75 dollars, 0.10 dollars down; April, 23.24 dollars, 0.14 dollars down.

Sakel.—The feature of the week was the publication of the third American Bureau Report on the 8th inst., giving a crop condition figure of 54.4 per cent. with 13,993,000 bales as the probable crop; these figures compare with 60.3 per cent. and 14,439,000 bales given by the second Bureau Report issued on September 8. Last year's crop was estimated on October 8 at 12,678,000 bales, finally turning out 12,777,000 bales.

The figure of 13,993,000 bales was considered as bullish, and prices advanced more than half a dollar; the advance was, however, short-lived, hedge-selling against actual cotton and some speculative short selling, in a market devoid of substantial support, quickly putting prices down again. As we have mentioned in a previous report, local speculators are rather bearish of Sakel, but although the sentiment is against the market, the open positions on the short side are not large.

The demand from spinners shows a slight improvement, but it is not by any means sufficient to absorb the heavy daily arrivals, and while the offtake remains so poor we do not look for better prices. The Sakel/Ashmouni straddle (November/December) stands at 1,182 points against 1,206 last week and 820 points last year at this time; the tendency, at the moment, is for a further narrowing.

Boston (Mass): Smith and McCance, Ashburton Place.

Uppers.—We have had a series of active markets without, however, any great change in prices. Demand from spinners is good, but the heavy arrivals from up-country, coupled with a disposition on the part of holders to sell their cotton, precludes, at least for the time being, any important rise in prices. The Ashmouni/American straddle (December/December) stands at 343 points against 327 points last week and 796 points at this time last year.

The week's receipts amount to 344,018 kantars, against exports 185,781 kantars; the stock in Alexandria stands at 1,850,432 kantars.

Spot.—During the week under review we have had another series of active markets, and a very good business has transpired. Sales for the five business days amounted to about 25,300 bales, of which we estimate 6,400 bales Sakellaridis, 17,000 bales Ashmouni and Zagora, 1,500 bales Pilon, and 400 bales other varieties. Ashmouni has once again absorbed the greater portion of the demand, but a little more interest is being shown in Sakel.

Sakellaridis: All styles have been dealt in and a moderate turnover has resulted. Extra cotton has changed hands at very good prices. Spot differences are without much change except for Fully Good and Extra, which have stiffened during the week.

Ashmouni and Zagora: Continue in good demand and all styles have changed hands, the medium grades attracting most attention. Spot differences are very firm and inclined to harden.

Pilon: Continues in good demand, mainly for the better grades. Spot differences are very steady with a hardening tendency.

Other Varieties: A fairly good business has been done in White. Nahda continues in good favour with buyers and is quickly bought up, especially the better grades, which command excellent premiums. A few bales of Fouadi have also changed hands.

Crop, 1928.—Climatic conditions in the Delta have not been very favourable this week, but the season is now so far advanced and the

quantity of cotton in the fields so much reduced that weather has ceased to be a very serious factor. The first picking is practically finished everywhere, and in many districts the second picking also is nearly completed. Up to now, the results of both first and second pickings, especially in the case of Sakel, have varied so much that it is nearly impossible to say whether this year's yield per feddan is better or worse than that of last year. In Upper Egypt, picking is practically completed, and results are, on the whole, excellent.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on October 16 and 17, comprised 38 tons (against 42½ tons at the same time last year and 32½ tons in July last), viz.: 14½ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 1 ton Abyssinian, 7 tons Egyptian (Alexandrian description), 10½ tons Congo and West Coast African, and 5 tons land carriage; also 1 ton mammoth tusks, total, 39½ tons.

There was the usual attendance of buyers and good competition throughout. America and the Continent bought freely, the home trade taking their usual quantity. All kinds met a good demand and the bulk of the offerings were disposed of. Ball ivory, which comprised some exceptionally fine lots of centres, advanced in many instances £20 to £30 per cwt.

The Calcutta Electric Supply Corporation has declared an interim dividend on the ordinary shares of 5 per cent. actual, less tax, for the half-year ended June 30, payable November 15.

COMMERCIAL BANK OF GREECE

(A Limited Liability Company Registered in Athens.)

CAPITAL PAID UP - Drs. 47,400,000
RESERVE FUNDS - Drs. 351,083,473.70

Head Office: ATHENS,

Branches: Piraeus, Argos, Pyrgos, Patras, Corfu, Cephalonia, Nauplia, Vostizza (Aegion), Calamata, Syra, Chio, Candia, Volo, Salonica, Larrissa, Triccala, Mitylene, Canea, Zante, Plomari, Tripolitza, Rethymo, Carditza, Cavalla, Prevesa, Vathy and Carlovassi.

Associated Bank in London:

The Commercial Bank of the Near East, Ltd., with branches at Alexandria and Constantinople.

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking and Stock Exchange business, and extends special facilities to merchants and traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is especially organised for Exchange transactions, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts and Bills.

Notes of the Week.

The Deadlock in Yugoslavia.

No improvement, unfortunately, has been reported during the past week in the relations between the Croats and Serbs. The big mass meeting of the Peasant-Democrat Coalition held at Sishak in Croatia on October 21 passed off without incident; the speeches, though couched in strong terms, were not more "incendiary" than was to be expected in the circumstances. M. Pribitchevitch, leader of the Democrat section of the Coalition, seems to be qualifying for the rôle of firebrand-in-chief; but, as he has been, the despair of most parties, until he made his peace with his old enemy Raditch, his utterances are as a rule to be largely discounted. For this reason it is to be regretted that the Yugoslav Government should resort to the extreme measure of seizing Belgrade newspapers merely for the offence of publishing M. Pribitchevitch's statements. The Radicals went out of their way to exasperate the Croats by electing M. Vukitchevitch as President of the Radical Club and M. Mihailovitch, of the same section of the Party, as President of the Skupshtina, and inevitably there had to be some retort from the Peasant-Democrat Coalition, which M. Pribitchevitch has taken upon himself to supply. For the Government to fire a further shot in this long-range duel merely confirms its inadequacy in the crisis through which the country is passing. If there are valid administrative reasons why the "bloodstained" Skupshtina should continue to sit, despite the Croats' resolve to boycott it, the least that the Belgrade Government can do is to avoid adding fuel to the fire of Croat wrath and to proceed as rapidly as possible with the reforms for which not only the Croats, but the other units of the Kingdom also have long waited. Unless some constructive statesmanship is evolved in Belgrade, the danger of an explosion appears to be becoming more and more imminent. As the ordinary politicians have proved themselves bankrupt of ideas, it would be expected that Yugoslavia could produce at least one man to serve the country in time of need.

Progress in Greece.

After many vicissitudes Greece is to return to a Parliament of two Houses. Previous ventures in this direction have not proved successful. The first Senate in Greece was abolished after eleven years of stormy existence, but in 1821 it was the Senate that formed itself and left the country without a national assembly. The Constitution of 1844 also gave Greece a Senate; but as membership was reserved for those who had occupied certain offices, had been deputies during two Parliaments, or had held municipal positions over which the Government then exercised control, the Senate became merely a servile instrument of King Otho's administrative system, and was abolished by the revolution which dethroned him. The Constitution promulgated by General Kondylis's Government in 1926 provided for the creation of a Senate; but owing to a variety of circumstances two years have elapsed before effect has been given to this provision. The new Senate Bill, moreover, introduces certain modifications in the original scheme. The number of Senators remains at 120; of these 97 will be elected by a majority vote in constituencies, eleven will be elected by various commercial, agricultural, scientific, technical and Labour organizations; ten will be elected by the Senate and the Chamber in joint session, and two will represent the Orthodox Church. As Roumania alone of the Balkan States has a Senate at the present time, Greece will be the second to indulge in an Upper House. Writing in 1866 George Finlay, the critical historian of Greece, who was conscious that contemporary events had tended "to cast dark shadows around him and, perhaps, to obscure his view," held that the question of a Senate was not so much whether one were necessary, as whether it were possible, from the state of society, to form one. "No class exists," he wrote, "from which unpaid senators can be taken, and experience has proved that a paid Senate, composed of servile notabilities or superannuated officials, can only become a house of retreat for corrupt politicians." Greece has progressed a long way since those

days. The new Senate will not reproduce the British House of Lords, but it will aim, by means of the representation of various interests, at the formation of a revisionary Chamber, whose existence, it is to be hoped, will act as a deterrent to hasty legislation and as an element of political stability.

The Reform of Al Azhar.

The acceptance by the University itself of the scheme of reform drawn up by the Commission presided over by the Rector of Al Azhar, Shaikh Mustapha al Maraghi, is a great triumph for Egypt. The problem presented by the unprogressive character of Al Azhar, which, in view of its prestige in the intellectual and cultural headquarters of the Muslim world, ought to have kept pace with the advance of knowledge, has long exercised the minds of enlightened Egyptians. All proposals for reform, however, have been resisted from within, until the appointment of the present Rector. Even when he was selected to preside over the Commission charged to investigate the question of reforms, it was feared that the problem would still be shelved indefinitely. The existence of the new Government, however, has given encouragement to all Egyptians with progressive ideas, and would seem to have availed to break down even the reactionary barriers that Al Azhar has so successfully raised in the past at the first suggestion of reform. A Grand Alim, Shaikh Olaish by name, was found to hold the last ditch in the approved style by seeking to arouse Muslim fanaticism against the new Rector, but his attempt failed. Already the position of the University as a training centre had been threatened by the establishment under the Ministry of Education of the Dar ul Ulum, or Teachers' Training College, and the more intelligent Ulama realised that, unreformed, Al Azhar would gradually lose its pre-eminence. Under the system now to be introduced the graduate course at Al Azhar will include a grounding in modern science, and when the primary and secondary courses have been re-organised it is proposed to close the Dar al Ulum, and to accept the diploma of Al Azhar for Government teachers. The University will retain its status as a theological institution, but its graduates are to have a general training in addition to a grounding in religion.

The Roumanian Railway Accident.

The accident to the Simplon Express in Roumania is a tragedy of the first order. The international character of the train gains for it more notoriety than would normally attach to a similar disaster to an ordinary train in any country, and the accident happens at the very moment when the Roumanian State Railways have started to accelerate their services. In the face of an unprecedented number of railway accidents in Great Britain it is clear that no country can count upon immunity, but it is equally the duty of all railway systems to see that accidents which can be attributed to any remediable cause do not continue to be prevalent. Railway accidents, not necessarily of a very serious kind, were at one time of too frequent occurrence in Roumania, and it was the custom to attribute them to defective equipment. Then came, apparently, an improvement of the administrative machinery, and, instead of the Roumanian Press having to record mishaps, it was able to point with pride, almost as frequently, to an accident's having been averted. The Roumanian railway system has been terribly handicapped by lack of funds to enable it to replace old rolling stock and old rails, and to double its tracks to enable them to meet the additional demands made upon them. Now, on the eve of the flotation of a big loan for Roumania, the Railway Administration has inaugurated a far-reaching improvement in all its main line services, which inevitably raised the question how it could be done before the loan had materialized. It is true that there has been a steady improvement all the time in the railway system, but the lesson of the Recea accident would seem to be that there should be no attempt at a rapid and general amelioration

unless both plant and personnel have been made ready for it.

The Wailing Wall Incidents.

The recent intervention by the Palestine authorities in the Jewish plans for conducting worship at the Wailing Wall has sadly disturbed the hitherto comparatively placid appearance of Arab-Jewish relations in Jerusalem. No good, however, can be done by glossing over the facts; and still less good can be done by rushing in to adopt a violently pro- or anti-Jewish or Zionist attitude. The circumstances, as we see them, and as we have already commented upon them, make it abundantly clear that, had not the Jews bethought themselves of bringing on this Day of Atonement certain articles—such as the partition, lamps, and so on—there would have been no complaint by Muslim authorities, and no action by the Police. But examination of the problem must go deeper than this. For quite obviously the Jews feel that their *rights* have been violated by the Palestine Government, and equally obviously the Muslims feel that their *rights* are in jeopardy. The transition of this quarrel from the religious sphere to the political sphere was, unhappily, the work of but a moment; in a twinkling the old, horrid head of Arab-Zionist suspicion has been raised. The Jews, who have organised meetings of protest against the action of the Government of Palestine throughout the world, insist that not even in Turkish times have they received such insults—the inference being that, now the Balfour Declaration has been made, their privileges at the Wailing Wall should, if anything, be more; not less, than they were before the Great War. And the Muslims, who until the year 1912 allowed freedom of worship to the Orthodox Jews in Jerusalem, have taken alarm that their own rights in the area of the Wailing Wall may be menaced by concession on the part of the Government which issued the Balfour Declaration. Through whatever cause, religious or political, alarm in both the Arab and the Jewish camp is genuine and persistent.

The Jewish Claims.

Now the Jewish claims, stripped of all verbiage, are, first, that the Wailing Wall is the one place in the whole world where they may worship at their own property, and secondly, that they have, therefore, absolute right to worship there in whatever manner they choose. The Jewish people themselves are, in their own estimation, the one lawful judge of what shall and what shall not take place at the Wailing Wall. If this freedom be not accorded to them, what becomes of the boast of the British Empire that under its ægis complete liberty of religious worship is allowed? Is the fact of the promulgation of the Balfour Declaration to be made a reason for actually curtailing Jewish liberties in Jerusalem? Nor is it necessary, in the opinion of at least of certain Jewish leaders, in so according perfect freedom of worship, to infringe upon any Muslim rights. But upon the practicability of that there is no unanimity among those best qualified to judge. For the unfortunate fact is that, although the Wailing Wall be Jewish, the area of the Wall is the property of a Muslim "Wakf." The question that the impartial outsider is bound to ask (deny the religious Jew how he will the right of an outsider so to ask) is: Why were innovations introduced at the Wailing Wall? To the Muslim Arab answer is simple: to mark privileges which existed not before the War, but to which the Balfour Declaration has induced the Jews to think themselves entitled. The Arab mind makes little of the difference between a partition attached to the area, and a permanent structure established to signify peculiar rights.

Political Repercussions.

The manifest path of wisdom, in commenting upon this unfortunate affair, is to refrain from stirring up the muddled waters of political strife and discontent. On another page we print a portion of a letter which we have received from a member of the eminent Nashashibi family

of Jerusalem; we have suppressed that section of it which showed alarm at the eagerness with which Zionists who do not profess the Jewish religion have cried out in support of their Orthodox brethren. For it is our wish that the matter be removed from the sordid atmosphere of politics, where claim and counter-claim can result only in the fanning of old and profitless animosities. When politics merge in the stream of religion that stream is always apt to be defiled. It is urgent, however, that a workable solution of this problem be found, and we cannot see why a Commission consisting of representatives of the Arab community, of the Jewish community, and of the Government in Palestine should not immediately be convoked to attempt to come to an arrangement. It might be found possible, as the Chief Rabbi of the British Empire has suggested, to hold up the traffic through the thoroughfare by the Wailing Wall on certain occasions, and at the same time it might be found possible for the Jews, on their side, to promise to worship in no different way from their method in Turkish times. Where legal rights appear to be wholly on the Muslim side, it is no part of the duty of the Mandatory Power to attempt to diminish them, for in Palestine nothing can rightly be done against either the Arabs or the Jews as if in the interests of the other. With arrogance on either side we have little sympathy, for mutual good will should be sufficient to solve a problem which at the moment looks like being a festering sore.

INDIAN NOTES.

Unity and Discord.

As in the matter of the problem of the Indian States, the attitude of the sponsors of the Nehru draft constitution towards the communal question was virtually to ignore it. Unfortunately, although this attempt to burke the most important issue of all was sufficiently cleverly contrived to pass muster so long as panegyrics took the place of reasoned criticism, from the beginning there were not wanting discordant notes which, with the passage of time, are developing into a crescendo of sound vibrating all over the country. That the opposition of the minority communities to an essentially Hindu agreement is beginning to gather force and volume is becoming increasingly evident. The meeting held last week in Bombay, in response to a circular appeal by seventy leading Muhammadans, and presided over by Maulvi Muhammad Yakub, the popular Deputy President of the Legislative, is only one of many similar gatherings which have been held throughout the length and breadth of the country in recent weeks. At the Bombay meeting the speakers roundly declared that the Nehru Report constituted a denial of the rights of the Muslim community respecting constitutional guarantees, the reservation of seats and quotas in the public services and the redistribution of the provinces. How wide is the gulf to be bridged is indicated, as our Calcutta correspondent mentions, by the main points of the Muslim case as embodied in the memorandum presented by the All-India Muslim League to the Statutory Commission. Meanwhile the breach in the Congress party itself over the respective merits of complete independence and Dominion Status continues steadily to widen. According to advices by the mail Pandit Motilal Nehru is in open conflict with Mr. S. Srinivasa Iyengar, the deputy leader and secretary of the party, who with Mr. C. S. Ranga Iyer, has joined the younger Nehru's Independence League, thereby deliberately setting the clock back to 1920, when the Congress creed was so modified as to include the idea of severance of the British connexion as an alternative to self-government within the Commonwealth. That this unhappy outcome of the much heralded Unity Conference was not unexpected, even in quarters most anxious for its success, is evident from the editorial comment in the leading Liberal newspapers.

The Lloyd Dam.

After a week largely devoted to hearing the divergent claims of the minority communities to political representation in the new order of things, the Statutory Commission has concluded its examination of witnesses in the Bombay Presidency and is now in session at Lahore. Unfortunately, with the exception of the views, characteristically direct and sound, of Mr. F. C. Griffith, the retiring Inspector-General of Police, and, albeit a policeman, one of the most popular and able incumbents of an office formerly reserved entirely for the I.C.S., the most instructive evidence appears to have been taken *in camera*. At the same time the Commissioners were able before their departure to take part in an event which carried a message more eloquent than any words or written memoranda could convey. We refer to the completion of the great Lloyd Dam, at Bhatgar, which has taken nearly fifteen years to build and marks the last stage of the series of gigantic protective works carried out in the Bombay Presidency and elsewhere in pursuance of the recommendations of the Irrigation Commission of 1923. The Lloyd Dam is a vital part of the irrigation system of Bombay and the Deccan and designed, as Sir Leslie Wilson, who performed the opening ceremony, observed, to banish the spectre of famine from a region too often visited in the past by that dreaded scourge. When the whole of the scheme for this region has been carried out, the Governor recalled, the total irrigated area will exceed 400,000 acres. Not merely have the economic conditions of the famine tract been greatly improved, but the people generally are not only more secure against famine, but more prosperous. It was estimated that there would be an increased yield of crops to the value of some £4,000,000 yearly, against which had to be set a capital expenditure of no more than twice that sum. Regarded simply as a feat of engineering, the Lloyd Dam is a triumph for its designer, Mr. C. B. Pooley, whom the Governor fittingly invested at the ceremony with the Commandership of the Order of the Indian Empire. As he stated, the dam exceeds greatly in size the famous Assuan Dam on the Nile and has been built at far less cost; it is indeed the largest work of its kind in existence. And Mr. W. T. Harrison, the chief engineer of the project, was able to observe, with professional and national pride intermingled, that its builders have now "gone one better" than the American Exchequer dam, which for a brief period held that pride of place.

YUGOSLAVIA: A HOUSE DIVIDED.

Although a better atmosphere appeared to have been introduced into Yugoslavia by the negotiations which M. Savtchitch inaugurated at the bidding, or at least with the approval, of King Alexander, the general situation in the country has so far shown no improvement. It is not enough for one or both parties to profess a desire for reconciliation, if neither is capable of putting forward a concrete proposal for a common understanding. Not only are Croats and Serbs at daggers drawn, but both would also seem to be bankrupt of ideas, when it comes to the formulating of a reasonable *modus vivendi* for the future. As it is the Croats who complain of the existing Government, the Serbs are within their rights in calling upon them to elaborate the scheme for its betterment. The Croats, however, up to the present have confined themselves to denouncing the Serbs and all their ways, and have taken no steps to draw up the Constitution that would satisfy them. They refuse to have anything to do with the present Parliament in Belgrade and demand fresh elections; but they have not, as far as is known, produced the programme on which they would have an appeal made to the country. Federalism and decentralisation may be convenient slogans, but if the electorate is to give an intelligent reply, it must have more information on the subject. There can be little doubt that federalism in some form or another is indicated as the best way out of Yugoslavia's difficulties; but it behoves the *Prechanski* Yugoslavs to make up their minds at once as to what form federation should take, and what the federal units should be. If their views find acceptance with the Serbs, the future course of events should present no serious difficulties; if, on the other hand, the Croat version of federation rests on principles which the Serbs will on no account accept, the two parties are no nearer to a solution, unless they take steps to reach a compromise. At present, as far as the distant observer can judge, the Croats are content to say, "no, no, never," while the Serbs protest a desire to be reconciled to their Croat brothers, but are not minded to surrender any of the privileges or advantages of position enjoyed by them hitherto, which form the bedrock of the Croat grievances. Although we believe that appreciation of the need for the maintenance of national unity will prevent the two sides from drifting farther apart, it would be idle to attempt to minimise the potential dangers of the situation, in view of the inflammable material that exists on each side.

It is not difficult to realize now that a grave mistake was made when the Serbs pressed on with their highly centralised Constitution, in spite of Croat objections. The Croats are not without responsibility in the matter,

as they had no constructive views to put forward when the new State was brought into being. At the time it sounded well—even magnanimous—to say that, as the Serbs had borne the heat and burden of the day in establishing the Triune Kingdom, they were entitled to play the leading part. In the light of subsequent events, however, it is seen that this attitude merely served as a cloak for Croat supineness or lack of constructive ability. The one leader who might have provided them with a definite policy—Dr. Ante Trumbitch—they rejected in favour of a demagogue, who at no time showed any of the qualities of statesmanship. While the Serbs set to work to mould the State to their own way of thinking, Raditch was coquetting with republicanism and communism, with the result that the Croats were deprived of all voice in the framing of the Constitution. Even when he formally accepted the system of government and entered the Cabinet, it was only to insert a spoke in the wheels of the Administration, without making any constructive contribution to the problems that confronted the State. When the tragedy of June 20 came the Croats could well give rein to their indignation and cast the dust of Belgrade from off their feet; but it became the more incumbent upon them to take control of the situation and produce their scheme of government. For all practical purposes they had a clean sheet of paper in their hands and could have written on it what they willed. Four months have passed, and nothing has been written on it. The dissolution of the Skupshtina and fresh elections offered little hope of introducing a new situation in the State, unless the Croats had definite proposals to submit to the electorate. It may be doubted, indeed, whether the Peasant-Democrat Coalition is even to-day agreed upon the basis on which they would substitute a federal for the strongly centralised system of government that exists. Yet it would be useless to expect any material chance in the territorial complexion of political parties as a result of elections so long as the various units of the State—Bosnia, Herzegovina, Voivodina, Slovenia, Montenegro, Dalmatia, Banat, Batchka—are in ignorance of the fate awaiting them, whether they are to be separate entities in a federated Kingdom or are to be merged in some combination which might be anathema to them.

Until, therefore, agreement has been reached regarding the essential character of the federation that it is proposed to substitute for the present form of government, there is force in the contention of the Serbian Radicals that they must carry on the administration of the country on existing lines. They would be in a stronger position, if they could introduce some improvements where so many are needed. It is hoped to abolish at the end of the year certain inequalities in taxation from which the Croats have suffered; but whether the reform will go far to meet the complaint of the Croats that they provide the major part of the revenue of the country, while only an insignificant portion of it is spent in Croatia, remains to be seen. That there should be delay in unifying the various systems of government that had been in force in the different units of the new Kingdom was inevitable; that so little in this direction should have been accomplished in ten years is eloquent of the political deadlock that has held up the machinery of government so long. Yet it should have been possible to smooth over some of the difficulties in other ways. The outside world learns with surprise that King Alexander is to pay in December what is virtually his first official visit to Zagreb. In view of the peculiar position occupied by the second capital, to which in some respects Belgrade cannot hold a candle, it seems more than an anomaly that the Throne should have been use to such little advantage in cementing good will between the component parts of the State. Next month's visit, it is to be hoped, will inaugurate a new era, in which the Crown will be found to be fulfilling its proper rôle in the Kingdom of the Serbs, Croats and Slovenes, and will not be content to be a monopoly of the Radical Party.

*The Near and Middle East

From Our Own Correspondents.

Cairo, October, 20.

King Fuad's Desert Trip.

King Fuad's visit to the Western Desert, from which he returned yesterday, appears to have been a splendid success from start to finish. All arrangements were carried out without a hitch—even to the transport of vast quantities of food and presents for the people and the provision of kiosks erected in the middle of the desert, a hundred and fifty miles away from anywhere, with electric light and hot and cold water installations. The scenes at Siwa, which was the objective of the trip, as it is the main centre of this area, were, according to eye-witnesses, beyond description in their interest, picturesqueness and enthusiasm. It was an excellent idea for King Fuad to make this visit to a vast region, which has not seen the sovereign to which it owes nowadays fealty for over fifteen years, and which is likely to play in the future a more important part in the life and development of Egypt's desert territory than it has done in the past. It was, moreover, a happy inspiration which prompted the equipping of the expedition with wonders of the West, such as fireworks, cinematograph and radiograph apparatus, which literally left the unsophisticated people of the desert open-mouthed and will cause the visit of King Fuad to remain as a graphic part of desert-history for generations. Indeed, it would not be surprising if in years to come, when investigations are made in the Western Desert, the people testify to the occurrence of certain events or the birth of children as having happened so many years after the visit of King Fuad, just as at one time the oldest inhabitants of Egypt measured their ages and their date of old events by the number of years since they had seen Napoleon.

For King Fuad this visit has been another personal success, and the fact that they have now been in direct contact with their ruler in such festive and generous circumstances will undoubtedly bring the tribes closer to the Egyptian throne. For the Frontier Districts Administration and the Royal Khassa, who were responsible for the arrangements, the smooth running of the programme has been an undeniable triumph over what were regarded as insuperable difficulties. Both the Sovereign and the Egyptian Government should receive the reward for their initiative and enterprise in the greater facility which should henceforward characterise the administration of this vast and wild area, and in the development which it will undergo, owing to the attention this visit has drawn to it and the facilities of communication which it will have brought into existence.

The Native Court of Appeal.

While the decision of the Council of Ministers entailing the simultaneous retirement of thirteen counsellors of the Native Court of Appeal, including the President, created discussion, it has nevertheless not aroused the amount of

controversy which experience of the past would have led one to expect. The note of the Minister of Justice on the legal point in regard to the reduction of the age limit from sixty-five, at which it had been temporarily fixed in 1916 to meet special eventualities which never materialised, to the normal one of sixty, was so clear and conclusive that the general public accepted the decision without any criticism. What assisted it in this attitude was the talk that had been going on for some time with regard to the higher court of the native jurisdiction, which clearly indicated the need for a fairly thorough overhauling. Finally, the scheme had originated in the Nahas Cabinet and affecting, as it did, counsellors most of whom were liberal in their tendencies, it was obviously not a partisan measure, and the Mahmoud Cabinet in executing the project was clearly only actuated by a desire to see re-established the old reputation for efficiency and integrity of the Native Court of Appeal.

It is stated that the counsellors affected by the decision are consulting with a view to taking legal action against the Government. It is to be hoped that wiser and more prudent counsels will prevail, for apart from the fact that it is in the highest degree undesirable that such a dispute should have to be referred to the court, the hearing of such a case can only give rise to the washing in public of dirty linen, the revelation of which cannot in any way be to the advantage of the national reputation.

There is general approval of the choice made by the Government of a President for the Court of Appeal in succession to Talaat Pasha. Abdel Aziz Pasha Fahmy has always enjoyed a great reputation as a lawyer of high ability and unquestionable integrity. He was on two occasions leader of the Native Bar, and if anyone can raise again the prestige of the Native Court of Appeal to what it was when Judges Bond and Percival were its Vice-Presidents, it is he, for, added to his technical qualifications and experience, there is the fact that he enjoys the respect and esteem of all parties, even of the Wafd whose bitter political opponent he has been for many years.

The Desert Rescue.

The recent miraculous rescue of a lost party in the desert has afforded the authorities an opportunity of drawing attention to regulations which have so far been ignored or deliberately disregarded by the public. The party in question, in fact, disobeyed almost every rule laid down by experience and certainly violated the law. No one who has his senses about him ever dreams of going out into the desert with one car, nor, if he is going any distance, does he go without taking a reliable guide and an adequate supply of petrol and water. In this instance the party had only one car, the petrol and water gave out before the first evening had passed—they admit they had intended to be absent two days—and the Badu whom they took with them was no guide at all. In addition, in going out to shoot gazelle they violated the law, which, very rightly, forbids such sport.

By rights the party should be prosecuted for violation of the law and also should be sued for the cost of the large amount of petrol which the cars and the aeroplanes used

in their search, an outlay which was entirely caused not only by their foolhardy venture, but also by the extraordinary lack of intelligence which they displayed when they missed their way. Whether this course will be taken by the authorities remains to be seen, but in the meanwhile they have issued a notice calling the attention of the public to the regulations under which entrance into the desert can be allowed by the Frontiers Districts Administration, which is responsible for the control of the desert areas of Egypt. It is pleasing to be able to record, in this connexion, the very graceful tribute paid by Mahamed Mahmoud Pasha, the Premier, in his letter of thanks addressed to Vice-Marshal Webb Brown, to the efforts of the R.A.F. and particularly to the aviators who found the missing party.

The Judicial Advisership.

Judge Booth, member of the Government Legal Department and prior to that a judge of the Mixed Courts of First Instance in Cairo, has now succeeded Sir Hope Percival as Judicial Adviser to the Egyptian Government. His appointment has been received with great satisfaction in all circles, for he has won a reputation for his ability as a lawyer and a conseller, and proved his fitness for this high post on the one or two occasions he has been called upon to act for the Judicial Adviser during his absence on leave.

GREECE.

Practical Works.

Salonika, October 21.

On his return from Europe, M. Venizelos immediately settled down to the solid work of governing, showing clearly that he does not regard his meteoric progress from capital to capital as more than a prelude to the less sensational task which lies before him. He has repeatedly warned his audiences that they must not expect a new heaven and a new earth (that pathetic illusion which

revives with every change of Government, and which invariably gives place within a few months to discontent).

In point of fact, within the last few weeks events have occurred in Greece which are of far greater value than any diplomatic triumphs. To mention only one, the beginning of work on the first new road to be constructed under the new convention has been inaugurated. This road will connect Naupactus, one of the most picturesque towns in Greece, hitherto accessible only by rare steamers and mule-tracks, with Missolonghi on the west, and will eventually be joined up with a road, also to be constructed, which will connect Lidoriki, Salona, and Delphi with Livadia, and so with the main road through Boeotia to Athens. Lidoriki stands at the junction of several routes (i.e., mule-tracks) radiating in all directions, and will become a place of great importance. The desolate and secluded Mornos valley will be opened up, a district of incomparable beauty will be made accessible, and, what is more important, immense benefits will be conferred on the sparse villages by the improvement in communications.

Another new road, the construction of which is about to be, if it has not already been, inaugurated, is that which will connect Yanina with Kalabaka and Thessaly by the famous Metsovo Pass. The railway from Verria to Kalabaka is already under construction, and when once Yanina and Grevena have been connected by another road the face of the whole region will be changed. Brigandage, it is true, will not cease automatically, as some people suppose. The worst acts of brigandage in recent years have taken place on existing motor-roads, but the tendency will be slowly in the direction of the extermination of brigands, who are actually at the moment receiving more attention than they like—another indication that M. Venizelos is not a man to promise what he will not try to fulfil.

Other signs of good augury for the future are the imminent conclusion of the contract for draining the Struma, and the proposed contract for draining the marshes of Thessaly and Epirus. All things considered,

and possible dangers taken into account, Greece stands, as perhaps never before, on the eve of momentous progress in material things. Within ten years' time, or even less, should no internal dissensions disturb the life of the country, Greece may be a changed land, which those who have known it in the past will hardly recognise. It remains to be seen what effect this material progress will have on the people themselves.

The Salonika Fair.

The Salonika Fair, the third of the series, has closed. It has been a qualified success, and this is attributed by some to the dengue fever, of which there have been about fifty cases a day here, and by others to the boycotting of the fair by the merchants and industrialists of Old Greece. The motive for this action is said to be jealousy, and it is suggested that these persons wish the Fair to be transferred to Athens—a suicidal proposal—seeing that Salonika is, from its position, the only suitable place in Greece for European exhibitors.

General News.

According to newspaper reports the new wharf at the Piræus is complete and foreign ships can now come alongside. The end of the tyranny of the Piræus boatmen, which has lasted too long, seems within sight, and these mischievous pests, who create such a bad impression on foreigners coming to Greece, will ere long be exterminated. Let us hope that other ports like Chalkis will follow suit, and that organised extortion from travellers will not adopt other forms.

It is good news that a definite scheme for improving the coastal traffic by removing over-competition, by organising itineraries and time-tables, and, it is to be hoped (though it is not stated), by securing reasonable comfort and cleanliness for the passengers, is being formulated.

Constantinople, October 24.

Turco-Albanian Relations.

Although there would appear to be no likelihood of anything like a formal rupture of diplomatic relations between Turkey and her former vassal, Albania, the modifications which are about to be introduced into the official relations between the two countries are nevertheless singularly symptomatic of the upheaval brought about in

this part of the world by the Great War and its aftermath. Not so many years have elapsed since Albania was no more than a Turkish Vilayet, administered by a Vali or Governor-General, while Turkey was an Empire governed by an Imperial Ruler. To-day Turkey is, on paper at all events, an ultra-democratic Republic run on strictly Constitutional lines, while Albania, after being apprenticed for many long years to a Vali, for a short spell to a Mpret and latterly to a Republican President, has, in the fulness of time attained to the rank of a Kingdom.

It is a little astonishing that, whereas official recognition of Albania's novel status by distant South-American States should already have reached Tirana, Turkey continues to hold back—and this in spite of the fact that a quite fair proportion of the Albanian *élite* and intelligentsia is allied by blood and faith to the upper classes in Turkey. It is more astonishing still that the Turkish Government have thought fit to recall their Ministers from Tirana, leaving a relatively junior diplomatist to act as Chargé d'Affaires. The Albanian Cabinet can, therefore, scarcely be laying themselves open to reproach by their avowed intention of withdrawing their Minister from Angora and replacing him also by a very junior Secretary. What exactly has given rise to this little storm in a teacup it is not easy to surmise. Geographical considerations, however, make it perfectly certain that, even if the two respective Legations were definitely closed down, anything in the shape of hostilities between these two independent countries must for ever be ruled out of practical politics.

The Rate of the Pound Sterling.

Although one must admit that the Turkish Cabinet have pursued a very sound policy and have exercised the greatest vigilance in the matter of the stability of the Turkish currency measured in terms of the foreign exchanges, there can be but little doubt that the forthcoming winter season will witness a further drop in the relatively stabilised value of the Turkish lira. While some of the financial and budgetary measures of the Turkish Government are open to criticism, it is only fair to remember that unfavourable atmospheric conditions in relation to the standing crops of 1928 have rendered the Turkish financial situation a somewhat precarious one. The drought in the highlands of Anatolia has not only killed off a large number of cattle, sheep and goats, but has also reduced the bulk of such exportable commodities as mohair, wool and hides.

This year's yield of Anatolian wheat has fallen so much below the average, that the importation of foreign grain and flour will have to be resorted to on an extensive scale. It is estimated that, in order to make good this shortage, foreign wheat to the value of 2 million liras will have to be imported before the end of this year.

The foreign exchange, principally Sterling Dollars, which annually comes on to the Turkish market in return for the exported part of the Smyrna fruit crop, has already been absorbed. It is, therefore, apprehended in banking and financial circles that the unforeseen increase

in the import of foodstuffs, added to the commitments of the Government for foreign railway material, may create such a demand for foreign exchange that the value of the Turkish Lira is bound to be affected in the near future.

The National Assembly.

The next session of the National Assembly will be opened on November 1, when the President of the Republic will make his usual speech. Careful preparations are being made to broadcast this speech in the main thoroughfares, picture houses and theatres, both in Angora and Constantinople.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 11.

The Statutory Commission.

I wrote on August 30: "All eyes are turned to Lucknow, where the Report of the Committee of the All-Parties Conference is on the anvil. How much support the draft produced by the Nehru Committee commands, as the *Statesman* remarks this morning, it will not be possible to assess till we have the account of the final sessions at Lucknow. It may be argued that even then assessment will be impossible."

Events have borne that out. Here we have Sir Muhammad Shafi, President of the All-India Muslim League, issuing a statement to the Press in reply to the recent statement of the Maharaja of Mahmudabad. Sir Muhammad Shafi argues that it is not only desirable but absolutely essential in the interests of the seventy millions of Indian Mussulmans that the proposed All-India Muslim Conference, under the presidency of H. H. the Aga Khan, should be held to pronounce the final verdict of the community on the "grave and vital questions involved in the draft constitution adopted at the recent Lucknow meeting on the basis of the Nehru Report." A review of the salient facts, in the matter of separate representation, Sir Muhammad Shafi says, "makes it abundantly clear that for the last twenty-two years the Indian Mussulmans have consistently insisted upon their right to elect their representatives through their own separate electorates, and they have enjoyed that right for the last eighteen years. The constitution adopted by the Lucknow meeting on the basis of the Nehru Report seeks suddenly to put an end to this constitutional right of the Indian Mussulmans."

According to a Press report from New Delhi, H. H. the Aga Khan, who will reach India early in December, has accepted the invitation to preside over the All-India Muslim Conference.

Meanwhile, in the Memorandum to the Statutory Commission of the All-India Muslim League, which was published yesterday, there is some evidence of the line likely to be taken at the Conference over which it is hoped that H. H. the Aga Khan will preside. The main points urged in the Memorandum are (1) a widening of the franchise; (2) the retention of separate electorates; (3) an increase in the number of the members of the legislative councils; (4) the introduction of reforms in the North-West Frontier Province and Baluchistan; (5) the separation of Sind from the Bombay Presidency; (6) the abolition of the India Council; (7) a larger share for Muhammadans in the public services; (8) the separation of judicial and executive functions. All that makes a great deal.

The Bengal Ministry.

Report has it, but this has not been officially confirmed, that the Raja of Nashipur is to hold the vacant portfolio in the Bengal Ministry. Except to the person chosen and his friends, it is a matter of so little interest now, that it is hardly worth mentioning. No one would bother to mention who had been chosen as Games Secretary by

the passengers of a sinking ship. Diarchy is such a ship. All the rats have left her.

Indian Railways.

The railway men have been conferring in Simla since Saturday, when the Indian Railway Association Conference was opened by this year's President, Mr. Pearce, Agent, Eastern Bengal Railway. He said some interesting things. One was that the railways must get back as quickly as possible to the personal touch between employer and employee that used to characterise railway working in India. Mr. Pearce is convinced that at heart the staffs of all railways are loyal, and to foster this loyalty he suggested the appointment of "Personal Officers," whose duty would be to deal with the grievances of the workers. That might only lead to the manufacturing of new ones. To judge from a talk I had with a man in the East Indian Railway, one day in one of the wards of the Presidency General Hospital, there is a good deal of sore feeling among classes of railwaymen of lower rank. My interlocutor dwelt passionately upon the glaring disproportion of the pay of the highest officials, and the generosity of the Company in granting them leave, and the ungenerosity of his pay, and the rigour in applying the rules, when he had need of leave. "If it is — or — or any of that lot," he said, "if nothing else can be found to be the matter with them, they can always be said to be suffering from high blood pressure!" It certainly is an elastic term for ill-health, as the man in the street understands things, while the fact may be, indeed certainly is, that high blood pressure is as undeniable a fact as malaria or smallpox.

Mr. Pearce was followed by Sir Clement Hindley, the Chief Commissioner, for whom there is some post waiting in England, so that we shall shortly lose him. India will lose a good man. Sir Clement also laid stress on the need for a personal touch with labour, but his remedy is not the appointment of Personal Officers, but more recreation facilities, particularly for the workshop hands.

Mr. Pearce had said that State management of the railways would prove to have been only a phase in the history of their expansion, and that the machine would eventually become too big for one Railway Board or one Railway Association. As a possible solution, he suggested that each Province should have its separate railway finance. That is another proof of the separatist tendency to which I have before this called attention. The richer parts of India, on which the poorer districts are now a drag, want to shake off those districts, and forge ahead alone. A natural wish, but not one for a disinterested onlooker to approve too readily. You may lose money in helping the poor but they say there is a reward somewhere else. Sir Clement's view on the question of decentralisation is that it may be pushed to the fullest extent possible; there will still be need for a central body and its consideration of railway policy and its direction of effort.

ROYAL ASIATIC SOCIETY.

At a meeting of the Royal Asiatic Society on October 23, with Lord Ronaldshay in the Chair, Mr. A. Yusuf Ali, late I.C.S. and recently Principal of the Islamia College, Lahore, read a paper on "Education in India: The New Outlook."

The lecturer said that until quite modern times the Indian universities built up professional standards and provided the raw material for public services, though the graduates were only touched in their outer or professional lives, their homes and home habits remaining unaltered. But since the flood of numbers began to engulf the Indian universities from 1916 onwards even the modest claims that could be made for the Indian degrees at an earlier stage had to be modified.

The universities had in no way helped to solve the distressing problem of communalism; on the contrary, in many ways they had contributed to its accentuation and exacerbation. Nor had they built up a tradition of self-reliance, independent judgment, or unbiased criticism. He had the highest opinion of the Indian student, but he felt that he never got a chance in his own land.

The lecturer made a number of suggestions as to the best methods of overcoming these and other evils, and urged that the time was overdue for a complete and reasoned survey of education in all its branches in modern India.

CALCUTTA COMMUNICATIONS.

(From a Correspondent.)

Reference was made in a recent issue to the notable contrast presented between the progress made with the new Calcutta docks and the delays which appear to be inseparable from most large public works in India. The Howrah Bridge scheme is, of course, a classic example. Another project which has been under discussion for even longer than the rebuilding of the Howrah Bridge is that for the construction of a canal designed to provide an alternative, and shorter, route from Calcutta to Eastern Bengal. This so-called Grand Trunk canal would reduce the distance between Calcutta and Narayanganj, the centre of the Eastern Bengal jute growing districts, from 485 to 277 miles; and the distance from Calcutta to Goalundo, the most important junction for Assam, from 535 to 271 miles. It would also make correspondingly large reductions in the distances to other points in Eastern Bengal. It has been under consideration for the past twenty-five years. It has been investigated by numerous Committees, and reported upon by various experts; and there has been endless discussion about it in the press and elsewhere. Yet another Committee was appointed, in April of last year, by the Government of Bengal; but a few months later the Government announced that they had decided to abandon the scheme altogether. During the current year, however, this decision appears to have been reversed, the Government of Bengal having recently announced that, after consultation with the Government of India, they had decided to re-open the question. The reason for the change is, it would seem, that the Sunderbunds route—to which the canal would be an alternative—is deteriorating so rapidly that the possibility of maintaining it for steamer traffic is, at the best, only problematical. The Inland Steamer companies have accordingly again urged that the canal should be undertaken; and they have been supported by the Bengal Chamber of Commerce. Should the scheme go on the Government will not try to maintain the Sunderbunds route longer than is necessary; but if it is not proceeded with they will keep this route open as long as may be possible. Such is the position of the scheme at the moment, and no information as to when a final decision will be reached is available. So far public opinion in Bengal has not greatly favoured the canal, and the Provincial Legislative Council is unlikely to support it as the cost will undoubtedly be heavy. But if the Sunderbunds route cannot be kept open for steamers then the case for an alternative, and shorter, route becomes a very strong one. In any event it is greatly to be hoped that the final decision will not be further delayed.

A third important Calcutta public improvement which does not seem to be able to get beyond the discussion stage is the proposed electrification of the suburban railways. The original scheme, which was framed some time ago, was revised as a result of the decision to proceed with the construction of the Calcutta Chard Railway with a bridge across the Hooghly at Bally. One of the most urgent needs of the people of Calcutta is the provision of a system of rapid transit between the city and the suburbs. And the urgency is becoming greater every year as the clearing of the Calcutta slum areas by the Improvement Trust progresses; and the workers are consequently forced to live farther away from their work in the town. The tramways and the motor omnibuses are of course of great utility in this connexion. But a rapid suburban train service with a central station in or near the business quarter of Calcutta is greatly to be desired. This is exactly what the proposed electrification scheme is designed to supply, but unfortunately the scheme has not yet got beyond the Railway Board. For at a recent meeting of the Assembly the Railway representative said, in reply to a question, that the scheme was actively under the consideration of the Board. An electric service has been in operation at Bombay for more than three and a

half years, the line between Victoria terminus and Kurla—9½ miles—having been open to traffic since the beginning of 1925. A year later the Mahim chord—an addition of 2½ miles—was completed, and the whole of the Harbour Branch railway was electrified. Experience has shown that the Bombay electric services have a two-fold advantage. They make for a better distribution of the population, which is of course of the highest importance; and they also bring about a reduction in the operating costs of the railways. It does not seem to be unreasonable to hope that a similar result might follow from the electrification of the Calcutta suburban lines, and if there is a reasonable prospect of this then obviously the change should be pushed on with the minimum of delay.

THE MESTON SETTLEMENT.

The following announcement has been made in India by the Chairman of the Indian Statutory Commission:—

“In view of the importance and difficulty of the questions which are coming before the Indian Statutory Commission, relating to the Meston Settlement and other aspects of Indian public finance, which require expert and impartial consideration, the Commission has invited Mr. W. T. Layton to act as a Financial Assessor. Mr. Layton, who is Editor of the *Economist*, is making arrangements to leave London in December, and will be available to assist the Commission early in the New Year.”

A Fellow of Gonville and Caius College, Cambridge, Mr. Layton, who was University Lecturer in Economics in 1912, has undertaken somewhat similar duties on several previous occasions. In 1917 he represented the Ministry of Munitions in the Milner Mission to Russia and accompanied the Balfour Mission to the United States later in the same year. He has also been a Director of the Economic and Financial Section of the League of Nations and represented this country at several sessions of that organisation and other international conferences held under its ægis.

THE LATE MR. S. R. DAS.

THE NEAR EAST AND INDIA regrets to announce the death, which occurred suddenly on October 26, of Mr. S. R. Das, who succeeded Sir Tej Bahadur Sapru as Law Member of the Governor-General's Executive Council towards the end of 1925 and has filled a difficult post with marked ability and distinction. The loss is a severe one to the Government and to the country. With the outstanding features of Mr. Das' distinguished career, both at the Calcutta Bar and in the succession of high offices to which he was afterwards called, we shall deal more fully in a subsequent issue. A keen protagonist of the cause of the numerically small but very influential community of Reformed Hindus, Mr. Das was essentially a patriot, who realised clearly the need for mutual comprehension and good will not only between Englishmen and Indians, but also between all sections of the Hindu community and their Muslim neighbours.

The character, the attainments and the spirit of practical patriotism with which Mr. Das sought to serve India in the exacting life of high office, have evoked a striking tribute from Sir John Simon, which will command universal assent, even in the ranks of his keenest political opponents.

At an Investiture Durbar, held recently at Gwalior, Colonel Heale, Resident, presented, with due formality, to Her Highness the Maharani Sahiba Scindia, President of the Council of Regency, the insignia of the Imperial Order of the Crown of India. The Resident, having explained the inauguration and scope of the Order, said it had been bestowed by His Majesty on the Maharani in recognition of the assiduous and successful discharge of her duties during the Regency. The young Maharaja Scindia of Gwalior, on behalf of his mother, offered most cordial thanks to the King Emperor for his high honour and to the Viceroy for his constant personal interest in Gwalior State and himself.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE WAILING WALL.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—For the last few weeks Zionist organs and pro-Zionist papers have been making much ado over the recent Wailing Wall incident in Jerusalem.

Being deeply interested in the whole affair, I have followed closely and read attentively everything that has been said and published about it; but to my great surprise and indignation I have found that most of the papers and speakers, if not all, are either misled or misleading.

I have spent the last twenty years of my life in the heart of Jerusalem, and know exactly how things are; and I believe that it is only fair and just that the English peoples and the misled Jews all over the world should know the real facts and the whole truth.

The Wailing Wall is a small portion in the back of the western wall of the Mosque of Omar. This portion of the wall is on one side of a blind alley, hardly ten feet wide, surrounded by houses owned and inhabited by Muslims. There being no thoroughfare, the narrow strip of paved yard belongs to the surrounding houses. To this portion of the Wall, Orthodox Jews go on different occasions to weep, lament, and say their prayers. They were allowed to do so only by the generosity of the Turks, the then representative Muslim Government. And as the Chief Rabbi of England himself admitted (in his speech at Kingsway Hall on October 22) they could do that "peacefully and quietly for 395 years" only under the Turks.

Well, on the last Day of Atonement, known by the Jews as "Yom Kippur," the Jews installed a screen and some benches in that narrow strip to separate women worshippers from men. They were asked by the Police to remove these obstacles, and on their refusal to abide with the law, the Police removed the screen for the mere reason that its installation was absolutely illegal—being an audacious intrusion on private property. The act of the Police was absolutely essential to the maintenance of peace and public security. Had they done otherwise, the intrusion would inevitably have excited the indignation of the Muslims, and would have had unhappy consequences.

The Zionists, however, for purely political reasons, called it "outrageous interference with their religious performances," and described the simple act with all the offensive adjectives they could think of. There was certainly nothing of the sort, and the impartial report of the Jerusalem Government will repudiate their false statements.—I am, etc.,

A. B. NASHASHIBI.

London, October 24.

[It is only right to point out that the Jews' claim to worship at the Wailing Wall is anterior to the Turkish conquest of Palestine.—Ed.]

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I shall be much obliged if you will allow me to comment on the leading article in your issue of October 25, as unfortunately the version that you have given of the recent incident at the Wailing Wall requires correction in several particulars.

(1) To represent the cause of the incident as the putting up of a screen in a public thoroughfare provides no justification for the resentment of the Arabs, even if—which I deny—it affords any justification for the interference of the police. The site near the Wailing Wall may be technically "a public thoroughfare," but anybody who is at all familiar with it knows quite well that it can be more accurately described as a semi-blind alley, as it is used for the most part only by the Jews who pray there,

by the tourists who go to watch them, and by the Arabs who live in the dilapidated dwellings opposite the Wall. The only persons who insist on using it as a thoroughfare are Arab donkey-drivers who wish to disturb the Jews at prayer.

(2) The screen was not a "structure," but a light portable screen, which had been used ten days before, on the New Year, without evoking any protest either from Arabs or police. It did not extend across the whole width of the alley, and anybody who wished to pass through could easily have done so. It was, therefore, not an "obstruction," as you term it.

(3) The police did not order "the responsible Jews" to remove the screen. It was their duty to have communicated with those responsible, if they wished to have the screen removed, but they failed to do so. Instead, they contented themselves with giving an order to the beadle, and interrupted the service at the most solemn moment without any previous notification to the Jewish authorities.

(4) The indignation felt by Jews outside Palestine at the incident is mild in comparison with that felt and expressed by Jews in Palestine itself. It surely cannot be said that Jews who have lived many years in Palestine or who were born there "display ignorance of local conditions and local feeling."

(5) To suggest that had the police not removed the screen there would have been bloodshed betrays both a wrong appreciation of the significance of the screen, so far as the Arabs are concerned, as well as a singular under-estimate of the ability of the British authorities to deal with the threat of some Arab agitators. The placing of the screen near the Wall did not constitute a violation of any Moslem sacred place. The site on which the Jews pray belongs to a Moslem Wakf, but there is absolutely nothing sacred attaching to it from the Moslem point of view. If there were, Moslem donkey-drivers would not persistently pollute it with the filth from their beasts.

(6) Even if the Jews had violated any *status quo* agreement by placing the screen near the Wall, that was surely not such a heinous offence as to justify the interruption of their worship on the most sacred day of the Jewish year at what has been and is venerated as the most holy place for the Jewish people since the destruction of the Temple. The District Commissioner should have informed the Supreme Moslem Council that there could be no interference with Jewish religious worship on such a day and that the matter in dispute must be held over until the conclusion of the Fast of Atonement. A resolute attitude on the part of the British authorities would have had the required effect, especially as, at most, there was only a formal and trivial infraction of the agreement. It is deplorable that the authorities allowed themselves to be cowed by the Arab threats into countenancing religious intolerance and aiding and abetting a gross act of desecration.

(7) According to Article 15 of the Palestine Mandate "The Mandatory shall see that complete freedom of conscience and the free exercise of all forms of worship, subject only to the maintenance of public order and morals, are ensured to all." If the Jews cannot be guaranteed the unrestricted right of public worship in accordance with their traditional rites and customs before the remnant of their ancient Temple in their own National Home, of what value is the Palestine Mandate? I have seen many a Salvation Army service in the streets of London causing far more obstruction than the Jewish service at the Wailing Wall could possibly have done; yet not even the most boorish policeman would have dared to interrupt it. Surely an attitude of intelligent respect is the least one can expect from the educated officers of the British Administration in Palestine.

I refrain from commenting on the last paragraph of your leader, in which you touch on questions of policy and principle, except to remark that your views as to what is possible in Palestine differ widely and deeply

from the views of Zionists, who are accustomed to a long range of vision and remain unperturbed by passing clouds.—I am, etc.,

ISRAEL COHEN.

October 26, The Zionist Organisation, London.

[The subject to which our Correspondent refers is dealt with in "Notes of the Week." The object of our remarks was to pour oil on troubled waters, by laying stress on the fact that no encroachment on Jewish rights and no new departure of policy had taken place. As our correspondent admits, an infraction of an agreement had been committed; the Jews were asked to remove the screen betimes and did not. *Hinc illæ lacrimæ*. All that followed, the intervention of the police and the interruption of the service, is regretted by everybody. What seems obvious is that the incident calls for local settlement by those concerned, and that there is no occasion for a world fuss. The position is not helped by quibbling over words. An obstruction is whatever the police choose to call one. If "public worship" is to be interpreted as "*alfresco* worship," it is necessarily conditioned by police regulations. A Salvation Army service with band would not be allowed to be held outside a Mosque. For a Government to take action on the strength of a Muslim protest does not imply that it endorses the protest. *Noblesse oblige*, and, as the Jews had good reason to suspect that sooner or later a protest would be lodged, it seems a pity that they did not disarm Muslim action by first obtaining permission for the use of the light portable screen.—ED.]

THE DODECANESE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—You say in your Notes with reference to my letter appearing in your number dated October 25: "The Dodecanesans, it is to be feared, share with other inhabitants of the East the habit of telling the inquirer what they imagine that he would like to hear." Quite so. You might well have added "the inhabitants of Ireland." In any case, I know the Near East sufficiently well to be able to visit the Dodecanese fore-armed, because fore-warned. I was, therefore, careful. Scarcely any of the many Greeks with whom I held converse had the slightest idea who I was, except that I was an English tourist; they did not even know I spoke Italian, since we conversed in French; so that how they could have intuited which way my sympathies lay, surpasses my comprehension. If anything, after an exchange of introductory remarks, they can only have known that I came from Athens, that I had many Greek friends, and sympathised with Greek nationalist aspirations in general. Had they done, therefore, as you suggest, they would certainly have inclined towards telling me what they are alleged to have told the Booths.

Moreover, as I stated in my letter, there were plenty of complaints; and of these I personally investigated quite a score. They all boiled down, apart from the general question of irredentism, to complaints of an individualist kind—that is, matters concerning vested interests disturbed or disappointments over what might have been. The only exception was the case of the removal of the ecclesiastical authorities from the control of the schools; and those who have any familiarity with the Greek Orthodox Church know that ecclesiastical control of the schools means nationalist—in the case of a country under foreign dominion, irredentist—control. Hence the reason, in accordance with the Italian principles of government, which I laid down, for the adoption of the measure complained of.

I might add that the Italian Government is more centralised, and, therefore, the local Demogerontia may have less scope for initiative. But, to judge from conditions in the Island before the Italians arrived, or the actual conditions of Cyprus, where the Demogerontia's scope has not in any way been restricted, their initiative

never amounted to much. Perhaps they had a *sense* of greater freedom than formerly. Perhaps. But, on the other hand, if anyone will take the trouble to read the manifestoes of the islanders published in condemnation of Turkish rule, he will find it difficult to believe this to be so. Besides, democratic government always gives a certain illusive sense of freedom, because democratic government constitutes the greatest confidence trick ever inflicted on the masses. It may or may not, according to circumstances, be a better or worse form of government than others; but that it means in reality greater freedom is extremely doubtful. In fact, it is just where Governments are more democratic in form that we find as a rule plutocracy more firmly installed.

I have read the Booths' book; and my last letter and this, if compared with the list of complaints registered by the authors of "Italy and her Ægean Islands," will be found to explain many of them. I can positively assert, however, that taxes have not been inordinately increased; but they have been enforced, and this may explain much. As for the alleged brutal treatment of the inhabitants by the Carabinieri, I can only say this is a libel which requires justification. It is not justified in the book. It is not justified by my observation, nor by my acquaintance of this admirable and disciplined force, nor by the knowledge of the Italian character. I can only protest, for it is useless to argue. The tone of the Booths' book, however, is so "demo-liberal," that it is not unnatural for the authors to seek to discredit anything which is Fascist. They can turn the tables in this respect on me, if they like. But the proof of the pudding is in the eating, after all. Let those in doubt go and spend a season in the Dodecanese and investigate for themselves. I can assure them in any case a perfectly delightful holiday.—I am, etc.,

Lausanne.

J. S. BARNES.

EGYPT, THE NILE, AND PALESTINE.

Messrs. Thos. Cook and Son have issued their 1928-9 Programme of Tours to Egypt and Palestine, the season beginning with the departure of the first of their luxurious steamers from Cairo on November 7. Thanks to the co-operation of the Wagons-Lits Company and the various French railways, travellers will now be able to proceed overland to Egypt or Palestine by the Simplon-Orient Express; an escorted tour occupying 32 days, at an inclusive fare of £200, proceeds by this route *via* Constantinople and Aleppo to Damascus, Palestine and Cairo, returning *via* Alexandria and Venice. An attractive booklet, well illustrated and containing over a hundred pages, gives the details of this and many other tours in Egypt and the Holy Land, may be obtained from any of Messrs. Cook's or the Wagons-Lits Offices.

Lieutenant-General Theodore Manettas has been appointed Under-Secretary for War in Greece.

King Zogu on October 27 received in audience at Tirana Sir Robert Hodgson, British Minister to Albania, who presented his Letters of Credence.

In consequence of the action taken by the Turks in seizing the property of Syrians in Cilicia, the French Administration is stated to have sequestered the estates of Turks in Syria.

The Geographical Society of Georgia and the Transcaucasian Communications Administration have sent a joint wireless expedition to carry out experiments in transmission and reception at various altitudes on the Kazbek Peak; which is 16,540 feet in height.

Two Persian students—Aga Riza Fallah and Ab'l Hasan Khan Raji—recently arrived in England under the ægis of the Anglo-Persian Oil Company to take the four years' course in petroleum technology at the Birmingham University.

By order of the Yugoslav Minister of the Interior, the Belgrade police on October 25 seized the newspapers *Politika* and *Vreme*, which on the previous day had published a statement of M. Pribitchevitch, Leader of the Peasant-Democrat Coalition, that was considered to be prejudicial to peace and order.

Sir Philip Sassoon, Under-Secretary for Air, on the conclusion of his tour of inspection in India, left for England in the flying boat *Iris* on October 24, with Sir Denys Brav, Foreign Secretary of the Government of India, as passenger. He arrived at Baghdad on October 27.

A JOURNEY IN UNKNOWN SOUTH ARABIA.

Discovery of Hamitic Tribes?

BY BERTRAM THOMAS.

[One of the most remarkable lectures delivered at the Seventeenth Orientalist Congress recently held in Oxford was that upon a notable piece of exploration by Mr. Bertram Thomas. We are privileged to print extracts from Mr. Thomas's paper, which aroused very considerable interest, both general and special. For the sake of those who would more fully pursue the paths which this young explorer has opened up, it may be mentioned that the anthropological material contained in his lecture is being published in the JOURNAL of the Royal Anthropological Society, that the geographical section forms the subject of a paper to be given to the Royal Geographical Society on December 3, and that the archæological and philological records are being given to the Royal Asiatic Society.—Ed.]

Non-Arab Tribes.

In January and February of this year I accomplished a journey by camel through the unknown South of Arabia. Fifteen camels and an escort of twelve Arabs constituted my caravan and the journey of six hundred and fifty miles from Suwaih to Dhufar occupied forty-eight days. This included two halts, one of seven days at Khaluf and the other of three days at the entrance of Wadi 'Ainain made for the purpose of changing camels; and this in effect divided the journey into three approximately equal stages. Time does not allow of a narrative of the whole of my journey, and I propose here to limit myself to a description of a group of non-Arab tribes, hitherto unvisited by a European, occupying a part of the second and the whole of the third stage of the journey, their customs and dialects, and the archæological remains found in their habitat.

The area in question stretches from Wadi Sarab lat. $20^{\circ} 10'$: long. $57^{\circ} 45'$ E. to Salalah the capital of Dhufar, lat. $17^{\circ} 00'$: long. $54^{\circ} 6'$ E. This region forms the habitat of a group of five tribes which are racially distinct from the Semitic Arab, and perhaps from one another; and they speak four separate dialects which are not understood by Arabs, and which have closer affinities with Ethiopic than with Arabic, though I think they are early Semitic and more closely associated with Himyaric. The names of these tribes in the order in which I passed through them from east to west are Harasis, Bautahara, Mahra, Qara and Shahara, and judging from head measurements I made, and from their appearance, traditions, language and customs, I think there can be little doubt that they constitute a *bloc* of non-Arab tribes of great local antiquity; and I shall further assume, in the light of anthropological evidence I collected, that with the possible exception of the Harasis, they are racially Hamitic. It would thus seem that their ethnological and linguistic affinities are at variance.

Before I describe these tribes in detail I should point out that there are two hostile political factions, Hinawi and Ghafari, to one or other of which every tribe in South Arabia, including these tribes, owes allegiance. Superficially the terms would appear to date from a dynastic squabble over succession in Oman in the early 18th century, but they are of much deeper significance, for, generally speaking, the Hinawi label coincides with the tribes of Yamani descent; and the Ghafari label with those of Nizari or Ma'adic (Ishmaelitish?) origin and all other

non-Yamani stock. Hence within limits the division is in all probability racial. It is not surprising then that this Hamitic group should all claim to be Ghafari, and this is the case except with the Harasis, who, notwithstanding, acknowledge their defection in times past to the Hinawi party through political expediency. Throughout Oman and south-east Arabia this Hinawi-Ghafari feud still smoulders, and no man dare travel through the country used by a tribe belonging to the rival faction without a *rafiq*. To do so would be to court attack and capture of his camels, if not his own death, except during the brief and intermittent periods of truce. To pass safely through a tribe it is not always essential to have as *rafiq* a member of that particular tribe, though that is preferable, but it is essential that a *rafiq* should be taken of that political faction, Hinawi or Ghafari, to which the tribe belongs. Only amongst the Qara is a slave acceptable as a *rafiq*. Elsewhere it is the custom to kill the free man and take captive the slave. In truth it would appear that the slave has a commercial value, and as such shares the privilege of the camel taken in the raid.

The Harasis.

The Harasis are a small dwindling nomad and pastoral tribe, perhaps numbering not more than 200 men, whose habitat is not regarded as their own exclusively, but belongs in name to the western Janabah tribe in the steppe land bordering the desert and extending from the hinterland of W. Sarab as far west as the 56th line of longitude. Although client to the Janabah they belong to the rival political faction of Hinawi but pay a nominal *sakat* to the Awamir tribe by which tribute they are brought in a slight measure and indirectly under the ægis of Ibn Saoud. Rude and primitive they appeared to me, as distinct from their Hamitic neighbours to the west as from their Arab neighbours to the east. They are generally speaking bilingual, though their Arabic has a slight accent, the noticeable feature of which is a flat *a* sound suggestive of that vowel as met with in Syria, but otherwise having no resemblance to the Syria Arabic, being a virile Bada-win dialect with a rather pleasing inflexion of voice. They have short broad faces, low sloping foreheads, large heavy aquiline noses and their cranial index is slightly dolichocephalic. The youths, unlike any others I have met, could almost be taken for a type of southern European. A tribe with noble traditions, they are now a scattered collection of seven sections, acknowledging only a nominal hereditary shaikh, by name Ibn Akis.

The Bautahara.

The Bautahara is a still smaller tribe primarily engaged in shark fishing, which they carry on in the primitive way of swimming on inflated skins. They have a few camels, and their habitat extends from Ras Sharbithat to Ras Nus. They are held by their neighbours, with whom they cannot marry, to be of ignoble origin, and until recently were so wild and disreputable that no traveller could pass in safety even accompanied though he might be by a *rafiq*. Ghafari in politics, the Bautahara are now subject to the western Janabah. The only Bautahari I could get hold of, passing as I did on the desert side of their habitat, was a fisherman from the coast. He appeared to be a very low type though his complexion was comparatively light brown for S.E. Arabia, he had comparatively straight hair and high cheek bones, and his cranial index was slightly brachycephalic. A greater local antiquity is allowed to the despised Bautahara, who were once largely pastoral, than to any other local tribe save the Shahara.

The Mahra.

The Mahra habitat extends through the desert westward of Jabal Zaulaul behind the Qara mountains. Of Ghafari persuasion, the Mahra do not claim descent from a single ancestor, as is usual with other tribes; the eastern elements claim descent from one Bir Bauki, and the Arabs refer to these Mahra neighbours as Hasarit. These

purely nomadic Mahra had noses which might almost be regarded as European, round brown eyes, short under-lips, jaws wide at the base, tapering to pointed chins and long curly hair; and their cranial index was mesocephalic. The Mahra exercise suzerainty over a depressed tribe Bait Al Hafi, the exponents of a devil cult—a similar relationship to that subsisting between the Janabah and Bautahara.

The Qara.

The Qara are a numerous settled and prosperous mountain tribe occupying the J. Qara and J. Samhan, the most prosperous of all the Hamitic tribes possessing innumerable camels, herds of cattle and the richest frankincense country. They resemble the Bisharin tribe of the Nubian Desert, to judge from the photographs of the latter. Men of big bone, they have long faces, long narrow jaws, noses of a refined shape, long curly hair and dark brown skins; their cranial index is mesocephalic.

The Shahara.

The Shahara are a small and disunited tribe living in groups amongst their Qara overlords, for whom they are mere hewers of wood and drawers of water. They have comparatively fair brown skins, less curly hair, more noticeably high cheek bones; and their cranial index tends to be dolichocephalic. Weak and degraded to-day, they claim to have been possessors of the land before the Qara dispossessed them.

The entire group, brown in colour, non-Arab and non-negroid in appearance and occupying almost exclusively the Central South of Arabia, have an ancient tradition of a North African origin via Hadhramaut—an origin as regards those of Dhufar noted by the traveller Ibn Batuta.

Interesting Customs.

These Hamitic tribes—if such they be—have many interesting and in some cases unique customs. The women are not veiled except in the instance of those Badawin elements, e.g., Hasarit and Harasis who move amongst Arab tribes. They have a custom of tattooing the chin with a short vertical line and a dot on either side (still practised in Modern Egypt—*vide* Lane's "Modern Egyptians"), and one met instances of a bracelet-like design around the wrist. In Dhufar they paint their faces red, black, and green on occasions of religious and other festivals, marriages, circumcisions, and so forth, generally a line along the edge of the cheek, another under the cheek bone and one bridging the nose across the eyebrows. The pre- and proto-dynastic Egyptians—say from 4000 B.C. to 3000 B.C.—also used face paint of these three colours. The use of the green paint is by some authorities considered magical, that colour being regarded as a symbol of life. The Qara women of Dhufar have a custom when young and almost invariably before marrying, of having a half inch strip of hair with its attendant flesh shaved in the centre parting along the top of the head. The hair never grows again and sometimes the operation has fatal results. Shaving the hair around the forehead to show a large expanse of brow is another observance of feminine beauty. Throughout the whole of these tribes it is customary for a boy's hair to be cut short except for a strip an inch wide which is allowed to grow long down the centre of the head—suggestive of a certain Hindu caste, or perhaps of the Horus lock affected by young Egyptian princes in ancient times in honour of the god. Men either shave the upper lip wholly or leave the slightest suspicion of a moustache not more than an eighth of an inch wide; they shave the side face both downwards from the cheek bone and upwards from the throat, leaving a slight beard around the edge of the jaw, but they never shave their chin tuft; though sometimes it is trimmed with scissors. It would be shameful to shave it, for by it a man swears. The growth of face hair is not strong, but the chin tuft is coarse. Male head hair characteristically long and curly, particularly with the Mahra and Qara, is generally worn like bobbed hair, and in the case of the Qara it is some-

times bunched up and tied with a bun on top—in both cases generally presenting a greasy appearance from generous treatment with cocoanut oil. Men go bare-headed except for a narrow leather thong called a *Mahfif*, which is merely a coil wound round the widest part of the head nine times and resembles an Arab *Aqal*. Their body dress consists of a short black skirt to the knees with a leather girdle around the waist which is looped as a cartridge belt. They go at all times barefooted and barelegged, except that the Badawin element in summer, when travelling over hot roads, sometimes affect a woollen sock.

Shafi Shrines.

Steeped in superstition and clinging to many pagan customs, these Hamitic tribes of South Arabia are all avowedly Muslims of the Shafi sect. In diametrical opposition to Wahhabi tenets they have much veneration for the shrines of saints, which they periodically visit. That of Muhammad Bin Ali, known also as Mazar Al Wali, near Murbat is the most famous of them. The annual pilgrimage to it takes place on the 15th Shaaban, when pilgrims from the far mountains assemble at the Shrine, walk round it and salute it with the nose kiss, and hear read the Quran. Amont the credulous three consecutive journeys to this shrine are accounted to have the virtue of a pilgrimage to Mecca. Other shrines are Salih Bin Hud at Siddih, Haddad at Dahariz, and Bin Arbait at Raisut. Few of these tribesmen make the pilgrimage to Mecca, in fact no Harsusi, I was told, had ever made the Mecca pilgrimage, but on the death of a relative a Harsusi will often pay a large part of the expenses of an Arab pilgrim on behalf of the departed. Disputants of these tribes are not always most satisfied with an oath on the Quran. An oath upon a shrine is more acceptable. They have a special veneration for the Shurafa Saada and Sharifs, descendants of the Prophet, after shaking whose hands they will raise their own reverently to their nostrils and take a few sniffs, apparently inhaling virtue thereby.

Language Distribution.

The language distribution is as follows:—Shahari is spoken by the Qara and Shahara tribes; Mahri by the Mahra; and Harsusi and Bautahari are the dialects of the Harasis and Bautahara respectively. The region occupied by these tribes is to the Arabs of Ja'alan known directionally as Hadra; by them the Indian Ocean bordering these coasts is called Bahr Al Hadri; and finally the *bloc* of tribes occupying Central South Arabia, including all these Hamitic tribes except the Qara, is known as Ahl Al Hadara; I venture, therefore, to give to these dialects the name of Hadara group. The identity of the word with Hadoram of Genesis is suggested, also with the Adramitae of Pliny. During my sojourn amongst these tribes, I collected vocabularies of some five hundred words of each of these dialects (fewer in the case of Bautahara for lack of opportunity, passing as I did through the desert in their rear), and deduced a few simple grammatical rules.

From Shaikh to Shaikh.

Before turning to a slight sketch of the country passed through, I may say that I travelled under no auspices but my own. Government permission, even if it were sought and given, would avail nought in the prosecution of a journey through the previously unpenetrated S.E. Arabia, which for a major part owns no allegiance to any Government. Better is it to grow a beard, wear Arab dress,

acquire the Badawin dialect and indulge a democratic communism with the Badawin.

South of the "Empty Quarter."

In contrast to the coastal plain and parched sands of the earlier part of my journey the terrain of the Hamitic tribes passed through consisted of bleak and arid limestone hill and rolling country crossed by Wadi beds, shallow in the early stages and trough-like as the greater altitudes in the later stages of the journey were reached. Here in these Wadi beds alone a sparse nourishment for man and beast was to be found in the water hole, the acacia and gum arabic trees, and the various camel thorns known as warikh, thurnad, haram, ghussab dha'a thi-diya, rimram, Al ithal (tamarisk) thamama and hamiyat. The course from Manadhif, lat. $20^{\circ} 00'$, long. $57^{\circ} 40'$ to Juwara in Sauqirah Bay lay over the plain of Al Dhahir, reaching a maximum elevation of 470 ft. Everywhere on our right hand the vast empty spaces of Jaddat Harasis spread out northwards, eventually to lose themselves in the sands of *Ruba Al Khali*. The term, *Ruba Al Khali*, incidentally, is nowhere used by the inhabitants of these Southern Borderlands to mean the entire desert in its geographical sense: when used by me in talking to them, however, it was sufficiently literal as to admit of no misunderstanding. Beyond Juwara we hugged the coast of Sauqirah Bay through the Jazir littoral below what appeared to be low igneous formation. Leaving it by way of Wadi 'Ainain, we ascended to the plain of Jaddat Arkad about 1,000 ft. in height, the Wadis throughout descending south eastwards towards the coast. From Wadi Muqarrad, the western limit of Arkad, we climbed again, threading our way through the northern fringes of Rakibit, the great steppe borderland of *Ruba Al Khali* coming into view on our right hand, as now and then our tortuous course took us towards the edge of the mountain system on the desert side: and hence we continued gradually climbing to 2,000 ft. in Wadi Dhaghaub, the deep troughs of the Wadi beds now trending everywhere to the north. For six days prior to reaching W. Andhaur the camels went unwatered, and we ourselves were reduced to the meagrest ration. The herbage was scant and our camels carrying loads for six or seven hours a day through this difficult mountainous country were in a sorry condition. The horse cannot live in such conditions, and I saw no horse west of Jaalan, and only a few dogs at Khaluf, throughout the whole of this journey through the southern borderland till reaching Dhufar. Goats will go longer without water than camels. Our camels, which were faltering on the sixth waterless day, could, I gathered, had they been without their loads, have gone ten days or more, and if grazing in the rains, would survive a month without watering. During the rainy season these Badawin wander with their flocks of sheep and goats for six weeks without bringing them to water. They take no water for themselves, subsisting on the milk of their flocks. The oryx gazelle and *rim* and sand lizards must, of course, be practically non-drinking animals. There are as many breeds of camels as there are tribes, each tribe specialising in its own breed. Thus the Yal Wahiba variety is called Banat Farhah, the Janabah, Baital-Khumais and so forth.

The order of tribal superiority in camel breeding in South East and South Arabia is as follows: Yal Wahiba, Janabah, Harasis, Mahra and Ma'araba—an almost geographical order, for as you travel west into more and more mountainous country, so the camel is bred less for raiding qualities, pace, stamina and the rest, and more for milk producing. More than "the ship of the desert" it is to the Badawin *Ata Allah*—"the Gift of God." A Harsusi told me that there is always water in its stomach, and when Badawin are in the desert and a water hole fails them and they are faced by death from thirst, they thrust a stick down the camel's throat and make it vomit water, and this they drink. If the camel has been watered within a day or two the water is tolerably drinkable, but if the beast has not been watered for some days, the escape from

death takes the form of a green and odorous liquid, "but it is better to drink it than to die." Several of my escort swore to having had such an experience. In case of the Badawin himself having stomach trouble, vomiting is encouraged first by an overdose of *samn* (butter) and but failing that drink a little urine of the cow camel.

The Magnificent South.

In the latter stages of our waterless trek, ascent and descent of steep passes strewn with massive boulders could only be made by dismounting, but the views presented from their summits were beautiful beyond description—to the south a magnificent panorama of the blue serried mountains of Rakibit stretching away out of sight and gorges two hundred or more feet below us, where the white ribbon of a pebble bed of Andhaur or Ara meandered northward into the great unknown *Ruba Al Khali*. Of bird life there was virtually none. In the early stages of Al Dhahir and Arkad we had crossed three inch tracks of the gazelle, with the ominous footmarks of an occasional wolf or panther or hyena. We saw some brightly coloured and mottled lizards, some with square tails and heard of two snakes, the red venomous *faiya* and the less dreaded *dab*. Gazelle were always with us and provided an occasional meal, but the hungry country gave us no other food save locusts—we had passed through a dense army, miles square, of a large red variety at the entrance to Wadi 'Ainain.

Wadi Dhaghaub and Wadi Dhikur, the approaches by which I made my way over the Qara Mountains from the *Ruba Al Khali* side, involve a quick ascent from 2,000 feet in the Wadi Dhaghaub, through 2,300 feet in Dhikur, to the Divide 3,000 feet. They are the centre of the frankincense country and part of the habitat of the Qara tribe. Between Wadi Afar—and Wadi Dhaghaub we crossed a large jungle of the frankincense tree, *mghur*, the most extensive of any on my route. It resembled an orchard of young three-year-old fruit trees. Hamuda, one of my escort, brought me a specimen of the sap on his dagger blade—of lard-like appearance and pleasant odour. The frankincense country owned chiefly by the Qara, is worked by the Mahra and Al Kathir, women as well as men, the owners' share being one-tenth of the produce. The tree has a silver bark, is of bush-like appearance, with a tiny insignificant leaf, eaten by the locally-bred camel. To secure the frankincense, the scaly bark is scratched with a knife (not a deep incision) and is left for a week. The sap which exudes has by then dried into a transparent green resinous substance of delicate fragrance, and this is the article of commerce which will find its way to the Indian temples. We ascended the white pebbly bed of Wadi Dhikur and were rewarded by a magnificent spectacle. Red cliffs, 300 feet and more, towered above us on each side, their face sculpted into loges by natural action, throwing fantastic dark shadows. The scene reminded me of Petra. Near the top at 2,300 feet was a pool, where our animals watered, while I collected one or two pink-red fossils. Thence we returned to the bottom of the same Wadi, with its gentler slopes clothed with frankincense trees, where three shaikhs of the Qara had arrived for me, sent by my friend Saiyid Sa'ud, the Governor of Dhufar. Bare bodied except for the skirts about their loins, an end of which was thrown over their shoulders, and armed with swords and bucklers, they were to accompany me for the rest of the journey. On the morrow we despatched our camels by another way and climbed the steep side of the valley on the right, a hundred feet or so above. Thence we passed through rolling country thick with *tishgaut* jungle—a libaniferous shrub inferior to frankincense—climbing to the Divide at 3,000 ft., the inland limit of the region which receives the plentiful rainfall of the south west monsoon. Here we were within twenty miles of the sea and had reached a point which the Bents had visited from the coast in 1895, and of whose tropical jungles, green fields and flowing streams they speak in such rapturous phrases. At Dhara'itum the birds had found their voices, the hillsides were thick with sycas-

more, figs and acacia, presenting a twisted outline against the sky, and coloured with many verdant greens, the valleys were alive with a strange people. The night was lit up by camp fires, but I was driven by cold and wind to take refuge in one of the caves with which these hills are naturally studded. The Qara and Shahara are troglodytes and their caves are generally marked by a low hive-shaped straw hut. I was anxious to see the Abyss which Bent had identified with Abyssapolis, so thither—the natives call it Al Dahaq—we proceeded, descending through rolling yellow meadows where cattle grazed, and occasionally catching a glimpse of the blue sea of the Indian Ocean over Taqa, or the blue range of Samhan behind Murbat, as we went. Passing the Shihait village of Shihait, where I halted to make head measurements, we soon arrived at the brink of the right bank overlooking the valley of Darbat. The spectacle is delightful. You look down some two hundred feet through a tangle of tree tops to the stream below, lined with trembling willows. Opposite the hills are equally precipitous and similarly wooded. In whatever direction you look is a wall of tropical jungle, and below it the stream which is flowing towards the Abyss. We made our way down the hillside to this stream, marked by tropical trees and luxuriant creepers and alive with heron and other water fowl. Thence we crawled to the edge of the Dahaq and peered down its precipitous face five hundred feet below. With much difficulty, we clambered down a flanking slope to its wooded foot and followed the meandering Wadi bed to its mouth—Khor Ruri. The ruins hereabout—Husn Mirahadh and the entrance of Inqitat (Bent's Khatiya) are clearly the site of Moscha of the Periplus (Ptolemy's Abyssapolis as suggested by Bent from its proximity with Al Dahaq). Miles' identification of Moscha with Hasik, eighty miles to the east, is, I think, a less happy one. The Arab geographers give Murbat as the site of the ancient seaport and capital of Dhufar, which lasted until the 4th century Hijra. The Shaikh of modern Murbat, twenty miles to the east, who accompanied me to these ruins around Khor Ruri, volunteered the information that this was the site of the ancient Murbat, and I further elicited from a Shahari that in their dialect Murbat is called *sik*—a word which would appear to preserve the important radicals of the name Moscha. From here to Raisut is the rich plain of Dhufar with its capital at Salalah. Here the cocoanut is the predominant vegetation, as opposed to the date palm of Oman, and besides these grow in abundance, cotton, tobacco, indigo, cereals, papaya, melons, and so forth. This plain is the historical Dhufar, and its widespread ruins are chief among witnesses of a former glory. The most characteristic feature of these ruins is a plain primitive column, an octagonal shaft, square corbelled cap and square base, generally a monolith. It is usually about six feet high and this and its corbelled cap suggest that it supported arches. Arch masonry does in fact lie strewn about amidst the debris. Bent connects the Dhufar column with columns he saw at Adulis on the Red Sea, and with those of Kulue and Aksam in Abyssinia and others he heard of at Ma'araba in the Yaman, and says that no doubt can be entertained that they were all built by the same people. Bent's other descriptions of the archæological remains as given in his "South Arabia," are, however, not exhaustive, and his sarcophagi are, I suspect, only water tanks. The most elaborate ruins—Balid—have, however, been very fully described by Carter, the Surgeon of the Indian Naval Brig. Palinurus, in a paper given to the R.G.S. in 1846. I attempted in the short time at my disposal to make measurements of the monuments I saw, and slight drawings of the decorated capitals and bases.

The word Dhufar is susceptible of being broken up into two words—Dhu Afar—Afar being the Wadi bounding one of the largest frankincense areas. I unfortunately omitted to question the natives on its probable derivation. In the Hadara dialects modifications of this word, e.g., Afur, *Au'fur* mean "red" and the meaning "Red Country" is satisfied by the predominant red

colour of W. Afar and W. Dhukur. In the Shahari dialect, the word *Afar* means clouds, and the name "the cloudy country" is satisfied by Dhufar's continuous rainfall for three months during the south-west monsoon. Whether Ophir, which has been suggested on grounds of similarity of name, receives any confirmation from such speculations, is perhaps a debatable matter.

AN ARAB ACADEMY.

Steps are being taken by the Egyptian Ministry of Education for the creation of an Arab Academy, part of whose mission will be to adapt the Arabic language to the requirements of modern science. The number of members is to be fifteen, with the present Minister of Education, Ahmed Loutfi el Sayed Bey, as president. Among those whose appointment to the new Academy is being considered are mentioned the following:—Ahmed Shawki Bey, Khalil Moutram Bey, and Hafiz Ibrahim Bey, poets; Abdul Hamid Badawi Pasha, Ahmed Naqib el Hilali Bey, jurisconsults; Shaikh Mohammed Mustapha el Maraghi, Rector of Al Azhar, representing Muhammadan Law; Dr. Taha Hussein and Dr. Ahmed el Iskandari, representing the Arabic language and Semitic philology, and Dr. George Soubhi, representing ancient languages; Dr. Ali Bey Ibrahim, Physician, and Dr. Mustapha Mousharrafa, mathematician.

NEWS IN BRIEF.

It has been announced at Tirana that Belgium has recognised the new Albanian Monarchy.

Treaties of Arbitration and Conciliation between the United States and Albania were signed at Washington on October 22.

The fifth anniversary of the proclamation of the Turkish Republic was celebrated on October 29 by a review of troops and Boy Scouts by the Ghazi Pasha in Angora.

The death is announced in Constantinople of Madame Sevket Bey, mother of Madame Ferid Bey, wife of the Turkish Ambassador in London.

Ratib Pasha, the new Egyptian Ambassador, and Subhy Beg, the new Iraq Minister, presented their Letters of Credence on October 26 to Ghazi Mustapha Kemal Pasha, President of the Turkish Republic.

Some fifty Afghan officers who have completed a course of military instruction at the Turkish Military Academy in Constantinople have been recalled to Kabul. A number of them have married Turkish wives, who will accompany them on their return.

Book Reviews

A MUSLIM WHO'S WHO.

"AS-SUYUTI'S WHO'S WHO IN THE FIFTEENTH CENTURY."
Nazm ul-Qayan fi A'yan-il-A'yan, being A Biographical Dictionary of Notable Men and Women in Egypt, Syria, and the Muslim World, based on Two Manuscripts, one in Cairo and the other in Leiden edited by Philip K. Hitti. (New York: Syrian-American Press. 1927)

Further information on the Mameluk period is always to be welcomed; and in Dr. Hitti's edition of as-Suyuti's biographical dictionary we are fortunate in receiving an account of the chief figures in Egyptian society in the fifteenth century from the pen of the most learned, if not the most unbiased, Professor in the University of Cairo at that time. The text is based on manuscripts dated 974 and 1097 A.H., so that they can claim a respectable antiquity.

Scholars have known of this work since Meursinge translated a portion of it many years ago; but it is only now made accessible. Dr. Hitti provides a preface in Arabic, in which he describes the MSS. and gives an interesting account of the life of the author and of his relations with his contemporaries. As-Suyuti does not seem to have suffered fools gladly, and consequently he made many enemies; although it is only fair to record that even in the last years of his life, which were spent more or less in disgrace on the island of Rauda, he was visited as an acknowledged superior by the principal men of his time. There is a tradition in Islam, which claims the authority of Muhammad, that at the beginning of each century Allah will send his people a reformer who will revivify their religion. As-Suyuti felt himself charged with this mission, and as the consciousness of it grew more insistent his attitude towards such of his contemporaries as would not admit his intellectual pre-eminence nor his claim to an exceptional authority, became more overbearing. Controversy between authors is seldom edifying, and these long-forgotten squabbles of a famous University can have value only if they suggest tolerance and scholarly detachment in theological disputes.

In his age and generation as-Suyuti was a genius: but he must have been a difficult man to live with. If he was a plagiarist, as his enemies asserted, he was a prince of plagiarists. By his skilful handling of literary material he obtained a notoriety for his publications which the *soi-disant* authors would not have enjoyed. He was an indefatigable student of the literary treasures of the past who, according to his detractors, preferred independent research to attendance at other men's lectures. His fame as a scholarly expositor is still widespread throughout the Islamic world.

The present work furnishes information about two hundred of the writer's contemporaries in the Near East, and in some instances as-Suyuti's account is the sole record of the persons named. Sometimes he draws his information from books which are not known to be extant. The author's plan is to give the full name of each person, the names of his teachers and his publications, and the date of his birth and death. Thus the work may well prove of considerable importance in checking and amplifying existing information on Muslim society during this epoch. Some headings are followed by no more information than that just summarised: others contain long extracts from the subject's writings, selected generally from his verse. The verses are for the most part trite and commonplace, and reflect the lack of inspiration and originality which marks most of the prose of the period. Traditional forms of thought as well as of expression were dictated to the Egyptian of the fifteenth century. On the whole, bibliographical rather than biographical information is recorded, but this is not always so.

On pp. 17f two extracts from Ibn Sa'd's "Tabaqat" are quoted by as-Suyuti. To judge by the footnotes, the Editor has collated them with the standard edition and has found no variant worthy of notice. As-Suyuti has merely epitomised. It would have been well if Dr. Hitti had collated the other excerpts from the hadith collections

with the printed texts. Such notes are of assistance to scholars, and serve to draw attention to variants in hadith or to illustrate dependence or otherwise on certain families of manuscripts.

Among the many literary notes which are to be found here and there in the biographies is the statement that the practice of giving a general *ijaza*, or licence, to cite traditions in the lecturer's name, had become obsolete. As-Suyuti elsewhere (in his "History of the Caliphs") records with obvious disapproval the bad example which the Caliph Nasir set in obtaining licences from the foremost traditionists of the time, and permitting all and sundry to cover themselves with the authority he had thus secured.

We notice that the date of the deposition of the Caliph Al Qaim bi Amri' llah (*sub voce*) is said to have been in the month Rajab of the year 859; whereas in the "History of the Caliphs" (Cairo edition) as-Suyuti states that al-Ashraf deposed the Caliph in the month of Jumada. (Jarrett, who worked from MSS. he found in India, says Jumada II.) This is an indication of the possible value this work may have for the historian to whom must be left the task of assigning proper value to the conflicting statements.

A most interesting feature of this book is the printing of Arabic in linotype. This is said to be the first time that a scholarly work has been thus printed; the result is most pleasing to the eye, save that the ligature between the letter "sin" and its neighbours is not so clear as in ordinary printing.

Dr. Hitti's edition of this valuable work adds to our knowledge of the last days of the Caliphate, and affords fresh material to the historian and bibliographer as well as to the student of Islamic culture.

ALFRED GUILLAUME.

GALLIPOLI SEEN THROUGH GERMAN EYES.

"THE CAMPAIGN IN GALLIPOLI." By Major-General Hans Kannengieser. Illustrated. (London: Hutchinson and Co. 21s. net.)

In Germany there seems to have been little understanding of the importance of the Gallipoli Campaign in the waging of the Great War or of the very important part taken in it by the small band of German officers and men engaged as a Military Mission on the reform of the Turkish Army before the War began. The author's object has been to bring these points home to his fellow countrymen as well as, perhaps, to work off some of the very natural irritation felt by himself and his companions at being kept perforce out of the fighting in France. His brief, straightforward and modest narrative is certainly well calculated to fulfil his object, and the German Army has every reason to feel proud of its representatives who served their country so well. But the book, which makes no claim to be a history of the campaign, but restricts itself to an occurrence of what the author saw himself, has, perhaps, even more interest for us than for the Germans. It is free from politics and is written by a plain, well-educated soldier who has no use for frills and is able to appreciate the good points of his enemies. We cannot but be a little amused at his efforts to say pleasant things about his friends, the Turks, officers and men, and the way his real feelings about them come through in spite of all his efforts. The Germans saved Gallipoli for the Turks, but they were not any the better loved for their great services. Their attitude towards everything was diametrically opposed to that of the Turks.

The reader will find much to interest him in the narrative. For instance, it is not a little startling to learn that Admiral de Robeck's attack on the Dardanelles in force had so seriously depleted the Turkish battalions' small store of gun ammunition that a repetition of the

attack on the next day must almost necessarily have resulted in a break-through to the Sea of Marmora. The account of the actual fighting leaves one with little doubt that the deficiency in quality of material on the Turkish side was far more than compensated by the plentiful supply of clean drinking water easily available in the hills which they were defending. The author's astonishment at the very great ability shown by the English in their final evacuation is both complete and generous. He puts the blame of the English defeat on the control by the "War Council" in London, the want of thorough peace training of the officers which so often resulted in missed opportunities, and the want of water. He certainly leaves us in no doubt that the Turks could not have thwarted our purpose had they not had the small band of Germans to direct and control them.

His pen pictures of his Turkish colleagues are interesting. This is what he says of Mustapha Kemal Bey who had at the time a subordinate command.

"The impression that I gained of him during this period was that of a clear-thinking, active, quiet man who knew what he wanted. He weighed and decided everything for himself, without looking elsewhere for support or agreement to his opinions. He spoke accordingly but little, and was always reserved and retiring without being unfriendly. He did not appear to be strong bodily, although extremely wiry. His stubborn energy gave him apparently complete control, both of his troops and of himself."

It is a pity that this valuable book has not been better translated. Not only is the English halting, but the transliteration of Turkish and other place names is also so badly done that it is often difficult to recognise the place in question. We may fairly suppose that the attribution to the British on page 78 of a 38-inch shell is a slip, but a similar excuse cannot apply to the machine-gun rattle, throughout the book, of the splitting, often with much misplaced ingenuity, of infinitives.

The illustrations do not, on the whole, add much to the value of the text, but a good map is given, although there is no index.

C.S-W.

AN AMERICAN'S "WAR BOOK."

"*THE ENORMOUS ROOM.*" By E. E. Cummings. With an Introduction by Robert Graves. (London: Jonathan Cape. 7s. 6d.)

It is due, apparently, to the enthusiastic and formidable combination of "T. E. Lawrence" and Robert Graves that this strange, tortured story of an American imprisoned for a short time during the War by the French authorities, has been published in England, where, however, it can scarcely receive a welcome from any but the morbid, the disgruntled, and the *déraciné*. Quite truly it is an unusual book, even an exciting book, as the author of the "Revolt of the Desert" claims for it. But it is neither literature nor the expression of important experiences.

Mr. Cummings was in France as a non-combatant, and, having a friend who seems to have been extraordinarily indiscreet in some of his letters, he was himself almost bound to come under official suspicion. To such a fate he was by no means unresigned, and it is with a kind of savage joy that he describes the shortcomings of French Government servants and also the peculiarities of fellow suspects.

But it is all too individual, too egocentric, to appeal strongly and permanently to any but those in search of sensation or possessed of anarchistic intellect. Pathological reaction to unessential phases of a national emergency, such as that which befel France in a degree experienced by no other people, may amuse and even edify the psycho-analysts, but to saner, more balanced men the self-conscious expression of it becomes irksome. To get things in the right perspective, one ought to have a French Government official write a history of the generally very beastly suspects whom that Government had to deal with during the War. But neither such a book nor this "Enormous Room" would have much chance of survival in a world concerned with the underlying and enduring bases of the conduct of living during the War.

THE SOUL OF OLD EGYPT.

"*THE NILE AND EGYPTIAN CIVILISATION.*" By Professor A. Moret. Illustrated. (London: Kegan Paul, Trench, Trubner and Co. 25s. net.)

Mr. C. K. Ogden is editing for Messrs. Kegan Paul a series of extremely important books, called "The History of Civilisation," many of which are translations of a similar series published in France. This enterprise has been the means of giving the English reader many works of permanent value and some of quite outstanding merit. Among the latter was Professor Moret's masterly account of the political development of Egypt from a nucleus of primitive communities to a world empire and its gradual decay, which formed the larger part of the book entitled "From Tribe to Empire." We had, at the time of publication, the privilege of calling the attention of our readers to its importance and interest. The qualities of immense learning and of clear statement which characterised the earlier work are equally conspicuous in that now under review.

The subject may, perhaps, be shortly summarised as the history of the religious, social, political, artistic and intellectual growth of the ancient Egyptians. It differs totally from the books on Egypt to which we are accustomed. It opens the door to new ideas and conceptions, and is a treatise of extraordinary interest and power. While intimately familiar with all the trees in the wood, Professor Moret never loses his clear view of the wood itself, and, in spite of (or rather, because of) his immense learning, he has written a book of absorbing interest and pellucid clarity. Perhaps the most enthralling parts of it concern the author's novel views on the divine and semi-divine kings who came before the existence of history, as we usually understand the term, and his explanation of the long period of darkness which puzzles the historian in the three-and-a-half centuries preceding B.C. 2000. This latter piece of research throws a flood of light on the whole mentality of the ancient Egyptian and explains the later history of the country in a way which has hitherto been impossible, especially the gradual undermining of central authority by the priests and feudal nobles which finally led to foreign domination. Altogether a masterly book by a master of his subject; excellent both from the scientific and from the literary point of view. He has achieved what only a few men of great learning can hope for, a book which nowhere stoops to the "popular" reader and which is yet easily read with full interest and enjoyment by the unlearned. We should add that it has been well translated, and that its illustrations, although not very well produced, are useful.

"Voices From the Near East." Edited by Milton Stauffer. (London: Student Christian Movement. 3s. net.)

"The Art of the Pali Empire of Bengal." By J. C. French, I.C.S. (London: Humphrey Milford. 18s. net.)

THE WEEK AT HOME

London, Tuesday Morning.

A Diagnosis of Liberalism.

Considerable entertainment is being afforded to those above the battle by the present argument between the Editor of the *Observer* and the official Liberals. Mr. Garvin wrote a short time ago that the Liberal Party shows no signs of revival—a harmless sort of accurate statement that the unkind might almost have called a platitude. Not so, however, Sir Herbert Samuel and his henchmen. For they believe, or say they believe, in a Liberal revival, and consequently are not at all beholden to the *Observer* for asserting the contrary.

The impartial witness is bound to deny the justice of the official Liberals' claim: the tide of Liberalism is not flowing, but only their money. Nor can this loss be explained by the personal defects of the candidates put forward. For what could Sir Herbert Samuel himself do in the Glasgow University Rectorial Election last Saturday? He polled 369 votes against the 1,044 of Mr. Baldwin and the 978 of Mr. Cunninghame-Graham!

The truth is, although they will not see it, that the Liberals have nothing to offer, except a stale and flat refusal to accept Safeguarding in any form, beyond the offer of the Conservatives. That they as a Party are any keener on peace than the present Administration was adequately disproved by the very remarkable utterance which the Prime Minister made at the League of Nations Union meeting in London last week. The strength and the sincerity of the Prime Minister's remarks then in favour of peace and also—this was very significant and not to be forgotten—in favour of the crediting of national statesmen with decent, not with indecent motives, made a very deep impression. One felt that Lord Grey himself, who was in the Chair, could not from all his Liberalism cull any choicer words than those spoken by Mr. Baldwin.

Scottish Nationalism.

It is a great error to suppose that Ireland has a monopoly of Nationalists in these islands, for we now have, as I have recorded before, both Scottish Nationalists and Welsh Nationalists. (In due course, it is to be hoped, we shall have the Nationalists the most needed of all, English Nationalists.) The Nationalists of Scotland are particularly prominent at the moment, being elated at the large number of votes which Mr. Cunninghame-Graham has just polled at Glasgow University.

What do they want, you ask, that they do not already possess? Well, as a start, they want Home Rule. They want to preserve Scottish autonomy, the Scottish language, Scottish customs and traditions, and so on. They fear that racial extinction is imminent, apparently being impressed by the Irish "invasion" of the industrial parts of Scotland. Quite seriously the proposal has been laid down to run candidates at the next General Election with this programme.

It is a little difficult for the Sassenach not to be amused at the monstrosity of the claim which the Scots, having overrun England years ago, having taken all her best jobs in practically every sphere, from the Church to politics, are now putting forward. Who has really been running Westminster, whose neglect of Scottish problems they now complain of, if not Scotsmen? Who has been running the newspapers, which are so ignorant of the beauties of the pure Scots character, of the Scots achievement, if it is not Scotsmen?

It seems to come to this, that Scotsmen, having (very successfully) emigrated from their own country, are now complaining when someone else (the Irish) is trying to make a "do" of a place which they themselves preferred to abandon. But of course not all Scotsmen are like this; and I rather doubt whether this new party will make much splash even in wild Caledonia.

The Bishops' "Impasse."

There seems to be little prospect of a pathway being found through the bog which was created for the Bishops by the parliamentary rejection of the Revised Prayer-Book. As if to make matters doubly sure of being all awry, the two Synods which were held last week in London and Liverpool have rejected the Bishops' proposals. Owing to a strange mixture of the Anglo-Catholic and the Evangelical vote, the Bishops have now seen that, at any rate in these important dioceses, the majority of the clergy are against them.

What is to be done, if the dioceses pronounce against the Lambeth programme of the Bishops, it is impossible to foresee. But this is a most probable contingency, for if there is opposition in the South, there will be much more opposition in the North.

A London Traffic Monopoly.

The individualists as well as the Socialists have been stirred to protest by some proposals that were recently brought forward for granting to the London Traffic Combine, which is headed by Lord Ashfield, the running of the L.C.C. trams, which, it is asserted, have for a long time been unable to pay their way. There is something inherent in the Londoner, perhaps, which makes him suspicious of monopolies, particularly of such a manifest monopoly as a transport monopoly would be.

Of course the plea is being adduced that no monopoly is intended, but only that, by means of common management of trams, buses, and Tubes, the present cut-throat competition and waste of overlapping would be avoided. It will be interesting to see whether the L.C.C. can recognise the face of the tiger when they see it. London is looking on at the coming struggle with unusual interest.

Rugger.

The two things that have most struck the follower of "Rugger" are the re-emergence of Coventry as a really first-class team, and the probability of a close match between Oxford and Cambridge at Twickenham next December. At present it is early days to write about the 'Varsity fifteens, but obviously Oxford have better material than they have had for some time past. No one can welcome this fact more sincerely than the Cambridge man, who is a little fatigued with the poor opposition which the Dark Blues have been showing in recent years. Perhaps the most noticeable feature of the Cambridge side as it has so far played is the number of Welshmen picked. And the star of "Cats" can hardly ever before have been so much in the ascendant.

PERSONAL AND GENERAL

TO-DAY

November 1, 1928 (New Style).

October 19, 1928 (Old Style).

Jumada I, 17, 1347 A.H., of the Muslim Calendar.

Marcheshvan 18, 5689, of the Jewish Calendar.

Lady Willoughby de Broke left England on October 30 on a visit to Egypt and Spain.

Sir Clement Hindley, the outgoing Chief Commissioner of Railways in India, has arrived in London.

Sir Leslie Wilson, Governor of Bombay, is paying a farewell visit to Karachi from October 31 to November 2.

Major-General Sir Edmund Ironside sailed in the P. and O. s.s. Ranpura from Tilbury on October 26 for Bombay.

Lord Melchett and the Hon. Henry and Mrs. Mond arrived in England yesterday (Wednesday) on their return from the United States.

Saturday, October 27, was observed throughout Roumania, as the birthday of King Michael, who was born on October 25, 1921.

Captain and Lady Mary Herbert, have returned from India, where Captain Herbert has served for two years as aide-de-camp to Lord Irwin.

The ex-King of the Hellenes honoured Commander Oliver Locker-Lampson, M.P., with his company at lunch on October 23 at the Savoy Hotel.

Field-Marshal Viscount Allenby and Viscountess Allenby will return to 24, Wetherby Gardens on November 6, from America.

Rear-Admiral and Mrs. Humphrey Walwyn left England on October 26 in the s.s. Ranpura for Bombay. Their address will be Admiral's House, Bombay.

M. Henri Martin, who was for many years Commercial Attaché at the Swiss Legation in London, has been appointed Minister in Angola, where a Swiss Legation was recently created.

Mr. H. Fish Armstrong, Editor of *Foreign Affairs* (New York), who has been on a visit of several weeks to the Balkans, was in London last week and left for New York on October 24.

The marriage is taking place to-day, at St. Margaret's, Westminster, between Josephine, daughter of Mrs. Joseph Addison, of 18, Hans Road, S.W., and Mr. Somerset Hopkinson, the Rifle Brigade.

Dr. Ante Trumbitch, leader of the Croat Federalist Party, at one time Foreign Minister of Yugoslavia and previously Yugoslav Minister in London, has arrived in England from Zagreb.

On the occasion of the anniversary of the proclamation of the Turkish Republic, the Turkish Ambassador in London held a reception for the Turkish Colony at the Embassy on October 29.

Lord and Lady Airedale and their daughter, the Hon. Mrs. Halstead Connor, left London in October 27 in the Orient liner Oronsay for India. Other passengers were the Bishop of Swansea, the Hon. Kenneth and Mrs. Mackay, Sir Charles and Lady Nathan, Sir John Hewett, Major-General Sir George Richardson, Major Colin and Lady Margaret MacRae, and Sir Hugh Stuart-Forbes.

The Nawab of Bhopal gave a luncheon party at Claridge's Hotel on October 26, when his guests included the Maharajah of Kashmir, Viscount Knebworth, Lord Ebury and the Hon. Betty Grosvenor, the Hon. Kenneth and Mrs. Mackay, Captain the Hon. Inigo and Mrs. Freeman-Thomas, Sir Thomas Carey-Evans, Captain and Mrs. FitzGerald, Major Nawab Khusru Jung, Colonel Amir Ahmed, and Captain Mohammed Habid.

Mrs. N. C. Sen, who is leaving shortly for India, gave a reception at the rooms of the British Indian Union, Grosvenor Gardens, on October 26, when the company included: the Persian Minister, the Latvian Minister and Mme. Vesmans, Lady Swaythling, Viscountess Erleigh, the Maharajah of Burdwan, Lady Carmichael, Prince Victor of Cooch Behar, Lady Hirtzel, Sir Louis and Lady Dane, Sir E. and Lady Chamier, Sir Dorab and Lady Tata, Lieutenant-Colonel Sir Francis and Lady Young-husband, Sir Robert and Lady Holland, Mr. and Mrs. S. N. Mallik, Miss Gertrude Kinnaird, Sir Herbert and Lady Holmwood, the Dowager Lady Boyle, Lieutenant-Colonel and Mrs. Patterson, Mrs. Ameer Ali, Sir J. and Lady Mackenna, Sir Theodore and Lady Pigott, Sir Thomas and Lady Arnold, Sir Henry and Lady Wheeler, Sir Selwyn Fremantle, Sir M. M. Bhownaggee, Colonel Rao Raja Amir Singh, Sir Henry and Lady Birt, and Lady Pinhey.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Bulgarian Loan.

It is unfortunate for Bulgaria that the negotiations for her loan should have to be conducted at a time when the market is rather overweighted with flotations. Politically speaking, she has advanced far in the two years that have elapsed since she negotiated her last loan, in December 1926, and she might well consider herself entitled to better terms than the seven per cent. at 92 that she then obtained. In these matters, however, the state of the money market plays an important, if not a decisive, part, and, as things are, it will not create surprise if the new loan has to be made even more attractive for the investor than the last.

Trade and the Roumanian Loan.

It is fervently to be hoped that in the case of the Roumanian Loan the authorities here will abandon their traditional *laissez faire* policy as regards foreign issues and will insist on the insertion of a clause providing that a part of the money to be raised here shall be spent in the purchase of British material. I have singled out the Roumanian from the two Near Eastern loans shortly to be issued because Bulgaria's case is quite different from that of Roumania's and it is obvious that a very large part of any loan Roumania raises must go to the purchase of material for the railways. If a Yugoslav loan were in question (and apparently it soon will be) I should take the same point of view that I take in the case of the Roumanian loan, and I am going to be bold enough to suggest that if the authorities depart from their traditional procedure in regard to the Roumanian loan the precedent thus established should be followed henceforward. In saying this I am aware of the difficulties of the case. The interests of finance and trade in this respect are not the same. The ideal of high finance is to avoid anything which may impair London's position as the world's money market, and it is perhaps not surprising if the idea of insisting that our borrowers should trade with us should be looked at askance as likely to make countries turn to other markets to obtain the credits they desire. But there is only one other state to which they can resort with any prospect of satisfaction, for at the present time America and Great Britain alone are in a position to float loans of any size, and America, it may be noted, has long recognised the value of the trading clause in loans as an instrument for trade development.

Commerce Follows Money.

In view of the number of examples we have had especially before the War it is difficult not to think that we have been following a stupid policy. Germany in Turkey and Bulgaria, and France in Russia in pre-War days found in loans a facile means of furthering a policy of commercial penetration. Since the War we have made a large number of loans notably in the Near East, and it cannot justly be said that by placing the resources of the London money market at the disposal of the various countries we have done much to benefit trade. There has certainly been no obvious movement to "Buy British" in these countries, and in the circumstances there need be no occasion for surprise were we to copy the example of our competitors.

If the authorities do at last decide to take action, starting with the Roumanian loan, it will be due largely to the fact that a trade revival here is so slow in making its presence felt; recent figures with regard to trade outside the Empire, indeed, have shown that we are not even holding our own. It may be due also, I suspect, partly to the fact that the Roumanian loan will be unpopular in certain quarters—despite the fact that the proposed alterations in the Mining Law are understood to meet the desires of the oil companies, whose hostility will thus be removed—and a loan which is certain to help trade is likely to be received with special favour at the present juncture. In any case, the motive matters not if the end is attained, and from the point of view of the Roumanians it must be quite immaterial from what source they get the railway material they must have, provided it is of the first quality. And that they know they will obtain from the workshops of Great Britain.

Latifiyah (Iraq) Estates.

Shareholders in the Latifiyah (Iraq) Estates Ltd., will learn with satisfaction that the agreement arrived at with the Iraq Government by which the company receives the Latifiyah Estates of approximately 100,323 misharas (roughly 60,000 acres) has now become effective having been passed by the Iraq Parliament and ratified by the Senate. The amount for which the company has acquired its new property is £15,016 3s. or Rs.2 per mishara. Arrangements are now being made whereby Tapu deeds for the estate will be issued. The question of the development and exploitation of the estate is now being dealt with, and Mr. W. D. Garbutt, now in the service of the Government of Iraq is to be manager of the estate as soon as he can be released from his present duties.

The P. and O. Dividend.

The final dividend on the Deferred stock of the P. and O. for the year ended September 30 last is 7 per cent. free of income tax, making the distribution for the twelve months 12 per cent., which is 2 per cent. more than the dividend for the three previous years, and it is noteworthy that it is paid on an increased capital as the additional £1,000,000 of Deferred stock ranked for dividends as from October 1, 1927, on the amounts then paid up. In view of the conservative policy pursued by the company this increased distribution will naturally be

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited

regarded as throwing a most encouraging light on the trade outlook. Lord Inchcape's survey of the situation at the annual meeting in December will, in the circumstances, be awaited with considerable eagerness. While on the subject of the P. and O. Company reference must be made to the recent division of the Deferred stock into £1 units. The disadvantages attaching to a stock of high denomination are obvious; it restricts dealings, tends to concentrate the stock in a relatively few hands, and by limiting the market may have the effect of keeping the price of the stock below the level which represents its intrinsic merits. In the case of the P. and O. the result has been a notable appreciation in the price, so that the stockholders have every reason to be satisfied with developments in the past few weeks.

Anglo-Persian Oil Profits.

Even if the British Government were not directly interested in the company the Anglo-Persian Oil Company would naturally be regarded as being as much a national institution as the P. and O. is, and considerable interest therefore attaches to its report for the year ended March 31 last, which has just made its appearance. As the dividend announcement foreshadowed, there has been a shrinkage in profits which was only to be expected in view of the exceedingly difficult conditions which have obtained in the oil world. The profits amounted to £3,112,529 as against £4,635,444 for the year ended March 31, 1927, and £4,383,232 for the previous twelve months. The effect of this is seen in the reduction of the Ordinary dividend from 12½ per cent. to 7½ per cent., which calls for £1,006,875 as compared with £1,678,125, while the appropriation for reserves total £800,000 as against £1,300,000. There is this time a great saving in income tax, while the decreased profits means a considerable reduction in the royalty paid to the Persian Government which is estimated this time at £250,000 as compared with over £1,000,000 for the previous year.

Increased Turnover.

Very little information is given in the report with regard to developments during the year, and for this and a survey of the outlook we must await Sir John Cadman's speech at the approaching general meeting. The only reference to the cause of the decline in earnings is the statement that the level of world prices fell considerably during the year, but the consequences have been to some extent offset by improvements in process and increased turnover. Particulars of the production are not given, but it is stated that production from the main field at Masjid-i-Suleiman continues at the steady rate of increase necessitated by the extensions of the marketing organisations. A large productive well established last April the existence of a new oil structure at Haft Kel, 55 miles S.S.E. of the main field. It is also stated that production in the Argentine fell slightly below the level of the preceding year, while test drilling has been continued in Albania but no favourable indications were met with during the year. The output of the company's refineries and those of the associated companies were satisfactory both in quality and quantity, and considerable extensions have been made, particularly at Abadan.

Assam Railways and Trading.

At the meeting of the Assam Railways and Trading Company Mr. James Mackenzie, who presided in the absence of the Chairman, was able to give a most satisfactory account of the company's progress. For the past year the trading profit was not so large as for the previous twelve months, but apart from that period it was the best return recorded. A noteworthy feature of the year was the further increase in earnings on the railway. In view of the Government's policy with regard to the railways it is interesting to note that the official view is that the purchase of this line in 1931 is extremely improbable, so that the company will be able to carry on its plans unhampered by the thought that the railway may shortly be acquired by the State.

South Indian Railway.

I have frequently had occasion to refer in these columns to the question of motor bus competition in relation to the railways. At the meeting of the South Indian Railway Company the Chairman referred to this question and said that the effect of this competition has been felt by this railway like most railways in India. Efforts have been made by the railway to retain the traffic by running rail motors and additional trains, but this action has so far not been entirely effective. In some cases, the Chairman pointed out, the motor buses are running as feeders to the railway, and this, as he suggested, is a development to be encouraged. As I have already mentioned, there was an increase in the mileage of this railway during the year of 156 miles, and in the current year large additions are also being made, details of which were given by the Chairman. It is significant of the rapid progress of this railway that construction is proceeding on some 200 miles of new lines, while surveys for further projects aggregating more than 500 miles were completed or were in progress in the past year. This development work will have its effect in due course on the earnings of the line.

A Loss to the Banking World.

There will be very general regret at the news of the death of Mr. William John Kemsley Hegarty, general manager of the National Bank of India, which took place suddenly on October 25. Mr. Hegarty, who was only 55 years of age, joined the bank in 1894, and three years later went out to the East. He was manager of various branches of the bank in India, including the Calcutta office, and eventually became inspector of the Indian branches, which office he was holding when he was appointed London manager in 1927. On the retirement of Mr. Charles Nicoll less than a year ago he became general manager, a position which his great experience and the high reputation he enjoyed in the banking world made him eminently fitted to hold. Quite recently he was understood to have been offered an appointment of the first importance elsewhere, but he was attached to the bank which he had served throughout his career, and his decision was to remain with it. Mr. Hegarty, who was a bachelor, and lived at his club, was extremely popular both with the staff of the bank and its clients.

REORGANISATION OF ROUMANIAN RAILWAYS.

One of the signs of the confidence now general in official circles in Roumania in the success of the loan negotiations is the activity recently shown in reorganising and improving the transport system. Through express trains have been put on to many important centres, i.e., to Sinaia, Galatz, Cernautzi, Oradea Mare, Constantza, etc., and at the International Railway Conference held in Vienna on October 22 the Roumanian delegates were to propose that the neighbouring countries should co-operate with them in accelerating the international services from the East to the West and the North, i.e., from Bucharest and Constantza to Paris, Berlin and Dantzig.

For instance, it is proposed (a) that direct first and second-class carriages should be attached both in summer and winter to the Bucharest-Paris express leaving Bucharest at 1.30 p.m. *via* Curtici and Budapest, and not only in summer as hitherto; (b) that the Hungarian railways should run an express service in connexion with the new Bucharest-Cluj and Satu-Mare express (started on October 22), and that the frontier Customs formalities should be performed during the transit of this train, so as to make it possible to leave Bucharest at 7 a.m. and to arrive in Budapest at 11 p.m. the same day; further, that a direct carriage, first and second class, from Bucharest to Vienna should be attached to this train. (When it is considered that up to the present it has taken from 25 to 30 hours to reach Vienna from Bucharest, it will be understood how great a blessing such a train would be to travellers.) (c) That the Calais-Bucharest direct carriage of the Orient Express should be run on to Constantza to connect with the ships of the Service Maritime Romaine serving Constantinople, Piræus, and Alexandria; (d) that an express service be arranged from Berlin to Bucharest and Constantza, with through carriages to the latter port, in extension of the new Roumanian express service from Bucharest to Cernautzi, by which the travelling time between Berlin and Constantza would be reduced to 33 hours; and that in connexion with this service through expresses be run from Warsaw to Bucharest, and Dantzig to Constantza; (e) that greater facilities should be given to induce Bulgarian travellers to take the Roumanian route to Budapest and Vienna instead of going through Yugoslavia. It seems unlikely that any objections will be raised to these proposals by the countries concerned, so that there is reasonable hope that the train services from Bucharest to the West and North will soon be greatly accelerated.

As regards inland transport, the Minister of Communications, in a long article published in the *Indépendance Roumaine* of October 24, outlined a long series of improvements which he proposes to carry out with all possible speed. They include the doubling of the line from Bucharest to Piteshti (the Simplon Express route) and the finishing of the Brashov-Nehoiash-Buzeu railway, which is of the greatest importance for traffic between Transylvania and the Danube ports.

A Belgrade message states that a contract between the Swedish-American Investment Corporation of Stockholm and the State Monopoly Direction of Yugoslavia was signed on October 27 by a representative of the Alstrom Syndicate and members of the State Monopoly Committee. The terms of the loan contract, which is for 22,000,000 dollars, involve a guarantee by the manufacture and sale of matches which have been conceded to the syndicate. The interest has been fixed at 6½, and the price of issue at 90. The loan will be redeemable in thirty years' time.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

GREECE'S TRADE POSITION.

The statistics for Greece's trade for the first half of this year make rather unfavourable showing when compared with the figures for the corresponding period of the previous year. The value of the imports showed a further substantial increase while that of the exports declined. The total for the imports (in thousands of drachmæ) was 6,336,540 as against 6,191,025 for 1927 and 4,622,156 for 1926, while the figures for the exports were 2,559,782 as against 2,724,763 for 1927 and 1,932,341 for 1926. The adverse balance for the half year was thus 3,776,758 as against one of 3,436,262 for 1927 and one of 2,776,758 for 1926. Converted into sterling at the mean rates of exchange these figures mean that Greece had an adverse balance for the half year of £10,071,000 as against £9,393,000 for 1927 and £7,331,000 for 1926. The reason for the increase in the adverse trade balance is principally that the imports included a large amount of material for various construction works, etc. The imports of agricultural products declined somewhat, as was to be expected in view of the development of agriculture in the country. The principal declines in the exports were in respect of tobacco (296,600,000 drachmæ) and wine 123,400,000. Greece has suffered, of course, as regards tobacco from the fact that there has been a tendency for the market to be overstocked with types produced in the Balkans. Bulgaria, Yugoslavia, and Greece all compete against each other with the result that they find it difficult to dispose of their crops.

In July 33 new motor cars and 13 new lorries and omnibuses were registered in Iraq.

The Brightside Foundry and Engineering Company have received an order for a rolling mill for India.

The Egyptian State Railways have given an order to the Steel Company of Scotland, Ltd., Glasgow, for the supply of carriage and waggon tyres.

The Greek Government has decided to grant a concession to a British company for the construction of aerodromes on the island of Corfu and at Argostoli, Navarino, and Suda, to be used in connexion with the London-Cairo section of the Imperial air route to India.

COMPANY NOTICE.

LATIFIYAH (IRAQ) ESTATES Limited.

The Directors of Latifiyah (Iraq) Estates Limited have pleasure in informing the shareholders that the Bill required to carry out the terms of the Agreement with the Iraq Government, dated 8th February, 1928, has been passed by that Parliament and ratified by the Senate, with the result that arrangements are being made by the company's representative in Baghdad whereby Tapu Deeds for the Latifiyah Estate of about 60,000 acres will be issued.

The active development and exploitation of the property is receiving the attention of the board, and Mr. W. D. Garbutt, a practical Agriculturist, now in the service of the Government of Iraq, will join the company as manager in Mesopotamia as soon as he can be released from his present charge. Meantime, the Department of Irrigation is proceeding with the preliminary work in connexion with the construction of the main canal and the necessary ancillary works for providing a supply of water for the Irrigation of the Estate.

The Directors desire to place on record their appreciation of the manner in which the Government of Iraq have met an admittedly difficult and complex situation, and believe the settlement now made is favourable to the company.

The formalities in connexion with the reduction of the capital of the company have been complied with, and shareholders are requested on or after the 7th November, 1928, to send their certificates for shares of £1 each, 10s. paid up, to the address below, when they will be exchanged for share certificates for fully paid shares of 10s. each.

WILLIAM S. GREGG, Secretary.

NOTE.—For the convenience of shareholders domiciled in Iraq arrangements will be made for their certificates to be exchanged at the company's Baghdad office and they will receive a notification from that office in due course.

Bank Buildings, 16, St. James's Street, London, S.W.1.
25th October, 1928.

MOTORS IN ROUMANIA.

The number of motor cars registered in Roumania on January 1 last was 22,295, and it is indicative of the trade enterprise of America that 11,095 of the motor cars came from that country, 6,694 of them being Fords. As a matter of fact, the proportion of American to European cars in Roumania is rapidly increasing. On January 1, 1926, American cars represented 33.89 per cent., a year later the percentage was 42.93, while on January 1 last it was 48.85, and presumably the current year will place American cars well in front. The Ford, as may be imagined from the figures given, easily heads the list of cars in Roumania; next comes the Fiat with 2,946 cars; the Chevrolet is third with 2,234 cars, while the Chrysler is fourth with 755. The figures for other makes of cars are Daimler 227, Sunbeam 36, Napier 29, and Morris 28. From the details given it will be seen that British cars have so far played only a small part in the Roumanian market, but in that respect the position is precisely similar to what it is in the other Balkan markets. The fact that America can find such a market in Roumania for motor cars should be an inspiration to British manufacturers to try to obtain considerably more of the trade than they do at present.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 20:—

Sultanas.

The estimated sales to date total 28,500 tons, against 28,850 tons at the corresponding period last year.

Closing prices Smyrna, per cwt., c.i.f. London, for types 12 to 18 were:—30s.; 31s. 6d.; 34s.; 37s.; 42s.; 46s. 6d.; 56s.

Market Conditions.—Demand this week slackened considerably. Prices have eased off to a slight extent, but the decline in foreign equivalents is more marked owing to a sharp rise in exchange representing about 2 per cent. advantage to the exporter. Supplies of fruit remaining in the country appear to be plentiful and the likelihood of the crop attaining even over the estimated figure of 45,000 tons seems probable.

We draw attention to a clerical error in our last report where we indicated the total sales to October 13, 1927, at 30,600 tons instead of 26,350 tons, the correct figure.

Figs.

The estimated arrivals on the Smyrna market since the opening of the season total 23,200 tons, against 21,214 tons at the corresponding period of last year; the estimated sales to date total 20,500 tons, against 20,445 tons.

Market Conditions.—Prices advanced considerably this week owing to few arrivals and demand exceeding supplies. It is evident that stocks in the country are on the point of exhaustion and the season is drawing quickly to a close.

It is reported that fresh lighters, including new ones, are being added to the existing supply at the port of Mersina. Three new electric cranes have been installed there by the Customs authorities.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Saddlery, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of various articles such as saddlery, fire-engines accessories, rest-house necessities, leather. November 24.

Microscopes and Accessories.—The Department of Public Health, Egypt, invites tenders for the supply and delivery of microscopes and accessories. November 15. (D.O.T.)

Electric Lighting Installation.—The Minister of the Interior invites tenders for the supply and erection of a complete electric lighting installation for Sohag. November 24. (D.O.T.)

Internal Combustion Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of one 30-B.H.P. internal combustion marine unit required for the Government Workshops, Bulaq, Cairo, November 1; one 45-B.H.P. internal combustion marine unit required for the Government Workshops, Bulaq, Cairo, November 1; and the supply and erection of one 100-B.H.P. internal combustion unit required for stone crushing plant at Ghamra, Cairo. November 10.

Power Unit for Stone Crushing Plant.—The Egyptian Ministry of Public Works invites tenders for the supply of one semi-Diesel type I.C. engine as power unit for stone crushing plant. November 10. (D.O.T.)

THE SUDAN.

Generators and Switchboards.—The Inspector-General, Egyptian Irrigation Department in the Sudan, Khartoum, invites tenders for the supply of three De-Laval Steam Turbo 4½ kilowatt generators and two switchboards, November 10.

TURKEY.

Aerodrome.—Tenders are required for the construction and equipment of an aerodrome on a site in Anatolia. Details must be submitted to the Ministry of Defence by November 15, 1928. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, November 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, November 8); s.s. Mangalore for Calcutta (Birkenhead, November 15).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, October 31).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, November 3); s.s. Mundra for Bombay and Karachi (London, November 10); s.s. Merkara for Colombo, Madras, and Calcutta (London, November 17); s.s. Hatimura for Bombay and Karachi (London, December 1).

Cunard Line.—S.s. Bothnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow and Swansea November 8, Liverpool November 10); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz and Ancona, if inducement (Liverpool November 24, and Swansea November 27).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, November 9); s.s. Perim for Calcutta (London, November 10).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 3); s.s. Egyptian Prince for Tunis, Malta, Alexandria, and Cyprus (Manchester, November 3).

Ellerman and Papayanni Lines.—S.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Venice, Trieste, and Fiume (Liverpool November 7, Swansea November 10); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 8); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 10); s.s. Volturino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 17); s.s. Mardinian for Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool November 17, Swansea November 17); s.s. Algerian for Algiers*, Smyrna, and Constantinople (Liverpool, December 1). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*FLYSIA ... Nov. 9	*MASSILIA ... Dec. 11

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.*(By Our Financial Expert.)**London, October 30.*

The continuance of a perfect deluge of new prospectuses has once again been the week's principal feature. This week's list has included some sound investment offers such as the Peruvian Loan and Baldwin's debentures, and several quite attractive offers by well-established commercial undertakings. But once again the majority of the issues have been of the recently familiar type of speculative ventures with new patents or processes to exploit. The public continue to swallow the latter with avidity.

In the markets for existing securities the speculative element has tended to narrow its field of concentration to gramophone shares and a few other favourites, while in many industrial or speculative securities there has been a disposition to take profits. On the whole, it may be said that the "bull" movement in the industrial share sections is neither so broad nor so strong as it has recently been. This slight slowing up may be connected with the rather disappointing reports from many trade centres, and it has been accompanied by a well sustained and fairly heavy demand for sound investment stocks. It is high time that inveterate speculators began to remind themselves firstly, that all booms must end some time, and secondly that there are plenty of sound investment stocks to-day purchasable at reasonable quotations.

The Reparations Problem: The Investor's Interest.

The many holders of the German 7 per cent. sterling bonds of 1926 in this country have no doubt followed with interest the new phase which the reparations problem has apparently entered upon. This is the more likely since there have been rumours of the possibility of a further appeal to the investor with regard to the next step in the reparations problem. The 7 per cent. sterling bonds, it will be remembered, were issued in connexion with the Dawes Scheme, which was not, and was not meant to be, a permanent settlement of the reparations problem. It was an ingenious piece of machinery devised to meet an emergency, and it performed two exceedingly useful functions. It afforded Germany the opportunity, which

she has abundantly used, to set her finances and currency in order and to regain economic stability; it arranged the scale of annual payments which should be required of Germany over a number of years. The Dawes Scheme has worked well, but the time has come when it is important, not merely for Germany but for her creditors, to know what sum, in the aggregate, Germany is to pay. With the re-opening of reparations negotiations we may perhaps be entering upon the final chapter of international War debt settlements, of which the keynote is the settlement of the German War debt total, and the fixation of the period of payment. The discussions which are now beginning raise many problems, and in particular such financial problems as the possibility of "mobilising" German railway bonds and marketing them in New York and other international centres. In these circumstances the investor will follow further developments with the greatest interest.

Mond Nickel Developments.

During recent months there have been remarkable movements in the price of the 10s. ordinary shares of the Mond Nickel Company, which, from the lowest of 18s. 6d. last year, have recently been over £8. The reason, though it has been vaguely known for some time, is now apparent. Negotiations are in progress for what may be merely a close working agreement, or more probably an actual merger, with the International Nickel Company of America. Properties of the two undertakings are in close proximity and important benefits would accrue from co-operative working. It has been suggested that a holding company will be incorporated in Canada to take over the shares of both companies. The assumption is that the ordinary shareholders in the Mond Nickel Company are to receive one share in the new holding company for each share they now own, but International Nickel holders are, it would appear, to get in effect six for one. The publication of these terms, which are, of course, at best intelligent anticipation, caused a sharp fall in Mond Nickel shares, the price declining to 6½; it had been thought that the Mond Nickel interests would be dealt with more generously in the merger. There has since, however, been a recovery in the quotation. It must be emphasised that the information at present available indicates that no agreement of any kind has yet been finally signed, but apparently this is merely a matter of time, and full particulars are expected shortly.

Investment Stocks.

Many small investors, who are dependent mainly or wholly upon dividends or interest on Stock Exchange investments, find it more convenient to have their income coming in in small instalments at frequent intervals, rather than in larger instalments, say, twice a year. In the latter case periods of stringency are likely to occur, and borrowing to meet them is expensive. Incidentally, the receipt of income in two big instalments is often conducive to extravagance. A regular monthly inflow of income can easily be achieved by a careful choice of investments. For instance, anyone who followed the investment list outlined below would have income coming in every month of the year. The interest on the Argentine 4 per cent. railway guaranteed rescission bonds, yielding £5 4s. per cent., is payable in January and July. The months of February and August are provided for by the New Zealand 4 per cent. inscribed stock, returning £4 18s. per cent. The Pearson and Dorman Long debentures, guaranteed under the Trade Facilities Acts, yield £4 18s. per cent., the interest being payable in March and September. An income for April and October could be derived from 3½ per cent. Conversion Loan, yielding £4 11s. per cent. The interest on the Belgian 7 per cent. stabilisation loan, returning £6 6s. per cent., is payable in May and November. The Bristol 4½ Corporation Stock yields £4 17s. per cent., the interest being payable in June and December.

Motors and Motoring.

By G. B. B.

Braking Systems.

The question has been raised as to whether a motor vehicle designed for commercial or passenger service should be fitted with two independent braking systems. So far it seems that it is certainly desirable for motor coaches or omnibuses to be designed with two more or less separate operating mechanisms, but it appears to be a debatable point as to whether these should be entirely independent of each other or whether some of the parts could not be common to both systems. The point was discussed recently before the Society of Automotive Engineers by Mr. Lockwood and Mr. Best, and the conclusions reached were, briefly, as follows: The purpose of legislation regarding brake equipment is to protect the public by making sure that all vehicles shall be provided with the safest possible brakes. Existing brake laws have a general similarity, apparently being patterned after early enactments formulated during the two-wheel-brake period. In some countries, notably in the United States, the law specifies, in substance, that every automobile shall be equipped with two sets of brakes, which shall be completely independent. This provision was complied with by all two-wheel brakes.

With the introduction of four-wheel brakes, conflict of brake laws and brake mechanisms was discovered, in that the two sets of brakes were not, in all cases, separately applied. Thus the anomalous situation has arisen of efficient four-wheel-brake equipment violating existing laws, while less efficient two-wheel brakes comply with the law. The situation has been met in a broad-minded way by the motor vehicle administrators, who have registered vehicles with the new brakes provisionally, pending a final decision on the question of violation of the law.

It is interesting, in this connexion, to note that definite recommendation has been made by the Eastern Conference of Motor Vehicle Administrators, which has formulated for adoption the following new law:—

Every motor vehicle operated in or upon any public highway in this State shall be equipped with brakes adequate to control the movement of and to stop such vehicle. Every automobile so operated shall be equipped with at least two braking systems, with two separate means of application, each operating on at least two wheels and each of which shall suffice to stop the vehicle within a proper distance. If these two systems are connected in any way, they shall be so constructed, that failure of any one part of the operating mechanism shall not leave the automobile without brakes on at least two wheels. One of these systems shall be so constructed that it can be set to hold the vehicle. All such brakes shall be maintained in good working order and shall conform to regulations not inconsistent with this act to be promulgated by the Commissioner of Motor Vehicles. Every motor-cycle shall be provided with at least one brake, which may be operated by hand or foot.

In spite of this official, or semi-official endorsement, many competent engineers will assert that such separation, with duplication of parts, will subtract from safety about as much as it will add; hence, the duplication of parts is not justifiable. Critics of this part of the proposed law dislike the implication that the service brakes of automobiles of the present high speed types will fail to such an extent that recourse must be had to the parking brakes. They also feel that, in case of interconnexion of the operating parts of the two sets of brakes, the operation of one set would not necessarily be affected by failure of the other set. It may be maintained that some safeguards are needed against the future cheapening of brake equipment, with the resulting lowering of safety standards. To this it may be replied that, in the essential units of the

automobile, such as braking and steering parts, such safeguards hardly seem necessary since the self-interest of the manufacturer in maintaining public confidence in his product will operate more powerfully than any law.

Cleaning Radiators.

Cases of clogged radiators are by no means uncommon, and a correspondent tells me that a method of cleaning them by using successive spurts of air and water has been devised and adopted by the research staff of one of the biggest passenger-carrying services in the world. His description of the operation is as follows: "The radiator is removed from the car and a water hose is connected to the pipe at the bottom of the radiator, where the bottom hose connexion is usually attached. The pet-cock at the bottom of the radiator is removed and a small nipple is put in place of it and connected to an air hose. The pipe where the top hose connexion attaches to the radiator is closed with a large cork. With the radiator cap removed, and the radiator standing upright, the water is turned on gradually and allowed to flow out at the top of the radiator. If hot water is available for the purpose, so much the better. The air is then turned on in spurts, a little carefully at first, and then in bigger spurts, to blow a mixture of water and air up through the radiator core. This is continued for a few minutes, the radiator being allowed to fill with water, and air may be allowed to flow through steadily together at a rapid rate for a few minutes. It should be remembered that a radiator will not stand unlimited pressure, and air and water should pass through fairly freely before being turned on at a rapid rate."

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

Installation of Tipping Gear.

Whilst on the subject of commercial motor vehicles there seems to be at least one avenue that should lead to economy that is neglected by large fleet owners. I refer to weight reduction by the installation of certain items of equipment at strategic points instead of imposing the same equipment upon each vehicle of a fleet. Tipping gear, for instance, can, in the case of a standardised fleet operating to a minimum number of given points, be installed at the tips, and vehicles arriving at intervals at each tip can all be dealt with by one outfit, thereby dispensing with the hitherto necessary gear on every vehicle. Such a method would tend to reduce initial cost and repair and maintenance charges. Even more important, however, would be the saving effected through carrying less dead weight.

An article in *Motor Transport* recently described the methods employed in this direction by the refuse collection department of the Glasgow Corporation, while last year a similar system was recorded at Hackney. Reports from both these places are encouraging, and show in a practical manner that there are no insurmountable obstacles in the way of economising by gross weight reduction in cases where standardised vehicles visit the same series of tips.

An A.P. Booklet.

My readers will no doubt be interested to know that the Anglo-Persian Oil Company is shortly issuing a booklet containing reprints of their well-known "B.P." Proverb Series. Motorists who would like a copy should write to the company at Britannia House, Moorgate, E.C.2.

The Cycle and Motor Cycle Show.

The Motor Cycle and Cycle Exhibition, which will be held at Olympia from November 5 to 10 inclusive, will provide an extraordinary display of machines. There will be motor cycles costing little more than £20 offering reliable and efficient road service, and there will be a big variety of machines of all types, whose manufacturers have set themselves to cater for the requirements of the enormous community which rides motor cycles. The bicycle will be shown in improved form and touring units, ranging from less than £5 to something like £200, every one of them being absolutely reliable.

There will be two-seater cars on two wheels, for there is a tendency toward the production of motor cycles offering unprecedented comfort. Some of the solo motor cycles will be specially designed for the conveyance of two passengers, the one-time pillion now being catered for by special seats, footrests and even handle-grips. An interesting exhibit will be a machine with a pressed steel frame whose power unit will be completely covered and protected and upon which there will be provision for protecting the rider as well. It will be a car on two wheels with motoring comfort and motor cycle performance.

Among the side-cars there will be some all enclosed baby saloons, some of them cellulose finished and equipped with safety glass wind screens. The two features of the Show will be the enhancement of comfort and appearance. There will not be a noisy motor cycle in the Exhibition, but there will be many very beautiful ones. It used to be said of the motor cycle that it was ugly and bristled with unnecessary controls. The 1929 types will be very graceful in general outline and will be very attractively finished.

Although the sports rider will be well catered for, the salient features will be comfort and safety. There will be no appreciable price reductions, but motor cycles will

be very much cheaper because they will be much better.

There will be tiny little motor cycles which will cost less per mile than is occasioned by public services travelling and which may be housed in an ordinary cycle shed in the back garden. They will be listed at figures very little in excess of £20. They are scientifically constructed mounts and as reliable as bigger motor cycles and extremely tractable.

The 250 c.c. class will offer to the prospective buyer a considerable choice. This type of machine, in spite of its small engine, has a reserve of power which ensures "safe conduct" over all hills. It is a smooth and quiet-running solo motor cycle.

Among the 350 c.c. motor cycles, which belong to the luxury class, are some of the best of the sports and fast touring motor cycles which the industry has to offer. They have reached such a stage of perfection that they may now be employed for side-car work without it being necessary to seek ultra lightness for the passenger attachment.

The Senior, or 500 c.c. machine, is a double purpose mount. As a solo machine it is a road cruiser with a performance which enables the rider to make forced marches without stressing the engine. The bigger machines are primarily intended for fast tourists who look for speed or for the family man of moderate means. There will be family side-cars with accommodation for two adults and two children, which will provide for comfort and unlimited touring scope. Their remarkable stability and facility of control render them the safest of all road vehicles. They are practically immune from skidding on the greasiest of roads. Some of them will be fitted with safety glass wind screens and their coach-built bodies will be cellulose finished.

Modern motor cycles are extremely simple to ride and to keep in order. Their general efficiency is such that the owner never has to consider the possibility of breakdowns and such adjustments as may be required are facilitated. For example, the mere turn of a milled thumb screw adjusts the brakes, lubrication is automatic, and greasing is by pressure gun. Gear changing, which is so difficult on some cars, is as easy as turning on the petrol. There is not a motor cycle in the show on which the gear cannot be changed up or down, and at any speed, with absolute ease.

Overhead valves are on the increase and enclosed mechanism carries out the general policy of greater cleanliness and better protection. There will be several interesting novelties in frame construction and saddle tanks will be general.

There will be many novelties among the accessories, including special devices for use on the road and in the garage. The visitor will discover ways and means of facilitating the removal of valves, wheels, chains, etc. There will be clever equipment amplifying the work of the manufacturers in affording greater protection to riders, and there will be a hundred and one little items for fitting to machines and side-cars.

The Egyptian Markets announce an interim dividend of 5 per cent., less tax, on the ordinary shares, payable November 15.

The Bank of England announce the numbers of 752 bonds of the Greek guaranteed 2½ per cent. gold loan of 1898 which have been purchased for the sinking fund and cancelled.

The chemists of Constantinople have decided to form a company for the manufacture of pharmaceutical products. The capital of the company is to be £T60,000 (£6,600). Owing to the excessive number of chemists' shops in Constantinople, the Turkish Government not very long ago ordered the compulsory closing of many shops which could not justify their existence.

At the 88th ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held at the company's offices on December 12, at 11 a.m., the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), will recommend a dividend on the deferred stock of 7 per cent. (free of income tax) for the six months ended September 30, 1928, making, with the dividend of 5 per cent. paid in May, a total distribution on the deferred stock of 12 per cent. for the year. Warrants will be payable on December 14.

Agriculture.

Greece is pre-eminently an agricultural country, about three-fifths of the population earning their living from agriculture. Owing largely to the mountainous and rocky nature of the country, only some 18.5 per cent. of the surface is cultivated. But schemes are on foot for the drainage and reclamation of extensive areas of marsh land, from which a valuable increase of agricultural land is to be expected. A feature of the agricultural development of the country is the increasing use made of artificial fertilisers. The local production of such fertilisers (mainly from a large and well-equipped factory at Piræus) rose steadily from 30,500 tons in 1925, 40,200 in 1926, to 45,600 in 1927. In this latter year the exports to Cyprus, Egypt, etc., amounted to 9,257 tons. The imports of artificial manures, which had amounted to 28,000 tons in 1925, fell to 9,600 tons in the following year, but rose to 13,800 tons in 1927.

On the whole, 1927 was a comparatively satisfactory year for agriculture, though losses were suffered from the ravages of locusts and the dacus fly in certain districts, while the great heat of the summer months also caused some damage. The prospects for the current year are stated to be on the whole good, owing to the satisfactory conditions obtaining during the sowing season. Later, however, some damage was done by heavy rains, while locusts have also appeared in various parts of the country.

The exportation of agricultural products is the main source of Greek national income. Out of a total export value of Drs.6,037,411,000 in 1927, the exports of tobacco accounted for more than half—Drs.3,417,639,884. This was followed by the export of currants, valued at Drs.785,571,015; of wines, Drs.527,407,420; and olive oil, Drs.182,465,529.

The Greek tobacco exports go mainly to Germany, Italy, and the United States of America, but considerable efforts are being made to extend the trade in other markets. Measures are being taken by the State, the Refugee Settlement Commission, and the Tobacco Growers' Association to assist the agriculturists and to improve the quality of leaf, particularly in those districts where the quality at present is inferior. There is question of the foundation of a bank, with foreign interests, which would devote itself specially to the needs of the tobacco trade.

There has been a marked increase in the export of Greek wines of recent years, the quantities having increased from 60,000 tons in 1925 to 104,000 tons in 1926 and 139,000 tons in 1927. The principal countries importing Greek wines are France (57,000 tons in 1927), Italy (33,000 tons), and Germany (16,500 tons). Great Britain's import last year amounted to 6,893 tons.

Besides the country wine producers, who still use the traditional methods, the industrial production of wine is developing considerably, there being now 171 industrial establishments in this branch. In conjunction with wine, the majority of these establishments produce also alcohol, both potable and for technical and illuminating purposes.

Cereals.—The importation of breadstuffs is the most important item in the Greek commercial budget. The main sources of supply for the 411,000 tons of wheat (valued at Drs.2,012,654,350) imported during the year were, in the following order, America, Bulgaria, Canada, and the Argentine. There was a decrease, as compared with the previous year, in the imports of wheat flour, which amounted to 66,752 metric tons, the principal supplying countries being :—Australia, 5,700 metric tons; United States, 39,291; Roumania, 1,726; Bulgaria, 8,600; and Canada, 7,101 metric tons. The reduced imports of flour were in some degree ascribable to the increase in the

duty imposed on this commodity, which aims at supporting the Greek milling industry.

Great efforts are being made to increase the home production of cereals (successful use being made of Canberra wheat for sowing purposes), with the object of reducing the expenditure of the country on imported breadstuffs. While this policy undoubtedly has a direct appeal to the broad mass of the general public, there are not wanting, perhaps, further seeing economists who advocate that greater attention should be given to increasing the output of more valuable crops, such as tobacco, cotton, etc., the proceeds of the sale of which would not only pay for the breadstuffs imported, but leave a surplus for other purchases.

Mines.

Unfortunately there exists no general statement on the mineral deposits of Greece. Of those already worked, mention may be made of mines of iron, lead, zinc, chrome, nickel, magnesite, lignite, iron pyrites, manganese, and bauxite, while the emery deposits of Naxos, the exploitation of which is a monopoly of the islanders and the revenues from which are assigned to the amortisation of the public debt, produce probably the finest emery in the world.

There exist, however, some 2,000 mining concessions, which have from time to time been issued, over which a register is kept by the Department of Mines of the Ministry of National Economy. The majority of these concessions have presumably but little, if any, value, but their number is some indication of the number of mineral deposits in the country. A large number of them have, however, not yet been examined.

It is believed, however, that certain of these deposits might repay investigation, with a view to exploitation. Such, for example, are said to be the deposit of argenteriferous ores on the island of Milos; the gold-bearing alluvial deposits of Macedonia; the nickel ore deposits of Larymna; the antimony ore deposits of Chio; the bauxite deposits in Attica; the deposits of manganese ores of Chalcidique (in Macedonia) and at Messina; the deposits of iron ores in the islands and the bituminous and petroliferous strata in Epirus, etc.

Some information concerning these and other deposits are in the possession of the Department of Mines, but a comprehensive report is yet to be made. As regards lignite, it may be added that the whole output is consumed locally, and although there is a movement to reduce the country's disbursements for imported fuels—coal and charcoal—it is not regarded as likely that, at present prices, there will be any material increase in the consumption of this fuel.

Company Meetings.

SOUTH INDIAN RAILWAY.

Record Revenue Earnings.

The ordinary general meeting of the South Indian Railway Company, Ltd., was held on October 26 at 91, Petty France, S.W.

Mr. Alex Muirhead, C.I.E. (chairman and managing director), in moving the adoption of the report and accounts, said that the calendar year had been marked by intense labour agitation consequent on proposals for reducing the number of workshop employees. In spite of the offer by the company of extremely liberal terms to induce voluntary retirements, the opportunity was seized by labour agitators to exploit the occasion and to induce the labour force to strike. The labour leaders agitated for enhancements of pay and the grant of privileges to such an extravagant extent that refusal was inevitable, and a general strike was declared on the night of July 19-20. The strike collapsed on July 28, and the terms offered to the workmen on the closing down of the engineering and Negapatam workshops had now been accepted. The agent considered that matters were now completely normal again.

The passenger fares were unchanged during the year, but as satisfactory increases both in numbers carried and in earnings had followed on the reduction in fares in January, 1927, further reductions had, from October 1, 1928, been made in the fares of all classes, and it was hoped that in due course these would produce equally satisfactory results.

As to the outlook for profits in the near future, while traffics were showing not unsatisfactory expansion, and everything possible was being done to secure economy in working, the new lines which were being and would be constructed could not for some time be expected to produce earnings on the same scale as those of the older sections, and the stockholders must therefore look for some lowering of the average net return on the total capital at charge.

The past year had been one of intense activity in all branches of the railway. The revenue earnings showed an increase of Rs.33,84,045, or 6.43 per cent., compared with last year, and constituted a record, while the total number of passengers carried, 56,000,000, was also the highest recorded. The working expenses had increased by 19.53 per cent. The net result of their operations was that they had a balance of Rs.5,15,735, which realised £38,680, against £54,948 received last year. The board recommended a final distribution of 2½ per cent. from surplus profits, making the same total as for the previous year—namely, 8 per cent., less income tax.

The report was unanimously adopted.

ASSAM RAILWAYS AND TRADING.

Steady Advance in Railway Earnings.

The forty-eighth ordinary general meeting of the Assam Railways and Trading Company, Ltd., was held on October 24 at Winchester House, Old Broad Street, E.C.

Mr. James Mackenzie, who presided in the absence through indisposition of Mr. George Turner (the Chairman of the company), said that for the last five years shareholders had been congratulated on accounts showing a record profit up to that date, and though, for the year under review, the Board were not able to show quite as large a trading profit as last year, it was, apart from that year, the largest ever earned by the company, and was amply sufficient to make all the usual provisions and allotments.

In the railway the encouraging feature was that the earnings were still on the ascending scale. It was a subject for considerable satisfaction that the coaching traffic and other general traffic had expanded sufficiently to compensate for certain fallings off foreshadowed a year ago, and that the accounts actually showed an increase on the previous record year. They might take special pride in the passenger traffic, which had responded consistently to the better accommodation provided. Last year they carried over a million and a-quarter passengers, and, so far this year, there had been another 10 per cent. increase, and the Board and management looked forward to a continuous advance.

Their policy had been steadily to improve the line and rolling-stock year by year; the management reported that they were now in a position to handle expeditiously any volume of traffic likely to offer.

As regards the collieries, the slump in Bengal coal continued and the board had had to reduce prices, but it was satisfactory that sales had been increased and cost of production per ton reduced. They could, he considered, look forward to the future with confidence.

In view of the fact that the Government had the right on 12 months' notice to buy the railway in 1931, the directors had endeavoured to ascertain what the intentions of the Government were. The Government had informed the board that while they were unable so far

ahead to give an absolute guarantee, they thought that the purchase of the railway in 1931 was extremely improbable. That statement might be viewed with a certain amount of relief; the longer the Government waited the more they would have to pay for the railway, while if they left it with the company indefinitely it might ultimately be in the best interests of the shareholders.

The final result for the year was a profit of £157,514, and, after paying debentures interest and all preference dividends, the directors recommended that £11,000 should be written off discount on debentures, and a final dividend of 7½ per cent. paid on the "B" stock, making 12½ per cent. for the year, leaving £14,825 to be carried forward, as against £13,571 brought in. Taking all the circumstances into consideration, the board thought there was no reason why the "B" dividend should not be increased by the small amount suggested.

The report and accounts were unanimously adopted.

COMPANY NOTES AND REPORTS.

BENGAL DOOARS RAILWAY.

The report of the Bengal Dooars Railway for the year ended March 31 states that the gross earnings were Rs.25,12,207, the working expenses were Rs.12,98,574, the net earnings being Rs.12,12,633. The coaching earnings amounted to Rs.5,76,238, compared with Rs.5,73,753 for the year ended March 31, 1927, an increase of Rs.2,485. The total amount received on account of goods traffic during the year was Rs. 17,78,691, against Rs.17,18,858, an increase of Rs.1,59,833. The receipts from ferry service and miscellaneous earnings amounted to Rs.57,278, compared with Rs.51,096, an increase of Rs.6,182. The amount at credit of the net revenue account is £113,342 11s. 10d., from which must be deducted £16,000, the amount of the 4 per cent. interim dividend on the ordinary stock paid on April 25, 1928. Out of the £97,342 11s. 10d. remaining the directors have placed £20,000 to the credit of the reserve fund, bringing it up to £250,000, leaving a balance of £77,342 11s. 10d., which the directors recommend should be dealt with as follows:—In payment of a final dividend of 4 per cent. and a bonus of 3 per cent. on the ordinary stock for the year ended March 31, 1928, subject to income tax, £28,000; leaving to be carried forward, £49,342 11s. 10d.—£77,342 11s. 10d. The directors are pleased to report that only slight damage was caused to the railway by the flooding and erosion of the River Teesta during the monsoon period of 1927, and that there was no interruption of traffic. A certain amount of damage was done during that period to protection and other works, which was made good during the dry season when further protection works were carried out. These works have held almost in their entirety during the monsoon period of 1928, resulting in the bight, made by the River Teesta in close proximity to the railway near Barnes Junction, having largely silted up.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date September 30:—

Arrivals in Kordofan Stations from August 21 to 31 amounted to 87 tons as against 68 tons for the corresponding period last year, whilst during September they totalled 270 tons as against 156 tons for the same month last year.

The total arrivals of Kordofan gum from the beginning of the year to date amounted to 14,556 tons as compared with 12,126 tons for January/September, 1927, or an increase of about 20 per cent.

The El Obeid market opened at about 6d. less than the price at which it closed on August 20 and remained practically steady until September 18, after which prices gradually fell up to the end of the month, when the total fall amounted to 2s. 3d. per cwt. On the other hand, the course of prices at Nahud, which is the only other station bringing in gum at the present time, marked a constant rise throughout the above period, the total increase on September 30 as against August 21 being about 2s. 9d. per cwt. Demand during the whole period was generally quiet.

Yugoslavia's foreign trade for the first eight months of this year was as follows (in million dinars):—Imports, 5,087; exports, 3,875.

The traffic receipts of the Suez Canal Company from October 6 to 12 amounted to 4,190,000 francs, compared with 4,080,000 francs for the corresponding period of last year.

The directors of Lloyds Bank announce that Lord Weir has been elected to a seat on the Board. Lord Weir is an extraordinary director of the National Bank of Scotland, Ltd., and is chairman of G. and J. Weir, Ltd., the Anglo-Scottish Beet Sugar Corporation, Ltd., and the West Midland Sugar Co., Ltd.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 24:—

Egyptian Futures.—Sakel Contract.—The speculative "bullish" movement which started just prior to, and was still in progress at the time of our last report, was maintained practically up to the week-end, further buying finding the market rather bare of contracts and forcing the level to 18.33d. for January before encountering much opposition. At this point the American market began to show signs of a reactionary tendency, and, with some of the more cautious and earlier buyers starting to take their profit, prices gradually eased; during the past two sessions the fact that the trade are not buyers at current prices has become more widely recognised, and we close to-night with an uncertain tendency, near positions 9 to 18 points and distant months 13 to 24 points advance since we last wrote. A feature of the recent trading has been the purchase of a line of March contracts, between 7,000 and 8,000 bales, by New York interests. In the ordinary course of events a transaction of this character would only have a temporary effect on the market, but under present conditions, with few imports heading to this side and no fresh supplies of contracts from "hedge" sources, the cotton had to be supplied by local operators; these latter have been gradually covering their sales during the past two sessions, thus imparting to the tone a greater degree of stability than the position really warranted. Trade reports in the fine section still leave a good deal to be desired, and spinners show little disposition to contract for cotton beyond their immediate requirements. The fact that Sakels are still about 800 points premium over the American contract checks any expansion in the offtake; in fact, as mentioned by us last week, the prevailing tendency is to utilise cheaper substitutes whenever possible. Liquidation of near positions has been proceeding throughout the week, and Novembers have dropped back to 15 points under January; a further widening may be witnessed between now and the end of the month, as tenders of old undesirable dockets are very probable. Reports from Alexandria indicate an improved offtake; in some outside cases there appears a tendency to reduce crop ideas, whilst more conservative sources are showing conflicting views regarding the yield. Whilst the general outlook, as far as this contract is concerned, appears to be rather "bearish," we doubt any material decline being witnessed unless American values break sharply.

Upper Contract.—Dearer American markets and improving Alexandria advices caused values in this contract to harden during the earlier days of the week; more recently, however, the tendency has been rather dull, and with trade interests showing reduced activity prices have dropped back to last week's levels. Further straddle purchases against sales of American have been in evidence; provided a very big trade demand develops during November and December this operation may be profitable; technically it is not sound, as on the Upper side purchases will have to be carried forward at heavy premiums, whilst in the American market slight discounts rule. In addition, it rather appears as if this season's Upper crop is mixed in staple which is rather a "Bear" point for the contract, as heavy tenders of undesirable and unwanted cotton will probably be experienced later. Trade reports of counts produced from cotton covered by this contract continue to be satisfactory, but spinners appear to be well covered in actual and show a disposition to await developments before making further purchases.

Egyptian Spot.—Business has again been disappointing. During the earlier part of the week, under the stimulus of an advancing futures market, quite a lively demand for actual cotton developed, but, unfortunately, much of it never passed beyond the inquiry stage. The temporary flurry in futures being over, prices now look like easing again, which, after all, is the normal state of affairs to expect at this time of the year. In the absence of killing frosts in America, the trade here looks for lower prices before the end of 1928. A certain amount of buying (probably more than is generally realised) has already taken place, and many spinners are now in a position to sit tight and wait awhile, unless, of course, the unexpected happens. In the meantime, reports from up-country indicate that trade in Egyptian counts is slowly improving. The local inquiry for Sakel has shown very little change, unless it has been for the 100 to 200 on quality, of which only a very mediocre selection is available here. "Pass" to 50 "on" has been in fair request, and the lower ranges, e.g., 10d. to 12d. and 14d. to 15½d., have attracted about their customary amount of attention. Some of the new crop Sakel we have seen (i.e., the better qualities) appears to be fully up to, if not an actual improvement on, last year's product.

Uppers continue to attract most attention and a steady trade has taken place in cotton at from "pass" to 50 "on" November contracts, whilst old crop cotton of a lower kind (25 to 50 off) has also been in favour. A moderate trade has taken place in Sudan Sakels at steady rates. White, and other special growths, have been somewhat neglected, except where undoubted bargains could be picked up. Pilon cotton has been in fair request, but buyers have been lacking in enthusiasm. C.i.f. business has been patchy. Forwardings to the trade were last week returned as 5,530 bales Egyptian and 693 bales Sudan. Estimated spot sales, 1,800 Egyptian and 550 bales Sudan. Quotations of Sakel show, on balance, an advance of 10 points, with Extra Fine exceptionally 45 points higher. Upper and Pilon are 5 points lower on the week. F.G.F. Sakel to-day, 18.30d. F.G.F. Upper to-day, 12.50d. F.G.F. Pilon to-day, 13.25d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 18, state:—

Since our last report the market has been active and the tone distinctly firm. The week's summary of price movements is as follows:—Sakellaridis: November, 35.47 dollars, 1.32 dollars up; January, 36.04 dollars, 1.32 dollars up; March, 36.57 dollars, 1.47 dollars up. Ashmouni: October, 23.09 dollars, 1.14 dollars up; December, 23.22 dollars, 0.89 dollars up; February, 23.65 dollars, 0.90 dollars up; April, 23.98 dollars, 0.74 dollars up; October, 1929, 24.68 dollars, 0.68 dollars up.

Sakel.—The market has shown a considerably better tendency this week, and this improvement may almost wholly be attributed to the revival in the demand from spinners. Some good lines have been booked during the past week, much to the general surprise, seeing that all reports recently received from the textile centres have been unanimous in declaring a total absence of demand for fine yarns due to the dearthness of Sakel compared with other growths of cotton. The general feeling here recently has been bearish of Sakel, and the improvement in the demand induced some short covering, which, falling on a rather narrow market, caused a sharp upward movement.

The future course of prices depends on the attitude of spinners. It is generally expected that the Sakel crop will turn out between 2½ and 2¾ million kantars; this cannot be considered a large crop, and should the demand continue fairly good and regular for any length of time, we may see prices pushed up further. The Sakel/Ashmouni straddle (November/December) stands at 1,225 points against 1,181 points last week and 881 points at this time last year.

Uppers.—The rise in New York of about 1 cent has been reflected in our market, although the demand from abroad, whilst satisfactory, is not so good as it was last week. Spinners, it would seem, having covered their immediate requirements, are not so disposed to pay present prices, and prefer to delay entering into further commitments. We consider prices of Uppers very reasonable in comparison with American, and it surprises us that spinners do not take more advantage of the present position. The Ashmouni-American straddle (December/December) stands at 339 points against 343 points last week and 788 points at this time last year.

At the second October tender, no dockets were issued. The week's

receipts amount to 433,808 kantars, against exports 158,629 kantars; the stock in Alexandria stands at 2,105,611 kantars.

Spot.—During the past week Minet el Bassal has shown considerable activity. Sales amount to about 33,550 bales, of which we estimate 11,500 bales Sakellaridis, 17,900 bales Ashmouni and Zagora, 2,750 bales Pilion, and 1,400 bales other varieties. Considerably more interest has been shown in Sakel, but Upper cotton still holds pride of place in the week's business. A greatly increased demand for Pilion has also appeared, and spinners are obviously trying to substitute this growth for Sakel wherever possible on account of its much lower price.

Sakellaridis: Has enjoyed a greatly improved demand and all styles have been dealt in. High premiums continue to be paid for Extra cotons. Spot differences are without much change.

Ashmouni and Zagora: Continue to meet a very good demand and all styles have changed hands. Spot differences are rather dearer for Good and better, and without much change for the other grades.

Pilion: A greatly increased business has been done in all grades. Spot differences are about unchanged for the medium qualities and distinctly dearer for the better grades.

Other Varieties: A good business has been done in White of all grades. A really good business has been done in Nahda at very good prices for all grades on offer, and a few bales of Maarad and Fouadi have also changed hands.

Up-country: The crop is moving very rapidly everywhere. Growers are, on the whole, rather disposed to sell their cotton, although the recent advance has tended to make them more pretentious in the matter of price, with the result that the turnover during the last few days shows a slight reduction. Nahda is very much in demand in the villages and still higher premiums are being paid for good crop lots. Pilion, also, is in good request. In Upper Egypt, the railway stations are choked with cotton. River transport is being utilised to

its fullest extent, but the boats available are not equal to requirements, and there has accordingly been rather less business concluded. The ginning factories are overflowing with cotton and are, for the most part, working day and night. Climatic conditions have, more or less, ceased to be of interest, as very little cotton now remains to be picked. Reports on the second picking received up to now vary considerably, but, generally speaking, results seem to be no better than last year; ginning yields, on the other hand, both for Sakel and Uppers, show slightly better than last year.

The Chirket-i-Hairie (the Bosphorus Steam Navigation Company), Constantinople, have placed an order with the Fairfield Shipbuilding and Engineering Company, Ltd., for a screw steamer for passenger ferry services on the Bosphorus. The vessel will be similar to steamers which the firm built for the same owners between 1903 and 1906, but the design will incorporate a number of improvements. The vessel will be about 100 ft. in length, 19 ft. in breadth, 7 ft. in depth, and of about 120 tons gross.

H.M. Acting Consul-General at Beyrout reports that, as the necessary consequence of the stabilisation of the franc, and therewith of the Lebano-Syrian piastre (equalling 20 centimes), the "gold Lebano-Syrian piastre" has been abolished as from September 1, 1928. This imaginary currency, introduced for purposes of official bookkeeping, has proved entirely unnecessary, as since its use began the paper currency has been practically stable. By Decree it is replaced by the Lebano-Syrian paper currency. Many Beyrout merchants continue to quote prices in Egyptian or Turkish gold, but it is presumed that the custom will gradually die out now that Syria has a stable currency of its own.

Notes of the Week.

The Resignation of the Roumanian Cabinet.

The force of circumstances has proved at last too strong for M. Vintila Bratianu, and he has found himself compelled to hand in the resignation of his Government, which has been accepted by the Roumanian Council of Regency. In view of the late Prime Minister's record, it is obvious that economic conditions, rather than the fulminations of the National-Peasant Opposition, have been the immediate cause of this step. The need for a foreign loan has dominated Roumanian affairs for the last two years. In the face of the outspoken and determined hostility of the National-Peasant Party the conclusion of such a loan became for the Liberals the sole hope of their being able to remain in office. To secure it, M. Bratianu has gradually sacrificed the main features of the financial policy that he had fastened upon the country, largely in its own despite. Revalorisation has been abandoned, and preparations were made to stabilise the leu even at a lower rate than that at which it stood when he first became Minister of Finance. His final act of renunciation was the admission that the necessary funds for stabilisation had to come from abroad, and to this end he has been obliged to modify in application some of the legislative measures which have affected foreign interests in Roumania. In spite of confident assertions to the contrary, the negotiations for a loan have not yet been finally concluded, although the foreign financial groups consulted are prepared to grant a loan to Roumania under certain conditions. The resignation of M. Bratianu at this stage suggests that the terms offered were such as he could not accept, or possibly could not fulfil, however anxious he might be to accept them. The internal situation in Roumania hardly encouraged foreign financiers to negotiate a loan with the Bratianu Government. Its terms would have to be severe, and it would be difficult to convince the Opposition that a loan could not have been secured on easier terms under a different régime. The National-Peasant Party, therefore, would not be likely to vote for the loan agreement in Parliament. M. Bratianu, however knew that it was hopeless for him to ask the National-Peasants to join his Government for the sake of putting

through the badly needed loan. Having failed to persuade the Council of Regency to prolong his mandate indefinitely, he resigned. The Regents tried to induce Dr. Maniu, the Transylvanian leader of the National-Peasant Coalition, and General Averescu, head of the People's Party, to form a joint Coalition Government; but the former refused, on the ground that his group was prepared to form an Administration alone. Further consultations with party leaders followed, and M. Titulescu, who had returned to his post in London only two days before, was hurriedly summoned to Bucharest for consultation. It is supposed that the Regency would like M. Titulescu to form a Coalition Government; but the claims of Dr. Maniu, as leader of the second largest party, will have to be taken into account.

The Council of Regency.

Not the least striking feature of the Ministerial change in Roumania is the action of the Council of Regency in forcing the resignation of M. Bratianu. Hitherto the three Regents have contrived to convey the impression that they could act only at the behest of the leader of the Liberal Party; so much so, indeed, that for a moment the question was raised in some quarters whether the course of events was not unfolding itself according to some deep-laid plan on the part of M. Bratianu, who was anxious to thrust on others the onus of concluding a foreign loan on none too favourable terms. All reports from Roumania, however, suggest that the Liberal leader was as much taken by surprise as were his political opponents, when the Council of Regency accepted with alacrity his threat of resignation. If this be the case, it is a wholesome development in the Roumanian situation. In all the countries of South-Eastern Europe a strong hand above party politics is needed for the smooth working of the political machine. The Sovereign is not required to act unconstitutionally, but it is to the advantage of the country if his personal position enables him to keep within certain limits the play of party politics, which are frequently liable to run riot. It is for this reason that a republican régime in a Balkan country is likely sooner or later to prove an expedient of dubious value, for it is hardly to be expected that the

supply of ideal Presidents can be maintained indefinitely. The death of King Ferdinand was a severe blow to Roumania; but the country will be a long way on the road to recovery from its loss if the Regents have now found their feet, their wills and their tongues.

A Transylvanian Government.

Considerable interest would attach to the accession to power of the National-Peasant Group under Dr. Maniu. With the exception of a short space of three months, from December, 1919, to March, 1920, when Dr. Vaida Voevod was Prime Minister, the Transylvanians have had no opportunity of exercising power in Roumania. Great hopes were formed of the heaven that it was supposed they would introduce into New Roumania; but for ten years they have virtually been in opposition, as Dr. Vaida Voevod's brief term was not sufficient to show what the Transylvanian element could do, nor was the party adequately organised. To-day the latter difficulty has been overcome, and there can be little doubt that, owing to the loss of Liberal popularity, the National-Peasant Group, comprising the Transylvanian National Party under Dr. Maniu, the Nationalists of the Old Kingdom under Professor N. Jorga, and the Tsaranists, or Peasant Party, led by M. Mihalake and Dr. Lupu, if he does not desert his party, have the bulk of the Roumanian people behind them. They are alive to the mistakes of the old régime, and it may be expected that they would make a serious effort to remedy them. First and foremost, there is Roumania's unenviable reputation for official corruption. The evil lies in the under-payment of the civil service and the incubus of a pernicious tradition. To break the latter little more than the fiat of the new Cabinet may be required; to deal with the former it may be necessary to reorganise the whole economic condition of the country. The degree of solidarity that the Coalition could maintain in office has yet to be proved; for it is probable that M. Mihalake and his Peasants will be anxious to go farther on the road of Socialist legislation than his colleagues will be anxious to follow him. It is to be hoped, however, that Roumania will be able to settle down to a long period of social and economic reconstruction. She has great resources, but she has lost much valuable time in adopting policies that ill conformed with her position or her requirements.

Egypt and Britain.

A long communication from the Secretary-General of the Egyptian Wafd to the *Manchester Guardian* deserves special attention, as it contains, by implication only, it is true, an avowal which is of considerable importance to Anglo-Egyptian relations. In the quarrel between the Wafd and the present Egyptian Government no British onlooker is called upon to intervene; the question whether one party or the other is responsible for initiating reforms or for carrying them through is for the Egyptian people to pass judgment upon, if so inclined. British interest is confined to the subject of Anglo-Egyptian relations, and it is on this point that the Secretary-General of the Wafd comes out in brand-new colours, identifying himself with those "who believe that Anglo-Egyptian amity is not merely possible, but also desirable." As a personal avowal this is interesting; if it is intended to imply that it is the official point of view of the Wafd to-day, it is of great importance. In that event it will be difficult to avoid the conclusion that this eminently happy state of affairs—for such a *volte face* on the part of the Wafd would, undoubtedly, be this—is due solely to the few months in the outer wilderness of opposition experienced by the Wafd. Against such a great achievement standing to the credit of Mahmoud Pasha's Government the Wafd cannot expect Great Britain, who already considers herself pledged not to interfere in the purely domestic affairs of Egypt, to attach any importance to such technical matters as the suspension of Parliament, the abolition of newspaper licences, and so on. On one point it is difficult to follow the Wafd spokesman, where he states that "Anglo-Egyptian relations are

going through a crisis of unprecedented gravity." This aspect of the situation has certainly not been noticed on the British side; for the relations with the present Egyptian Government are scrupulously correct; and now with the knowledge that even the Wafd believe Anglo-Egyptian amity to be desirable (and the Wafd, as Dr. William Makram Ebeid points out, "represents Egypt as no political party in any other country does") Great Britain has the profound satisfaction of realising that there is no one left in Egypt to disturb Anglo-Egyptian relations, which only a few months ago, before the welcome change in the attitude of the Wafd and of its Secretary-General, were indeed in dire jeopardy.

The Turkish Assembly.

Mustapha Kemal Pasha knows the value of directness of speech, and it was hoped that he would take advantage of the opening of the Grand National Assembly to come to grips with the real problems that must, sooner or later, seriously exercise the Turkish Government. His speech, however, although slightly more explicit than the usual run of stereotyped utterances common to such occasions, threw no light upon the economic situation of the country. He excluded from the list of foreign relations that were normal the question of security along the Syrian frontier and the exchange of population problem, as still providing Turkey and France on the one hand and Turkey and Greece on the other with bones of contention. The reference to the agreement on pre-War debts was frank up to a point. It could not be pretended that the agreement had been concluded on favourable terms, nor could it be said whether the country could support the weight of the settlement without suffering considerably; but, he added, "it was a moral and national duty to recognise the debts, and it is that which has decided us to make this arrangement." It is, perhaps, unfortunate for Turkey that this attitude towards her indebtedness was not adopted at an earlier date. She will have gained nothing by postponing the day of reckoning, as it may be taken for granted that the loan agreement can be carried out only by means of a foreign loan, if any of the public works to which the President referred—railway and road construction, and irrigation schemes—are to be taken in hand. A foreign loan, however, entails the overhauling of Turkey's fiscal policy, with the provision of adequate guarantees that "moral and national" duties will not be evaded in future. The new session of the National Assembly, it is announced, will be taken up mainly with economic questions; but, as the members consider themselves debarred from criticising the Government's proposals, it is not likely that more light will be thrown on the economic situation of the country than the Cabinet chooses to reveal.

General Pangalos.

The fates are not kind to the ex-Dictator of Greece. After being kept in prison for two years without trial, by successive Governments which were as afraid to release him as they were to try him, General Pangalos was liberated by M. Venizelos, and an amnesty accorded to all political offences since 1925 seemed to have closed the Pangalos chapter for all time. It was, however, not to be. During the recent electoral campaign the ex-Dictator's headquarters were the scene of a demonstration, and in the excitement of the moment shots were fired from the house at the demonstrators. Arrests were made among the General's supporters and General Pangalos himself was subjected to magisterial inquiry, but was subsequently liberated. Two of the people who were shot have since died and General Pangalos has now been arrested in connexion with the affair. As he denied having used any weapon, it must be supposed that fresh light on the incident has been thrown by the investigations which the police have been making. If any responsibility can be attached to the General for the shooting, he will not be able this time to count on the sympathy, whether personal or political, of his compatriots.

The Balfour Declaration Anniversary.

From the way in which the Muslims and Jews in Palestine observed last Friday, November 2—which was the eleventh anniversary of the Balfour Declaration—the superficial witness of events might be tempted to think that the chances of genuine co-operation between the old inhabitants of the Holy Land and the new Zionist settlers were remote. There is, unhappily, no question that the unfortunate occurrences at the Wailing Wall on September 24 have emphasised the cleavage between the two peoples. Both Muslims and Jews have appealed to extra-Palestine authorities in defence of their particular claims in the area of, or at, the Wailing Wall, and any hopes that might originally have been entertained of circumscribing the effects of the now famous “incidents” must have vanished. Either spontaneously or through mobilisation representative voices of Jewry throughout the world have condemned the action of the British authorities on the Day of Atonement; and either spontaneously or through mobilisation Muslims in Trans-Jordan, Syria, and Egypt have hastened to the defence of their brethren in Palestine in resisting what in their view is Jewish encroachment upon their rights. On November 1 a meeting of 600 Muslims, including delegations from Trans-Jordan and Syria, resolved, according to *The Times*, not only to dispatch reports to the League of Nations, to the British Government, and to the Palestine Government, and to conduct propaganda throughout Islam, but also to establish a universal Muslim Society for the defence of Muslim Holy Places. Such, therefore, is the vivid result of allowing political bias to interfere with an essentially religious question. The clock of Palestinian unity, of collaboration between the various peoples therein, has been set back. Suspicion and distrust and disdain are now the most prominent features of the Arab-Zionist situation, and it will need all the resolve and fixity of purpose of the High Commissioner-designate, Sir John Chancellor, once more to set the country moving along more reasonable channels. Fortunately, however, there is general belief in his ability to cope with the task.

Immigration into the Holy Land.

Whether or not the Government of Palestine was partly to blame for permitting the very large immigration into Palestine during the “boom” year of 1925, it is certain now that the lesson from that particular error has been taken well to heart. Nor should we omit to add that the Zionists themselves are determined to adapt immigration of Jews into Palestine to the practicabilities of the situation. Negotiations which have been going on between the Palestine Zionist Executive and the Palestine Government in connexion with the Labour Schedule for the half-year which began on November 1 have ended with the following result. Permission is given for the immigration of 300 unskilled agricultural workmen not over the age of 35, and of 100 women workers. One hundred and fifty men for employment in industrial undertakings not over the age of 45 are to be allowed, and fifty skilled artisans not over the age of 45. Male immigrants may be accompanied by their wives, and children under the age of eighteen whom they are able to maintain. This system and these details of the half-yearly schedule show clearly with what minute care the position of the immigrants has to be controlled, and although the immigration regulations may, of course, be altered from time to time, it is patent that for the next decade or so, if not for much longer, the rate of entry of Jewish colonists should do nothing to excite Arab fears of a preponderating Jewish influence in Palestine.

The Population of Palestine

An ingenious suggestion has recently been made, according to the Jerusalem correspondent of the *Jewish Chronicle*, that the nomadic *Badawin* of Palestine should not be counted in the population of the Holy Land. This, in his opinion, would bring the number of non-Jews down from about 650,000 to something like 400,000, and since the Jews number about 150,000 (probably fewer now) the

proportion of new settlers to old is not so disheartening. One rather doubts, however, whether the official Zionist will take much courage from this calculation, for even if it were true that the nomadic Arabs are included in what there is increasing tendency now to regard as the permanent Muslim majority, it is probable that with the progress of civilisation in Palestine the roving tribes will be persuaded to settle. Another factor that may offset the Jewish immigration into Palestine is the fact that with an improvement of hygienic conditions in Palestine infant mortality among the Arab population is bound to decrease. It is difficult, from whatever angle the matter be viewed, ever to envisage a Jewish majority in the Holy Land.

The Iraqi Majlis.

It was a matter for some surprise that the Prime Minister of Iraq, Sir Abdul Muhsin Beg as Saadun, was able at the end of the last parliamentary session to boast at least as strong a position as that enjoyed by any other Prime Minister of Iraq at the end of his first session. The abundant opposition which showed itself appeared but to strengthen Sir Abdul Muhsin's hands—in which process, by the way, the notable work performed by Naji Beg Suwaidi should be mentioned. The important thing, however, is: what will happen in the session which opened on November 2? The Speech from the Throne contained some very optimistic references to the progress of negotiations upon the financial and military agreements subsidiary to the Anglo-Iraqi Treaty, to relations with the Wahhabis of Najd, and to the development of agriculture in Iraq. But no details are yet available of the lines upon which the important problem of the defence of Iraq is to be solved. As if to emphasise the urgency of this question, the two battalions of the Mahratta Light Infantry, which were the sole remaining charge on the Imperial Exchequer—apart, of course, from the Royal Air Force and the now diminished Assyrian Levies—have now left Iraq. It is known that the present Government of Iraq will in no circumstances agree to the proposal that Iraq should pay the difference in cost of the Royal Air Force at home and abroad. There seems, therefore, no alternative between the British Government's continuing to bear the full cost, and the introduction into Iraq of compulsory military service. A Conscription Bill has, we believe, been considered by the parliamentary deputies during the Recess, and it will be profoundly interesting to see whether it is actually brought before the House, and if so, what its fate therein will be. To judge from King Faisal's remarks in his Speech, we imagine that the Bill will be given its chance—otherwise how could he speak of being in “perfect accord with his British Ally on the draft proposals for the new military agreement”?

A TURKISH ANNIVERSARY.

On October 29 Turkey celebrated the fifth anniversary of the Republic, and the occasion was marked by special ceremonies throughout the country. Much that gives the Turks peculiar satisfaction has been accomplished in the last five years; a homogeneous Turkish nation has been created out of the Ottoman Empire, and Turkey has now the political and economic independence that the founders of the Republic set themselves to win for her. She has freed herself from the shackles on modern progress that certain features of the Muhammadan religion had fastened on her, and she has adopted the measures which she considered necessary to prove her right and her capacity to take her place in line with the Western nations. In so doing she has made no attempt to stultify her geographical position; for while she claims to have availed herself of all the advantages of Western progress, she has resisted the encroachment of European Powers on her territory, and she remains in the van of the modernising movement which is now stirring all the nations of the East. For those Turks, however, who are able to probe beneath the glamour attaching to the achievements of the last five years, the present situation in the country cannot be altogether free from anxiety. Anatolia has suffered this year from a serious drought, and the problem of feeding her population in the coming winter prevents formidable difficulties. As the result of a prolonged investigation the Supreme Economic Council has reported that a grave crisis is arising from diminishing wealth and extravagant private expenditure. The Commission appointed by this Council to inquire into the enhanced cost of living has analysed the conditions on which this judgment is based. Agricultural production, it is recorded, is at the lowest ebb; work is uselessly wasted, and the same effort would secure a much better return in other countries; agricultural machinery and implements are comparatively rarely used; the soil needs to be improved, but fertilisers are not employed. A restricted use is made of banking, credit and capital being the monopoly of a few. Turkish commerce, above all the export trade, is entirely lacking in organization. The incomes of the professional classes are diminishing; prices are too high, particularly rents and the cost of food stuffs.

From the earliest days of the Republic it has been realized by all with first-hand knowledge of conditions in Turkey that the real test of the new régime would be its capacity to promote the material advancement of the country. The task of the Turkish Government was to make two ears of corn grow where only one grew before, and, unless it contrived to do this, the Turkish people were not going to be much better off under a republican form of government. Unfortunately, although not unnaturally, the Turks, both official and unofficial, have considered it necessary to the success of their undertaking to make, at once, the worse appear the better cause. Instead of
